Himālayas, once saw a messenger of Indra flying through the sky. She asked him where he was going. In reply he said that a certain king, Ariṣṭanemi by name, having given his kingdom to his son and having become free from all passions, was performing a course of asceticism (*tapas*), and that he had had to go to him on duty and was returning from him. The damsel wanted to know in detail what happened there between the messenger and the king. The messenger replied that he was asked by Indra to take a well-decorated chariot and bring the king in it to heaven, but while doing so he was asked by the king to describe the advantages and defects of heaven, on hearing which he would make up his mind whether he would like to go there or not. In heaven, he was answered, people enjoyed superior, medium and inferior pleasures according as their merits were superior, medium or inferior: when they had exhausted their merits by enjoyment, they were reborn again on earth, and during their stay there they were subject to mutual jealousy on account of the inequality of their enjoyments. On hearing this the king had refused to go to heaven, and, when this was reported to Indra, he was very much surprised and he asked the messenger to carry the king to Vālmiki's hermitage and make Vālmiki acquainted with the king's refusal to enjoy the fruits of heaven and request him to give him proper instructions for the attainment of right knowledge, leading to emancipation (*mokṣa*). When this was done, the king asked Vālmiki how he might attain *mokṣa*, and Vālmiki in reply wished to narrate the dialogue of Vaśiṣṭha and Rāma (*Vaśiṣṭha-rāma-samvāda*) on the subject.

Vālmiki said that, when he had finished the story of Rāma—the work properly known as *Rāmāyaṇa*—and taught it to Bharadvāja, Bharadvāja recited it once to Brahmā (the god), and he, being pleased, wished to confer a boon on him. Bharadvāja in reply said that he would like to receive such instructions as would enable people to escape from sorrow. Brahmā told him to apply to Vālmiki and went himself to him (Vālmiki), accompanied by Bharadvāja, and asked him not to cease working until he finished describing the entire character of Rāma, by listening to which people will be saved from the dangers of the world. When Brahmā disappeared from the hermitage after giving this instruction, Bharadvāja also asked Vālmiki to describe how Rāma and his wife, brother and followers behaved in this sorrowful and dangerous world and lived in sorrowless tranquillity.

In answer to the above question Vālmiki replied that Rāma, after finishing his studies, went out on his travels to see the various places of pilgrimage and hermitages. On his return, however, he looked very sad every day and would not tell anyone the cause of his sorrow. King Daśaratha, Rāma's father, became very much concerned about Rāma's sadness and asked Vāsiṣṭha if he knew what might be the cause of it. At this time the sage Viśvāmitra also visited the city of Ayodhyā to invite Rāma to kill the demons. Rāma's dejected mental state at this time created much anxiety, and Viśvāmitra asked him the cause of his dejection.

Rāma said in reply that a new enquiry had come into his mind and had made him averse from all enjoyments. There is no happiness in this world, people are born to die and they die to be born again. Everything is impermanent (*asthira*) in this world. All existent things are unconnected (*bhāvāḥ...parasparam asaṅginah*). They are collected and associated together only by our mental imagination (*manah-kalpanayā*). The world of enjoyment is created by the mind (*manah*), and this mind itself appears to be non-existent. Everything is like a mirage.

Vāsiṣṭha then explained the nature of the world-appearance, and it is this answer which forms the content of the book. When Vālmiki narrated this dialogue of Vāsiṣṭha and Rāma, king Ariṣṭanemi found himself enlightened, and the damsel was also pleased and dismissed the heavenly messenger. Kāruṇya, on hearing all this from his father Agniveśya, felt as if he realized the ultimate truth and thought that, since he realized the philosophical truth, and since work and passivity mean the same, it was his clear duty to follow the customary duties of life. When Agastya finished narrating the story, the Brahmin Sutikṣṇa felt himself enlightened.

There is at least one point which may be considered as a very clear indication of later date, much later than would be implied by the claim that the work was written by the author of the *Rāmāyaṇa*. It contains a *śloka* which may be noted as almost identical with a verse of Kālidāsa's *Kumāra-saṃbhava*¹. It may, in my opinion, be almost unhesitatingly assumed that the author borrowed it from Kālidāsa, and it is true, as is generally supposed, that Kālidāsa

¹ *Yoga-vāsiṣṭha*, III. 16. 50:

*atha tām atimātra-vihvalāṃ
sakyāpākāśabhavā sarasvatī
śapharīm hrada-śoṣa-vihvalāṃ
prathamā vṛṣṭir ivānvakampata.*

lived in the fifth century A.D. The author of the *Yoga-vāsiṣṭha*, whoever he may have been, flourished at least some time after Kālidāsa. It may also be assumed that the interval between Kālidāsa's time and that of the author of the *Yoga-vāsiṣṭha* had been long enough to establish Kālidāsa's reputation as a poet. There is another fact which deserves consideration in this connection. In spite of the fact that the views of the *Yoga-vāsiṣṭha* and Śaṅkara's interpretation of Vedānta have important points of agreement neither of them refers to the other. Again, the views of the *Yoga-vāsiṣṭha* so much resemble those of the idealistic school of Buddhists, that the whole work seems to be a Brahmanic modification of idealistic Buddhism. One other important instance can be given of such a tendency to assimilate Buddhistic idealism and modify it on Brahmanic lines, viz. the writings of Gauḍapāda and Śaṅkara. I am therefore inclined to think that the author of the *Yoga-vāsiṣṭha* was probably a contemporary of Gauḍapāda or Śaṅkara, about A.D. 800 or a century anterior to them.

The work contains six books, or *prakaraṇas*, namely, *Vairāgya*, *Mumukṣu-vyavahāra*, *Utpatti*, *Sthiti*, *Upaśama* and *Nirvāṇa*. It is known also by the names of *Ārṣa-Rāmāyaṇa*, *Ĵñāna-vāsiṣṭha*, *Mahā-Rāmāyaṇa*, *Vāsiṣṭha-Rāmāyaṇa* or *Vāsiṣṭha*. Several commentaries have been written on it. Of these commentaries I am particularly indebted to the *Tātparyā-prakāśa* of Ānandabodhendra.

The *Yoga-vāsiṣṭha* is throughout a philosophical work, in the form of popular lectures, and the same idea is often repeated again and again in various kinds of expressions and poetical imagery. But the writer seems to have been endowed with extraordinary poetical gifts. Almost every verse is full of the finest poetical imagery; the choice of words is exceedingly pleasing to the ear, and they often produce the effect of interesting us more by their poetical value than by the extremely idealistic thought which they are intended to convey.

The *Yoga-vāsiṣṭha* had a number of commentaries, and it was also summarized in verse by some writers whose works also had commentaries written upon them. Thus Advayāraṇya, son of Narahari, wrote a commentary on it, called *Vāsiṣṭha-Rāmāyaṇa-candrikā*. Ānandabodhendra Sarasvatī, pupil of Gaṅgādharendra Sarasvatī of the nineteenth century, wrote the *Tātparyā-prakāśa*. Gaṅgādharendra also is said to have written a commentary of the same name. Rāmadeva and Sadānanda also wrote two commentaries on

the work, and in addition to these there is another commentary, called *Yoga-vāsiṣṭha-tātparya-saṃgraha*, and another commentary, the *Pada-candrikā*, was written by Mādhava Sarasvatī. The names of some of its summaries are *Bṛhad-yoga-vāsiṣṭha*, *Laghu-jñāna-vāsiṣṭha*, *Yoga-vāsiṣṭha-ślokāḥ* and *Yoga-vāsiṣṭha-saṃkṣepa* by Gauḍa Abhinanda of the ninth century, *Yoga-vāsiṣṭha-sāra* or *ġñāna-sāra*, *Yoga-vāsiṣṭha-sāra-saṃgraha* and *Vāsiṣṭha-sāra* or *Vāsiṣṭha-sāra-gūḍhārthā* by Ramānanda Tirthā, pupil of Advaitānanda. The *Yoga-vāsiṣṭha-saṃkṣepa* of Gauḍa Abhinanda had a commentary by Ātmasukha, called *Candrikā*, and another called *Samśāra-taraṇi*, by Mummaḍideva. The *Yoga-vāsiṣṭha-sāra* also had two commentaries by Pūrṇānanda and Mahīdhara. Mr Sivaprasad Bhattacharya in an article on the *Yoga-vāsiṣṭha-Rāmāyaṇa* in the *Proceedings of the Madras Oriental Conference* of 1924 says that the *Mokṣopāya-sāra*, which is another name for the *Yoga-vāsiṣṭha-sāra*, was written by an Abhinanda who is not to be confused with Gauḍa Abhinanda. But he misses the fact that Gauḍa Abhinanda had also written another summary of it, called *Yoga-vāsiṣṭha-saṃkṣepa*. Incidentally this also refutes his view that the *Yoga-vāsiṣṭha* is to be placed between the tenth and the twelfth centuries. For, if a summary of it was written by Gauḍa Abhinanda of the ninth century, the *Yoga-vāsiṣṭha* must have been written at least in the eighth century. The date of the *Yoga-vāsiṣṭha* may thus be regarded as being the seventh or the eighth century.

The Ultimate Entity.

The third book of the *Yoga-vāsiṣṭha* deals with origination (*utpatti*). All bondage (*bandha*) is due to the existence of the perceptible universe (*dṛśya*), and it is the main thesis of this work that it does not exist. At the time of each dissolution the entire universe of appearance is destroyed, like dreams in deep sleep (*susupti*). What is left is deep and static (*stimita-gambhira*), neither light nor darkness, indescribable and unmanifested (*anākhyam anabhivyaktam*), but a somehow existent entity. This entity manifests itself as another (*svayam anya ivollasan*); and through this dynamic aspect it appears as the ever-active mind (*manas*)—like moving ripples from the motionless ocean. But in reality whatever appears as the diversified universe is altogether non-existent; for, if it was existent,

it could not cease under any circumstances¹. It does not exist at all. The ultimate indefinite and indescribable entity, which is pure extinction (*nirvāṇa-mātra*), or pure intelligence (*paro bodhaḥ*), remains always in itself and does not really suffer any transformations or modifications. Out of the first movement of this entity arises ego (*svatā*), which, in spite of its appearance, is in reality nothing but the ultimate entity. Gradually, by a series of movements (*spanda*) like waves in the air, there springs forth the entire world-appearance. The ultimate entity is a mere entity of pure conceiving or imagining (*saṃkalpa-puruṣa*)². The Muni held that what appears before us is due to the imagination of *manas*, like dreamland or fairyland (*yathā saṃkalpa-nagaraṃ yathā gandharva-pattanam*). There is nothing in essence except that ultimate entity, and whatever else appears does not exist at all—it is all mere mental creations, proceeding out of the substanceless, essenceless mental creations of the ultimate entity. It is only by the realization that this world-appearance has no possibility of existence that the false notion of ourselves as knowers ceases, and, though the false appearance may continue as such, there is emancipation (*mokṣa*).

This *manas*, however, by whose mental creations everything springs forth in appearance, has no proper form, it is merely a name, mere nothingness³. It does not exist outside or subjectively inside us; it is like the vacuity surrounding us everywhere. That anything has come out of it is merely like the production of a mirage stream. All characteristics of forms and existence are like momentary imaginations. Whatever appears and seems to have existence is nothing but *manas*, though this *manas* itself is merely a hypothetical starting-point, having no actual reality. For the *manas* is not different from the dreams of appearance and cannot be separated from them, just as one cannot separate liquidity from water or movement from air. *Manas* is thus nothing but the hypothetical entity from which all the dreams of appearance proceed, though these dreams and *manas* are merely the same and

III. 4. 38.

it is impossible to distinguish between them¹. *Avidyā*, *saṃsṛti*, *citta*, *manas*, *bandha*, *mala*, *tamas* are thus but synonyms for the same concept². It is the perceiver that appears as the perceived, and it is but the perceptions that appear as the perceiver and the perceived. The state of emancipation is the cessation of this world-appearance. There is in reality no perceiver, perceived or perceptions, no vacuity (*śūnya*), no matter, no spirit or consciousness, but pure cessation or pure negation, and this is what we mean by Brahman³. Its nature is that of pure cessation (*śānta*), and it is this that the Sāṃkhyaists call *puruṣa*, the Vedāntins call "Brahman," the idealistic Buddhists call "pure idea" (*viññāna-mātra*) and the nihilists "pure essencelessness" (*śūnya*)⁴. It is of the nature of pure annihilation and cessation, pervading the inner and the outer world⁵. It is described as that essencelessness (*śūnya*) which does not appear to be so, and in which lies the ground and being of the essenceless world-appearance (*yasmin śūnyam jagat sthitam*), and which, in spite of all creations, is essenceless⁶. The illusory world-appearance has to be considered as absolutely non-existent, like the water of the mirage or the son of a barren woman. The ultimate entity is thus neither existent nor non-existent and is both statical and dynamical (*spandāspandātmaka*)⁷; it is indescribable and unnameable (*kimapy avyapadeśātmā*) and neither being nor non-being nor being-non-being, neither statical being nor becoming (*na bhāvo bhavanam na ca*). The similarity of the philosophy of the *Yoga-vāsiṣṭha* to the idealistic philosophy of the *Laṅkāvatāra-sūtra* is so definite and deep that the subject does not require any elaborate discussion and the readers are referred to the philosophy of the *Laṅkāvatāra* in the first volume of the present work. On Vedānta lines it is very similar to Prakāśānanda's interpretation of the Vedānta in later times, called *drṣṭi-sṛṣṭi-vāda*, which can probably be traced at least as far back as Gauḍapāda or Maṇḍana. Prakāśātman refers to the *Yoga-vāsiṣṭha* as one of his main authorities.

Origination.

The world as such never existed in the past, nor exists now, nor will exist hereafter; so it has no production or destruction in any real sense¹. But yet there is the appearance, and its genesis has somehow to be accounted for. The ultimate entity is, of course, of the nature of pure cessation (*śānta*), as described above. The order of moments leading to the manifestation of the world-appearance can be described in this way: At first there is something like a self-reflecting thought in the ultimate entity, producing some indescribable objectivity which gives rise to an egohood. Thus, on a further movement, which is akin to thought, is produced a state which can be described as a self-thinking entity, which is clear pure intelligence, in which everything may be reflected. It is only this entity that can be called conscious intelligence (*cit*). As the thought-activity becomes more and more concrete (*ghana-saṃvedana*), other conditions of soul (*jīva*) arise out of it. At this stage it forgets, as it were, its subject-objectless ultimate state, and desires to flow out of itself as a pure essence of creative movement (*bhāvanā-mātra-sāra*). The first objectivity is *ākāśa*, manifested as pure vacuity. At this moment arise the ego (*ahaṃtā*) and time (*kāla*). This creation is, however, in no sense real, and is nothing but the seeming appearances of the self-conscious movement (*sva-saṃvedana-mātrakam*) of the ultimate being. All the network of being is non-existent, and has only an appearance of existing. Thought (*saṃvit*), which at this moment is like the *ākāśa* and the ego and which is the seed (*bīja*) of all the conceivings of thought (*bhāvanā*), formulates by its movement air². Again,

¹ *bandhyā-putra-vyoma-bane yathā na staḥ kadācana jagad-ādy akhilaṃ dṛśyaṃ tathā nāsti kadācana na cotpamam na ca dhvamsi yat kilādaḥ na vidyate utpattiḥ kādṛṣi tasya nāśa-śabdasya kā kathā.* III. 11. 4, 5.

² *manah saṃpadyate lolaṃ kalanā-kalanonmukham; kalayanāti manah śaktir ādaḥ bhāvayati kṣaṇāt. ākāśa-bhāvanāmacchām śabda-bīja-rasomukhīm; tatas tām ghanatām jātaṃ ghana-spanda-kramān manah.*

IV. 44. 16, 17.

A comparison of numerous passages like these shows that each mental creation is the result of a creative thought-movement called *bhāvanā*, and each successive movement in the chain of a succession of developing creative movements is said to be *ghana*, or concrete. *Ghana* has been paraphrased in the *Tātparyaprakāśa* as accretion (*upacaya*). *Bhāvanā* is the same as *spanda*; as the result of each thought-movement, there was thought-accretion (*ghana*), and corresponding to each *ghana* there was a semi-statical creation, and following each *ghana* there was a *spanda* (*ghana-spanda-kramāt*).

following the *ākāśa* moment and from it as a more concrete state (*ghanibhūya*), comes forth the sound-potential (*kha-tan-mātra*). This sound-potential is the root of the production of all the Vedas, with their words, sentences and valid means of proof. Gradually the conceivings of the other *tan-mātras* of *sparsa*, *tejas*, *rasa* and *gandha* follow, and from them the entire objective world, which has no other reality than the fact that they are conceptions of the self-conscious thought¹. The stages then are, that in the state of equilibrium (*sama*) of the ultimate indescribable entity called the Brahman, which, though pure consciousness in essence, is in an unmanifested state, there first arises an objectivity (*cetyatva*) through its self-directed self-consciousness of the objectivity inherent in it (*sataś cetyāṁśa-cetanāt*); next arises the soul, where there is objective consciousness only through the touch or connection of objectivity (*cetya-samyoga-cetanāt*) instead of the self-directed consciousness of objectivity inherent in itself. Then comes the illusory notion of subjectivity, through which the soul thinks that it is only the conscious subject and as such is different from the object (*cetyaika-paratā-vaśāt*). This moment naturally leads to the state of the subjective ego, which conceives actively (*buddhitvāḥkalanam*), and it is this conceiving activity which leads to the objective conceptions of the different *tan-mātras* and the world-appearance. These are all, however, ideal creations, and as such have no reality apart from their being as mere appearance. Since their nature is purely conceptual (*vikalpa*), they cannot be real at any time. All that appears as existent does so only as a result of the conceptual activity of thought. Through its desire, "I shall see," there comes the appearance of the two hollows of the eye, and similarly in the case of touch, smell, hearing and taste. There is no single soul, far less an infinite number of them. It is by the all-powerful conceptual activity of Brahman that there arises the appearance of so many centres of subjective thought, as the souls (*jīvas*). In reality, however, the *jīvas* have no other existence than the conceptualizing activity which produces their appearance. There is no materiality or form: these are nothing but the self-flashings of thought (*citta-camatkāra*).

Manas, according to this theory, is nothing but that function of pure consciousness through which it posits out of itself an object of itself. Here the pure conscious part may be called the spiritual

part and its objectivity aspect the material part¹. In its objectivity also the *cit* perceives nothing but itself, though it appears to perceive something other than itself (*svam evānyatayā dṛstvā*), and this objectivity takes its first start with the rise of egohood (*ahantā*).

But to the most important question, namely, how the original equilibrium is disturbed and how the present development of the conceptual creation has come about, the answer given in the *Yoga-vāsiṣṭha* is that it is by pure accident (*kākatāliya-yogena*) that such a course of events took place. It is indeed disappointing that such a wonderful creation of world-appearance should have ultimately to depend on accident for its origin². It is considered irrelevant to enquire into the possibility of some other cause of the ultimate cause, the Brahman³.

Karma, Manas and the Categories.

Karma in this view is nothing but the activity of the *manas*. The active states of *manas* are again determined by their preceding moments and may in their turn be considered as determining the succeeding moments. When any particular state determines any succeeding state, it may be considered as an agent, or *kartā*; but, as this state is determined by the activity of the previous state, otherwise called the *karma*, it may be said that the *karma* generates the *kartā*, the *kartā* by its activity again produces *karma*, so that *karma* and *kartā* are mutually determinative. As in the case of the seed coming from the tree and the tree coming from the seed, the cycle proceeds on from *kartā* to *karma* and from *karma* to *kartā*, and no ultimate priority can be affirmed of any one of them⁴. But, if this is so, then the responsibility of *karma* ceases; the root desire (*vāsanā*) through which a man is born also makes him suffer or enjoy in accordance with it; but, if *kartā* and *karma* spring forth together, then a particular birth ought not to be determined by the *karma* of previous birth, and this would mean

¹ *cito yac cetya-kalanam tan-manastvam udāhytam

that man's enjoyment and sorrow did not depend on his *karma*. In answer to such a question, raised by Rāmacandra, Vāsiṣṭha says that *karma* is due not to *ātman*, but to *manas*. It is the mental movement which constitutes *karma*. When first the category of *manas* rises into being from Brahman, *karma* also begins from that moment, and, as a result thereof, the soul and the body associated with it are supposed to be manifested. *Karma* and *manas* are in one sense the same. In this world the movement generated by action (*kriyā-spanda*) is called *karma*, and, as it is by the movement of *manas* that all effects take place, and the bodies with all their associated sufferings or enjoyments are produced, so even the body, which is associated with physical, external *karma*, is in reality nothing but the *manas* and its activity. *Manas* is essentially of the nature of *karma*, or activity, and the cessation of activity means the destruction of *manas* (*karma-nāśe mano-nāśaḥ*)¹. As heat cannot be separated from fire or blackness from collyrium, so movement and activity cannot be separated from *manas*. If one ceases, the other also necessarily ceases. *Manas* means that activity which subsists between being and non-being and induces being through non-being: it is essentially dynamic in its nature and passes by the name of *manas*. It is by the activity of *manas* that the subject-objectless pure consciousness assumes the form of a self-conscious ego. *Manas* thus consists of this constantly positing activity (*ekānta-kalanāḥ*). The seed of *karma* is to be sought in the activity of *manas* (*karma-bijaṃ manāḥ-spanda*), and the actions (*kriyā*) which follow are indeed very diverse. It is the synthetic function (*tad-anusandhatte*) of *manas* that is called the functioning of the conative senses, by which all actions are performed, and it is for this reason that *karma* is nothing but *manas*. *Manas*, *buddhi*, *ahaṃkāra*, *citta*, *karma*, *kalpanā*, *saṃsṛti*, *vāsanā*, *vidyā*, *prayatna*, *smṛti*, *indriya*, *prakṛti*, *māyā* and *kriyā* are different only in name, and they create confusion by these varied names; in reality, however, they signify the same concept, namely, the active functioning of *manas* or *citta*. These different names are current only because they lay stress on the different aspects of the same active functioning. They do not mean different entities, but only different moments, stages or aspects. Thus the first moment of self-conscious activity leading in different directions is called *manas*. When, after such oscillating movement, there is

¹ III. 95.

the position of either of the alternatives, as "the thus," it is called *buddhi*. When by the false notions of associations of body and soul there is the feeling of a concrete individual as "I," it is called *aḥamkāra*. When there is reflective thought associated with the memory of the past and the anticipations of the future, it is called *citta*. When the activity is taken in its actual form as motion or action towards any point, it is called *karma*. When, leaving its self-contained state, it desires anything, we have *kalpanā*. When the *citta* turns itself to anything previously seen or unseen, as being previously experienced, we have what is called memory (*smṛti*). When certain impressions are produced in a very subtle, subdued form, dominating all other inclinations, as if certain attractions or repulsions to certain things were really experienced, we have the root inclinations (*vāsanā*). In the realization that there is such a thing as self-knowledge, and that there is also such a thing as the false and illusory world-appearance, we have what is called right knowledge (*vidyā*). When the true knowledge is forgotten and the impressions of the false world-appearance gain ground, we have what are called the impure states (*mala*). The functions of the five kinds of cognition please us and are called the senses (*indriya*). As all world-appearance has its origin and ground in the highest self, it is called the origin (*prakṛti*). As the true state can neither be called existent nor non-existent, and as it gives rise to all kinds of appearance, it is called illusion (*māyā*)¹. Thus it is the same appearance which goes by the various names of *jīva*, *manas*, *citta* and *buddhi*².

One of the peculiarities of this work is that it is not a philosophical treatise of the ordinary type, but its main purpose lies in the attempt to create a firm conviction on the part of its readers, by repeating the same idea in various ways by means of stories and elaborate descriptions often abounding in the richest poetical imagery of undeniably high aesthetic value, hardly inferior to that of the greatest Sanskrit poet, Kālidāsa.

¹ III. 96. 17-31.

² *Jīva ity ucyate loke mana ity api kathyate
cittam ity ucyate saiva buddhir ity ucyate tathā.*

III. 96. 34.

The World-Appearance.

The *Yoga-vāsiṣṭha* is never tired of repeating that this world is like a hare's horn, a forest in the sky, or a lotus in the sky. The state of Brahman is higher than the state of *manas*. It is by becoming *manas* that Brahman transforms itself into thought-activity and thus produces the seeming changeful appearances. But Brahman in itself cannot have anything else (*brahma-tattve 'nyatā nāsti*). But, though there is this change into *manas*, and through it the production of the world-appearance, yet such a change is not real, but illusory; for during all the time when this change makes its appearance and seems to stay, Brahman remains shut up within itself, changeless and unchangeable. All objective appearance is thus nothing but identically the same as the Brahman, and all that appears has simply no existence. The seer never transforms himself into objectivity, but remains simply identical with himself in all appearances of objectivity. But the question arises, how, if the world-appearance is nothing but the illusory creative conception of *manas*, can the order of the world-appearance be explained? The natural answer to such a question in this system is that the seeming correspondence and agreement depend upon the similarity of the imaginary products in certain spheres, and also upon accident. It is by accident that certain dream series correspond with certain other dream series¹. But in reality they are all empty dream constructions of one *manas*. It is by the dream desires that physical objects gradually come to be considered as persistent objects existing outside of us. But, though during the continuance of the dreams they appear to be real, they are all the while nothing but mere dream conceptions. The self-alienation by which the pure consciousness constructs the dream conception is such that, though it always remains identical with itself, yet it seems to posit itself as its other, and as diversified by space, time, action and substance (*deśa-kāla-kriyā-dravyaiḥ*).

The difference between the ordinary waking state and the dream state consists in this, that the former is considered by us as associated with permanent convictions (*sthira-pratyaya*), whereas the latter is generally thought to have no permanent basis. Any experience which persists, whether it be dream or not,

¹ *melanam api svakīya-parakīya-svapnānām daivāt kvacit saṁvādat svāntaḥ-kalpanātmakam eva. Yoga-vāsiṣṭha-tātparya-prakāśa, IV. 18. 46.*

comes to be regarded as permanent, whereas, if even our waking conceptions come to be regarded as changeful, they lose their validity as representing permanent objects, and our faith in them becomes shaken. If the dream experiences persisted in time and the waking experiences were momentary, then the waking state would be considered as a dream and the dream experiences would be considered as ordinary experiences in the dream state. It is only with the coming of the waking state that there is a break of the dream experiences, and it is then that the latter are contradicted and therefore regarded as false. But so long as the dream experiences lasted in the dream state, we did not consider them to be false; for during that time those dream experiences appeared somehow to be permanent and therefore real. There is thus no difference between dream states and waking states except this, that the latter are relatively persistent, continuous and permanent (*sthira*), while the former are changeful and impermanent (*asthira*)¹.

There is within us a principle of pure consciousness, which is also the vital principle (*jīva-dhātu*), vitality (*vīrya*), and body heat (*tejas*). In the active condition, when the body is associated with *manas*, action and speech, the vital principle moves through the body, and on account of this all sorts of knowledge arise, and the illusion of world-appearance inherent in it is manifested as coming from outside through the various sense apertures. This being of a steady and fixed character is called the waking state (*jāgrat*). The *suṣupta*, or deep sleep state, is that in which the body is not disturbed by the movement of the *manas*, action or speech. The vital principle remains still in itself, in a potential state without any external manifestation, as the oil remains in the sesamum (*taila-samvid yathā tile*)². When the vital principle (*jīva-dhātu*) is very much disturbed, we have experiences of the dream state.

Whenever the *manas* strongly identifies itself with any of its concepts, it appears to itself as that concept, just as an iron ball in fire becomes itself like fire. It is the *manas* that is both the perceiver (*puṛuṣa*) and the perceived universe (*viśva-rūpatā*)³.

IV. 19. 11, 12.

² IV. 19. 23.

³ IV. 20. 4.

The followers of the Sāṃkhya consider *manas* to be pure consciousness; they have also explained their doctrines in other details, and they think that emancipation cannot be attained by any way other than that which the Sāṃkhya suggests. The followers of the Vedānta also consider that emancipation is attained if one understands that all this world is Brahman and if there is self-control and cessation of desires together with this knowledge, and that this is the only way of salvation. The Vijñānavādins (Idealistic Buddhists) think that, provided there is complete self-control and cessation of all sense desires, one may attain emancipation, if he understands that the world-appearance is nothing but his own illusion. Thus each system of thought thinks too much of its own false methods of salvation (*svair eva niyama-bhramaiḥ*), springing from the traditional wrong notions. But the truth underlying all these conceptions is that *manas* is the root of all creations. There is nothing intrinsically pleasurable or painful, sweet or bitter, cold or hot, and such appearances arise only through the habitual creations of the mind. When one believes and thinks with strong faith in any particular manner, he begins to perceive things in that particular manner during that particular time¹.

Nature of Agency (Kartṛtva) and the Illusion of World Creation.

Whenever we ascribe agency (*kartṛtva*) to any person in respect of deeds producing pleasure or pain, or deeds requiring strenuous exercise of will-power, as those of the Yoga discipline, we do it wrongly; for agency consists in the grasp of will and resolution, and so it is an internal determination of the mind, of the nature of dominant and instinctive desires and inclinations (*vāsanābhīdhānah*)². The inner movement of feeling in the person towards the enjoyment of experiences takes place in accordance with these fixed desires or inclinations leading him to specific forms of enjoyment. All enjoyment is thus a natural consequence of our nature and character as active agents. Since all active agency (*kartṛtva*) consists in the

¹ *na jñenehu padārtheṣu rūpam ekam udīryate

IV. 21. 56, 57.

² *yohyantara-sthāyāḥ manovṛtter niṣṭayaḥ upādeyatā-pratyayo vāsanābhīdhā-
natatkartṛtva-śabdenocyate.* IV. 38. 2.

inner effort of will, the enjoyment following such an inner exercise of will is nothing but the feeling modifications of the mind following the lead of the active exercise of the will. All action or active agency is thus associated with root inclinations (*vāsanā*), and is thus possible only for those who do not know the truth and have their minds full of the root inclinations. But those who have no *vāsanā* cannot be said to have the nature of active agents or of enjoying anything. Their minds are no doubt always active and they are active all the time; but, as they have no *vāsanā*, they are not attached to fruit, and there is the movement without any attachment. Whatever is done by *manas* is done, and what is not done by it is not done; so it is the *manas* that is the active agent, and not the body; the world has appeared from the mind (*citta* or *manas*), is of the essence of *manas*, and is upheld in *manas*. Everything is but a mental creation and has no other existence.

Ultimately, everything comes from Brahman; for that is the source of all powers, and therefore all powers (*śaktayaḥ*) are seen in Brahman—existence, non-existence, unity, duality and multiplicity all proceed from Brahman. The *citta*, or mind, has evolved out of pure consciousness (*cit*) or Brahman, as has already been mentioned, and it is through the latter that all power of action (*karma*), root desires (*vāsanā*), and all mental modifications appear. But, if everything has proceeded from Brahman, how is it that the world-appearance happens to be so different from its source, the Brahman? When anything comes out of any other thing, it is naturally expected to be similar thereto in substance. If, therefore, the world-appearance has sprung forth from Brahman, it ought to be similar in nature thereto; but Brahman is sorrowless, while the world-appearance is full of sorrow; how is this to be explained? To such a question the answer is, that to a person who has a perfect realization of the nature of the world-appearance, as being a mere conceptual creation from the Brahman and having no existence at all, there is no sorrow in this world-appearance nor any such quality which is different from Brahman. Only in the eyes of a person who has not the complete realization does this difference between the world-appearance and Brahman seem to be so great, and the mere notion of the identity of Brahman and the universe, without its complete realization, may lead to all sorts of mischief. On this account instruction in the identity of the Brahman and the world-appearance should never be given to

anyone whose mind has not been properly purified by the essential virtues of self-control and disinclination to worldly pleasures¹. As in magic (*indrajāla*), non-existent things are produced and existent things are destroyed, a jug becomes a cloth, and a cloth becomes a jug, and all sorts of wonderful sights are shown, though none of these appearances have the slightest essence of their own; so is the entire world-appearance produced out of the imagination of the mind. There is no active agent (*kartr*) and no one enjoyer (*bhoktr*) of the pleasures and sorrows of the world, and there is no destruction whatsoever².

Though the ultimate state is the indescribable Brahman or *cit*, yet it is from *manas* that all creation and destruction from cycle to cycle take their start. At the beginning of each so-called creation the creative movement of *manas* energy is roused. At the very first the outflow of this *manas* energy in the direction of a conceptual creation means an accumulation of energy in *manas*, called *ghana*, which is a sort of statical aspect of the dynamical energy (*spanda*). At the next stage there is a combination of this statical state of energy with the next outflow of energy, and the result is the stabilized accretion of energy of the second order; this is again followed by another outflow of energy, and that leads to the formation of the stabilized energy of the third order, and so on. The course of thought-creation is thus through the interaction of the actualized energy of thought with the active forms of the energy of thought, which join together, at each successive outflow from the supreme fund of potential energy. Thus it is said that the first creative movement of *manas* manifests itself as the *ākāśa* creation, and that, as a result of this creative outflow of energy, there is an accretion of energy in *manas*; at this moment there is another outflow (*spanda*) or movement on the part of *manas*, as modified by the accretion of energy of the previous state, and this outflow of *manas* thus modified is the creation of air. The outflow of this second order, again, modifies *manas* by its accretion, and there is a third outflow of energy of the *manas* as modified by the previous accretion, and so on. This process of the modification of energy by the outflow of the *manas* modified at each stage by the accretion of the outflow of energy at each of the preceding states is called

IV. 39. 23.

² *nātra kaścit kartā na bhoktā na vināśam eti.*

IV. 39. 41.

*ghana-spanda-krama*¹. The creation of all the so-called *tan-mātras* (subtle states) of *ākāśa*, *vāyu*, *tejas*, *ap* and *kṣiti* takes place in this order, and afterwards that of the *ahaṃkāra* and *buddhi*, and thus of the subtle body (*purī-aṣṭaka*); thereafter the cosmic body of Brahman is formed and developed in accordance with the root desire (*vāsanā*) inherent in *manas*. Thus here we have first the *ākāśa tan-mātra*, then the *vāyu tan-mātra* from the *ākāśa tan-mātra* plus the outflow of energy, then, from the *ākāśa tan-mātra* plus the *vāyu tan-mātra* plus the outflow of energy of the third order, *tejas tan-mātra*, and so on. Then, after the *tan-mātra*, the *ahaṃkāra* and the *buddhi*, we have the subtle body of eight constituents (five *tan-mātras*, *ahaṃkāra*, *buddhi* and the root *manas*), called the *purī-aṣṭaka* of Brahṁā. From this develops the body of Brahṁā, and from the creative imagination of Brahṁā we have the grosser materials and all the rest of the world-appearance. But all this is pure mental creation, and hence unreal, and so also are all the scriptures, gods and goddesses and all else that passes as real.

The Stage of the Saint (Jīvan-mukta).

Emancipation (*mukti*) in this system can be attained in the lifetime of a person or after his death; in the former case it is called *sa-deha-mukṭatā*, or *jīvan-mukṭatā*. The *jīvan-mukta* state is that in which the saint has ceased to have any desires (*apagatai-ṣaṇaḥ*), as if he were in a state of deep sleep (*suṣuptavat*). He is self-contained and thinks as if nothing existed. He has always an inward eye, even though he may be perceiving all things with his external eye and using his limbs in all directions. He does not wait for the future, nor remain in the present, nor remember the past. Though sleeping, he is awake and, though awake, he is asleep. He may be doing all kinds of actions externally, though he remains altogether unaffected by them internally. He internally renounces all actions, and does not desire anything for himself. He is full of bliss and happiness, and therefore appears to ordinary eyes to be an ordinary happy man; but in reality, though he may be doing all kinds of things, he has not the delusion of being himself an active agent (*tyakta-kartṛtva-vibhramah*). He has no antipathy, grief, emotions, or outbursts of pleasure. He is quite neutral to all who

¹ IV. 44. 13-30.

do him ill or well; he shows sympathetic interest in each person in his own way; he plays with a child, is serious with an old man, an enjoyable companion to a young man, sympathetic with the sorrows of a suffering man. He is wise and pleasant and loving to all with whom he comes in contact. He is not interested in his own virtuous deeds, enjoyments, sins, in bondage or emancipation. He has a true philosophic knowledge of the essence and nature of all phenomena, and, being firm in his convictions, he remains neutral to all kinds of happenings, good, bad, or indifferent. But from the descriptions it appears that this indifference on the part of a saint does not make him an exclusive and unnatural man; for, though unaffected in every way within himself, he can take part in the enjoyment of others, he can play like a child and can sympathize with the sorrows of sufferers¹.

Jīvan-mukti, or emancipation while living, is considered by Śaṅkara also as a possible state, though he does not seem to have used the term in his works. Thus, on the basis of *Chāndogya*, VI. 14. 2, he says that knowledge destroys only those actions which have not already begun to yield their fruits; those actions which have already begun to yield fruits cannot be destroyed by true knowledge, and so it is not possible for anyone to escape from their effects, good or bad; and it has to be admitted that even after the dawning of true knowledge the body remains until the effects of the actions which have already begun to yield fruits are exhausted by enjoyment or suffering. In explaining such a condition Śaṅkara gives two analogies: (1) as a potter's wheel goes on revolving when the vessel that it was forming is completed, so the body, which was necessary till the attainment of true knowledge, may continue to exist for some time even after the rise of knowledge; (2) as, when a man through some eye-disease sees two moons instead of one, he continues to do so even when he is convinced that there are not two moons but one, so, even when the saint is firmly convinced of the unreality of the world-appearance, he may still continue to have the illusion of world-appearance, though internally he may remain unaffected by it². Of the Upaniṣads only the later *Muktika Upaniṣad*, which seems to have drawn its inspiration from the *Yoga-vāsiṣṭha*, mentions the word *jīvan-mukta*, meaning those saints who live till their fruit-yielding

¹ v. 77.

² Śaṅkara's *Śārīraka-bhāṣya* or the *Brahma-sūtra*, IV. i. 15, 19.

actions (*prārabdha-karma*) are exhausted¹. But, though the word is not mentioned, the idea seems to be pretty old.

The conception of *sthita-prajña* in the *Śrīmad-bhagavad-gītā* reminds us of the state of a *jīvan-mukta* saint. A *sthita-prajña* (man of steady wisdom) has no desires, but is contented in himself, has no attachment, fear or anger, is not perturbed by sorrow nor longs for pleasure, and is absolutely devoid of all likes and dislikes. Like a tortoise within its shell, he draws himself away from the sense-objects². This conception of the *Śrīmad-bhagavad-gītā* is referred to in the *Yoga-vāsiṣṭha*, which gives a summary of it in its own way³. But it seems as if the conception of the saint in the *Yoga-vāsiṣṭha* has this advantage over the other, that here the saint, though absolutely unaffected by all pleasures and sufferings, by virtue and vice, is yet not absolutely cut off from us; for, though he has no interest in his own good, he can show enjoyment in the enjoyment of others and sympathy with the sufferings of others; he can be as gay as a child when with children, and as serious as any philosopher when with philosophers or old men. The *Śrīmad-bhagavad-gītā*, though it does not deny such qualities to a saint, yet does not mention them either, and seems to lay stress on the aspect of the passivity and neutral character of the saint; whereas the *Yoga-vāsiṣṭha*, as we have already said, lays equal stress on both these special features of a saint. He is absolutely unattached to anything, but is not cut off from society and can seemingly take part in everything without losing his mental balance in any way. The *Gītā*, of course, always recommends even the unattached saint to join in all kinds of good actions; but what one misses there is the taking of a full and proper interest in life along with all others, though the saint is internally absolutely unaffected by all that he may do.

The saint in the *Yoga-vāsiṣṭha* not only performs his own actions in an unattached manner, but to all appearance mixes with the sorrows and joys of others.

The question whether a saint is above the tyranny of the effects of his own deeds was also raised in Buddhist quarters. Thus we find in the *Kathā-vatthu* that a discussion is raised as to whether a saint can be killed before his proper time of death, and it is said that no one can attain *nirvāṇa* without enjoying the

¹ *Muktika Upaniṣad*, I. 42, also II. 33, 35, 76.

² *Śrīmad-bhagavad-gītā*, II. 55-58.

³ *Yoga-vāsiṣṭha*, VI. 52-58.

fruits of accumulated intentional deeds¹. A story is told in the *Dhamma-pada* commentary (the date of which, according to E. W. Burlingame, is about A.D. 450), how the great saint Moggallāna was torn in pieces by thieves, and his bones were pounded until they were as small as grains of rice; such a miserable death of such a great saint naturally raised doubts among his disciples, and these were explained by Buddha, who said that this was due to the crime of parricide, which Moggallāna had committed in some previous birth; even though he had attained sainthood (*arhattva*) in that life, he could not escape suffering the effect of his misdeeds, which were on the point of bearing fruit². This would naturally imply the view that sainthood does not necessarily mean destruction of the body, but that even after the attainment of sainthood the body may continue to exist for the suffering of the effects of such actions as are on the point of bearing fruit.

The different Indian systems are, however, not all agreed regarding the possibility of the *jīvan-mukta* state. Thus, according to the Nyāya, *apavarga*, or emancipation, occurs only when the soul is absolutely dissociated from all the nine kinds of qualities (will, antipathy, pleasure, pain, knowledge, effort, virtue, vice and rooted instincts). Unless such a dissociation actually occurs, there cannot be emancipation; and it is easy to see that this cannot happen except after death, and so emancipation during the period while the body remains is not possible³. The point is noticed by Vātsyāyana in a discussion on *Nyāya-sūtra*, IV. 2. 42-45, where he raises the question of the possibility of knowledge of external objects through the senses and denies it by declaring that in emancipation (*apavarga*) the soul is dissociated from the body and all the senses, and hence there is no possibility of knowledge; and that with the extinction of all knowledge there is also ultimate and absolute destruction of pain⁴. The Vaiśeṣika holds the same view on the subject. Thus Śrīharṣa says that, when through right knowledge (*paramārtha-darśana*) all merit ceases, then the

¹ *Kathā-vatthu*, xvii. 2.

² *Buddhist Legends* by E. W. Burlingame, vol. II. p. 304. The same legend is repeated in the introduction to *Jātaka* 522.

⁴ *yasmāt sarva-duḥkha-bījaṃ sarva-duḥkhāyatanāṃ cāpavarge
vichidyate tasmāt sarveṇa duḥkhena vimuktiḥ
apavargo no nīrbījaṃ nīrāyatanam ca duḥkham utpadyate.*

Vātsyāyana on *Nyāya-sūtra*, IV. 2. 43.

soul, being devoid of the seeds of merit and demerit, which produce the body and the senses, etc., and the present body having been destroyed by the exhaustive enjoyment of the fruits of merit and demerit, and there being no further production of any new body by reason of the destruction of all the seeds of *karma*, there is absolute cessation of the production of body, like the extinction of fire by the burning up of all the fuel; and such an eternal non-production of body is called *mokṣa* (emancipation)¹.

Prabhākara seems to hold a similar view. Thus Śālikanātha, in explaining the Prabhākara view in his *Prakaraṇa-pañcikā*, says that emancipation means the absolute and ultimate destruction of the body, due to the total exhaustion of merit and demerit². The difficulty is raised that it is not possible to exhaust by enjoyment or suffering the fruits of all the *karmas* accumulated since beginningless time; he who, being averse to worldly sorrows and all pleasures which are mixed with traces of sorrow, works for emancipation, desists from committing the actions prohibited by Vedic injunctions, which produce sins, exhausts by enjoyment and suffering the good and bad fruits of previous actions, attains true knowledge, and is equipped with the moral qualities of passionless tranquillity, self-restraint and absolute sex-control, exhausts in the end all the potencies of his *karmas* (*niḥśeṣa-karmāśaya*) and attains emancipation³. This view, however, no doubt has reference to a very advanced state in this life, when no further *karma* is accumulating; but it does not call this state *mokṣa* during life; for *mokṣa*, according to this view, is absolute and ultimate non-production of body.

The *Sāṃkhya-kārikā*, however, holds that, when true knowledge is attained (*samyagjñānādhiḡama*), and when in consequence none of the *karmas* of undetermined fruition (*aniyata-vipāka*), accumulated through beginningless time, are able to ripen for bearing fruit, the body may still continue to remain simply by the inertia, as it were, of the old *avidyā*; just as even after the potter has ceased to operate the potter's wheel may continue to move as a

Prāśastapāda also writes: *tadā nirodhāt nirbījasyātmanaḥ śarīrādi-nivṛttiḥ punaḥ śarīrādy-anutpattau dagdhendhanānalavad upāśamo mokṣa iti*. *Prāśastapāda-bhāṣyā*, p. 282.

² *ātyantikas tu dehocchedo niḥśeṣa-dharmādharma-parikṣaya-nibandhano mokṣa iti*. *Prakaraṇa-pañcikā*, p. 156.

³ *Ibid.* p. 157.

result of the momentum which it has acquired (*cakra-bhramivad dhṛta-śarīraḥ*)¹.

The word *jīvan-mukta* is not used either in the *Kārikā* or in the *Tattva-kaumudī* or in the *Tattva-vibhākara*. The *Sāṃkhya-sūtra*, however, uses the term and justifies it on the same grounds as does Vācaspati². The *Sāṃkhya-sūtra*, more particularly the *Pravacana-bhāṣya*, raises the threefold conception of *manda-viveka* (feeble discrimination), *madhya-viveka* (middle discrimination), and *viveka-niṣpatti* (finished discrimination)³. The stage of *manda-viveka* is that in which the enquirer has not attained the desired discrimination of the difference between *prakṛti* and *puruṣa*, but is endeavouring to attain it; the *madhya-viveka* stage is the state of the *jīvan-mukta*. But this is an *asamprajñāta* state, i.e. a state in which there is still subject-object knowledge and a full conscious discrimination. The last stage, *viveka-niṣpatti*, is an *asamprajñāta* state in which there is no subject-object knowledge, and therefore there cannot in this stage be any reflection of pleasure or sorrow (due to the fructifying *karma*—*prārabdha-karma*) on the *puruṣa*.

The Yoga also agrees with the general conclusion of the *Sāṃkhya* on the subject. A man who nears the state of emancipation ceases to have doubts about the nature of the self, and begins to re-live the nature of his own self and to discriminate himself as being entirely different from his psychosis (*sattva*); but, as a result of the persistence of some decayed roots of old impressions and instincts, there may, in the intervals of the flow of true discriminative knowledge, emerge other ordinary cognitive states, such as "I am," "mine," "I know," "I do not know"; yet, inasmuch as the roots of the old impressions have already been burnt, these occasional ordinary cognitive states cannot produce further new impressions. The general impressions of cognition (*jñāna-saṃskāra*), however, remain until the final destruction of *citta*. The point here is that, the roots in the world of sub-conscious impressions being destroyed, and the occasional appearance of ordinary cognitive states being but remnants produced by some of the old impressions, the roots of which have already

¹ *Sāṃkhya-kārikā*, 67, 68. The *Tattva-kaumudī* here essays to base its remarks on *Chāndogya*, vi. 14. 2, as Śaṅkara did in his *bhāṣya* on the *Brahma-sūtra*. The *Tattva-vibhākara* of Vamśīdhara Miśra, in commenting on Vācaspati's *Tattva-kaumudī*, quotes *Muṇḍaka Upaniṣad*, II. 2. 8, and also *Śrīmad-bhagavad-gītā*, IV. 37, for its support. Compare *Yoga-vāsiṣṭha*: *ghanā na vāsanā yasya punar-janana-varjitā*.

² *Sāṃkhya-sūtra*, III. 77-83.

³ *Ibid.* III. 77, 78.

been burnt, these occasional ordinary cognitive states are like passing shadows which have no basis anywhere; they cannot, therefore, produce any further impressions and thus cannot be a cause of bondage to the saint. With the advance of this state the sage ceases to have inclinations even towards his processes of concentration, and there is only discriminative knowledge; this state of *samādhi* is called *dharma-megha*. At this stage all the roots of ignorance and other afflictions become absolutely destroyed, and in such a state the sage, though living (*jīvaṇṇ eva*), becomes emancipated (*vimukta*). The next stage is, of course, the state of absolute emancipation (*kaivalya*), when the *citta* returns back to *prakṛti*, never to find the *puruṣa* again¹.

Among later writers Vidyāraṇya wrote on this subject a treatise which he called *Jīvan-mukti-viveka*². It is divided into five chapters. In the first he deals with the authorities who support *jīvan-mukti*; in the second, with the nature of the destruction of instinctive root inclinations (*vāsanā*); in the third, with the destruction of *manas* (*mano-nāśa*); in the fourth, with the final object for which *jīvan-mukti* is sought; and in the fifth, with the nature and characteristics of those saints who have attained *jīvan-mukti* by wisdom and right knowledge (*vidvat-saṁnyāsa*), and have virtually renounced the world, though living. The work is more a textual compilation from various sources than an acute philosophical work examining the subject on its own merits. The writer seems to have derived his main inspiration from the *Yoga-vāsiṣṭha*, though he refers to relevant passages in several other works, such as *Bṛhad-āranyaka Upaniṣad*, *Maitreyī-brāhmaṇa*, *Kahola-brāhmaṇa*, *Śārīra-brāhmaṇa*, *Jābālu-brāhmaṇa*, *Kaṭha-vallī*, *Gītā*, *Bhāgavata*, *Brhaspati-smṛti*, *Sūta-saṁhitā*, *Gauḍa-pāda-kārikā*, *Śaṅkara-bhāṣya*, *Brahma-sūtra*, *Pañca-pādikā*, *Viṣṇu-purāṇa*, *Taittirīya-brāhmaṇa*, *Yoga-sūtra*, *Naiṣkarmya-siddhi*, *Kauṣītaki*, *Pañcadaśī*, *Antaryāmi-brāhmaṇa*, *Vyāsa-bhāṣya*, *Brahma-upaniṣad*, the works of Yama, Parāśara, Bodhāyana, Medhātithi, Viśvarūpa Ācārya, etc.

Disinclination to passions and desires (*vīrakti*) is, according to him, of two kinds, intense (*tīvra*) and very intense (*tīvratara*).

¹ *Yoga-sūtra* and *Vyāsa-bhāṣya*, iv. 29-32.

² This Vidyāraṇya seems to be later than the Vidyāraṇya who wrote the *Pañcadaśī*, as quotations from the chapter *Brahmānanda* of the *Pañcadaśī* are found in it (chap. II, pp. 195, 196, Chowkhamba edition). So my identification of the Vidyāraṇya of the *Pañcadaśī* with the writer of *Jīvan-mukti-viveka* in the first volume (p. 419) of the present work seems to be erroneous.

Intense *virakti* is that in which the person does not desire anything in this life, whereas very intense *virakti* is that in which the person ceases to have any desires for all future lives¹. Vidyāraṇya takes great pains to prove, by reference to various scriptural texts, that there are these two distinct classes of renunciation (*saṁnyāsin*), though one might develop into the other². As regards the nature of *jīvan-mukti*, Vidyāraṇya follows the view of the *Yoga-vāsiṣṭha*, though he supports it by other scriptural quotations. On the subject of bodiless emancipation (*videha-mukti*) also he refers to passages from the *Yoga-vāsiṣṭha*. *Jīvan-mukti* is the direct result of the cessation of all instinctive root desires (*vāsanā-kṣaya*), the dawning of right knowledge (*tattva-jñāna*), and the destruction of *manas* (*mano-nāśa*). Vidyāraṇya, however, holds that on account of steady right knowledge even the seeming appearance of passions and attachment cannot do any harm to a *jīvan-mukta*, just as the bite of a snake whose fangs have been drawn cannot do him any harm. Thus he gives the example of Yājñavalkya, who killed Śākalya by cursing and yet did not suffer on that account, because he was already a *jīvan-mukta*, firm in his knowledge of the unreality of the world. So his anger was not real anger, rooted in instinctive passions, but a mere appearance (*ābhāsa*) of it³.

Energy of Free-will (Pauruṣa).

One of the special features of the *Yoga-vāsiṣṭha* is the special emphasis that it lays upon free-will and its immense possibilities, and its power of overruling the limitations and bondage of past *karmas*. *Pauruṣa* is defined in the *Yoga-vāsiṣṭha* as mental and physical exertions made in properly advised ways (*sādhūpadiṣṭa*-

¹ If the ascetic has ordinary desires he is called *haṁsa*; if he desires emancipation, he is called *parama-haṁsa*. The course of their conduct is described in the *Parāśara-smṛti*, *Jīvan-mukti-viveka*, I. 11. When a man renounces the world for the attainment of right knowledge, it is called *vividiṣā-saṁnyāsa* (renunciation for thirst of knowledge), as distinguished from *vidvat-saṁnyāsa* (renunciation of the wise) in the case of those who have already attained right knowledge. The latter kind of *saṁnyāsa* is with reference to those who are *jīvan-mukta*.

² It is pointed out by Vidyāraṇya that the *Ārunikopaniṣad* describes the conduct and character of *vividiṣā-saṁnyāsa*, in which one is asked to have a staff, one loin-cloth and to repeat the *Āraṇyaka*s and the *Upaniṣad*s only, and the *Parama-haṁsopaniṣad* describes the conduct and character of *vidvat-saṁnyāsa*, in which no such repetition of the *Upaniṣad*s is held necessary, since such a person is fixed and steady in his *Brahma* knowledge. This makes the difference between the final stages of the two kinds of renunciation (*Jīvan-mukti-viveka*, I. 20-24).

³ *Jīvan-mukti-viveka*, pp. 183-186.

mārgeṇa), since only such actions can succeed¹. If a person desires anything and works accordingly in the proper way, he is certain to attain it, if he does not turn back in midway². *Pauruṣa* is of two kinds, of the past life (*prāktana*) and of this life (*aīhika*), and the past *pauruṣa* can be overcome by the present *pauruṣa*³. The *karma* of past life and the *karma* of this life are thus always in conflict with each other, and one or the other gains ground according to their respective strength. Not only so, but the endeavours of any individual may be in conflict with the opposing endeavours of other persons, and of these two also that which is stronger wins⁴. By strong and firm resolution and effort of will the endeavours of this life can conquer the effect of past deeds. The idea that one is being led in a particular way by the influence of past *karmas* has to be shaken off from the mind; for the efforts of the past life are certainly not stronger than the visible efforts of the moment.

All efforts have indeed to be made in accordance with the direction of the scriptures (*śāstra*). There is, of course, always a limit beyond which human endeavours are not possible, and therefore it is necessary that proper economy of endeavours should be observed by following the directions of the scriptures, by cultivating the company of good friends, and by adhering to right conduct, since mere random endeavours or endeavours on a wrong line cannot be expected to produce good results⁵. If one exerts his will and directs his efforts in the proper way, he is bound to be successful. There is nothing like destiny (*daiva*), standing as a separate force: it has a continuity with the power of other actions performed in this life, so that it is possible by superior exertions to destroy the power of the actions of previous lives, which would have led to many evil results. Whenever a great effort is made or a great energy is exerted, there is victory. The whole question, whether the *daiva* of the past life or the *pauruṣa* of this life will win, depends upon the relative strength of the two, and any part of the *daiva* which becomes weaker than the efforts of the present life

in a contrary direction is naturally annulled. It is only he who thinks that destiny must lead him on, and consequently does not strive properly to overcome the evil destiny, that becomes like an animal at the mercy of destiny or God, which may take him to heaven or to hell. The object of all endeavours and efforts in this life is to destroy the power of the so-called destiny, or *daiva*, and to exert oneself to his utmost to attain the supreme end of life.

The *Yoga-vāsiṣṭha* not only holds that *pauruṣa* can conquer and annul *daiva*, but it even goes to the extreme of denying *daiva* and calling it a mere fiction, that, properly speaking, does not exist at all. Thus it is said that endeavours and efforts manifest themselves as the movement of thought (*saṃvit-spanda*), the movement of *manas* (*manah-spanda*), and the movement of the senses (*āindriya*). Thought movement is followed by movement of the psychosis or *cetas*; the body moves accordingly, and there is also a corresponding enjoyment or suffering. If this view is true, then *daiva* is never seen anywhere. Properly speaking, there is no *daiva*, and wherever any achievement is possible, it is always by continual strenuous effort of will, standing on its own account, or exercised in accordance with the *śāstra* or with the directions of a teacher¹. It is for all of us to exert ourselves for good and to withdraw our minds from evil. By all the *pramāṇas* at our disposal it is found that nothing but the firm exercise of will and effort achieves its end, and that nothing is effected by pure *daiva*; it is only by the effort of eating that there is the satisfaction of hunger, it is only by the effort of the vocal organs that speech is effected, and it is only by the effort of the legs and corresponding muscles that one can walk. So everything is effected by personal efforts, when directed with the aid of the *śāstra* and proper advisers or teachers. What passes as *daiva* is a mere fiction; no one has ever experienced it, and it cannot be used by any of the senses; and the nature of efforts being essentially vibratory (*spanda*), one can never expect such movement from the formless, insensible, so-called *daiva*, which is only imagined and can never be proved. Visible efforts are all tangible and open to immediate perception; and, even if it is admitted that *daiva* exists, how can this supposed formless (*amūrta*) entity come in contact with it? It is only fools who conceive the

1

sarvatra puruṣārthasya na daivasya kadācana.*

Yoga-vāsiṣṭha, II. 7. 11.

existence of *daiva*, and depend on it, and are ruined, whereas those who are heroes, who are learned and wise, always attain their highest by their free-will and endeavour¹.

Rāma points out to Vasiṣṭha in II. 9 that *daiva* is fairly well accepted amongst all people, and asks how, if it did not exist, did it come to be accepted, and what does it mean after all? In answer to this Vasiṣṭha says that, when any endeavour (*pauruṣa*) comes to fruition or is baffled, and a good or a bad result is gained, people speak of it as being *daiva*. There is no *daiva*, it is mere vacuity, and it can neither help nor obstruct anyone in any way. At the time of taking any step people have a particular idea, a particular resolution; there may be success or failure as the result of operation in a particular way, and the whole thing is referred to by ordinary people as being due to *daiva*, which is a mere name, a mere consolatory word. The instinctive root inclinations (*vāsanā*) of a prior state become transformed into *karma*. A man works in accordance with his *vāsanā* and by *vāsanā* gets what he wants. *Vāsanā* and *karma* are, therefore, more or less like the potential and actual states of the same entity. *Daiva* is but another name for the *karmas* performed with strong desire for fruit, *karma* thus being the same as *vāsanā*, and *vāsanā* being the same as *manas*, and *manas* being the same as the agent or the person (*puruṣa*); so *daiva* does not exist as an entity separate from the *puruṣa*, and they are all merely synonyms for the same indescribable entity (*durniścaya*). Whatever the *manas* strives to do is done by itself, which is the same as being done by *daiva*. There are always in *manas* two distinct groups of *vāsanās*, operating towards the good and towards the evil, and it is our clear duty to rouse the former against the latter, so that the latter may be overcome and dominated by the former. But, since man is by essence a free source of active energy, it is meaningless to say that he could be determined by anything but himself; if it is held that any other entity could determine him, the question arises, what other thing would determine that entity, and what else that entity, and there would thus be an endless vicious regression². Man is thus a free source

Ibid. II. 9. 29.

of activity, and that which appears to be limiting his activity is but one side of him, which he can overcome by rousing up his virtuous side. This view of *puṛuṣa-kāra* and *karma* seems to be rather unique in Indian literature.

Prāṇa and its Control.

The mind (*citta*), which naturally transforms itself into its states (*vṛtti*), does so for two reasons, which are said to be like its two seeds. One of these is the vibration (*parispanda*) of *prāṇa*, and the other, strong and deep-rooted desires and inclinations which construct (*dṛḍha-bhāvanā*)¹. When the *prāṇa* vibrates and is on the point of passing through the nerves (*nāḍī-saṃsparśanodyata*), then there appears the mind full of its thought processes (*saṃvedanamaya*). But when the *prāṇa* lies dormant in the hollow of the veins (*śīrā-saraṇi-koṭare*), then there is no manifestation of mind, and its processes and the cognitive functions do not operate². It is the vibration of the *prāṇa* (*prāṇa-spanda*) that manifests itself through the *citta* and causes the world-appearance out of nothing. The cessation of the vibration of *prāṇa* means cessation of all cognitive functions. As a result of the vibration of *prāṇa*, the cognitive function is set in motion like a top (*viṭā*). As a top spins round in the yard when struck, so, roused by the vibration of *prāṇa*, knowledge is manifested; and in order to stop the course of knowledge, it is necessary that the cause of knowledge should be first attacked. When the *citta* remains awake to the inner sense, while shut to all extraneous cognitive activities, we have the highest state. For the cessation of *citta* the yogins control *prāṇa* through *prāṇāyāma* (breath-regulation) and meditation (*dhyāna*), in accordance with proper instructions³.

Again, there is a very intimate relation between *vāsanā* and *prāṇa-spanda*, such that *vāsanā* is created and stimulated into activity, *prāṇa-spanda*, and *prāṇa-spanda* is set in motion through *vāsanā*. When by strong ideation and without any proper deliberation of the past and the present, things are conceived to be one's own—the body, the senses, the ego and the like—we have what is

¹ *Yoga-vāsiṣṭha*, v. 91. 14.

² I have translated *śīrā* as veins, though I am not properly authorized to do it. For the difference between veins and arteries does not seem to have been known.

³ *Yoga-vāsiṣṭha*, v. 91. 20-27.

called *vāsanā*. Those who have not the proper wisdom always believe in the representations of the ideations of *vāsanā* without any hesitation and consider them to be true; and, since both the *vāsanā* and the *prāṇa-spanda* are the ground and cause of the manifestations of *citta*, the cessation of one promptly leads to the cessation of the other. The two are connected with each other in the relation of seed and shoot (*bijāṅkuravat*); from *prāṇa-spanda* there is *vāsanā*, and from *vāsanā* there is *prāṇa-spanda*. The object of knowledge is inherent in the knowledge itself, and so with the cessation of knowledge the object of knowledge also ceases¹.

As a description of *prāṇa* we find in the *Yoga-vāsiṣṭha* that it is said to be vibratory activity (*spanda-śakti*) situated in the upper part of the body, while *apāna* is the vibratory activity in the lower part of the body. There is a natural *prāṇāyāma* going on in the body in waking states as well as in sleep. The mental outgoing tendency of the *prāṇas* from the cavity of the heart is called *recaka*, and the drawing in of the *prāṇas* (*dvādaśāṅgulī*) by the *apāna* activity is called *pūraka*. The interval between the cessation of one effort of *apāna* and the rise of the effort of *prāṇa* is the stage of *kumbhaka*. Bhuṣuṇḍa, the venerable old crow who was enjoying an exceptionally long life, is supposed to instruct Vāsiṣṭha in VI. 24 on the subject of *prāṇa*. He compares the body to a house with the ego (*ahaṁkāra*) as the householder. It is supposed to be supported by pillars of three kinds², provided with nine doors (seven apertures in the head and two below), tightly fitted with the tendons (*snāyu*) as fastening materials and cemented with blood, flesh and fat. On the two sides of it there are the two *nāḍis*, *idā* and *piṅgalā*, lying passive and unmanifested (*nimīlita*). There is also a machine (*yantra*) of bone and flesh (*asthi-māṁsa-maya*) in the shape of three double lotuses (*padma-yugma-traya*) having pipes attached to them running both upwards and downwards and with their petals closing upon one another (*anyonya-mīlat-komala-saddala*). When it is slowly

¹ *saṁulāṁ naśyataḥ kṣipraṁ mūla-cchedād iva drumah.
saṁvidam viddhi saṁvedyaṁ bijam dhīratayā vinā
na saṁbhavati saṁvedyaṁ taila-hīnas tilo yathā
na bahir nāntare kimcit saṁvedyaṁ vidyate pṛthak.*

Yoga-vāsiṣṭha, v. 91. 66 and 67.

² *tri-prakāra-mahā-sthūṇam*, VI. 24. 14. The commentator explains the three kinds of pillars as referring to the three primal entities of Indian medicine—*vāyu* (air), *pitta* (bile) and *kapha* (phlegm)—*vāta-pitta-kapha-lakṣaṇa-tri-prakārā mahāntaḥ sthūnā viṣṭambha-kāṣṭhāni yasya*. I am myself inclined to take the three kinds of pillars as referring to the bony structure of three parts of the body—the skull, the trunk, and the legs.

filled with air, the petals move, and by the movement of the petals the air increases. Thus increased, the air, passing upwards and downwards through different places, is differently named as *prāṇa*, *apāna*, *samāna*, etc. It is in the threefold machinery of the lotus of the heart (*hṛt-padma-yantra-tritaye*) that all the *prāṇa* forces operate and spread forth upwards and downwards like the rays from the moon's disc. They go out, return, repulse and draw and circulate. Located in the heart, the air is called *prāṇa*: it is through its power that there is the movement of the eyes, the operation of the tactual sense, breathing through the nose, digesting of food and the power of speech¹. The *prāṇa* current of air stands for exhalation (*recaka*) and the *apāna* for inhalation (*pūraka*), and the moment of respite between the two operations is called *kumbhaka*; consequently, if the *prāṇa* and *apāna* can be made to cease there is an unbroken continuity of *kumbhaka*. But all the functions of the *prāṇa*, as well as the upholding of the body, are ultimately due to the movement of *citta*². Though in its movement in the body the *prāṇa* is associated with air currents, still it is in reality nothing but the vibratory activity proceeding out of the thought-activity, and these two act and react upon each other, so that, if the vibratory activity of the body be made to cease, the thought-activity will automatically cease, and vice-versa. Thus through *spanda-nirodha* we have *prāṇa-nirodha* and through *prāṇa-nirodha* we have *spanda-nirodha*. In the *Yoga-vāsiṣṭha*, III. 13. 31, *vāyu* is said to be nothing but a vibratory entity (*spandate yat sa tad vāyuh*).

In v. 78 it is said that *citta* and movement are in reality one and the same, and are therefore altogether inseparable, like the snow and its whiteness, and consequently with the destruction of one the other is also destroyed. There are two ways of destroying the *citta*, one by Yoga, consisting of the cessation of mental states, and the other by right knowledge. As water enters through the crevices of the earth, so air (*vāta*) moves in the body through the *nāḍis* and is called *prāṇa*. It is this *prāṇa* air which, on account of its diverse functions and works, is differently named as *apāna*, etc.

¹ *Yoga-vāsiṣṭha*, VI. 24. It is curious to note in this connection that in the whole literature of the Āyur-veda there is probably no passage where there is such a clear description of the respiratory process. *Pupphusa*, or lungs, are mentioned only by name in *Suśruta-saṃhitā*, but none of their functions and modes of operation are at all mentioned. It is probable that the discovery of the respiratory functions of the lungs was made by a school of thought different from that of the medical school.

² *Ibid.* VI. 25. 61-74.

But it is identical with *citta*. From the movement of *prāṇa* there is the movement of *citta*, and from that there is knowledge (*samvid*). As regards the control of the movement of *prāṇa*, the *Yoga-vāsiṣṭha* advises several alternatives. Thus it holds that through concentrating one's mind on one subject, or through fixed habits of long inhalation associated with meditation, or through exhaustive exhalation, or the practice of not taking breath and maintaining *kumbhaka*, or through stopping the inner respiratory passage by attaching the tip of the tongue to the uvula¹, or, again, through concentration of the mind or thoughts on the point between the two brows, there dawns all of a sudden the right knowledge and the consequent cessation of *prāṇa* activities².

Professor Macdonell, writing on *prāṇa* in the *Vedic Index*, vol. II, says, "*prāṇa*, properly denoting 'breath,' is a term of wide and vague significance in Vedic literature." In the narrow sense *prāṇa* denotes one of the vital airs, of which five are usually enumerated, viz. *prāṇa*, *apāna*, *vyāna*, *udāna* and *samāna*. The exact sense of each of these breaths, when all are mentioned, cannot be determined. The word *prāṇa* has sometimes merely the general sense of breath, even when opposed to *apāna*. But its proper sense is beyond question "breathing forth," "expiration." But, though in a few cases the word may have been used for "breath" in its remote sense, the general meaning of the word in the Upaniṣads is not air current, but some sort of biomotor force, energy or vitality often causing these air currents³. It would be tedious to refer to the large number of relevant Upaniṣad texts and to try to ascertain after suitable discussion their exact significance in each

¹ *tālu-mūla-gatām yatnāj jihvayākramya ghaṇṭikām
ūrdhva-randhra-gate prāṇe prāṇa-spando nirudhyate.*

Yoga-vāsiṣṭha, v. 78. 25.

² It is important to notice in this connection that most of the forms of *prāṇa-yāma* as herein described, except the *haṭha-yoga* process of arresting the inner air passage by the tongue, otherwise known as *khecari-mūdrā*, are the same as described in the *sūtras* of Patañjali and the *bhāṣya* of Vyāsa; and this fact has also been pointed out by the commentator Ānandabodhendra Bhikṣu in his commentary on the above.

³ Difference between *prāṇa* and *vāyu*, *Aitareya*, II. 4; the *nāsikya prāṇa*, I. 4. Relation of *prāṇa* to other functions, *Kauṣītaki*, II. 5; *prāṇa* as life, II. 8; *prāṇa* connected with *vāyu*, II. 12; *prāṇa* as the most important function of life, II. 14; *prāṇa* as consciousness, III. 2. Distinction of *nāsikya* and *mukhya prāṇa*, *Chāndogya*, II. 1-9; the function of the five *vāyus*, III. 3-5; *prāṇa* as the result of food, I. 8. 4; of water, VI. 5. 2, VI. 6. 5, VI. 7. 6; *prāṇa* connected with *ātman*, as everything else connected with *prāṇa*, like spokes of a wheel, *Bṛhad-āraṇyaka*, II. 5. 15; *prāṇa* as strength, *ibid.* v. 14. 4; *prāṇa* as force running through the *suṣumnā* nerve, *Maitrī*, VI. 21; etc.

case. The best way to proceed therefore is to refer to the earliest traditional meaning of the word, as accepted by the highest Hindu authorities. I refer to the *Vedānta-sūtra* of Bādarāyaṇa, which may be supposed to be the earliest research into the doctrines discussed in the Upaniṣads. Thus the *Vedānta-sūtra*, II. 4. 9 (*na vāyu-kriye prthag upadeśāt*), speaking of what may be the nature of *prāṇa*, says that it is neither air current (*vāyu*) nor action (*kriyā*), since *prāṇa* has been considered as different from air and action (in the Upaniṣads). Śaṅkara, commenting on this, says that from such passages as *yaḥ prāṇaḥ sa eṣa vāyuh pañca 'vidhaḥ prāṇo pāno vyāna udānaḥ samānaḥ* (what is *prāṇa* is *vāyu* and it is fivefold, *prāṇa*, *apāna*, *vyāna*, *udāna*, *samāna*), it may be supposed that *vāyu* (air) is *prāṇa*, but it is not so, since in *Chāndogya*, III. 18. 4, it is stated that they are different. Again, it is not the action of the senses, as the Sāṃkhya supposes; for it is regarded as different from the senses in *Muṇḍaka*, II. 1. 3. The passage which identifies *vāyu* with *prāṇa* is intended to prove that it is the nature of *vāyu* that has transformed itself into the entity known as *prāṇa* (just as the human body itself may be regarded as a modification or transformation of *kṣiti*, earth). It is not *vāyu*, but, as Vācaspati says, "*vāyu-bheda*," which Amalānanda explains in his *Vedānta-kalpataru* as *vāyoh pariṇāma-rūpa-kārya-viśeṣaḥ*, i.e. it is a particular evolutionary product of the category of *vāyu*. Śaṅkara's own statement is equally explicit on the point. He says, "*vāyur evāyam adhyātman āpannaḥ pañca-vyūho viśeṣātmanāvatiṣṭhamānaḥ prāṇo nāma bhanyate na tattvāntaram nāpi vāyu-mātram*," i.e. it is *vāyu* which, having transformed itself into the body, differentiates itself into a group of five that is called *vāyu*; *prāṇa* is not altogether a different category, nor simply air. In explaining the nature of *prāṇa* in II. 4. 10-12, Śaṅkara says that *prāṇa* is not as independent as *jīva* (soul), but performs everything on its behalf, like a prime minister (*rāja-mantrivaj jīvasya sarvārtha-karaṇatvena upakaraṇa-bhūto na svatantraḥ*). *Prāṇa* is not an instrument like the senses, which operate only in relation to particular objects; for, as is said in *Chāndogya*, v. 1. 6, 7, *Bṛhad-āraṇyaka*, IV. 3. 12 and *Bṛhad-āraṇyaka*, I. 3. 19, when all the senses leave the body the *prāṇa* continues to operate. It is that by the functioning of which the existence of the soul in the body, or life (*jīva-sthiti*), and the passage of the *jīva* out of the body, or death (*jīvotkrānti*), are possible. The five *vāyus* are the five functionings of this vital

principle, just as the fivefold mental states of right knowledge, illusion, imagination (*vikalpa*), sleep and memory are the different states of the mind. Vācaspati, in commenting on *Vedānta-sūtra*, II. 4. 11, says that it is the cause which upholds the body and the senses (*dehendriya-vidhāraṇa-kāraṇam prāṇaḥ*), though it must be remembered that it has still other functions over and above the upholding of the body and the senses (*na kevalam śarīrendriya-dhāraṇam asya kāryam*, Vācaspati, *ibid.*). In *Vedānta-sūtra*, II. 4. 13, it is described as being atomic (*aṇu*), which is explained by Śaṅkara as “subtle” (*sūkṣma*), on account of its pervading the whole body by its fivefold functionings. Vācaspati in explaining it says that it is called “atomic” only in a derivative figurative sense (*upacaryate*) and only on account of its inaccessible or indefinable character (*duradhigamatā*), though pervading the whole body. Govindānanda, in commenting upon *Vedānta-sūtra*, II. 4. 9, says that *prāṇa* is a vibratory activity which upholds the process of life and it has no other direct operation than that (*parispanda-rupa-prāṇanānukūlatvād avāntara-vyāpārābhāvāt*). This seems to be something like biomotor or life force. With reference to the relation of *prāṇa* to the motor organs or faculties of speech, etc., Śaṅkara says that their vibratory activity is derived from *prāṇa* (*vāg-ādiṣu parispanda-lābhasya prāṇāyattatvam*, II. 4. 19). There are some passages in the *Vedānta-sūtra* which may lead us to think that the five *vāyus* may mean air currents, but that it is not so is evident from the fact that the substance of the *prāṇa* is not air (*etat prāṇādi-pañcakam ākāśādi-gata-rajo-’mśebhyo militebhya utpadyate*), and the *rajas* element is said to be produced from the five *bhūtas*, and the *prāṇas* are called *kriyātmaka*, or consisting of activity. Rāma Tīrtha, commenting on the above passage of the *Vedānta-sāra*, says that it is an evolutionary product of the essence of *vāyu* and the other *bhūtas*, but it is not in any sense the external air which performs certain physiological functions in the body (*tathā mukhya-prāṇo ’pi vāyor bāhyasya sūtrātmakasya vikāro na śārīra-madhye nabhovad vṛtti-lābha-mātreṇa avasthito bāhya-vāyur eva*)¹. Having proved that in Vedānta *prāṇa* or any of the five *vāyus* means biomotor force and not air current, I propose now to turn to the Sāṃkhya-Yoga.

The Sāṃkhya-Yoga differs from the Vedānta in rejecting the view that the *prāṇa* is in any sense an evolutionary product of the

¹ *Vidvan-mano-rañjanī*, p. 105, Jacob’s edition, Bombay, 1916.

nature of *vāyu*. Thus Vijñānabhikṣu in his *Vijñānāmṛta-bhāṣya* on *Vedānta-sūtra*, II. 4. 10, says that *prāṇa* is called *vāyu* because it is self-active like the latter (*svataḥ kriyāvattvena ubhayoḥ prāṇa-vāyvoḥ sājātyāt*). Again, in II. 4. 9, he says that *prāṇa* is neither air nor the upward or downward air current (*mukhya-prāṇo na vāyuh nāpi śārīrasya ūrdhv-ādho-vgamana-lakṣaṇā vāyu-kriyā*).

What is *prāṇa*, then, according to Sāṃkhya-Yoga? It is *mahat-tattva*, which is evolved from *prakṛti*, which is called *buddhi* with reference to its intellective power and *prāṇa* with reference to its power as activity. The so-called five *vāyus* are the different functionings of the *mahat-tattva* (*sāmānya-kārya-sādhāraṇaṃ yat kāraṇaṃ mahat-tattvaṃ tasyaiva vṛtti-bhedāḥ prāṇāpānādayaḥ*; see *Vijñānāmṛta-bhāṣya*, II. 4. 11). Again, referring to *Sāṃkhya-kārikā*, 29, we find that the five *vāyus* are spoken of as the common functioning of *buddhi*, *ahaṃkāra* and *manas*, and Vācaspati says that the five *vāyus* are their life. This means that the three, *buddhi*, *ahaṃkāra* and *manas*, are each energizing, in their own way, and it is the joint operation of these energies that is called the fivefold *prāṇa* which upholds the body. Thus in this view also *prāṇa* is biomotor force and no air current. The special feature of this view is that this biomotor force is in essence a mental energy consisting of the specific functionings of *buddhi*, *ahaṃkāra* and *manas*¹. It is due to the evolutionary activity of *antaḥkaraṇa*. In support of this view the *Sāṃkhya-pravacana-bhāṣya*, II. 31, *Vyāsa-bhāṣya*, III. 39, Vācaspati's *Tattva-vaiśārādī*, Bhikṣu's *Yoga-varttika*, and Nāgeśa's *Chāyā-vyākhyā* thereon may be referred to. It is true, no doubt, that sometimes inspiration and expiration of external air are also called *prāṇa*; but that is because in inspiration and expiration the function of *prāṇa* is active or it vibrates. It is thus the entity which moves and not mere motion that is called *prāṇa*². Rāmānuja agrees with Śaṅkara in holding that *prāṇa* is not air (*vāyu*), but a transformation of the nature of air. But it should be noted that this modification of air is such a modification as can only be known by Yoga methods³.

The Vaiśeṣika, however, holds that it is the external air which

¹ Gauḍapāda's *bhāṣya* on the *Sāṃkhya-kārikā*, 29 compares the action of *prāṇa* to the movement of birds enclosed in a cage which moves the cage: compare Śaṅkara's reference to *Vedānta-sūtra*, II. 4. 9.

² Rāmānuja's *bhāṣya* on *Vedānta-sūtra*, II. 4. 8.

³ See the *Tattva-muktā-kalāpa*, 53-55, and also Rāmānuja's *bhāṣya* and *Śruta-prakāśikā*, II. 4. 1-15.

according to its place in the body performs various physiological functions¹. The medical authorities also support the view that *vāyu* is a sort of driving and upholding power. Thus the *Bhāva-prakāśa* describes *vāyu* as follows: It takes quickly the *doṣas*, *dhātus* and the *malas* from one place to another, is subtle, composed of *rajo-guṇa*; is dry, cold, light and moving. By its movement it produces all energy, regulates inspiration and expiration and generates all movement and action, and by upholding the keenness of the senses and the *dhātus* holds together the heat, senses and the mind². Vāhaṭa in his *Aṣṭāṅga-saṃgraha* also regards *vāyu* as the one cause of all body movements, and there is nothing to suggest that he meant air currents³. The long description of Caraka (I. 12), as will be noticed in the next chapter, seems to suggest that he considered the *vāyu* as the constructive and destructive force of the universe, and as fulfilling the same kinds of functions inside the body as well. It is not only a physical force regulating the physiological functions of the body, but is also the mover and controller of the mind in all its operations, as knowing, feeling and willing. Suśruta holds that it is in itself *avyakta* (unmanifested or unknowable), and that only its actions as operating in the body are manifested (*avyakto vyakta-karmā ca*).

In the *Yoga-vāsiṣṭha*, as we have already seen above, *prāṇa* or *vāyu* is defined as that entity which vibrates (*spandate yat sa tad vāyuh*, III. 13) and it has no other reality than vibration. *Prāṇa* itself is, again, nothing but the movement of the intellect as *ahamkāra*⁴.

Prāṇa is essentially of the nature of vibration (*spanda*), and mind is but a form of *prāṇa* energy, and so by the control of the mind the five *vāyus* are controlled⁵. The Śaiva authorities also agree with the view that *prāṇa* is identical with cognitive activity, which passes through the *nāḍīs* (nerves) and maintains all the body movement and the movement of the senses. Thus Kṣemarāja says that it is the cognitive force which passes in the form of *prāṇa* through the *nāḍīs*, and he refers to Bhaṭṭa Kallaṭa as also holding the same view, and *prāṇa* is definitely spoken of by him as force (*kuṭīla-vāhinī prāṇa-śaktiḥ*)⁶. Śivopādhyaya in his *Vivṛti* on the

⁵ *Ibid.* v. 13, 78.

⁶ *Śiva-sūtra-vimarśinī*, III. 43, 44.

Vijñāna-bhairava also describes *prāṇa* as force (*śakti*), and the *Vijñāna-bhairava* itself does the same¹. Bhaṭṭa Ānanda in his *Vijñāna-kaumudī* describes *prāṇa* as a functioning of the mind (*citta-vṛtti*).

Stages of Progress.

It has been already said that the study of philosophy and association with saintly characters are the principal means with which a beginner has to set out on his toil for the attainment of salvation. In the first stage (*prathamā bhūmikā*) the enquirer has to increase his wisdom by study and association with saintly persons. The second stage is the stage of critical thinking (*vicāraṇā*); the third is that of the mental practice of dissociation from all passions, etc. (*asaṅga-bhāvanā*); the fourth stage (*vilāpanī*) is that in which through a right understanding of the nature of truth the world-appearance shows itself to be false; the fifth stage is that in which the saint is in a state of pure knowledge and bliss (*śuddha-saṃvit-mayā-nanda-rūpa*). This stage is that of the *jīvan-mukta*, in which the saint may be said to be half-asleep and half-awake (*ardha-supta-prabuddha*). The sixth stage is that in which the saint is in a state of pure bliss; it is a state which is more like that of deep dreamless sleep (*suṣupta-saḍśā-sthiti*). The seventh stage is the last transcendental state (*turyātita*), which cannot be experienced by any saint while he is living. Of these the first three stages are called the waking state (*jāgrat*), the fourth stage is called the dream state (*svapna*), the fifth stage is called the dreamless (*suṣupta*) state, the sixth stage is an unconscious state called the *turya*, and the seventh stage is called the *turyātita*³.

Desire (*icchā*) is at the root of all our troubles. It is like a mad elephant rushing through our system and trying to destroy it. The senses are like its young, and the instinctive root inclinations (*vāsanā*) are like its flow of ichor. It can only be conquered by the close application of patience (*dhairya*). Desire means the imaginations of the mind, such as "let this happen to me," and this is also called *saṅkalpa*. The proper way to stop this sort of imagining is to cease by sheer force of will from hoping or desiring in this manner, and for this one has to forget his memory; for

² See the *Nyāya-kandali* of Śrīdhara, p. 48, and also *Dinakarī* and *Rāmarūdrī* on the *Siddhānta-muktāvalī* on *Bhāṣā-parichheda*, p. 44.

³ *Yoga-vāsiṣṭha*, VI. 120.

so long as memory continues such hopes and desires cannot be stopped. The last stage, when all movement has ceased (*asṇanda*) and all thoughts and imaginations have ceased, is a state of unconsciousness (*avedanam*)¹. *Yoga* is also defined as the ultimate state of unconsciousness (*avedana*), the eternal state when everything else has ceased². In this state *citta* is destroyed, and one is reduced to the ultimate entity of consciousness; and thus, being free of all relations and differentiations of subject and object, one has no knowledge in this state, though it is characterized as *bodhātma* (identical with consciousness). This last state is indeed absolutely indescribable (*avyapadeśya*), though it is variously described as the state of Brahman, Śiva, or the realization of the distinction of *prakṛti* and *puruṣa*³. The *Yoga-vāsiṣṭha*, however, describes this state not as being essentially one of bliss, but as a state of unconsciousness unthinkable and indescribable. It is only the fifth state that manifests itself as being of the nature of *ānanda*; the sixth state is one of unconsciousness, which, it seems, can somehow be grasped; but the seventh is absolutely transcendental and indescribable.

The division of the progressive process into seven stages naturally reminds one of the seven stages of *prajñā* (wisdom) in Patañjali's *Yoga-sūtra* and *Vyāsa-bhāṣya*. The seven stages of *prajñā* are there divided into two parts, the first containing four and the second three. Of these the four are psychological and the three are ontological, showing the stages of the disintegration of *citta* before its final destruction or *citta-vimukti*⁴. Here also the first four stages, ending with *vilāpanī*, are psychological, whereas the last three stages represent the advance of the evolution of *citta* towards its final disruption. But, apart from this, it does not seem that there is any one to one correspondence of the *prajñā* states of the *Yoga-vāsiṣṭha* with those of Patañjali. The *Yoga-vāsiṣṭha* occasionally mentions the name *Yoga* as denoting the highest state and defines it as the ultimate state of unconsciousness (*avedanam vidur yogam*) or as the cessation of the poisonous effects of desire⁵. In the first half of the sixth book, chapter 125, the ultimate state is described as the state of universal negation (*sarvāpahnava*). Existence of *citta* is pain, and its destruction bliss; the destruction

⁴ See my *A History of Indian Philosophy*, vol. I, Cambridge, 1922, p. 273.

⁵ *Ichā-ṛiṣa-vikārasya viyogam yoga-nāmakam. Yoga-vāsiṣṭha*, vi. 37. 1; also *ibid.* vi. 126. 99.

of *citta* by cessation of knowledge—a state of neither pain nor pleasure nor any intermediate state—a state as feelingless as that of the stone (*pāṣāṇavat-samam*), is the ultimate state aimed at¹.

Karma, according to the *Yoga-vāsiṣṭha*, is nothing but thought-activity manifesting itself as subject-object knowledge. Abandonment of *karma* therefore means nothing short of abandonment of thought-activity or the process of knowledge². Cessation of *karma* thus means the annihilation of knowledge. The stirring of *karma* or activity of thought is without any cause; but it is due to this activity that the ego and all other objects of thought come into being; the goal of all our endeavours should be the destruction of all knowledge, the unconscious, stone-like knowledgeless state³.

As there are seven progressive stages, so there are also seven kinds of beings according to the weakness or strength of their *vāsanās*. There are *svapna-jāgara*, *saṅkalpa-jāgara*, *kevala-jāgrat-sthita*, *cirā-jāgrat-sthita*, *ghana-jāgrat-sthita*, *jāgrat-svapna* and *kṣīṇa-jāgaraka*. *Svapna-jāgara* (dream-awake) persons are those who in some past state of existence realized in dream experience all our present states of being and worked as dream persons (*svapna-nara*). The commentator in trying to explain this says that it is not impossible; for everything is present everywhere in the spirit, so it is possible that we, as dream persons of their dream experience, should be present in their minds in their *vāsanā* forms (*tad-antaḥ-karaṇe vāsanātmanā sthitāḥ*)⁴. As both past and present have no existence except in thought, time is in thought reversible, so that our existence at a time future to theirs does not necessarily prevent their having an experience of us in dreams. For the limitations of time and space do not hold for thought, and as elements in thought everything exists everywhere (*sarvaṃ sarvatra vidyate*)⁵. By dreams these persons may experience changes of life and even attain to final emancipation. The second class, the *saṅkalpa-jāgaras*, are those who without sleeping can by mere imagination continue to conceive all sorts of activities and existences, and may ultimately attain emancipation. The third class, the *kevala-jāgaras*, are those who are born in this life for the first time. When such beings pass

¹ This *turyāṅgīta* stage should not be confused with the sixth stage of *suṣupti*, which is often described as a stage of pure bliss.

² *sarveṣāṃ karmaṇāṃ evaṃ vedanaṃ bījaṃ uttamam
svarūpaṃ cetayitvāntas tataḥ spandaḥ pravartate.*

Yoga-vāsiṣṭha, VI. 11. 2. 26.

³ *Ibid.* III. 15. 16.

⁴ *Ibid.* VI. 2. 50. 9. *Tātparya-prakāśa*.

⁵ *Ibid.*

through more than one life, they are called *cira-jāgaras*. Such beings, on account of their sins, may be born as trees, etc., in which case they are called *ghana-jāgaras*. Those of such beings suffering rebirth who by study and good association attain right knowledge are called *jāgrat-svapna-sthita*; and finally, those that have reached the *turya* state of deliverance are called *kṣīṇa-jāgaraka*.

Bondage (*bandha*), according to the *Yoga-vāsiṣṭha*, remains so long as our knowledge has an object associated with it, and deliverance (*mokṣa*) is realized when knowledge is absolutely and ultimately dissociated from all objects and remains in its transcendent purity, having neither an object nor a subject¹.

Methods of Right Conduct.

The *Yoga-vāsiṣṭha* does not enjoin severe asceticism or the ordinary kinds of religious gifts, ablutions or the like for the realization of our highest ends, which can only be achieved by the control of attachment (*rāga*), antipathy (*dveṣa*), ignorance (*tamaḥ*), anger (*krodha*), pride (*mada*), and jealousy (*mātsarya*), followed by the right apprehension of the nature of reality². So long as the mind is not chastened by the clearing out of all evil passions, the performance of religious observances leads only to pride and vanity and does not produce any good. The essential duty of an enquirer consists in energetic exertion for the achievement of the highest end, for which he must read the right sort of scriptures (*sac-chāstra*) and associate with good men³. He should somehow continue his living and abandon even the slightest desire of enjoyment (*bhoga-gandham parityajet*), and should continue critical thinking (*vicāra*). On the question whether knowledge or work, *jñāna* or *karma*, is to be accepted for the achievement of the highest end, the *Yoga-vāsiṣṭha* does not, like Śaṅkara, think that the two cannot jointly be taken up, but on the contrary emphatically says that, just as

¹ *jñānasya jñeyatāpattir bandha ity abhidhīyate
tasyaiva jñeyatā-śāntir mokṣa ity abhidhīyate.*

Yoga-vāsiṣṭha, VI. II. 190. 1.

² *sva-pauruṣa-prayātṇena vivekena vikāśinā
sa devo jñāyate rāma na tapaḥ-snāna-karmabhiḥ.*

Ibid. III. 6. 9.

³ Good men are defined in the *Yoga-vāsiṣṭha* as follows:
*deṣe yaṃ sujana-prāyā lokāḥ sādhuṃ pracakṣate
sa viśiṣṭaḥ sa sādhuḥ syāt taṃ prayātṇena saṃśrayet.*

Ibid. III. 6. 20.

a bird flies with its two wings, so an enquirer can reach his goal through the joint operation of knowledge and work¹.

The main object of the enquirer being the destruction of *citta*, all his endeavours should be directed towards the uprooting of instinctive root inclinations (*vāsanā*), which are the very substance and root of the *citta*. The realization of the truth (*tattva-jñāna*), the destruction of the *vāsanās* and the destruction of the *citta* all mean the same identical state and are interdependent on one another, so that none of them can be attained without the other. So, abandoning the desire for enjoyment, one has to try for these three together; and for this one has to control one's desires on one hand and practise breath-control (*prāṇa-nirodhena*) on the other; and these two would thus jointly co-operate steadily towards the final goal. Such an advancement is naturally slow, but this progress, provided it is steady, is to be preferred to any violent efforts to hasten (*haṭha*) the result². Great stress is also laid on the necessity of self-criticism as a means of loosening the bonds of desire and the false illusions of world-appearance and realizing the dissociation from attachment (*asaṅga*)³.

Yoga-vāsiṣṭha, Śāṅkara Vedānta and Buddhist Vijñānavāda.

To a superficial reader the idealism of the *Yoga-vāsiṣṭha* may appear to be identical with the Vedānta as interpreted by Śāṅkara; and in some of the later Vedānta works of the Śāṅkara school, such as the *jīvan-mukti-viveka*, etc., so large a number of questions dealt with in the *Yoga-vāsiṣṭha* occur that one does not readily imagine that there may be any difference between this idealism and that of Śāṅkara. This point therefore needs some discussion.

The main features of Śāṅkara's idealism consist in the doctrine that the self-manifested subject-objectless intelligence forms the ultimate and unchangeable substance of both the mind (*antaḥkaraṇa*) and the external world. Whatever there is of change and mutation is outside of this Intelligence, which is also the Reality. But, nevertheless, changes are found associated with this reality or Brahman, such as the external forms of objects and the diverse mental states. These are mutable and have therefore a different kind of indescribable existence from Brahman; but still they are

¹ *Yoga-vāsiṣṭha*, I. I. 7, 8.

² *Ibid.* v. 92.

³ *Ibid.* v. 93.

somehow essentially of a positive nature¹. Śaṅkara's idealism does not allow him to deny the existence of external objects as apart from perceiving minds, and he does not adhere to the doctrine of *esse est percipi*. Thus he severely criticizes the views of the Buddhist idealists, who refuse to believe in the existence of external objects as apart from the thoughts which seem to represent them. Some of these arguments are of great philosophical interest and remind one of similar arguments put forth by a contemporary British Neo-realist in refutation of Idealism.

The Buddhists there are made to argue as follows: When two entities are invariably perceived simultaneously they are identical; now knowledge and its objects are perceived simultaneously; therefore the objects are identical with their percepts. Our ideas have nothing in the external world to which they correspond, and their existence during dreams, when the sense-organs are universally agreed to be inoperative, shows that for the appearance of ideas the operation of the sense-organs, indispensable for establishing connection with the so-called external world, is unnecessary. If it is asked how, if there are no external objects, can the diversity of percepts be explained, the answer is that such diversity may be due to the force of *vāsanās* or the special capacity of the particular moment associated with the cognition². If the so-called external objects are said to possess different special capacities which would account for the diversity of percepts, the successive moments of the mental order may also be considered as possessing special distinctive capacities which would account for the diversity of percepts generated by those cognition moments. In dreams it is these diverse cognition moments which produce diversity of percepts.

Śaṅkara, in relating the above argument of the Buddhist idealist, says that external objects are directly perceived in all our perceptions, and how then can they be denied? In answer to this, if it is held that there is no object for the percepts excepting the sensations, or that the existence of anything consists in its being perceived, that can be refuted by pointing to the fact that the independent existence of the objects of perception, as apart from their being perceived, can be known from the perception itself, since the

¹ See the account of Śaṅkara Vedānta in my *A History of Indian Philosophy*, vol. I, Cambridge, 1922, chapter x.

² *Kasyacid eva jñāna-kṣaṇasya sa tādṛśaḥ sāmāthyātīśayo vāsanā-pariṇāmaḥ. Bhāmati*, II. 11. 28.

perceiving of an object is not the object itself; it is always felt that the perception of the blue is different from the blue which is perceived; the blue stands forth as the object of perception and the two can never be identical. This is universally felt and acknowledged, and the Buddhist idealist, even while trying to refute it, admits it in a way, since he says that what is inner perception appears as if it exists outside of us, externally. If externality as such never existed, how could there be an appearance of it in consciousness? When all experiences testify to this difference between knowledge and its object, the inner mental world of thoughts and ideas and the external world of objects, how can such a difference be denied? You may see a jug or remember it: the mental operation in these two cases varies, but the object remains the same¹.

The above argument of Śaṅkara against Buddhist idealism conclusively proves that he admitted the independent existence of objects, which did not owe their existence to anybody's knowing them. External objects had an existence different from and independent of the existence of the diversity of our ideas or percepts.

But the idealism of the *Yoga-vāsiṣṭha* is more like the doctrine of the Buddhist idealists than the idealism of Śaṅkara. For according to the *Yoga-vāsiṣṭha* it is only ideas that have some sort of existence. Apart from ideas or percepts there is no physical or external world having a separate or independent existence. *Esse est percipi* is the doctrine of the *Yoga-vāsiṣṭha*, while Śaṅkara most emphatically refutes such a doctrine. A later exposition of Vedānta by Prakāśānanda, known as *Vedānta-siddhānta-muktāvalī*, seems to derive its inspiration from the *Yoga-vāsiṣṭha* in its exposition of Vedānta on lines similar to the idealism of the *Yoga-vāsiṣṭha*, by denying the existence of objects not perceived (*ajñāta-sattvānabhyupagama*)². Prakāśānanda disputes the ordinarily accepted view that cognition of objects arises out of the contact of senses with objects; for objects for him exist only so long as they are perceived, i.e. there is no independent external existence of objects apart from their perception. All objects have only perceptual existence (*prātītika-sattva*). Both Prakāśānanda and the *Yoga-vāsiṣṭha* deny the existence of objects when they are not perceived, while Śaṅkara not only admits their existence, but also holds that they exist in the same form in which they are known; and this amounts virtually to the admission that our knowing an object does not add

¹ Śaṅkara's *bhāṣya* on the *Brahma-sūtra*, II. 2. 28.

² *Siddhānta-muktāvalī*. See *The Pandit*, new series, vol. XI, pp. 129-139.

anything to it or modify it to any extent, except that it becomes known to us through knowledge. Things are what they are, even though they may not be perceived. This is in a way realism. The idealism of Śaṅkara's Vedānta consists in this, that he held that the Brahman is the immanent self within us, which transcends all changeful experience and is also ultimate reality underlying all objects perceived outside of us in the external world. Whatever forms and characters there are in our experience, internal as well as external, have an indescribable and indefinite nature which passes by the name of *māyā*¹. Śaṅkara Vedānta takes it for granted that that alone is real which is unchangeable; what is changeful, though it is positive, is therefore unreal. The world is only unreal in that special sense; *māyā* belongs to a category different from affirmation and negation, namely the category of the indefinite.

The relation of the real, the Brahman, to this *māyā* in Śaṅkara Vedānta is therefore as indefinite as the *māyā*; the real is the unchangeable, but how the changeful forms and characters become associated with it or what is their origin or what is their essence, Śaṅkara is not in a position to tell us. The *Yoga-vāsiṣṭha* however holds that formless and characterless entity is the ultimate truth; it is said to be the Brahman, *cit*, or void (*śūnya*); but, whatever it may be, it is this characterless entity which is the ultimate truth. This ultimate entity is associated with an energy of movement, by virtue of which it can reveal all the diverse forms of appearances. The relation between the appearances and the reality is not external, indefinite and indescribable, as it is to Śaṅkara, but the appearances, which are but the unreal and illusory manifestations of the reality, are produced by the operation of this inner activity of the characterless spirit, which is in itself nothing but a subject-objectless pure consciousness. But this inner and immanent movement does not seem to have any dialectic of its own, and no definite formula of the method of its operation for its productions can be given; the imaginary shapes of ideas and objects, which have nothing but a mere perceptual existence, are due not to a definite order, but to accident or chance (*kākatāliya*). Such a conception is indeed very barren, and it is here that the system of the *Yoga-vāsiṣṭha* is particularly defective. Another important defect of the system is that it does not either criticize knowledge or admit its validity, and the characterless entity which forms its absolute is never revealed in experience.

¹ See my *A History of Indian Philosophy*, vol. I, ch. x.

With Śaṅkara the case is different; for he holds that this absolute Brahman is also the self which is present in every experience and is immediate and self-revealed. But the absolute of the *Yoga-vāsiṣṭha* is characterless and beyond experience. The state of final emancipation, the seventh stage, is not a stage of bliss, like the Brahmahood of the Vedānta, but a state of characterlessness and vacuity almost. In several places in the work it is said that this ultimate state is differently described by various systems as Brahman, distinction of *prakṛti* and *puruṣa*, pure *vijñāna* and void (*śūnya*), while in truth it is nothing but a characterless entity. Its state of *mukti* (emancipation) is therefore described, as we have already seen above, as *pāṣāṇavat* or like a stone, which strongly reminds us of the Vaiśeṣika view of *mukti*. On the practical side it lays great stress on *pauruṣa*, or exertion of free-will and energy, it emphatically denies *daiva* as having the power of weakening *pauruṣa* or even exerting a superior dominating force, and it gives us a new view of *karma* as meaning only thought-activity. As against Śaṅkara, it holds that knowledge (*jñāna*) and *karma* may be combined together, and that they are not for two different classes of people, but are both indispensable for each and every right-minded enquirer. The principal practical means for the achievement of the highest end of the *Yoga-vāsiṣṭha* are the study of philosophical scripture, association with good men and self-criticism. It denounces external religious observances without the right spiritual exertions as being worse than useless. Its doctrine of *esse est percipi* and that no experiences have any objective validity outside of themselves, that there are no external objects to which they correspond and that all are but forms of knowledge, reminds us very strongly of what this system owes to Vijñānavāda Buddhism. But, while an important Vijñānavāda work like the *Laṅkāvatāra-sūtra* tries to explain through its various categories the origin of the various appearances in knowledge, no such attempt is made in the *Yoga-vāsiṣṭha*, where it is left to chance. It is curious that in the Sanskrit account of Vijñānavāda by Hindu writers, such as Vācaspati and others, these important contributions of the system are never referred to either for the descriptive interpretation of the system or for its refutation. While there are thus unmistakable influences of Vijñānavāda and Gauḍapāda on the *Yoga-vāsiṣṭha*, it seems to have developed in close association with the Śaiva, as its doctrine of *spanda*, or immanent activity, so clearly shows. This point will, however, be more fully discussed in my treatment of Śaiva philosophy.

CHAPTER XIII

SPECULATIONS IN THE MEDICAL SCHOOLS

It may be urged that the speculations of the thinkers of the medical schools do not deserve to be recorded in a History of Indian Philosophy. But the force of such an objection will lose much in strength if it is remembered that medicine was the most important of all the physical sciences which were cultivated in ancient India, was directly and intimately connected with the Sāṃkhya and Vaiśeṣika physics and was probably the origin of the logical speculations subsequently codified in the *Nyāya-sūtras*¹. The literature contains, moreover, many other interesting ethical instructions and reveals a view of life which differs considerably from that found in works on philosophy; further, it treats of many other interesting details which throw a flood of light on the scholastic methods of Indian thinkers. Those, again, who are aware of the great importance of Haṭha Yoga or Tantra physiology or anatomy in relation to some of the Yoga practices of those schools will no doubt be interested to know for purposes of comparison or contrast the speculations of the medical schools on kindred points of interest. Their speculations regarding embryology, heredity and other such points of general enquiry are likely to prove interesting even to a student of pure philosophy.

Āyur-veda and the Atharva-Veda.

Suśruta says that Āyur-veda (the science of life) is an *upāṅga* of the *Atharva-Veda* and originally consisted of 100,000 verses in one thousand chapters and was composed by Brahmā before he created all beings (*Suśruta-saṃhitā*, I. 1. 5). What *upāṅga* exactly means in this connection cannot easily be satisfactorily explained. Dalhaṇa (A.D. 1100) in explaining the word in his *Nibandha-saṃgraha*, says that an *upāṅga* is a smaller *aṅga* (part)—“*aṅgam eva alpatvād upāṅgam.*” Thus, while hands and legs are regarded as *aṅgas*, the toes or the palms of the hands are called *upāṅga*. The *Atharva-Veda* contains six thousand verses and about

¹ The system of Sāṃkhya philosophy taught in *Caraka-saṃhitā*, IV. 1, has already been described in the first volume of the present work, pp. 213-217.

one thousand prose lines. If the Āyur-veda originally contained 100,000 verses, it cannot be called an *upāṅgu* of the *Atharva-Veda*, if *upāṅga* is to mean a small appendage, as Ḍalhaṇa explains it. For, far from being a small appendage, it was more than ten times as extensive as the *Atharva-Veda*. Caraka, in discussing the nature of Āyur-veda, says that there was never a time when life did not exist or when intelligent people did not exist, and so there were always plenty of people who knew about life, and there were always medicines which acted on the human body according to the principles which we find enumerated in the Āyur-veda. Āyur-veda was not produced at any time out of nothing, but there was always a continuity of the science of life; when we hear of its being produced, it can only be with reference to a beginning of the comprehension of its principles by some original thinker or the initiation of a new course of instruction at the hands of a gifted teacher. The science of life has always been in existence, and there have always been people who understood it in their own way; it is only with reference to its first systematized comprehension or instruction that it may be said to have a beginning¹. Again, Caraka distinguishes Āyur-veda as a distinct Veda, which is superior to the other Vedas because it gives us life, which is the basis of all other enjoyments or benefits, whether they be of this world or of another². Vāgbhaṭa, the elder, speaks of Āyur-veda not as an *upāṅga*, but as an *upaveda* of the *Atharva-Veda*³. The *Mahā-bhārata*, II. 11. 33, speaks of *upaveda*, and Nīlakaṇṭha, explaining this, says that there are four *upavedas*, *Āyur-veda*, *Dhanur-veda*, *Gāndharva* and *Artha-sāstra*. *Brahma-vaivarta*, a later *purāṇa*, says that after creating the Ṛk, Yajus, Sāma and Atharva Brahmā created the Āyur-veda as the fifth Veda⁴. Roth has a quotation in his *Wörterbuch* to the effect that Brahmā taught Āyur-veda, which was a *vedāṅga*, in all its eight parts⁵.

¹ Caraka, I. 30. 24. This passage seems to be at variance with Caraka, I. 1. 6; for it supposes that diseases also existed always, while Caraka, I. 1. 6 supposes that diseases broke out at a certain point of time. Is it an addition by the reviser Ḍṛḍhabala?

² Caraka, I. 1. 42 and *Āyur-veda-dīpikā* of Cakrapāṇi on it.

³ *Aṣṭāṅga-saṃgraha*, I. 1. 8. *Gopatha-Brahmaṇa*, I. 10, however, mentions five vedas, viz. *Sarpa-veda*, *Pisāca-veda*, *Asura-veda*, *Itihāsa-veda* and *Purāṇa-veda*, probably in the sense of *upaveda*, but Āyur-veda is not mentioned in this connection.

⁴ *Brahma-vaivarta-purāṇa*, I. 16. 9, 10.

⁵ *Brahmā vedāṅgam aṣṭāṅgam āyur-vedam abhāṣata*. This quotation, which occurs in the *Wörterbuch* in connection with the word *āyur-veda*, could not

We thus find that Āyur-veda was regarded by some as a Veda superior to the other Vedas and respected by their followers as a fifth Veda, as an *upaveda* of the *Atharva-Veda*, as an independent *upaveda*, as an *upāṅga* of the *Atharva-Veda* and lastly as a *vedāṅga*. All that can be understood from these conflicting references is that it was traditionally believed that there was a Veda known as Āyur-veda which was almost co-existent with the other Vedas, was entitled to great respect, and was associated with the *Atharva-Veda* in a special way. It seems, however, that the nature of this association consisted in the fact that both of them dealt with the curing of diseases and the attainment of long life; the one principally by incantations and charms, and the other by medicines. What Suśruta understands by calling Āyur-veda an *upāṅga* of the *Atharva-Veda* is probably nothing more than this. Both the *Atharva-Veda* and Āyur-veda dealt with the curing of diseases, and this generally linked them together in the popular mind, and, the former being the holier of the two, on account of its religious value, the latter was associated with it as its literary accessory. Dārila Bhaṭṭa, in commenting upon *Kauśika-sūtra*, 25. 2, gives us a hint as to what may have been the points of contact and of difference between Āyur-veda and the *Atharva-Veda*. Thus he says that there are two kinds of diseases; those that are produced by unwholesome diet, and those produced by sins and transgressions. The Āyur-veda was made for curing the former, and the Atharvan practices for the latter¹. Caraka himself counts penance (*prāyaś-citta*) as a name of medicine (*bheṣaja*) and Cakrapāṇi, in commenting on this, says that as *prāyaś-citta* removes the diseases produced by sins, so medicines (*bheṣaja*) also remove diseases, and thus *prāyaś-citta* is synonymous with *bheṣaja*².

But what is this Āyur-veda? We now possess only the treatises of Caraka and Suśruta, as modified and supplemented by later revisers. But Suśruta tells us that Brahmā had originally produced the Āyur-veda, which contained 100,000 verses spread over one thousand chapters, and then, finding the people weak in intelligence and short-lived, later on divided it into eight subjects, be verified owing to some omission in the reference. It should be noted that *vedāṅga* is generally used to mean the six *āṅgas*, viz. *Śikṣā*, *Kalpa*, *Vyākaraṇa*, *Chandas*, *Jyotiṣ* and *Nirukta*.

¹ *dvi-prakārā vyādhayaḥ āhāra-nimittā aśubhanimittāś ceti; tatra āhāra-samutthānāṃ vaiṣamyā āyurvedaṃ cakāra adharma-samutthānāṃ tu sāstramidam ucyate*. Dārila's comment on *Kauśika-sūtra*, 25. 2.

² Caraka, vi. 1. 3 and *Āyur-veda-ṭīpikā*, *ibid*.

viz. surgery (*śalya*), treatment of diseases of the head (*śālākya*), treatment of ordinary diseases (*kāya-cikitsā*), the processes of counteracting the influences of evil spirits (*bhūta-vidyā*), treatment of child diseases (*kaumāra-bhṛtya*), antidotes to poisons (*agadatantra*), the science of rejuvenating the body (*rasāyana*) and the science of acquiring sex-strength (*vājīkaraṇa*)¹. The statement of Suśruta that Āyur-veda was originally a great work in which the later subdivisions of its eight different kinds of studies were not differentiated seems to be fairly trustworthy. The fact that Āyur-veda is called an *upāṅga*, an *upaveda*, or a *vedāṅga* also points to its existence in some state during the period when the Vedic literature was being composed. We hear of compendiums of medicine as early as the *Prātiśākhya*². It is curious, however, that nowhere in the Upaniṣads or the Vedas does the name “Āyur-veda” occur, though different branches of study are mentioned in the former³. The Aṣṭāṅga Āyur-veda is, however, mentioned in the *Mahā-bhārata*, and the three constituents (*dhātu*), *vāyu* (wind), *pitta* (bile) and *śleṣman* (mucus), are also mentioned; there is reference to a theory that by these three the body is sustained and that by their decay the body decays (*etaiḥ kṣīṇaiś ca kṣīyate*), and Kṛṣṇātreya is alluded to as being the founder of medical science (*cikitsitam*)⁴. One of the earliest systematic mentions of medicines unmixed with incantations and charms is to be found in the *Mahā-vagga* of the *Vinaya-Piṭaka*, where the Buddha is prescribing medicines for his disciples⁵. These medicines are of a simple nature, but they bear undeniable marks of methodical arrangement. We are also told there of a surgeon, named Ākāśagotto, who made surgical operations (*satthakamma*) on fistula (*bhagandara*). In Rockhill's *Life of the Buddha* we hear of Jīvaka as having studied medicine in the Taxila Univer-

¹ *Suśruta-saṃhitā*, I. 1. 5-9.

² R.V. *Prātiśākhya*, 16. 54 (55), mentioned by Bloomfield in *The Atharva-Veda and Gopatha-Brahmaṇa*, p. 10. The name of the medical work mentioned is *Subheṣaja*.

³ *Rg-vedaṃ bhagavo 'dhyemi Yajur-vedaṃ sāmavedaṃ ātharvaṇaś caturtham itihāsa-purāṇaṃ pañcamaṃ vedānāṃ vedam pītryaṃ rāṣiṃ daivaṃ nidhiṃ vāko-vākyam ekāyanaṃ deva vidyāṃ brahma-vidyāṃ bhūta-vidyāṃ kṣattra-vidyāṃ nakṣatra-vidyāṃ sarpa-deva-jana-vidyāṃ, Chāndogya*, VII. 1. 2. Of these *bhūta-vidyā* is counted as one of the eight *tantras* of Āyur-veda, as we find it in the *Suśruta-saṃhitā* or elsewhere.

⁴ *Mahā-bhārata*, II. 11. 25, XII. 342. 86, 87, XII. 210. 21. Kṛṣṇātreya is referred to in *Caraka-saṃhitā*, VI. 15. 129, and Cakrapāṇi, commenting on this, says that Kṛṣṇātreya and Ātreya are two authorities who are different from Ātreya Punarvasu, the great teacher of the *Caraka-saṃhitā*.

⁵ *Vinaya-Piṭaka, Mahā-vagga*, VI. 1-14.

sity under Ātreya¹. That even at the time of the *Atharva-Veda* there were hundreds of physicians and an elaborate pharmacopœia, treating diseases with drugs, is indicated by a *mantra* therein which extols the virtues of amulets, and speaks of their powers as being equal to thousands of medicines employed by thousands of medical practitioners². Thus it can hardly be denied that the practice of medicine was in full swing even at the time of the *Atharva-Veda*; and, though we have no other proofs in support of the view that there existed a literature on the treatment of diseases, known by the name of Āyur-veda, in which the different branches, which developed in later times, were all in an undifferentiated condition, yet we have no evidence which can lead us to disbelieve Suśruta, when he alludes definitely to such a literature. The *Caraka-saṃhitā* also alludes to the existence of a beginningless traditional continuity of Āyur-veda, under which term he includes life, the constancy of the qualities of medical herbs, diet, etc., and their effects on the human body and the intelligent enquirer. The early works that are now available to us, viz. the *Caraka-saṃhitā* and *Suśruta-saṃhitā*, are both known as *tantras*³. Even Agniveśa's work (*Agniveśa-saṃhitā*), which Caraka revised and which was available at the time of Cakrapāṇi, was a *tantra*. What then was the Āyur-veda, which has been variously described as a fifth Veda or an *upaveda*, if not a literature distinctly separate from the *tantras* now available to us⁴? It seems probable, therefore, that such a literature existed, that the systematized works of Agniveśa and others superseded it and that, as a consequence, it came ultimately to be lost. Caraka, however, uses the word "Āyur-veda" in the general sense of "science of life." Life is divided by Caraka into four kinds, viz. *sukha* (happy), *duḥkha* (unhappy), *hita* (good) and *ahita* (bad). *Sukham āyuh* is a life which is not affected by bodily or mental diseases, is endowed with vigour, strength, energy, vitality, activity and is full of all sorts of enjoyments and successes. The opposite of this is the *asukham āyuh*. *Hitam āyuh* is the life of a person who is always willing to do good to all beings, never steals others' property, is truthful, self-controlled, self-restrained and works

¹ Rockhill's *Life of the Buddha*, p. 65.

² *Atharva-veda*, II. 9. 3, *śataṃ hy asya bhiṣajāḥ sahasram uta vīrudhaḥ*.

³ *Gurv-ājñā-lābhānantaram etat-tantra-karaṇam*. Cakrapāṇi's *Āyur-veda-dīpikā*, I. 1. 1; also *Caraka-saṃhitā*, I. 1. 52.

⁴ Cakrapāṇi quotes the *Agniveśa-saṃhitā* in his *Āyur-veda-dīpikā*, VI. 3. 177-185.

with careful consideration, does not transgress the moral injunctions, takes to virtue and to enjoyment with equal zeal, honours revered persons, is charitable and does what is beneficial to this world and to the other. The opposite of this is called *ahita*. The object of the science of life is to teach what is conducive to all these four kinds of life and also to determine the length of such a life¹.

But, if Āyur-veda means "science of life," what is its connection with the *Atharva-Veda*? We find in the *Caraka-saṃhitā* that a physician should particularly be attached (*bhaktir ādeśyā*) to the *Atharva-Veda*. The *Atharva-Veda* deals with the treatment of diseases (*cikitsā*) by advising the propitiatory rites (*svastyayana*), offerings (*balī*), auspicious oblations (*maṅgala-homa*), penances (*niyama*), purificatory rites (*prāyaś-citta*), fasting (*upavāsa*) and incantations (*mantra*)². Cakrapāṇi, in commenting on this, says that, since it is advised that physicians should be attached to the *Atharva-Veda*, it comes to this, that the *Atharva-Veda* becomes Āyur-veda (*Atharva-vedasya āyurvedatvam uktam bhavati*). The *Atharva-Veda*, no doubt, deals with different kinds of subjects, and so Āyur-veda is to be considered as being only a part of the *Atharva-Veda* (*Atharva-vedaikadeśa eva āyur-vedaḥ*). Viewed in the light of Cakrapāṇi's interpretation, it seems that the school of medical teaching to which Caraka belonged was most intimately connected with the *Atharva-Veda*. This is further corroborated by a comparison of the system of bones found in the *Caraka-saṃhitā* with that of the *Atharva-Veda*. Suśruta himself remarks that, while he considers the number of bones in the human body to be three hundred, the adherents of the Vedas hold them to be three hundred and sixty; and this is exactly the number counted by Caraka³. The *Atharva-Veda* does not count the bones; but there are with regard to the description of bones some very important points in

¹ *Caraka*, I. 1. 40 and I. 30. 20-23:

*hitāhitam sukham duḥkham āyus tasya hitāhitam
mānam ca tac ca yatroktaṃ āyur-vedaḥ sa ucyate.*

In I. 30. 20 the derivation of Āyur-veda is given as *āyur vedayati iti āyur-vedaḥ*, i.e. that which instructs us about life. Suśruta suggests two alternative derivations—*āyur asmin vidyate anena vā āyur vindatīty āyur-vedaḥ*, i.e. that by which life is known or examined, or that by which life is attained. *Suśruta-saṃhitā*, I. 1. 14.

² *Caraka*, I. 30. 20.

³ *Trīṇi śaṣṭhāny asthi-śatāni veda-vādinō bhāṣante; śalya-tantre tu trīṇy eva śatāni*. *Suśruta-saṃhitā*, III. 5. 18. *Trīṇi śaṣṭhāni śatāny asthnam saha dantanakkena*. *Caraka-saṃhitā*, IV. 7. 6.

which the school to which Caraka belonged was in agreement with the *Atharva-Veda*, and not with Suśruta. Dr Hoernle, who has carefully discussed the whole question, thus remarks: "A really important circumstance is that the Atharvic system shares with the Charakiyan one of the most striking points in which the latter differs from the system of Suśruta, namely, the assumption of a central facial bone in the structure of the skull. It may be added that the Atharvic term *pratiṣṭhā* for the base of the long bones obviously agrees with the Charakiyan term *adhiṣṭhāna* and widely differs from the Suśrutian *kūrca*¹." The *Śatapatha-brāhmaṇa*, which, as Dr Hoernle has pointed out, shows an acquaintance with both the schools to which Caraka and Suśruta respectively belonged, counts, however, 360 bones, as Caraka did². The word *veda-vādino* in *Suśruta-saṃhitā*, III. 5. 18 does not mean the followers of Āyur-veda as distinguished from the Vedas, as Ḍalhaṇa interprets it, but is literally true in the sense that it gives us the view which is shared by Caraka with the *Atharva-Veda*, the *Śatapatha-brāhmaṇa*, the legal literature and the *purāṇas*, which according to all orthodox estimates derive their validity from the Vedas. If this agreement of the Vedic ideas with those of the Ātreya school of medicine, as represented by Caraka, be viewed together with the identification by the latter of Āyur-Veda with *Atharva-Veda*, it may be not unreasonable to suppose that the Ātreya school, as represented by Caraka, developed from the *Atharva-Veda*. This does not preclude the possibility of there being an Āyur-veda of another school, to which Suśruta refers and from which, through the teachings of a series of teachers, the *Suśruta-saṃhitā* developed. This literature probably tried to win the respect of the people by associating itself with the *Atharva-Veda*, and by characterizing itself as an *upāṅga* of the *Atharva-Veda*³.

Jayanta argues that the validity of the Vedas depends on the fact that they have been composed by an absolutely trustworthy

¹ A. F. Rudolf Hoernle's *Studies in the Medicine of Ancient India*, p. 113.

² *Ibid.* pp. 105-106. See also *Śatapatha-brāhmaṇa*, x. 5. 4. 12, also XII. 3. 2. 3 and 4, XII. 2. 4. 9-14, VIII. 6. 2. 7 and 10. The *Yājñavalkya-Dharma-śāstra*, *Viṣṇu-smṛti*, *Viṣṇu-dharmottara* and *Agni-Purāṇa* also enumerate the bones of the human body in agreement with Caraka as 360. The source of the last three was probably the first (*Yājñavalkya-Dharma-śāstra*), as has been suggested by Dr Hoernle in his *Studies in the Medicine of Ancient India*, pp. 40-46. But none of these non-medical recensions are of an early date: probably they are not earlier than the third or the fourth century A.D.

³ The word *upāṅga* may have been used, however, in the sense that it was a supplementary work having the same scope as the *Atharva-Veda*.

person (*āpta*). As an analogy he refers to Āyur-veda, the validity of which is due to the fact that it has been composed by trustworthy persons (*āpta*). That the medical instructions of the Āyur-veda are regarded as valid is due to the fact that they are the instructions of trustworthy persons (*yato yatrāptavādātram tatra prāmānyam iti vyāptir grhyate*). But it may be argued that the validity of Āyur-veda is not because it has for its author trustworthy persons, but because its instructions can be verified by experience (*nanvāyur-vedādaṁ prāmānyam pratyakṣādi-saṁvādāt pratipannam nāpta-prāmānyāt*). Jayanta in reply says that the validity of Āyur-veda is due to the fact of its being composed by trustworthy persons; and it can be also verified by experience. He argues also that the very large number of medicines, their combinations and applications, are of such an infinite variety that it would be absolutely impossible for any one man to know them by employing the experimental methods of agreement and difference. It is only because the medical authorities are almost omniscient in their knowledge of things that they can display such superhuman knowledge regarding diseases and their cures, which can be taken only on trust on their authority. His attempts at refuting the view that medical discoveries may have been carried on by the applications of the experimental methods of agreement and difference and then accumulated through long ages are very weak and need not be considered here.

The fourth Veda, known as the *Atharva-Veda* or the *Brahma-Veda*, deals mainly with curatives and charms¹. There is no reason to suppose that the composition of this Veda was later than even the earliest Ṛg-Vedic hymns; for never, probably, in the history

¹ Some of the sacred texts speak of four Vedas and some of three Vedas, e.g. "*asya mahato bhūtasya niḥśvasitam etad ṛg-vedoyajur-vedaḥ sāma-vedo 'tharvān-girasaḥ*," *Brh.* II. 4. 10 speaks of four Vedas; again "*Yam ṛṣayas trayī-vido viduḥ ṛcaḥ sāmānyajūṣi*," *Taittirīya-brāhmaṇa*, I. II. 1. 26 speaks of three Vedas. Sāyaṇa refers to the *Mīmāṃsā-sūtra*, II. 1. 37 "*śeṣe Yajuh-śabdah*" and says that all the other Vedas which are neither Ṛk nor Sāma are Yajuṣ (Sāyaṇa's *Upodghāta* to the *Atharva-Veda*, p. 4, Bombay edition, 1895). According to this interpretation the *Atharva-Veda* is entitled to be included within Yajuṣ, and this explains the references to the three Vedas. The *Atharva-Veda* is referred to in the *Gopatha-brāhmaṇa*, II. 16 as *Brahma-Veda*, and two different reasons are adduced. Firstly, it is said that the *Atharva-Veda* was produced by the ascetic penances of Brahman; secondly it is suggested in the *Gopatha-brāhmaṇa* that all Atharvanic hymns are curative (*bheṣaja*), and whatever is curative is immortal, and whatever is immortal is Brahman—"Ye 'tharvāṇas tad bheṣajaṁ, yad bheṣajaṁ tad amṛtaṁ, yad amṛtaṁ tad Brahma." *Gopatha-brāhmaṇa*, III. 4. See also *Nyāya-mañjarī*, pp. 250-261.

of India was there any time when people did not take to charms and incantations for curing diseases or repelling calamities and injuring enemies. The *Ṛg-Veda* itself may be regarded in a large measure as a special development of such magic rites. The hold of the Atharvaṇic charms on the mind of the people was probably very strong, since they had occasion to use them in all their daily concerns. Even now, when the *Ṛg-Vedic* sacrifices have become extremely rare, the use of Atharvaṇic charms and of their descendants, the Tantric charms of comparatively later times, is very common amongst all classes of Hindus. A very large part of the income of the priestly class is derived from the performance of auspicious rites (*svastyayana*), purificatory penances (*prāyaścitta*), and oblations (*homa*) for curing chronic and serious illnesses, winning a law-suit, alleviating sufferings, securing a male issue to the family, cursing an enemy, and the like. Amulets are used almost as freely as they were three or four thousand years ago, and snake-charms and charms for dog-bite and others are still things which the medical people find it difficult to combat. Faith in the mysterious powers of occult rites and charms forms an essential feature of the popular Hindu mind and it oftentimes takes the place of religion in the ordinary Hindu household. It may therefore be presumed that a good number of Atharvaṇic hymns were current when most of the *Ṛg-Vedic* hymns were not yet composed. By the time, however, that the *Atharva-Veda* was compiled in its present form some new hymns were incorporated with it, the philosophic character of which does not tally with the outlook of the majority of the hymns. The *Atharva-Veda*, as Sāyaṇa points out in the introduction to his commentary, was indispensable to kings for warding off their enemies and securing many other advantages, and the royal priests had to be versed in the Atharvaṇic practices. These practices were mostly for the alleviation of the troubles of an ordinary householder, and accordingly the *Gṛhya-sūtras* draw largely from them. The oldest name of the *Atharva-Veda* is *Atharvāṅgīrasaḥ*, and this generally suggested a twofold division of it into hymns attributed to Atharvan and others attributed to Aṅgīras; the former dealt with the holy (*śānta*), promoting of welfare (*pauṣṭika*) and the curatives (*bheṣajāni*), and the latter with offensive rites for molesting an enemy (*ābhicārika*), also called terrible (*ghora*). The purposes which the Atharvaṇic charms were supposed to fulfil were numerous. These may

be briefly summed up in accordance with the *Kauśika-sūtra* as follows: quickening of intelligence, accomplishment of the virtues of a Brahmacārin (religious student); acquisition of villages, cities, fortresses and kingdoms, of cattle, riches, food grains, children, wives, elephants, horses, chariots, etc.; production of unanimity (*aikamatya*) and contentment among the people; frightening the elephants of enemies, winning a battle, warding off all kinds of weapons, stupefying, frightening and ruining the enemy army, encouraging and protecting one's own army, knowing the future result of a battle, winning the minds of generals and chief persons, throwing a charmed snare, sword, or string into the fields where the enemy army may be moving, ascending a chariot for winning a battle, charming all instruments of war music, killing enemies, winning back a lost city demolished by the enemy; performing the coronation ceremony, expiating sins, cursing, strengthening cows, procuring prosperity; amulets for promoting welfare, agriculture, the conditions of bulls, bringing about various household properties, making a new-built house auspicious, letting loose a bull (as a part of the general rites—*śrāddha*), performing the rites of the harvesting month of Agrahāyaṇa (the middle of November to the middle of December); securing curatives for various otherwise incurable diseases produced by the sins of past life; curing all diseases generally, Fever, Cholera, and Diabetes; stopping the flow of blood from wounds caused by injuries from weapons, preventing epileptic fits and possession by the different species of evil spirits, such as the *bhūta*, *piśāca*, *Brahma-rākṣasa*, etc.; curing *vāta*, *pitta* and *śleṣman*, heart diseases, Jaundice, white leprosy, different kinds of Fever, Pthisis, Dropsy; curing worms in cows and horses, providing antidotes against all kinds of poisons, supplying curatives for the diseases of the head, eyes, nose, ears, tongue, neck and inflammation of the neck; warding off the evil effects of a Brahmin's curse; arranging women's rites for securing sons, securing easy delivery and the welfare of the foetus; securing prosperity, appeasing a king's anger, knowledge of future success or failure; stopping too much rain and thunder, winning in debates and stopping brawls, making rivers flow according to one's wish, securing rain, winning in gambling, securing the welfare of cattle and horses, securing large gains in trade, stopping inauspicious marks in women, performing auspicious rites for a new house, removing the sins of prohibited

acceptance of gifts and prohibited priestly services; preventing bad dreams, removing the evil effects of unlucky stars under whose influence an infant may have been born, paying off debts, removing the evils of bad omens, molesting an enemy; counteracting the molesting influence of the charms of an enemy, performing auspicious rites, securing long life, performing the ceremonies at birth, naming, tonsure, the wearing of holy thread, marriage, etc.; performing funeral rites, warding off calamities due to the disturbance of nature, such as rain of dust, blood, etc., the appearance of *yakṣas*, *rākṣasas*, etc., earthquakes, the appearance of comets, and eclipses of the sun and moon.

The above long list of advantages which can be secured by the performance of Atharvaṇic rites gives us a picture of the time when these Atharvaṇic charms were used. Whether all these functions were discovered when first the Atharvaṇic verses were composed is more than can be definitely ascertained. At present the evidence we possess is limited to that supplied by the *Kauśika-sūtra*. According to the Indian tradition accepted by Sāyaṇa the compilation of the *Atharva-Veda* was current in nine different collections, the readings of which differed more or less from one another. These different recensions, or *śākhās*, were Paippalāda, Tāṇḍa, Maṇḍa, Śaunakiya, Jājala, Jalada, Brahmagāda, Devādarsa, and Cāraṇavaidya. Of these only the Paippalāda and Śaunakiya recensions are available. The Paippalāda recension exists only in a single unpublished Tübingen manuscript first discovered by Roth¹. It has been edited in facsimile and partly also in print. The Śaunakiya recension is what is now available in print. The Śaunakiya school has the *Gopatha-brāhmaṇa* as its Brāhmaṇa and five *sūtra* works, viz. *Kauśika*, *Vaitāna*, *Nakṣatra-kalpa*, *Āṅgīrasa-kalpa* and *Śānti-kalpa*²; these are also known as the five *kalpas* (*pañca-kalpa*). Of these the *Kauśika-sūtra* is probably the earliest and most important, since all the other four depend upon it³. The *Nakṣatra-kalpa* and *Śānti-kalpa* are more or less of an astrological character. No manuscript of the *Āṅgīrasa-kalpa* seems to be available; but from the brief notice of Sāyaṇa it appears to

¹ *Der Atharvaveda in Kashmir* by Roth.

² The *Kauśika-sūtra* is also known as *Samhitā-vidhi* and *Samhitā-kalpa*. The three *kalpas*, *Nakṣatra*, *Āṅgīrasa* and *Śānti*, are actually *Parīṣṭas*.

³ 'tatra Śākalyena samhitā-mantrāṇāṃ śāntika-pauṣṭikādiṣu karmasu vinīyogavīdhānāt samhitā-vidhir nāma Kauśikam sūtram; tad eva itarair upajīvyatvāt. Upodghāta of Sāyaṇa to the *Atharva-Veda*, p. 25.

have been a manual for molesting one's enemies (*abhicāra-karma*). The *Vaitāna-sūtra* dealt with some sacrificial and ritualistic details. The *Kauśika-sūtra* was commented on by Dārila, Keśava, Bhadra and Rudra. The existence of the *Cāraṇa-vaidya* (wandering medical practitioners) *śākhā* reveals to us the particular *śākhā* of the *Atharva-Veda*, which probably formed the old *Āyur-veda* of the *Ātreya-Caraka* school, who identified the *Atharva-Veda* with *Āyur-veda*. The suggestion, contained in the word *Cāraṇa-vaidya*, that the medical practitioners of those days went about from place to place, and that the sufferers on hearing of the arrival of such persons approached them, and sought their help, is interesting¹.

Bones in the Atharva-Veda and Āyur-veda.

The main interest of the present chapter is in that part of the *Atharva-Veda* which deals with curative instructions, and for this the *Kauśika-sūtra* has to be taken as the principal guide. Let us first start with the anatomical features of the *Atharva-Veda*². The bones counted are as follows: 1. heels (*pārṣṇī*, in the dual number, in the two feet)³; 2. ankle-bones (*gulphau* in the dual number)⁴;

¹ Is it likely that the word *Caraka* (literally, a wanderer) had anything to do with the itinerant character of Caraka's profession as a medical practitioner?

² Hymns II. 33 and X. 2 are particularly important in this connection.

³ Caraka also counts one *pārṣṇī* for each foot. Hoernle (*Studies in the Medicine of Ancient India*, p. 128) remarks on the fact, that Caraka means the backward and downward projections of the os calcis, that is, that portion of it which can be superficially seen and felt, and is popularly known as the heel. The same may be the case with the *Atharva-Veda*. Suśruta probably knew the real nature of it as a cluster (*kūrca*); for in *Sātrīya-sthāna* VI he speaks of the astragalus as *kūrca-śiras*, or head of the cluster, but he counts the *pārṣṇī* separately. Hoernle suggests that by *pārṣṇī* Suśruta meant the os calcis, and probably did not think that it was a member of the tarsal cluster (*kūrca*). It is curious that Vāgbhaṭa I makes a strange confusion by attributing one *pārṣṇī* to each hand (*Aṣṭāṅga-saṃgraha*, II. 5; also Hoernle, pp. 91-96).

⁴ *Gulpha* means the distal processes of the two bones of the leg, known as the malleoli. As counted by Caraka and also by Suśruta, there are four *gulphas*. See Hoernle's comment on Suśruta's division, Hoernle, pp. 81, 82, 102-104. Suśruta, III. v. 19, has "*tala-kūrca-gulpha-saṃśritāni duṣa*," which Dāhāṇa explains as *tala* (5 *śālākās* and the one bone to which they are attached)—6 bones, *kūrca*—2 bones, *gulpha*—2 bones. Hoernle misinterpreted Dāhāṇa, and, supposing that he spoke of two *kūrcas* and two *gulphas* in the same leg, pointed out a number of inconsistencies and suggested a different reading of the Suśruta text. His translation of *valaya* as "ornament" in this connection is also hardly correct; *valaya* probably means "circular." Following Dāhāṇa, it is possible that the interpretation is that there are two bones in one cluster (*kūrca*) in each leg, and the two bones form one circular bone (*valayāsthī*) of one *gulpha* for each leg. If this is accepted, much of what Hoernle has said on the point loses its value and becomes hypercritical. There are two *gulphas*, or one in each leg, according as the constituent pieces, or the one whole *valayāsthī*, is referred to. On my interpretation Suśruta

3. digits (*aṅgulayaḥ* in the plural number)¹; 4. metacarpal and metatarsal bones (*ucchlaṅkhau* in the dual number, i.e. of the hands and feet)²; 5. base (*pratiṣṭhā*)³; 6. the knee-caps (*aṣṭhivantau* in the dual)⁴; 7. the knee-joints (*jāmunoh sandhi*)⁵; 8. the shanks (*jaṅghe* in the dual)⁶; 9. the pelvic cavity (*śroni* in the dual)⁷; 10. the thigh bones (*ūrū* in the dual)⁸; 11. the breast bones

knew of only two bones as forming the *kūrca*, and there is no passage in Suśruta to show that he knew of more. The os calcis would be the *pārṣṇi*, the astragalus, the *kūrca-śiras*, the two malleoli bones and the two *gulpha* bones.

¹ Both Caraka and Suśruta count sixty of these phalanges (*pāṇi-pādāṅgulī*), whereas their actual number is fifty-six only.

² Caraka counts these metacarpal and metatarsal bones (*pāṇi-pāda-śalākā*) as twenty, the actual number. Suśruta collects them under *tala*, a special term used by him. His combined *tala-kūrca-gulpha* includes all the bones of the hand and foot excluding the *aṅgulī* bones (phalanges).

³ Caraka uses the term *pāṇi-pāda-śalākādhiṣṭhāna*, Yājñavalkya, *sthāna*, and Suśruta, *kūrca*. Caraka seems to count it as one bone. *Kūrca* means a network of (1) flesh (*māṃsa*), (2) *śirā*, (3) *snāyu*, (4) bones (*māṃsa-śirā-snāyu-asthi-jālāni*). All these four kinds of network exist in the two joints of the hands and feet.

⁴ Hoernle remarks that in the *Atharva-Veda aṣṭhivat* and *jānu* are synonymous; but the text, x. 2. 2, seems clearly to enumerate them separately. The *aṣṭhivat* is probably the patella bone. Caraka uses the terms *jānu* and *kapālikā*, probably for the knee-cap (patella) and the elbow pan (*kapālikā*). *Kapālikā* means a small shallow basin, and this analogy suits the construction of the elbow pan. Suśruta uses the term *kūrpara* (elbow pan), not in the ordinary list of bones in *Sātra*, v. 19, but at the time of counting the *marma* in *ibid.* vi. 25.

⁵ This seems to be different from *aṣṭhivat* (patella).

⁶ The tibia and the fibula in the leg. Caraka, Bhela, Suśruta and Vāgbhaṭa I describe this organ rightly as consisting of two bones. The *Atharva-Veda* justly describes the figure made by them as being a fourfold frame having its ends closely connected together (*catuṣṭayam yuyate samhitāntam*). The corresponding two bones of the fore-arm (*aratni*)—radius and ulna—are correctly counted by Caraka. Curiously enough, Suśruta does not refer to them in the bone-list. The *bāhu* is not enumerated in this connection.

⁷ Caraka speaks of two bones in the pelvic cavity, viz. the os innominatum on both sides. Modern anatomists think that each os innominatum is composed of three different bones: ilium, the upper portion, ischium, the lower part, and the pubis, the portion joined to the other innominate bone. The ilium and ischium, however, though they are two bones in the body of an infant, become fused together as one bone in adult life, and from this point of view the counting of ilium and ischium as one bone is justifiable. In addition to these a separate *bhagāsthi* is counted by Caraka. He probably considered (as Hoernle suggests) the sacrum and coccyx to be one bone which formed a part of the vertebral column. By *bhagāsthi* he probably meant the pubic bone; for Cakrapāṇi, commenting upon *bhagāsthi*, describes it as "*abhimukhaṃ kaṭi-sandhāna-kārakaṃ tiryag-asthi*" (the cross bone which binds together the haunch bones in front). Suśruta, however, counts five bones: four in the *guda*, *bhaga*, *nitamba* and one in the *trika*. *Nitamba* corresponds to the two *śroni-phalaka* of Caraka, *bhaga* to the *bhagāsthi*, or pubic bone, *guda* to the coccyx and *trika* to the triangular bone sacrum. Suśruta's main difference from Caraka is this, that, while the latter counts the sacrum and coccyx as one bone forming part of the vertebral column, the former considers them as two bones and as separate from the vertebral column. Vāgbhaṭa takes *trika* and *guda* as one bone, but separates it from the vertebral column.

⁸ Caraka, Suśruta and Vāgbhaṭa I count it correctly as one bone in each leg. Caraka calls it *ūru-nalaka*.

(uras)¹; 12. the windpipe (*grīvāḥ* in the plural)²; 13. the breast (*stanau* in the dual)³; 14. the shoulder-blade (*kaphoḍau* in the dual)⁴; 15. the shoulder-bones (*skandhān* in the plural)⁵; 16. the backbone (*prṣṭhīḥ*

¹ Caraka counts fourteen bones in the breast. Indian anatomists counted cartilages as new bones (*taruṇa asthī*). There are altogether ten costal cartilages on either side of the sternum. But the eighth, ninth and tenth cartilages are attached to the seventh. So, if the seventh, eighth, ninth and tenth cartilages are considered as a single bone, there are altogether seven bones on either side of the sternum. This gives us the total number of fourteen which Caraka counts. The sternum was not counted by Caraka separately. With him this was the result of the continuation of the costal cartilages attached to one another without a break. Suśruta and Vāgbhaṭa I curiously count eight bones in the breast, and this can hardly be accounted for. Hoernle's fancied restoration of the ten of Suśruta does not appear to be proved. Yājñavalkya, however, counts seventeen, i.e. adds the sternum and the eighth costal cartilage on either side to Caraka's fourteen bones, which included these three. Hoernle supposes that Yājñavalkya's number was the real reading in Suśruta; but his argument is hardly convincing.

² The windpipe is composed of four parts, viz. larynx, trachea, and two bronchi. It is again not a bone, but a cartilage; but it is yet counted as a bone by the Indian anatomists, e.g. Caraka calls it "*jatru*" and Suśruta "*kaṇṭha-nāḍī*." Hoernle has successfully shown that the word *jatru* was used in medical books as synonymous with windpipe or neck generally. Hoernle says that originally the word denoted cartilaginous portions of the neck and breast (the windpipe and the costal cartilages), as we read in the *Śatapatha-brāhmaṇa*: "*tasmād imā ubhayatra parśavo baddhāḥ kikasāsu ca jatruṣu*" (the ribs are fastened at either end, exteriorly to the thoracic vertebrae and interiorly to the costal cartilages—*jatru*). In medical works it means the cartilaginous portion of the neck, i.e. the windpipe (Caraka), and hence is applied either to the neck generally or to the sterno-clavicular articulation at the base of the neck (Suśruta). It is only as late as the sixth or seventh century A.D. that, owing to a misinterpretation of the anatomical terms *sandhi* and *aṃsa*, it was made to mean clavicle. See Hoernle's *Studies in the Medicine of Ancient India*, p. 168.

³ "*Pārśvayoś catur-viṃśatiḥ pārśvayos tāvanti caiva sthālakāni tāvanti caiva sthālakārbudāni*," i.e. there are twenty-four bones in the *pārśva* (ribs), twenty-four *sthālakas* (sockets), and twenty-four *sthālakārbudas* (tubercles). Suśruta speaks of there being thirty-six ribs on either side. A rib consists of a shaft and a head; "at the point of junction of these two parts there is a tubercle which articulates with the transverse process of corresponding vertebrae, and probably this tubercle is *arbuda*." There are, no doubt, twenty-four ribs. The *sthālakas* and *arbudas* cannot properly be counted as separate bones; but, even if they are counted, the total number ought to be 68 bones, as Hoernle points out, and not 72, since the two lowest have no tubercles.

⁴ *Kaphoḍa* probably means scapula or shoulder-blade. Caraka uses the word *aṃsa-phalaka*. Caraka uses two other terms, *aḥṣaka* (collar-bone) and *aṃsa*. This word *aṃsa* seems to be a wrong reading, as Hoernle points out; for in reality there are only two bones, the scapula and the collar-bone. But could it not mean the acromion process of the scapula? Though Suśruta omits the shoulder-blade in the counting of bones in *Śātrīa*, v. (for this term is *aḥṣaka-saṃjñā*), yet he distinctly names *aṃsa-phalaka* in *Śātrīa*, vi. 27, and describes it as triangular (*trika-sambaddhe*); and this term has been erroneously interpreted as *grīvāyā aṃsa-dvayasya ca yaḥ saṃyogas sa trikaḥ* by Dāhapa. The junction of the collar-bone with the neck cannot be called *trika*.

⁵ Caraka counts fifteen bones in the neck. According to modern anatomists there are, however, only seven. He probably counted the transverse processes

in the plural)¹; 17. the collar-bones (*aṃsau* in the dual)²; 18. the brow (*lalāṭa*); 19. the central facial bone (*kakāṭikā*)³; 20. the pile of the jaw (*hanu-citya*)⁴; 21. the cranium with temples (*kapālam*)⁵.

and got the number fourteen, to which he added the vertebrae as constituting one single bone.

Suśruta counts nine bones. The seventh bone contains spinous and transverse processes and was probably therefore counted by him as three bones, which, together with the other six, made the total number nine.

¹ Caraka counts forty-three bones in the vertebral column (*prsthā-gatāsthī*), while the actual number is only twenty-six. Each bone consists of four parts, viz. the body, the spinous process, and the two transverse processes, and Caraka counts them all as four bones. Suśruta considers the body and the spinous process as one and the two transverse processes as two; thus for the four bones of Caraka, Suśruta has three. In Caraka the body and the spinous process of the twelve thoracic vertebrae make the number twenty-four; the five lumbar vertebrae (body + spine + two transverses) make twenty. He adds to this the sacrum and the coccyx as one pelvic bone, thus making the number forty-five; with Suśruta we have twelve thoracic vertebrae, six lumbar vertebrae, twelve transverses, i.e. thirty bones. The word *kikasa* (A.V. II. 33. 2) means the whole of the spinal column, *anūkyā* (A.V. II. 33. 2) means the thoracic portion of the spine, and *udara* the abdominal portion.

² Both Caraka and Suśruta call this *akṣaka* and count it correctly as two bones. Cakrapāṇi describes it as "*akṣa-vivakṣakau jatru-sandheḥ kilakau*" (they are called *akṣaka* because they are like two beams—the fastening-pegs of the junction of the neck-bones).

Suśruta further speaks of *aṃsa-pīṭha* (the glenoid cavity into which the head of the humerus is inserted) as a *samudga* (casket) bone. The joint of each of the anal bones, the pubic bone and the hip bone (*nīṭamba*) is also described by him as a *samudga*. This is the "acetabulum, or cotyloid cavity, in which the head of the femur, is lodged" (*Suśruta, Sāhita*, v. 27, *aṃsa-pīṭha-guda-bhaga-nīṭambeṣu samudgāḥ*).

³ *Lalāṭa* is probably the two superciliary ridges at the eye-brow and *kakāṣikā* the lower portion, comprising the body of the superior maxillary together with the molar and nasal bones. Caraka counts the two molar (*gaṇḍa-kūṭa*), the two nasal, and the two superciliary ridges at the eye-brows as forming one continuous bone (*ekāsthī nāsikā-gaṇḍa-kūṭa-lalāṭam*).

⁴ According to Caraka, the lower jaw only is counted as a separate bone (*ekaṃ hanu-asthi*), and the two attachments are counted as two bones (*dve hanu-mūla-bandhane*). Suśruta, however, counts the upper and the lower jaws as two bones (*hanuṃ dve*). Though actually each of these bones consists of two bones, they are so fused together that they may be considered as one, as was done by Suśruta. Caraka did not count the upper jaw, so he counted the sockets of the teeth (*dantolūkhala*) and the hard palate (*tāluṣaka*). Suśruta's counting of the upper *hanu* did not include the palatine process; so he also counts the *tālu* (*ekaṃ tāluni*).

⁵ *Śaṅkha* is the term denoting the temples, of which both Caraka and Suśruta count two. Caraka counts four cranial bones (*catvāri śiraḥ-kaṇḍālāni*) and Suśruta six (*śirasi ṣaṭ*). The brain-case consists of eight bones. Of these two are inside and hence not open to view from outside. So there are only six bones which are externally visible. Of these the temporal bones have already been counted as *śaṅkha*, thus leaving a remainder of four bones. Suśruta divides the frontal, parietal and occipital bones into two halves and considers them as separate bones, and he thus gets the number six. Both the frontal and occipital are really each composed of two bones, which become fused in later life.

Though the author has often differed from Dr Hoernle, yet he is highly indebted to his scholarly explanations and criticisms in writing out this particular section of this chapter.

Organs in the Atharva-Veda and Āyur-veda.

We have no proofs through which we could assert that the writer of the *Atharva-Veda* verse knew the number of the different bones to which he refers; but it does not seem possible that the references made to bones could have been possible without a careful study of the human skeleton. Whether this was done by some crude forms of dissection or by a study of the skeletons of dead bodies in a state of decay is more than can be decided. Many of the organs are also mentioned, such as the heart (*hṛdaya*), the lungs (*kloma*)¹, the gall-bladder (*halikṣṇa*)², the kidneys (*matsnābhyām*)³, the liver (*yakna*), the spleen (*plīhan*), the stomach and the smaller intestine (*antrebhyaḥ*), the rectum and the portion above it (*gudābhyaḥ*), the

¹ Caraka counts *kloma* as an organ near the heart, but he does not count *pupphusa*. In another place (*Cikitsā*, xvii. 34) he speaks of *kloma* as one of the organs connected with hiccough (*hṛdayaṃ kloma kaṇṭhaṃ ca tālukaṃ ca samāsritā mṛdvi sā kṣudra-hikveti nr̥ṇām sādhyā prakīrtitā*). Cakrapāṇi describes it as *pipāsā-sthāna* (seat of thirst). But, whatever that may be, since Caraka considers its importance in connection with hiccough, and, since he does not mention *pupphusa* (lungs—*Mahā-vyutpatti*, 100), *kloma* must mean with him the one organ of the two lungs. Suśruta speaks of *pupphusa* as being on the left side and *kloma* as being on the right. Since the two lungs vary in size, it is quite possible that Suśruta called the left lung *pupphusa* and the right one *kloma*. Vāgbhaṭa I follows Suśruta. The *Atharva-Veda*, Caraka, Suśruta, Vāgbhaṭa and other authorities use the word in the singular, but in *Bṛhad-āraṇyaka*, i. the word *kloma* is used in the plural number; and Śaṅkara, in commenting on this, says that, though it is one organ, it is always used in the plural (*nitya-bahu-vacanānta*). This, however, is evidently erroneous, as all the authorities use the word in the singular. His description of it as being located on the left of the heart (*yakrc ca klomāṇaś ca hṛdayasyādhistād dakṣiṇottarau māṃsu-khaṇḍau*, Br. i. 1, commentary of Śaṅkara) is against the verdict of Suśruta, who places it on the same side of the heart as the liver. The *Bhāva-prakāśa* describes it as the root of the veins, where water is borne or secreted. That *kloma* was an organ which formed a member of the system of respiratory organs is further proved by its being often associated with the other organs of the neighbourhood, such as the throat (*kaṇṭha*) and the root of the palate (*tālu-mūla*). Thus Caraka says, “*udaka-vahānām srotasām tālu-mūlaṃ kloma ca... jihvā-tālu-oṣṭha-kaṇṭha-kloma-śoṣam... dṛṣtvā*” (*Vimāna*, v. 10). *Sārṅgadhara*, i. v. 45, however, describes it as a gland of watery secretions near the liver (*jala-vāhi-śirā-mūlaṃ tṛṣṇā-tchādanakaṃ tilam*).

² This word does not occur in the medical literature. Sāyaṇa describes it as “*etat-saṅgīnakāt tat-saṃbandhāt māṃsa-piṇḍa-viśeṣāt*.” This, however, is quite useless for identification. Weber thinks that it may mean “gall” (*Indische Studien*, 13, 206). Macdonell considers it to be “some particular intestine” (*Vedic Index*, vol. II, p. 500).

³ Sāyaṇa paraphrases *matsnābhyām* as *vṛkyābhyām*. Caraka's reading is *vukka*. Sāyaṇa gives an alternative explanation: “*matsnābhyām ubhaya-pārśva-saṃbandhābhyām vṛkyābhyām tat-samīpa-sṭha-pittādhāra-pātrābhyām*.” If this explanation is accepted, then *matsnā* would mean the two sacs of *pitta* (bile) near the kidneys. The two *matsnās* in this explanation would probably be the gall bladder and the pancreas, which latter, on account of its secretions, was probably considered as another *pittādhāra*.

larger intestine (*vaniṣṭhu*, explained by Sāyaṇa as *sthavirāntra*), the abdomen (*udara*), the colon (*plāśī*)¹, the umbilicus (*nābhi*), the marrow (*majjābhyah*), the veins (*snāvabhyah*) and the arteries (*dhamanibhyah*)². Thus we see that almost all the important organs reported in the later Ātreya-Caraka school or the Suśruta school were known to the composers of the Atharvanic hymns³.

Bolling raises the point whether the *Atharva-Veda* people knew the difference between the *śirā* and the *dhamanī*, and says, "The apparent distinction between veins and arteries in I. 17. 3 is offset by the occurrence of the same words in VII. 35. 2 with the more general sense of 'internal canals' meaning entrails, vagina, etc.—showing how vague were the ideas held with regard to such subjects⁴." But this is not correct; for there is nothing in I. 17. 3 which suggests a knowledge of the distinction between veins and arteries in the modern sense of the terms, such as is not found in VII. 35. 2. The *sūkta* I. 17 is a charm for stopping the flow of blood from an injury or too much hemorrhage of women. A handful of street-dust was to be thrown on the injured part and the hymn was to be uttered. In I. 17. 1 it is said, "Those *hirās* (veins?) wearing red garment (or the receptacles of blood) of woman which are constantly flowing should remain dispirited, like daughters without a brother⁵." Sāyaṇa, in explaining the next verse, I. 17. 2, says that it is a prayer to *dhamanīs*. This verse runs as follows: "Thou (Sāyaṇa says 'thou *śirā*') of the lower part, remain (i.e. 'cease from letting out blood,' as Sāyaṇa says), so thou of the upper part remain, so thou of the middle part, so thou

¹ *Plāśī* is paraphrased by Sāyaṇa as "*bahu-ccidrān mala-pātrāt*" (the vessel of the excreta with many holes). These holes are probably the orifices of the glands inside the colon (*mala-pātra*). The *Śatapatha-brāhmaṇa*, XII. 9. 1. 3 enumerates all these organs as being sacred to certain gods and sacrificial instruments—*hṛdayam evāsyaindraḥ puroḍāśaḥ, yakṛt sāvitraḥ, klomā vāruṇaḥ, matsne evāsyāśvatthaṇi ca pātram audumbaram ca pīttam naiyagrodham antrāṇi sthālyah guḍa upāśayāni śyena-pātre plihāsandī nābhīḥ kumbho vaniṣṭhuḥ plāśīḥ śātātṛṇā tad yat sā bahudhā vītrṇā bhavati tasmāt plāśir bahudhā vīkṛtāḥ*. *Vasti*, or bladder, is regarded as the place where the urine collects (A.V. I. 3. 6).

² Sāyaṇa says that *snāva* means here the smaller *śirās* and *dhamanī* the thicker ones (the arteries)—*sūksmāḥ śirāḥ snāva-śabdena ucyante dhamanī-śabdena sthūlāḥ* (A.V. II. 33).

³ A.V. x. 9 shows that probably dissection of animals was also practised. Most of the organs of a cow are mentioned. Along with the organs of human beings mentioned above two other organs are mentioned, viz. the pericardium (*puritat*) and the bronchial tubes (*saha-kaṇṭhikā*). A.V. x. 9. 15.

⁴ *Encyclopaedia of Religion and Ethics*, "Diseases and medicine: Vedic."

⁵ Sāyaṇa paraphrases *hirā* as *śirā* and describes it as a canal (*nāḍī*) for carrying blood (*rajo-vahana-nāḍyah*), and the epithet "*lohita-vāsasah*" as either "wearing red garment" or "red," or "the receptacle of blood" (*rudhirasya nivāsa-bhūtāḥ*).

small, so thou the big *dhamani*¹." In the third verse both the *hirās* and *dhamanis* are mentioned. "These in the middle were formerly (letting out blood) among a hundred *dhamanis* and thousands of *hirās* (and after that) all the other (*nāḍis*) were playing with (others which have ceased from letting out blood)²." Hymn VII. 35 is for stopping the issue of a woman who is an enemy. The third verse says, "I close with a stone the apertures of a hundred *hirās* and a thousand *dhamanis*." Sāyaṇa, in explaining this verse, says that the *hirās* are fine *nāḍis* inside the ovary (*garbha-dhāraṇārtham antar-avasthitāḥ sūkṣmā yā nāḍyaḥ*) and the *dhamanis* the thicker *nāḍis* round the ovary for keeping it steady (*garbhāśayasya avaṣṭambhikā bāhyā sthūlā yā nāḍyaḥ*). The only point of difference between this verse and those of I. 17 is that here *śīrās* are said to be a hundred and *dhamanis* a thousand, whereas in the latter, the *dhamanis* were said to be a hundred and the *śīrās* a thousand. But, if Sāyaṇa's interpretation is accepted, the *dhamanis* still appear as the bigger channels and the *śīrās* as the finer ones. *Nāḍi* seems to have been the general name of channels. But nowhere in the *Atharva-Veda* is there any passage which suggests that the distinction between veins and arteries in the modern sense of the terms was known at the time. In A.V. I. 3. 6 we hear of two *nāḍis* called *gavīnyau* for carrying the urine from the kidneys to the bladder³. The gods of the eight quarters and other gods are said to have produced the foetus and, together with the god of delivery (*Sūṣā*), facilitated birth by loosening the bonds of the womb⁴.

¹ The previous verse referred to *śīrās* as letting out blood, whereas this verse refers to *dhamanis* as performing the same function. Sāyaṇa also freely paraphrases *dhamani* as *śīrā* (*mahā mahatī sthūlatarā dhamaniḥ śīrā tiṣṭhād it tiṣṭhaty eva, anena prayogeṇa nirvṛta-rudhira-srāvā avatiṣṭhatām*).

² Here both the *dhamani* and the *hirā* are enumerated. Sāyaṇa here says that *dhamanis* are the important *nāḍis* in the heart (*hṛdaya-gatānām pradhāna-nāḍīnām*), and *hirās* or *śīrās* are branch *nāḍis* (*śīrāṇām sākhā-nāḍīnām*). The number of *dhamanis*, as here given, is a hundred and thus almost agrees with the number of *nāḍis* in the heart given in the *Kaṭha Upaniṣad*, VI. 16 (*śatam caikā ca hṛdayasya nāḍyaḥ*).

The *Praśna Upaniṣad*, III. 6 also speaks of a hundred *nāḍis*, of which there are thousands of branches.

³ *antrebhyo vinirgatasya mūtrasya mūtrāśaya-prāpti-sādhane pārśva-dvaya-sṭhe nāḍyau gavīnyau ity ucyete*. Sāyaṇa's *Bhāṣya*. In I. 11. 5 two *nāḍis* called *gavīnikā* are referred to and are described by Sāyaṇa as being the two *nāḍis* on the two sides of the vagina controlling delivery (*gavīnike yoneḥ pārśva-vartinyau nirgamana-pratibandhike nāḍyau*—Sāyaṇa). In one passage (A.V. II. 12. 7) eight *dhamanis* called *manya* are mentioned, and Sāyaṇa says that they are near the neck. A *nāḍi* called *sikatāvati*, on which strangury depends, is mentioned in A.V. I. 17. 4.

⁴ Another goddess of delivery, *Sūṣāṇi*, is also invoked.

The term *jarāyu* is used in the sense of placenta, which is said to have no intimate connection with the flesh and marrow, so that when it falls down it is eaten by the dogs and the body is in no way hurt. A reference is found to a first aid to delivery in expanding the sides of the vagina and pressing the two *gavīnikā nāḍis*¹. The *snāvas* (tendons) are also mentioned along with *dhamanis*, and Sāyaṇa explains them as finer *śīrās* (*śuksmāḥ śīrāḥ snāva-śabdena ucyante*). The division of *dhamanis*, *śīrās* and *snāvas* thus seems to have been based on their relative fineness: the thicker channels (*nāḍis*) were called *dhamanis*, the finer ones were called *śīrās* and the still finer ones *snāvas*. Their general functions were considered more or less the same, though these probably differed according to the place in the body where they were situated and the organs with which they were associated. It seems to have been recognized that there was a general flow of the liquid elements of the body. This probably corresponds to the notion of *srotas*, as we get it in the *Caraka-saṃhitā*, and which will be dealt with later on. Thus A.V. x. 2. 11 says, "who stored in him floods turned in all directions moving diverse and formed to flow in rivers, quick (*tivrā*), rosy (*aruṇā*), red (*lohini*), and copper dark (*tāmra-dhūmrā*), running all ways in a man upward and downward?" This clearly refers to the diverse currents of various liquid elements in the body. The semen, again, is conceived as the thread of life which is being spun out². The intimate relation between the heart and the brain seems to have been dimly apprehended. Thus it is said, "together with his needle hath Atharvan sewn his head and heart³." The theory of the *vāyus*, which we find in all later literature, is alluded to, and the *prāṇa*, *apāna*, *vyāna* and *samāna* are mentioned⁴. It is however difficult to guess what these *prāṇa*, *apāna*, etc. exactly meant. In another passage of the *Atharva-Veda* we hear of nine *prāṇas* (*nava prāṇān navabhiḥ saṃmimite*), and in another seven *prāṇas* are mentioned⁵. In another passage

¹ *vi te bhīnadmi vi yoniṃ vi gavīnike*. A.V. i. 11. 5.

² *Ko asmin reto nyadadhāt tantur ātayatām iti* (Who put the semen in him, saying, Let the thread of life be spun out? A.V. x. 2. 17).

³ *Mūrdhānam asya saṃstvyātharvā hrdayaṃ ca yat* (A.V. x. 2. 26). See also Griffith's translations.

⁴ *Ko asmin prāṇam avayat ko apānaṃ vyānaṃ u samānaṃ asmin ko deve 'dhi śīrāya pūruṣe* (Who has woven *prāṇa*, *apāna*, *vyāna* and *samāna* into him and which deity is controlling him? A.V. x. 2. 13).

⁵ *Sapta prāṇān aṣṭau munyas* (or *majjñās*) *tāṃs te vṛścāmi brahmaṇā* (A.V. 11. 12. 7). The *Taittirīya-brāhmaṇa*, i. 2. 3. 3 refers to seven *prāṇas*, *sapta vai*

we hear of a lotus with nine gates (*nava-dvāraṃ*) and covered with the three *guṇas*¹. This is a very familiar word in later Sanskrit literature, as referring to the nine doors of the senses, and the comparison of the heart with a lotus is also very common. But one of the most interesting points about the passage is that it seems to be a direct reference to the *guṇa* theory, which received its elaborate exposition at the hands of the later Sāṃkhya writers: it is probably the earliest reference to that theory. As we have stated above, the real functions of the *prāṇa*, etc. were not properly understood; *prāṇa* was considered as vital power or life and it was believed to be beyond injury and fear. It was as immortal as the earth and the sky, the day and the night, the sun and the moon, the Brāhmaṇas and the Kṣattriyas, truth and falsehood, the past and the future². A prayer is made to *prāṇa* and *apāna* for protection from death (*prāṇāpānau mṛtyor mā pātāṃ svāhā*)³. In A.V. III. 6. 8 *manas* and *citta* are separately mentioned and Sāyaṇa explains *manas* as meaning *antaḥkaraṇa*, or inner organ, and *citta* as a particular state of the *manas* (*mano-vṛtti-viśeṣeṇa*), as thought⁴. Here also the heart is the seat of consciousness. Thus in a prayer in III. 26. 6 it is said, "O Mitra and Varuṇa, take away the thinking power (*citta*) from the heart (*hṛt*) of this woman and, making her incapable of judgment, bring her under my control⁵." The *ojas* with which we are familiar in later medical works of Caraka and others is mentioned in A.V. II. 18, where

śīrṣaṇyāḥ prāṇāḥ. Again a reference to the seven senses is found in A.V. x. 2. 6: *kaḥ sapta khāni vitatarā śīrṣaṇi*. In A.V. xv. 15. 16. 17 seven kinds of *prāṇa*, *apāna* and *vyāna* are described. These seem to serve cosmic functions. The seven *prāṇas* are *agni*, *āditya*, *candramāḥ*, *pavamāna*, *āpaḥ*, *paśavaḥ* and *prajāḥ*. The seven *apānas* are *paurṇamāsī*, *aṣṭakā*, *amāvāsyā*, *śruddhā*, *dikṣā*, *yajña* and *dakṣiṇā*. The seven kinds of *vyāna* are *bhūmi*, *antarikṣaṃ*, *dyauḥ*, *nakṣatrāṇi*, *ṛtaṇuḥ*, *ārtavaḥ* and *saṃvatsarāḥ*.

¹ *puṇḍarikāṃ nava-dvāraṃ tribhir guṇebhīr āvṛtaṃ
tasmin yad yakṣaṃ ātmanvat tad vai Brahma-vido viduḥ.*

(Those who know Brahman know that being to be the self which resides in the lotus flower of nine gates covered by the three *guṇas*. A.V. x. 8. 43.) The *nāḍis* *ṛdā*, *piṅgalā* and *suṣumnā*, which figure so much in the later Tāntric works, do not appear in the *Atharva-Veda*. No reference to *prāṇāyāma* appears in the *Atharva-Veda*.

² A.V. II. 15.

³ *Ibid.* II. 16. 1. *Prāṇa* and *apāna* are asked in another passage to enter a man as bulls enter a cow-shed. Sāyaṇa calls *prāṇa*, *apāna* "*śarīras-dhāraka*" (A.V. III. II. 5). They are also asked not to leave the body, but to bear the limbs till old age (III. II. 6).

⁴ *Manas* and *citta* are also separately counted in A.V. III. 6. 8.

⁵ The word *cittinaḥ* is sometimes used to mean men of the same ways of thinking (*cittinaḥ samāna-citta-yuktāḥ*—Sāyaṇa. A.V. III. 13. 5).

Agni is described as being *ojas* and is asked to give *ojas* to the worshipper¹.

Practice of Medicine in the Atharva-Veda.

As we have said above, there is evidence to show that even at the time of the *Atharva-Veda* the practice of pure medicine by professional medical men had already been going on. Thus the verse II. 9. 3, as explained by Sāyaṇa, says that there were hundreds of medical practitioners (*śataṃ hy asya bhaiṣajāḥ*) and thousands of herbs (*sahasraṃ uta vīrudhaḥ*), but what can be done by these can be effected by binding an amulet with the particular charm of this verse². Again (II. 9. 5), the Atharvan who binds the amulet is described as the best of all good doctors (*subhīṣaktama*). In VI. 68. 2 Prajāpati, who appears in the Ātreya-Caraka school as the original teacher of Āyur-veda and who learnt the science from Brahmā, is asked to treat (with medicine) a boy for the attainment of long life³. In the *Kauśika-sūtra* a disease is called *liṅgī*, i.e. that which has the symptoms (*liṅga*), and medicine (*bhaiṣajya*) as that which destroys it (*upatāpa*). Dārila remarks that this *upatāpa-karma* refers not only to the disease, but also to the symptoms, i.e. a *bhaiṣajya* is that which destroys the disease and its symptoms⁴. In the *Atharva-Veda* itself only a few medicines are mentioned, such as *jaṅgiḍa* (XIX. 34 and 35), *gulgulu* (XIX. 38), *kuṣṭha* (XIX. 39) and *śata-vāra* (XIX. 36), and these are all to be used as amulets for protection not only from certain diseases, but also from the witchcraft (*krtyā*) of enemies. The effect of these herbs was of the same miraculous nature as that of mere charms or incantations. They did not operate in the manner in which the medicines prescribed

¹ *Ojo' sy ojo me dāh svāhā* (A.V. II. XVIII. 1). Sāyaṇa, in explaining *ojah*, says, "*ojah śarīra-sthiti-kāraṇam aṣṭamo dhātuḥ*." He quotes a passage as being spoken by the teachers (*ācāryaiḥ*): "*ksetrajñasya tad ojas tu kevalāśraya iṣyate yathā snehaḥ pradīpasya yathābhram aśani-tviṣaḥ*" (Just as the lamp depends on the oil and the lightning on the clouds so the *ojah* depends on the *kṣhetra-jña* (self) alone).

² *Śataṃ yā bheṣajāni te sahasraṃ saṃgatāni ca śreṣṭham āsrāva-bheṣajam vaśiṣṭham roga-nāśanam.*
(Oh sick person! you may have applied hundreds or thousands of medicinal herbs; but this charm is the best specific for stopping hemorrhage. A.V. VI. 45. 2.) Here also, as in II. 9. 3, the utterance of the charm is considered to be more efficacious than the application of other herbs and medicines. Water was often applied for washing the sores (VI. 57. 2).

³ *Cikitsatu Prajāpatir dirghāyutvāya cakṣase* (VI. 68. 2).

⁴ Dārila's comment on the *Kauśika-sūtra*, 25. 2.

in the ordinary medical literature acted, but in a supernatural way. In most of the hymns which appear as pure charms the *Kauṣika-sūtra* directs the application of various medicines either internally or as amulets. The praise of Atharvan as physician *par excellence* and of the charms as being superior to all other medicines prescribed by other physicians seems to indicate a period when most of these Atharvaṇic charms were used as a system of treatment which was competing with the practice of ordinary physicians with the medicinal herbs. The period of the *Kauṣika-sūtra* was probably one when the value of the medicinal herbs was being more and more realized and they were being administered along with the usual Atharvaṇic charms. This was probably a stage of reconciliation between the drug system and the charm system. The special hymns dedicated to the praise of certain herbs, such as *jaṅgiḍa*, *kuṣṭha*, etc., show that the ordinary medical virtues of herbs were being interpreted on the miraculous lines in which the charms operated. On the other hand, the drug school also came under the influence of the *Atharva-Veda* and came to regard it as the source of their earliest authority. Even the later medical literature could not altogether free itself from a faith in the efficacy of charms and in the miraculous powers of medicine operating in a supernatural and non-medical manner. Thus Caraka, VI. 1. 39 directs that the herbs should be plucked according to the proper rites (*yathā-vidhi*), and Cakrapāṇi explains this by saying that the worship of gods and other auspicious rites have to be performed (*maṅgala-devatārcanādi-pūrvakam*); in VI. 1. 77 a compound of herbs is advised, which, along with many other virtues, had the power of making a person invisible to all beings (*adrśyo bhūtānām bhavati*); miraculous powers are ascribed to the fruit *āmalaka* (Emblic Myrobalan), such as that, if a man lives among cows for a year, drinking nothing but milk, in perfect sense-control and continence and meditating the holy *gāyatrī* verse, and if at the end of the year on a proper lunar day in the month of Pauṣa (January), Māgha (February), or Phālguna (March), after fasting for three days, he should enter an *āmalaka* garden and, climbing upon a tree full of big fruits, should hold them and repeat (*japa*) the name of Brahman till the *āmalaka* attains immortalizing virtues, then, for that moment, immortality resides in the *āmalaka*; and, if he should eat those *āmalakas*, then the goddess Śrī, the incarnation of the Vedas, appears in person to him (*svayaṃ*

cāsyopatiṣṭhanti śrīr vedavākya-rūpiṇi, vi. 3. 6). In vi. 1. 80 it is said that the *rasāyana* medicines not only procure long life, but, if they are taken in accordance with proper rites (*yathā-vidhi*), a man attains the immortal Brahman. Again in vi. 1. 3 the word *prāyaścitta* (purificatory penance) is considered to have the same meaning as *auśadha* or *bheṣaja*. The word *bheṣaja* in the *Atharva-Veda* meant a charm or an amulet which could remove diseases and their symptoms, and though in later medical literature the word is more commonly used to denote herbs and minerals, either simple or compounded, the older meaning was not abandoned¹. The system of simple herbs or minerals, which existed independently of the *Atharva-Veda*, became thus intimately connected with the system of charm specifics of the *Atharva-Veda*; whatever antagonism may have before existed between the two systems vanished, and Āyur-veda came to be treated as a part of the *Atharva-Veda*². Prajāpati and Indra, the mythical physicians of the *Atharva-Veda*, came to be regarded in the Ātreya-Caraka school as the earliest teachers of Āyur-veda³.

Bloomfield arranges the contents of the *Atharva-Veda* in fourteen classes: 1. Charms to cure diseases and possession by demons (*bhaiṣajyāni*); 2. Prayers for long life and health (*āyuṣyāni*); 3. Imprecations against demons, sorcerers and enemies (*ābhicāri-*

¹ The A.V. terms are *bheṣajam* (remedy), *bheṣajī* (the herbs), and *bheṣajīh* (waters). The term *bhaiṣajya* appears only in the *Kauśika* and other *sūtras* and Brāhmaṇas. Bloomfield says that the existence of such charms and practices is guaranteed moreover at least as early as the Indo-Iranian (Aryan) period by the stems *baeṣaza* and *baeṣazya* (*mañthra baeṣaza* and *baeṣazya*; *haoma baeṣazya*), and by the pre-eminent position of water and plants in all prayers for health and long life. Adalbert Kuhn has pointed out some interesting and striking resemblances between Teutonic and Vedic medical charms, especially in connection with cures for worms and fractures. These may perhaps be mere anthropological coincidences, due to the similar mental endowment of the two peoples. But it is no less likely that some of these folk-notions had crystallized in prehistoric times, and that these parallels reflect the continuation of a crude Indo-European folklore that had survived among the Teutons and Hindus. See Bloomfield's *The Atharva-Veda and Gopatha-Brahmaṇa*, p. 58, and Kuhn's *Zeitschrift für vergleichende Sprachforschung*, xiii. pp. 49-74 and 113-157.

² The *Atharva-Veda* itself speaks (xix. 34. 7) of herbs which were current in ancient times and medicines which were new, and praises the herb *jaṅgiḍa* as being better than them all—*na tvā pūrva oṣadhayo na tvā taranti yā navāḥ*.

³ A.V. vi. 68. 2—*Cikitsatu prajāpatir dīrghāyutvāya cakṣase*; *ibid.* xix. 35. 1—*Indrasya nāma gṛhṇanto ṛṣayaḥ jaṅgiḍam dadan* (The ṛṣis gave *jaṅgiḍa*, uttering the name of Indra). This line probably suggested the story in the *Caraka-saṃhitā*, that Indra first instructed the ṛṣis in Āyur-veda. See *ibid.* xi. viii. 23—*yan mātaliḥ rathakṛitāṃ amṛtaṃ veda bheṣajam tad indro apsu praveśayat tad āpo datta bheṣajam*. The immortalizing medicine which Mātali (the charioteer of Indra) bought by selling the chariot was thrown into the waters by Indra, the master of the chariot. Rivers, give us back that medicine!

kāni and *krtyā-pratiharaṇāni*); 4. Charms pertaining to women (*stri-karmāni*); 5. Charms to secure harmony, influence in the assembly, and the like (*saumanasyāni*); 6. Charms pertaining to royalty (*rāja-karmāni*); 7. Prayers and imprecations in the interest of Brahmins; 8. Charms to secure property and freedom from danger (*pauṣṭikāni*); 9. Charms in expiation of sin and defilement (*prāyaścittāni*); 10. Cosmogonic and theosophic hymns; 11. Ritualistic and general hymns; 12. The books dealing with individual themes (books 13–18); 13. The twentieth book; 14. The *kuntāpa* hymns¹; of these we have here to deal briefly with 1, 2, 3, 4 and 9, more or less in the order in which they appear in the *Atharva-Veda*. A.V. 1. 2 is a charm against fever (*jvara*), diarrhoea (*atisāra*), diabetes (*atimūtra*), glandular sores (*nāḍi-vraṇa*); a string made of *muñja* grass is to be tied, the mud from a field or ant-hill is to be drunk, clarified butter is to be applied and the holes of the anus and penis and the mouth of the sore are to be aerated with a leather bladder and the charm is to be chanted. The disease *āsrāva*, mentioned in this hymn, is explained by Sāyaṇa as meaning diabetes (*mūtrātisāra*)². 1. 3 is a charm against stoppage of urine and stool (*mūtra-puriṣa-nirodha*). Along with a chanting of the hymn the patient is to be made to drink either earth from a rat's hole (*mūṣika-mṛttikā*), a *pūtikā* plant, curd, or saw-dust from old wood, or he is to ride an elephant or a horse, or to throw an arrow; a fine iron needle was to be passed through the urinal canal. This is probably the earliest stage of what developed in later times as the *vasti-kriyā*³. 1. 7 and 1. 8 are charms for driving away evil spirits, *yātudhānas* and *kimidins*, when a man is possessed by them. 1. 10 is a charm for dropsy (*jalodara*): a jugful of water containing grass, etc. is to be sprinkled over the body of the patient. 1. 11 is a charm for securing easy delivery. 1. 12 is a charm for all diseases arising from disturbance of *vāta*, *pitta* and *śleṣman*—fat, honey and clarified butter or oil have to be drunk. Head-disease (*śirṣakti*) and cough (*kāsa*) are specially mentioned. 1. 17

¹ Mr Bloomfield's *The Atharva-Veda and Gopatha-Brahmaṇa*, p. 57.

² Bloomfield says that *āsrāva* means *atisāra* or diarrhoea (*ibid.* p. 59). The same physical applications for the same diseases are directed in A.V. 11. 3. *Āsrāva* denotes any disease which is associated with any kind of diseased ejection. Thus in 11. 3. 2 Sāyaṇa says that *āsrāva* means *atisārātimūtra-nāḍi-vraṇādayaḥ*.

³ *Pra te bhinadmī mehanam vartram veśantya iva evā te mūtram mucyatām buhir bāl iti sarvakam* (I open your urinal path like a canal through which the waters rush. So may the urine come out with a whizzing sound—A.V. 1. 3. 7). All the verses of the hymn ask the urine to come out with a whizzing sound.

is a charm for stopping blood from an injury of the veins or arteries or for stopping too much hemorrhage of women. In the case of injuries a handful of street-dust is to be thrown on the place of injury or a bandage is to be tied with sticky mud¹. I. 22 is a charm against heart-disease and jaundice—hairs of a red cow are to be drunk with water and a piece of a red cow's skin is to be tied as an amulet. It is prayed that the red colour of the sun and the red cow may come to the patient's body and the yellow colour due to jaundice may go to birds of yellow colour. I. 23, which mentions *kilāsa* or *kuṣṭha* (white leprosy) of the bone, flesh and skin and the disease by which hairs are turned grey (*palita*), is a charm against these². The white parts are to be rubbed with an ointment made of cow-dung, *bhr̥ṅga-rāja*, *haridrā* *indravaruṇī* and *nīlikā* until they appear red. The black medicines applied are asked to turn the white parts black. I. 25 is a charm against *takman*, or fever—the patient has to be sprinkled with the water in which a red-hot iron axe has been immersed. The description shows that it was of the malarial type; it came with cold (*śīta*) and a burning sensation (*śoci*). Three types of this fever are described: that which came the next day (*anyedyuh*), the second day (*ubhayedyuh*), or the third day (*tr̥tīyaka*)³. It was also associated with yellow, probably because it produced jaundice. II. 9 and 10 are charms against hereditary (*kṣetriya*) diseases, leprosy, dyspepsia, etc.⁴ Amulets of *arjuna* wood, barley, sesamum and its flower had also to be tied when the charm was uttered⁵. II. 31 is a charm against various diseases due to worms. The priest, when uttering this charm, should hold street-dust in his left hand and press it with his right hand and throw it on the patient. There are visible and invisible worms; some of them are called *algaṇḍu* and others *śaluna*; they are generated in the intestines, head and

¹ IV. 12 is also a charm for the same purpose.

² VI. 135–137 is also a charm for strengthening the roots of the hair. *Kāka-māci* with *bhr̥ṅga-rāja* has to be drunk.

³ *Na mahi śītāya takmane namo rūrāya śociṣe kṛṇomi
yo anyedyur ubhayedyur abhyeti tr̥tīyakāya namo astu takmane.*

See also A.V. VII. 123. 10, where the third-day fever, fourth-day fever and irregular fevers are referred to.

⁴ The word *kṣetriya* has been irregularly derived in Pāṇini's rule, v. 2. 92 (*kṣetriyac paraḥṣetre cikitsyah*). Commentaries like the *Kāśika* and the *Padamañjarī* suggest one of its meanings to be "curable in the body of another birth" (*jānmāntara-śarīre cikitsyah*), that is, incurable. I, however, prefer the meaning "hereditary," as given by Sāyaṇa in his commentary on A.V. II. 10. 1, as being more fitting and reasonable.

⁵ *Yakṣman* is also counted as a *kṣetriya* disease (II. 10. 6).

heels; they go about through the body by diverse ways and cannot be killed even with various kinds of herbs. They sometimes reside in the hills and forests and in herbs and animals, and they enter into our system through sores in the body and through various kinds of food and drink¹. II. 33 is a charm for removing *yakṣman* from all parts of the body. III. 7. 1 is a charm for removing all hereditary (*kṣetriya*) diseases; the horn of a deer is to be used as an amulet. III. 11 is a charm against phthisis (*rāja-yakṣman*)—particularly when it is generated by too much sex-indulgence; the patient is to eat rotten fish². IV. 4 is a charm for attaining virility—the roots of the *kapittha* tree boiled in milk are to be drunk when the charm is uttered. IV. 6 and 7 are charms against vegetable poisoning—the essence of the *kṛmuka* tree is to be drunk. V. 4 is a charm against fever (*takman*) and phthisis; the patient is to take the herb *kuṣṭha* with butter when the charm is uttered³. V. 11 is a charm against fever⁴. V. 23 is a charm against worms—the patient is given the juice of the twenty kinds of roots⁵. VI. 15 is a charm for eye-diseases; the patient has to take various kinds of vegetable leaves fried in oil, particularly the mustard plant⁶. VI. 20 is a charm against bilious fever (*śuṣmīṇo jvarasya*); it is said to produce a great burning sensation, delirium and jaundice. VI. 21 is a charm for increasing the hair—the hair is to be sprinkled with a decoction of various herbs. VI. 23 is a charm against heart-disease, dropsy and jaundice. VI. 25 is a charm for inflammation of the glands of the neck (*ganḍa-mālā*)⁷. VI. 85 is a charm against consumption (*rājay-akṣman*); VI. 90 for colic pain (*śūla*)⁸; VI. 105 for cough and

¹ II. 31. 5. I have adopted Sāyaṇa's interpretation.

² VII. 78 is also a charm for inflammation of the neck (*ganḍa-mālā*) and phthisis (*yakṣma*).

³ *Kuṣṭha* was believed to be good for the head and the eyes (v. 4. 10).

⁴ Gāndhāra Mahāvṛṣa, Muñjavān, and particularly Bālhika (Balkh), were regarded as the home of fever; so also the country of Aṅga and Magadha. It was accompanied by cold (*śīta*) and shivering (*rūrah*). It was often attended with cough (*kāsa*) and consumption (*valāsa*). It attacked sometimes on the third or fourth day, in summer or in autumn (*śarada*), or continued all through the year.

⁵ This is one of the few cases where a large number of roots were compounded together and used as medicine along with the charms.

⁶ Some of the other plants are *alasālā*, *silāñjālā*, *mālagasālā*.

⁷ Also VII. 78, where *apacit* appears as a name for the inflammation of the neck (*gala-ganḍa*). Three different types of the disease are described. *Apacit* is at first harmless, but when it grows, it continues more to secrete its discharges, like boils on the joints. These boils grow on the neck, the back, the thigh-joint and the anus. See further VI. 83, where conch-shell is to be rubbed and applied. VIII. 83 is also a charm for it. Blood had to be sucked off the inflamed parts by a leech or an iguana (*grha-godhikā*).

⁸ A piece of iron is to be tied as an amulet.

other such diseases due to phlegm (*śleṣmā*); VI. 109 for diseases of the rheumatic type (*vāta-vyādhi*¹). VI. 127 is a charm for abscess (*vidradha*), phlegmatic diseases (*valāsa*) and erysipelatous inflammation (*visarpa*). Various kinds of *visarpa* in different parts of the body are referred to. Heart-disease and phthisis are also mentioned². There are said to be a hundred kinds of death (*mṛtyu*) (A.V. VIII. 5. 7), which are explained by Sāyaṇa as meaning diseases such as fever, head-disease, etc. Several diseases are mentioned in IX. 18—first the diseases of the head, *śirṣakti*, *śirṣāmaya*, *karna-śūla* and *visalpaka*, by which secretions of bad smell come out from the ear and the mouth, then fever proceeding from head troubles with shivering and cracking sensations in the limbs. *Takman*, the dreaded autumnal fever, is so described. Then comes consumption; then come *valāsa*, *kāhābāha* of the abdomen, diseases of *kloma*, the abdomen, navel and heart, diseases of the spine, the ribs, the eyes, the intestines, the *visarpa*, *vidradha*, wind-diseases (*vātikāra*), *alaji* and diseases of the leg, knee, pelvis, veins and head.

Bolling, in his article on diseases and medicine (Vedic) in the *Encyclopaedia of Religion and Ethics*, makes the following remark concerning the theory of the origin of diseases. "To be noted however is the fact that the Hindu theory of the constitution of the body of three elements, bile, phlegm and wind, does not appear in early Atharvan texts. *Vāti-kṛta-nāśanī* of VI. 44. 3 cannot be urged as proof to the contrary, as it means, not destructive of (diseases) produced by the wind in the body (*vāti-kṛta-nāśanī*), but destructive of that which has been made into wind. Evidently, from its association with diarrhoea, it refers to wind in the intestines." This does not seem to me to be correct. The phrase which Bolling quotes is indeed of doubtful meaning; Sāyaṇa takes it as being composed of two words, *vāti* (healer by aeration) and *kṛta-nāśanī* (destroyer of evil deeds which brought about the disease). But, however that may be, there are other passages on the subject, which Bolling seems to have missed. Thus in I. 12. 3 diseases are divided into three classes, viz. those produced by water, by wind, and those which are dry—*yo abhrajā vātajā yaś ca śuṣmaḥ*³. The phlegm of the later medical writers was also considered watery, and the word

¹ *Pippalī* is also to be taken along with the utterance of the charm. It is regarded as the medicine for all attacked by the diseases of the wind (*vāti-kṛtasya bheṣajīm*). It is also said to cure madness (*kṣiptasya bheṣajīm*).

² *Cīpudru* is a medicine for *valāsa*. *Cīpudrur abhicakṣaṇam* (VI. 127. 2).

³ Compare also *vātikārasya* (IX. 13. 20).

abhraja probably suggests the origin of the theory of phlegm, as being one of the upholders and destroyers of the body. The word *vātaja* means, very plainly, diseases produced by wind, and the *pitta*, or bile, which in later medical literature is regarded as a form of fire, is very well described here as *śuṣma*, or dry. Again in VI. 109 we have *pippalī* as *vāti-kṛtasya bheṣajīm*. The context shows that the diseases which are referred to as being curable by *pippalī* are those which are considered as being produced by wind in later literature; for "madness" (*kṣipta*) is mentioned as a *vāti-kṛta* disease. The word *śuṣma* comes from the root "śuṣ," to dry up, and in slightly modified forms is used to mean a "drying up," "burning," "strength," and "fiery." In one place at least it is used to describe the extremely burning sensation of delirious bilious fever, which is said to be burning like fire¹. My own conclusion therefore is that at least some Atharvaṇic people had thought of a threefold classification of all diseases, viz. those produced by wind, those by water, and those by fire, or those which are dry and burning. This corresponds to the later classification of all diseases as being due to the three *doṣas*, wind (*vāyu*), phlegm (*kapha* or *śleṣma*) and bile (*pitta*). Apart from the ordinary diseases, many were the cases of possession by demons and evil spirits, of which we have quite a large number. Some of the prominent ones are *Yātudhāna*, *Kimūdin*, *Piśāca*, *Piśāci*, *Amivā*, *Dvayāvin*, *Rakṣaḥ*, *Magundī*, *Alimśa*, *Vatsapa*, *Palāla*, *Anupalāla*, *Śarku*, *Koka*, *Malimluca*, *Palijaka*, *Vavrivāsas*, *Āśreṣa*, *Rkṣagrīva*, *Pramilin*, *Durnāmā*, *Sunāmā*, *Kuṣṣila*, *Kusūla*, *Kakubha*, *Śrīma*, *Arāya*, *Karuma*, *Khalaja*, *Śakadhūmaja*, *Uruṇḍa*, *Maṭmaṭa*, *Kumbhamuṣka*, *Sāyaka*, *Nagnaka*, *Taṅgalva*, *Pavinasa*, *Gandharva*, *Brahmagraha*, etc.² Some of the diseases with their troublous symptoms were (poetically) personified, and diseases which often went together were described as being related as brothers and sisters. Diseases due to worms were well known, in the case of both men

¹ VI. 20. 4. For other references where the word *śuṣma* occurs in more or less modified forms see I. 12. 3, III. 9. 3, IV. 4. 3, IV. 4. 4, V. 2. 4, V. 20. 2, VI. 65. 1, VI. 73. 2, IX. 1. 10, 20, IX. 4. 22, etc.

² See I. 28. 35, II. 9. 11, 14, VIII. 6. The last passage contains a good description of some of these beings. There were some good spirits which fought with evil ones and favoured men, such as *Piṅga*, who preserved the babe at birth and chased the amorous *Gandharvas* as wind chases cloud. VIII. 6. 19, 25 says that sometimes the higher gods are also found to bring diseases. Thus *Takman* was the son of *Varuṇa* (VI. 96. 2) and he produced dropsy (I. 10. 1-4, II. 10. 1, IV. 16. 7, etc.). *Parjanya* (rain-god) produced diarrhoea, and *Agni* produced fever, headache and cough.

and of cattle. There were also the diseases due to sorcery, which played a very important part as an offensive measure in Vedic India. Many of the diseases were also known to be hereditary (*kṣetriya*). From the names of the diseases mentioned above it will be found that most of the diseases noted by Caraka existed in the Vedic age.

The view-point from which the Vedic people looked at diseases seems to have always distinguished the different diseases from their symptoms. Thus the fever was that which produced shivering, cold, burning sensation, and the like, i.e. the diagnosis was mainly symptomatic. In addition to the charms and amulets, and the herbs which were to be internally taken, water was considered to possess great medical and life-giving properties. There are many hymns which praise these qualities of water¹. The medicinal properties of herbs were often regarded as being due to water, which formed their essence. Charms for snake poisons and herbs which were considered to be their antidotes were in use. Scanty references to diseases and their cures are found sparsely scattered in other R̥g-Vedic texts and Brāhmaṇas. But nothing in these appears to indicate any advance on the *Atharva-Veda*² in medical knowledge. Apart from these curatives there were also the already mentioned charms, amulets and medicines for securing long life and increasing virility, corresponding to the *Rasāyana* and the *Vāji-karaṇa* chapters of Caraka and other medical works. We cannot leave this section without pointing to the fact that, though most diseases and many remedies were known, nothing in the way of *nidāna*, or causes of diseases, is specified. The fact that there existed a threefold classification of diseases, viz. *abhraja*, *vātaja* and *śuṣma*, should not be interpreted to mean that the Vedic people had any knowledge of the disturbance of these elements operating as *nidānas* as they were understood in later medical literature. The three important causes of diseases were evil deeds, the sorcery of enemies, and possession by evil spirits or the anger of certain gods.

¹ *apsu antar amṛtam apsu bheṣajam* (There is immortality and medicine in water—1. 4. 4). See also 1. 5. 6, 33, 11. 3, 111. 7. 5, IV. 33, VI. 24. 92, VI. 24. 2, etc.

² For a brief survey of these R̥g-Vedic and other texts see Bolling's article "Disease and Medicine (Vedic)" in *Encyclopaedia of Religion and Ethics*.

The Foetus and the Subtle Body.

A human body is regarded by Caraka as a modification of the five elements, ether, air, fire, water and earth, and it is also the seat of consciousness (*cetanā*)¹. The semen itself is made of the four elements, air, fire, water and earth; ether is not a constituent of it, but becomes connected with it as soon as it issues forth, since *ākāśa* or *antarikṣa* (ether) is all-pervading. The semen that is ejected and passes into the ovary is constituted of equal parts of air, fire, water and earth; the ether becomes mixed with it in the ovary; for *ākāśa* itself is omnipresent and has no movement of its own²; the semen is the product of six kinds of fluids (*rasa*). But the foetus cannot be produced simply by the union of the semen of the father and the blood (*śoṇita*) of the mother. Such a union can produce the foetus only when the *ātman* with its subtle body, constituted of air, fire, water and earth, and *manas* (mind—the organ involved in all perception and thought), becomes connected with it by means of its *karma*. The four elements constituting the subtle body of the *ātman*, being the general causes of all productions, do not contribute to the essential bodily features of the child³. The elements that contribute to the general features are, (1) the mother's part—the blood, (2) the father's part—the semen, (3) the *karma* of each individual; the part played by the assimilated food-juice of the mother need not be counted separately, as it is determined by the *karma* of the individual. The mental traits are determined by the state of mind of the individual in its previous birth. Thus, if the previous state of life was that of a god, the mind of the child

Caraka, IV. 2. 4. *ākāśam tu yady-apī śukre pāñca-bhautike 'sti tathāpi na puruṣa-śarīrān nirgatya garbhāsayam gacchati, kintu bhūta-catuṣṭayam eva kriyāvad yāi ākāśam tu vyāpakam eva tatragatena śukreṇa sambaddham bhavati*. Cakrapāṇi's *Āyur-veda-dīpikā*, IV. 2. 4. Sūśruta however considers *śukra* (semen) as possessing the qualities of *soma*, and *ārtava* (blood) as possessing the qualities of fire. He says, however, that particles of the other *bhūtas* (earth, air and ether, as *Ḍalhaṇa* enumerates them) are separately associated with them (*saumyam śukram ārtavam āgneyam itareṣām apy atra bhūtānām sāmīdhyam asty aṇunā viśeṣeṇa paraśparopākārāt parānugrahāt paraśparāmupraveśāc ca*—Sūśruta, III. 3. 1), and they mutually co-operate together for the production of the foetus.

³ *yāni tv ātmani sūksmāṇi bhūtāni ātivāhika-rūpāṇi tāni sarva-sādhāraṇatvena aviśeṣa-sādrśya-kāraṇānti neha boddhavyāni*. Cakrapāṇi's *Āyur-veda-dīpikā*, IV. 2. 23-27.

will be pure and vigorous, whereas, if it was that of an animal, it will be impure and dull¹. When a man dies, his soul, together with his subtle body, composed of the four elements, air, fire, water and earth, in a subtle state and *manas*, passes invisibly into a particular womb on account of its *karma*, and then, when it comes into connection with the combined semen and blood of the father and mother, the foetus begins to develop². The semen and blood can, however, operate as causes of the production of the body only when they come into connection with the subtle body transferred from the previous body of a dying being³. Suśruta (III. 1. 16) says that the very subtle eternal conscious principles are manifested (*abhivyañjyate*) when the blood and semen are in union (*parama-sūkṣmās cetanāvantah śāśvatā lohita-retasaḥ sannipāteṣv abhivyañjyante*). But later on (III. 3. 4) this statement is modified in such a way as to agree with Caraka's account; for there it is said that the soul comes into contact with the combined semen and blood along with its subtle elemental body (*bhūtātmanā*). In another passage a somewhat different statement is found (Suśruta, III. 4. 3). Here it is said that the materials of the developing foetus are *agni*, *soma*, *sattva*, *rajas*, *tamas*, the five senses, and the *bhūtātmanā*—all these contribute to the life of the foetus and are also called the *prāṇas* (life)⁴. Ḍalhaṇa, in explaining this, says that the *agni* (fire) spoken of here is the heat-power which manifests itself in the fivefold functionings of digestion (*pācaka*), viz. brightening of the skin (*bhrājaka*), the faculty of vision

⁴ This *bhūtātmanā*, i.e. the subtle body together with the soul presiding over it, is called by Suśruta *karma-puruṣa*. Medical treatment is of this *karma-puruṣa* and his body (*śa eṣa karma-puruṣaḥ cikitsādhikṛtaḥ*—Suśruta, III. 1. 16). Suśruta (I. 1. 21) again says, “*pañca-mahābhūta-śarīri-samavāyah puruṣa ity ucyate; tasmin kṛiyā so 'dhiṣṭhānam.*” (In this science, the term *puruṣa* is applied to the unity of five elements and the self (*śarīri*), and this is the object of medical treatment.)

(*ālocaka*), coloration of the blood, the intellectual operations and the heat operations involved in the formation and work of the different constituent elements (*dhātu*), such as chyle, blood, etc.; the *soma* is the root-power of all watery elements, such as mucus, chyle, semen, etc., and of the sense of taste; *vāyu* represents that which operates as the fivefold life-functionings of *prāṇa*, *apāna*, *samāna*, *udāna*, and *vyāna*. Dalhaṇa says further that *sattva*, *rajas* and *tamas* refer to *manas*, the mind-organ, which is a product of their combined evolution. The five senses contribute to life by their cognitive functionings. The first passage seemed to indicate that life was manifested as a result of the union of semen and blood; the second passage considered the connection of the soul with its subtle body (*bhūtātma*) necessary for evolving the semen-blood into life. The third passage introduces, in addition to these, the five senses, *sattva*, *rajas*, and *tamas*, and the place of semen-blood is taken up by the three root-powers of *agni*, and *vāyu*. These three powers are more or less of a hypothetical nature, absorbing within them a number of functionings and body-constituents. The reason for these three views in the three successive chapters cannot be satisfactorily explained, except on the supposition that Suśruta's work underwent three different revisions at three different times. Vāgbhaṭa the elder says that the moment the semen and the blood are united, the life principle (*jīva*), being moved by *manas* (*mano-javana*), tainted, as the latter is, with the afflictions (*kleśa*) of attachment, etc., comes in touch with it¹.

The doctrine of a subtle body, as referred to in the medical works, may suitably be compared with the Sāṃkhya view. Cakrapāṇi himself, in explaining *Caraka-saṃhitā*, IV. 2. 36, says that this doctrine of a subtle body (*ātivāhika śarīra*) is described in the *āgama*, and by *āgama* the Sāṃkhya *āgama* is to be understood (*tena āgamād eva sāmkhya-darśana-rūpād ātivāhika-śarīrāt*). The *Sāṃkhya-kārikā* 39 speaks of a subtle body (*sūkṣma deha*) and the body inherited from

¹ gate purāṇe rajasi nave 'vasthite śuddhe garbhasyāśaye mārge ca bijātmanā śuklam avikṛtam avikṛtena vāyunā preritam anyaiś ca mahā-bhūtair anugataṃ ārtavena abhīmūrchitam anvaṣaṃ eva rāgādi-kleśa-vaśānuvartinā sva-karma-coditenamano-javenajīvenābhisaṃśṛṣṭaṃ garbhāśayam upayāti. Aṣṭāṅga-saṃgraha, II. 2. Indu, in explaining this, says, "bijātmanā garbha-kāraṇa-mahā-bhūta-svabhāvena . . . sūkṣma-svarūpāḥ manas-sahacāribhis tanmātrākhyair mahā-bhūtair anugataṃ strī-kṣetra-prāptiā karma-vaśād ārtavena miśrī bhūtaṃ anvaṣaṃ miśrī-bhāva-hīna-kālam eva . . . mano-javena jīvenābhisaṃśṛṣṭaṃ prāpta-saṃyogam garbhāśayam śuklam upayāti." His further explanations of the nature of applications of the *jīva* show that he looked up Patañjali's *Yoga-sūtras* for the details of *avidyā*, etc., and the other *kleśas*.

the parents. The *sūkṣma* continues to exist till salvation is attained, and at each birth it receives a new body and at each death it leaves it. It is constituted of *mahat*, *ahaṃkāra*, the eleven senses and the five *tan-mātras*. On account of its association with the *buddhi*, which bears the impress of virtue, vice, and other intellectual defects and accomplishments, it becomes itself associated with these, just as a cloth obtains fragrance through its connection with campak flowers of sweet odour; and hence it suffers successive rebirths, till the *buddhi* becomes dissociated from it by the attainment of true discriminative knowledge. The necessity of admitting a subtle body is said to lie in the fact that the *buddhi*, with the *ahaṃkāra* and the senses, cannot exist without a supporting body; so in the interval between one death and another birth the *buddhi*, etc. require a supporting body, and the subtle body is this support¹. In the *Sāṃkhya-pravacana-bhāṣya*, v. 103, it is said that this subtle body is like a little tapering thing no bigger than a thumb, and that yet it pervades the whole body, just as a little flame pervades a whole room by its rays². The *Vyāsa-bhāṣya*, in refuting the Sāṃkhya view, says that according to it the *citta* (mind), like the rays of a lamp in a jug or in a palace, contracts and dilates according as the body that it occupies is bigger or smaller³. Vācaspati, in explaining the Yoga view as expounded by Vyāsa, says that in the Sāṃkhya view the *citta* is such that it cannot, simply by contraction and expansion, leave any body at death and occupy another body without intermediate relationship with a subtle body (*ātivāhika-śarīra*). But, if the *citta* cannot itself leave a body and occupy another, how can it connect itself with a subtle body at the time of death? If this is to be done through another body, and that through another, then we are led to a vicious infinite. If it is argued that the *citta* is connected with such a subtle body from beginningless time, then the reply is that such a subtle body has never been perceived by anyone (*na khalu etad adhyakṣa-gocaram*); nor can it be regarded as indispensably necessary through inference, since the Yoga view can explain the situation without the hypothesis of any such body. The *citta* is all-pervading,

¹ *Sāṃkhya-tattva-kaumudī*, 39, 40, 41.

² *yathā dīpasya sarva-gṛha-vyāpīve 'pi kalikā-kāratvaṃ...tathaiṣa līṅga-dehasya deha-vyāpīve 'py anguṣṭha-parimāṇatvaṃ. Sāṃkhya-pravacana-bhāṣya*, v. 103.

³ *ghaṭa-prāsāda-pradīpa-kalpaṃ saṅkoca-vikāśi cittam śarīra-parimāṇākāra-mātram ity āpare pratipannāḥ. Vyāsa-bhāṣya on Patañjali's Yoga-sūtras*, iv. 10.

and each soul is associated with a separate *citta*. Each *citta* connects itself with a particular body by virtue of the fact that its manifestations (*vr̥tti*) are seen in that body. Thus the manifestations of the all-pervading *citta* of a soul cease to appear in its dying body and become operative in a new body that is born. Thus there is no necessity of admitting a subtle body (*ātivāhikatvaṃ tasya na mṛṣyāmahe*)¹.

The Vaiśeṣika also declines to believe in the existence of a subtle body, and assigns to it no place in the development of the foetus. The development of the foetus is thus described by Śrīdhara in his *Nyāya-kandālī*²: “After the union of the father’s semen and the mother’s blood there is set up in the atoms constituting them a change through the heat of the womb, such that their old colour, form, etc. become destroyed and new similar qualities are produced; and in this way, through the successive formation of dyads and triads, the body of the foetus develops; and, when such a body is formed, there enters into it the mind (*antahkaraṇa*), which could not have entered in the semen-blood stage, since the mind requires a body to support it (*na tu śukra-śoṇitāvasthāyām śarīrāśrayatvān manasaḥ*). Small quantities of food-juice of the mother go to nourish it. Then, through the unseen power (*adr̥ṣṭa*), the foetus is disintegrated by the heat in the womb into the state of atoms, and atoms of new qualities, together with those of the food-juice, conglomerate together to form a new body.” According to this view the subtle body and the mind have nothing to do with the formation and development of the foetus. Heat is the main agent responsible for all disintegration and re-combination involved in the process of the formation of the foetus.

The Nyāya does not seem to have considered this as an important question, and it also denies the existence of a subtle body. The soul, according to the Nyāya, is all-pervading, and the *Mahā-bhārata* passage quoted above, in which Yama draws out the *puruṣa*

¹ Vācaspati’s *Tattva-vaiśārādī*, IV. 10. Reference is made to *Mahā-bhārata*, III. 296. 17, *aṅguṣṭha-mātram puruṣaṃ niśakaraṣa yamo balāt*. Vācaspati says that *puruṣa* is not a physical thing and hence it cannot be drawn out of the body. It must therefore be interpreted in a remote sense as referring to the cessation of manifestation of *citta* in the dying body (*na cāsya niśkarṣaḥ sambhāvati, ity aupacāriko vyākhyeyas tathā ca cīteṣ cittasya ca tatra tatra vr̥tty-abhāva eva niśkarṣārthah*).

² The *Sāṃkhya-pravacana-bhāṣya*, v. 103, says that the thumb-like *puruṣa* referred to in *Mahā-bhārata*, III. 296. 17, which Yama drew from the body of Satyavān, has the size of the subtle body (*līṅga-deha*).

² *Nyāya-kandālī*, Vizianagram Sanskrit series, 1895, p. 33.

of the size of a thumb, has, according to Nyāya, to be explained away¹. In rebirth it is only the all-pervading soul which becomes connected with a particular body (*ya eva dehāntara-saṃgamo 'sya, tam eva taj-jñāh-para-lokam āhuh*)².

Candrakīrti gives us an account of the Buddhist view from the *Śāli-stamba-sūtra*³. The foetus is produced by the combination of the six constituents (*ṣaṇṇāṃ dhātūnāṃ samavāyāt*). That which consolidates (*saṃśleṣa*) the body is called earth (*prthivī-dhātu*); that which digests the food and drink of the body is called fire (*tejo-dhātu*); that which produces inhalation and exhalation is called air (*vāyu-dhātu*); that which produces the pores of the body (*antaḥ-sauśīryam*) is called ether (*ākāśa-dhātu*); that by which knowledge is produced is called the *viññāna-dhātu*. It is by the combination of them all that a body is produced (*sarveṣāṃ samavāyāt kāyasyotpattir bhavati*). The seed of *viññāna* produces the germ of name and form (*nāma-rūpāṅkura*) by combination with many other diverse causes. The foetus is thus produced of itself, not by another, nor by both itself and another, nor by god, nor by time, nor by nature, nor by one cause, nor by no cause, but by the combination of the mother's and the father's parts at the proper season⁴. The combination of father's and mother's parts gives us the five *dhātus*, which operate together when they are in combination with the sixth *dhātu*, the *viññāna*.

The view that the foetus is the result of the joint effect of the six *dhātus* reminds us of a similar expression in *Caraka*, IV. 3. Caraka gives there a summary of the discussions amongst various sages on the subject of the causes of the formation and development of the foetus: where there is a union between a man with effective semen and a woman with no defect of organ, ovary and blood, if at the time of the union of the semen and blood the soul comes in touch with it through the mind, then the foetus begins to develop⁵. When it is taken care of by proper nourishment, etc., then at the right time

¹ *tasmān na hṛt-puṇḍarīke yāvad-avasthānam ātmanaḥ ata eva aṅguṣṭha-mātram puruṣaṃ niścakārṣa balād yama iti Vyāsa-vacanam evam-param avagantavyam* (Jayanta's *Nyāya-mañjarī*, p. 469).

² *Ibid.* p. 473.

³ *Mādhyamika-vṛtti* (Bibliotheca Buddhica), pp. 560-61.

⁴ *Ibid.* p. 567.

⁵ In the Vaiśeṣika also the all-pervading *ātman* comes into touch with the foetus through the *manas*; but the difference is this, that here the *manas* is an operative factor causing the development of the foetus, whereas there the *manas* goes to the foetus when through the influence of body-heat it has already developed into a body.

the child is born, and the whole development is due to the combined effect of all the elements mentioned above (*samudayād eṣāṃ bhāvānām*). The foetus is born of elements from the mother and the father, the self, the proper hygienic care of the parents' bodies (*sātmya*) and the food-juice; and there is also operant with these the *sattva* or *manas*, which is an intermediate vehicle serving to connect the soul with a former body when it leaves one (*aupapāduka*)¹. Bharadvāja said that none of these causes can be considered as valid; for, in spite of the union of the parents, it often happens that they remain childless; the self cannot produce the self; for, if it did, did it produce itself after being born or without being born? In both cases it is impossible for it to produce itself. Moreover, if the self had the power of producing itself, it would not have cared to take birth in undesirable places and with defective powers, as sometimes happens. Again, proper hygienic habits cannot be regarded as the cause; for there are many who have these, but have no children, and there are many who have not these, but have children. If it was due to food-juice, then all people would have got children. Again, it is not true that the *sattva* issuing forth from one body connects itself with another; for, if it were so, we should all have remembered the events of our past life. So none of the above causes can be regarded as valid. To this Ātreya replied that it is by the combined effect of all the above elements that a child is produced, and not by any one of them separately². This idea is again repeated in IV. 3. 20, where it is said that just as a medical room (*kūṭāgāraṃ vartulākāraṃ grhaṃ jantāka-sveda-pratipāditam* —Cakrapāṇi) is made up of various kinds of things, or just as a chariot is made up of a collection of its various parts, so is the foetus made up of the combination of various entities which contribute to the formation of the embryo and its development (*nānā-vidhānāṃ garbha-kārāṇāṃ bhāvānāṃ samudayād abhinirvartate*)³. The idea of such a combined effect of causes as leading to the production of a perfect whole seems to have a peculiar Buddhistic ring about it.

Bharadvāja, in opposing the above statement of Ātreya, asks what, if the foetus is the product of a number of combined causes,

¹ *Caraka-saṃhitā*, IV. 3. 3.

² *neti bhagavān Ātreyaḥ sarvebhya ebhyo bhāvebhyaḥ samudātebhya garbho 'bhinirvartate. Ibid.* IV. 3. 11.

³ *Ibid.* IV. 3. 20.

is the definite order in which they co-operate together to produce the various parts (*katham ayaṃ sandhiyate*)? Again, how is it that a child born of a woman is a human child and not that of any other animal? If, again, man is born out of man, why is not the son of a stupid person stupid, of a blind man blind, and of a madman mad? Moreover, if it is argued that the self perceives by the eye colours, by the ear sounds, by the smell odours, by the organ of taste the different tastes, and feels by the skin the different sensations of touch, and for that reason the child does not inherit the qualities of the father, then it has to be admitted that the soul can have knowledge only when there are senses and is devoid of it when there are no senses; in that case the soul is not unchangeable, but is liable to change (*yatra caitad ubhayaṃ sambhavati jñatvaṃ ajñatvaṃ ca sa-vikāraś cātmā*)¹. If the soul perceives the objects of sense through the activity of the senses, such as perceiving and the like, then it cannot know anything when it has no senses, and, when it is unconscious, it cannot be the cause of the body-movements or of any of its other activities and consequently cannot be called the soul, *ātman*. It is therefore simple nonsense to say that the soul perceives colours, etc. by its senses.

To this Ātreya replies that there are four kinds of beings, viz. those born from ovaries, eggs, sweat and vegetables. Beings in each class exist in an innumerable diversity of forms². The forms that the foetus-producing elements (*garbha-karā bhāvāḥ*) assume depend upon the form of the body where they assemble. Just as gold, silver, copper, lead, etc. assume the form of any mould in which they are poured, so, when the foetus-producing elements assemble in a particular body, the foetus takes that particular form. But a man is not infected with the defect or disease of his father, unless it be so bad or chronic as to have affected his semen. Each of our limbs and organs had their germs in the semen of the father, and, when the disease or defect of the father is so deep-rooted as to have affected (*upatāpa*) the germ part of any particular organ in the seed, then the child produced out of the semen is born defective in that limb; but, if the defect or disease of the father is so superficial that his semen remains unaffected, then the disease or defect is not inherited by the son. The child does not owe sense-organs to his parents; he alone is responsible for the goodness or badness of his sense-organs; for

¹ *Caraka-saṃhitā*, IV. 3. 21.

² *Ibid.* IV. 3. 22, 23.

these are born from his own self (*ātma-jānindriyāṇi*). The presence or absence of the sense-organs is due to his own destiny or the fruits of *karma* (*daiva*). So there is no definite law that the sons of idiots or men with defective senses should necessarily be born idiots or be otherwise defective¹. The self (*ātman*) is conscious only when the sense-organs exist. The self is never without the *sattva* or the mind-organ, and through it there is always some kind of consciousness in the self². The self, as the agent, cannot without the sense-organs have any knowledge of the external world leading to practical work; no practical action for which several accessories are required can be performed unless these are present; a potter who knows how to make a jug cannot succeed in making it unless he has the organs with which to make it³. The fact that the self has consciousness even when the senses do not operate is well illustrated by our dream-knowledge when the senses lie inoperative⁴. Ātreya further says that, when the senses are completely restrained and the *manas*, or mind-organ, is also restrained and concentrated in the self, one can have knowledge of all things even without the activity of the senses⁵. The self is thus of itself the knower and the agent.

This view of Caraka, as interpreted by Cakrapāṇi, seems to be somewhat new. For the self is neither pure intelligence, like the *puruṣa* of the Sāṃkhya-yoga, nor the unity of being, intelligence and bliss, like that of the Vedānta. Here the soul is the knower by virtue of its constant association with *manas*. In this, however, we are nearer to the Nyāya-Vaiśeṣika view. But in the Nyāya-Vaiśeṣika view the soul is not always in contact with *manas* and is not always conscious. The *manas* in that view is atomic. The view that the

¹ *Caraka-saṃhitā*, IV. 3. 25.

² *Ibid.* IV. 3. 26, *na hy-asattvaḥ kadācid ātmā sattva-viśeṣāc copalabhyate jñāna-viśeṣaḥ*. Cakrapāṇi, in commenting on this, says that our knowledge of the external world is due to the operation of the sense-organs in association with the mind-organ. If these sense-organs do not exist, we cannot have any knowledge of the external world, but the internal organ of mind is always associated with the self: so the knowledge which is due to this mind-organ is ever present in the self (*yat tu kevala-mano-janyam ātma-jñānam, tad bhavaty eva sarvadā*). It seems that both *sattva* and *manas* are used to denote the mind-organ.

³ The word *kārya-jñānam* in *Caraka-saṃhitā*, IV. 3. 27, has been explained by Cakrapāṇi as *kārya-pravṛtti-janaka-bāhya-viśaya-jñānam*. The knowledge that the self has when it has no sense-organs operating in association with the mind has no object (*nirviśaya*); in other words, this knowledge which the self always has is formless.

⁴ *Ibid.* IV. 3. 31.

⁵ *vināpīndriyāṇi samādhi-balād eva yasmāt sarvajño bhavati; tasmā jñāna-svabhāva eva nirindriyo 'py ātmā* (Cakrapāṇi's *Caraka-tātparya-ṭīkā*, IV. 3. 28-29).

soul has always a formless consciousness has undoubtedly a Vedāntic or Sāṃkhyaic tinge; but the other details evidently separate this view from the accepted interpretations of these schools. The theory of the soul, however, as here indicated comes as a digression and will have to be discussed more adequately later on.

On the subject of the existence of subtle bodies we have already quoted the views of different Indian schools of philosophy for the purpose of suggesting comparisons or contrasts with the views of Caraka. Before concluding this section reference must be made to the Vedānta views with regard to the nature of subtle bodies.

According to the Vedānta, as interpreted by Śaṅkara, the subtle body is constituted of five particles of the elements of matter (*bhūta-sūkṣmaḥ*), with which are also associated the five *vāyus*, *prāṇa*, *apāna*, etc.¹ Those who perform good deeds go to the region of the moon, and those who commit sins suffer in the kingdom of Yama and then are again born in this world². Those who, as a reward of their good deeds, go to the kingdom of the moon and afterwards practically exhaust the whole of their fund of virtue and consequently cannot stay there any longer, begin their downward journey to this earth. They pass through *ākāśa*, air, smoke and cloud and then are showered on the ground with the rains and absorbed by the plants and again taken into the systems of persons who eat them, and again discharged as semen into the wombs of their wives and are reborn again. In the kingdom of the moon they had watery bodies (*candra-maṇḍale yad am-mayam śarīram upabhogārtham ārabdham*) for the enjoyment available in that kingdom; and, when they exhaust their good deeds through enjoyment and can no longer hold that body, they get a body which is like *ākāśa* and are thus driven by the air and come into association with smoke and cloud. At this stage, and even when they are absorbed into the body of plants, they neither enjoy pleasure nor suffer pain. A difference must be made between the condition of those who are endowed with plant-bodies as a punishment for their misdeeds and those who pass through the plant-bodies merely as stations on their way to rebirth. In the case of the former the plant life is a life of enjoyment and sorrow, whereas in the case of the latter there is neither enjoyment nor sorrow.

¹ The *Bhāṣya* of Śaṅkara on the *Brahma-sūtra*, III. i. 1-7.

² *Ibid.* III. i. 13.

Even when the plant-bodies are chewed and powdered the souls residing in them as stations of passage do not suffer pain; for they are only in contact with these plant-bodies (*candra-maṇḍala-skhalitānām vrihy ādi-saṁśleṣa-mātram tad-bhāvaḥ*)¹.

We thus see that it is only the Sāṃkhya and the Vedānta that agree to the existence of a subtle body and are thus in accord with the view of Caraka. But Caraka is more in agreement with the Vedānta in the sense that, while according to the Sāṃkhya it is the *tan-mātras* which constitute the subtle body, it is the fine particles of the gross elements of matter that constitute the subtle bodies in the case both of the Vedānta and of Caraka. The soul in one atomic moment becomes associated successively with *ākāśa*, air, light, heat, water, and earth (and not in any other order) at the time of its entrance into the womb².

Foetal Development³.

When the different elements of matter in conjunction with the subtle body are associated with the self, they have the appearance of a little lump of mucus (*kheṭa-bhūta*) with all its limbs undifferentiated and undeveloped to such an extent that they may as well be said

¹ *Bhāṣya* of Śaṅkara, III. i. 25, also III. i. 22-27.

² *Caraka-saṃhitā*, IV. 4. 8. Cakrapāṇi, commenting on this, says that there is no special reason why the order of acceptance of gross elements should be from subtler to grosser; it has to be admitted only on the evidence of the scriptures—*ayaṃ ca bhūta-grahaṇa-krama āgama-siddha eva nātra yuktis tathā-vidhā hṛdayaṅgamāsti*.

³ In the *Garbha Upaniṣad*, the date of which is unknown, there is a description of foetal development. Its main points of interest may thus be summarized: the hard parts of the body are earth, the liquid parts are water, that which is hot (*uṣṇa*) is heat-light (*tejaḥ*), that which moves about is *vāyu*, that which is vacuous is *ākāśa*. The body is further said to depend on six tastes (*ṣaḍ-āśraya*), sweet (*madhura*), acid (*amla*), salt (*lavaṇa*), bitter (*tikta*), hot (*kaṭu*) and pungent (*kaṣāya*), and it is made up of seven *dhātus* of chyle (*rasa*), blood (*śonita*) and flesh (*māṃsa*). From the six kinds of *rasa* comes the *śonita*, from *śonita* comes *māṃsa*, from *māṃsa* comes fat (*medas*), from it the tendons (*snāyu*), from the *snāyu* bones (*asthā*), from the bones the marrow (*majjā*), from the marrow the semen (*śukra*). By the second night after the union of semen and blood the foetus is of the form of a round lump called *kalala*, at the eighth night it is of the form of a vesicle called *budbuda*, after a fortnight it assumes the form of a spheroid, *piṇḍa*; in two months the head appears, in three months the feet, in four months the abdomen, heels and the pelvic portions appear, in the fifth month the spine appears, in the sixth month the mouth, nose, eyes and ears develop; in the seventh month the foetus becomes endowed with life (*jīvena saṃyukto bhavati*), in the eighth month it becomes fully developed. By an excess of semen over blood a male child is produced, by the excess of blood a female child is produced, when the two are equal a hermaphrodite is produced. When air somehow enters and divides the semen into two, twins are produced. If the minds of the parents are disturbed (*vyākulita-mānasaḥ*), the issue becomes either blind or lame or dwarf. In the ninth month, when the foetus is well developed

not to exist as to exist. Suśruta remarks that the two main constituents of the body, semen and blood, are respectively made up of the watery element of the moon (*saumya*) and the fiery element (*āgneya*); the other elements in atomic particles are also associated with them, and all these mutually help one another and co-operate together for the formation of the body¹. Suśruta further goes on to say that at the union of female and male the heat (*tejaḥ*) generated rouses the *vāyu*, and through the coming together of heat and air the semen is discharged². Caraka, however, thinks that the cause of discharge of semen is joy (*harṣa*)³. The semen is not produced from the body, but remains in all parts of the body, and it is the joy which causes the discharge and the entrance of the semen into the uterus⁴. Thus he says that, being ejected by the self as joy (*harṣa-bhūtenātmanodiritaś cādhiṣṭhitaś ca*), the semen constituent or the seed, having come out of the man's body, becomes combined with the menstrual product (*ārtava*) in the uterus (*garbhāśaya*) after it has entrance thereinto through the proper channel (*ucitena pathā*). According to Suśruta the ejected semen enters into the female organ (*yonim abhiprapadyate*) and comes into association there with the menstrual product⁵. At that very moment, the soul with its subtle body comes into association with it and thus becomes associated with the material characteristics of *sattva*,

with all its organs, it remembers its previous birth and knows its good and bad deeds and repents that, on account of its previous *karma*, it is suffering the pains of the life of a foetus, and resolves that, if it can once come out, it will follow the Sāṃkhya-yoga discipline. But as soon as the child is born it comes into connection with *Vaiṣṇava vāyu* and forgets all its previous births and resolutions. A body is called *śarīra*, because three fires reside in it (*śrayante*), viz. the *koṣṭhāgni*, *darśanāgni* and *jñānāgni*. The *koṣṭhāgni* digests all kinds of food and drink, by the *darśanāgni* forms and colours are perceived, by the *jñānāgni* one performs good and bad deeds. This Upaniṣad counts the cranial bones as being four, the vital spots (*marman*) as being 107, the joints as 180, the tissues (*snāyu*) as 109, the *śīrās*, or veins, as 700, the marrow places as 500, and the bones as 300.

¹ *Suśruta-saṃhitā*, III. 3. 3.

² *Ibid.* III. 3. 4, Nirṇaya-Sāgara edition, 1915. Ḍalhaṇa, commenting on this, says, "sukha-lakṣaṇa-vyāyāmaśoṣma-vilīnaṃ vidrutam anilāc cyutam."

³ *Caraka-saṃhitā*, IV. 4. 7.

⁴ Cakrapāṇi, commenting on *Caraka-saṃhitā*, IV. 4. 7, says that "nāṅgebhyaḥ śukram utpadyate kintu śukra-rūpatayaiva vyajyate," i.e. the semen is not produced from the different parts of the body, but it exists as it is and is only manifested in a visible form after a particular operation (Suśruta, III. 3. 4).

⁵ As Ḍalhaṇa interprets this, the female organ here means the uterus; thus Ḍalhaṇa says, "yones trītyāvartāvasthita-garbhāśayam pratipadyate," i.e. the semen enters into the third chamber of the female organ, the place of the foetus. The uterus is probably considered here as the third chamber, the preceding two being probably the vulva and the vagina.

rajas and *tamas*, and godly (*deva*), demonic (*asura*), and other characteristics. Caraka, referring to the question of the association of the soul with the material elements, says that this is due to the operation of the soul acting through the mind-organ (*sattva-karaṇa*)¹. Cakrapāṇi, in commenting on the above passage, says that the self (*ātman*) is inactive; activity is however attributed to the soul on account of the operative mind-organ which is associated with it. This, however, seems to be a compromise on the part of Cakrapāṇi with the views of the traditional Sāṃkhya philosophy, which holds the soul to be absolutely inactive; but the text of the *Caraka-saṃhitā* does not here say anything on the inactivity of the soul; for Caraka describes the soul as active (*pravartate*) as agent (*kartṛ*) and as universal performer (*viśva-karman*), and the *sattva* is described here only as an organ of the soul (*sattva-karaṇa*).

In the first month, the foetus has a jelly-like form (*kalala*)²; in the second month, the material constituents of the body having undergone a chemical change (*abhiprapacyamāna*) due to the action of cold, heat and air (*śītoṣmānilaiḥ*), the foetus becomes hard (*ghana*). If it is the foetus of a male child, it is spherical (*piṇḍa*); if it is of a female child, it is elliptical (*peśī*); if it is of a hermaphrodite, it is like the half of a solid sphere (*arbuda*)³. In the third month five special eminences are seen, as also the slight differentiation of limbs. In the fourth month the differentiation of the limbs is much more definite and well manifested; and owing to the manifestation of the heart of the foetus the entity of consciousness becomes also manifested, since the heart is the special seat of consciousness; so from the fourth month the foetus manifests a desire for the objects of the senses. In the fifth month the consciousness becomes more awakened; in the sixth intelligence begins to develop; in the seventh the division and differentiation of

¹ *Sattva-karaṇo guṇa-grahaṇāya pravartate*—*Caraka-saṃhitā*, iv. 4. 8. Cakrapāṇi rightly points out that *guṇa* here means material elements which possess qualities—*guṇavanti bhūtāni*. The word *guṇa* is used in all these passages in the sense of material entity or *bhūta*. Though *guṇa* means a quality and *guṇin* a substance, yet the view adopted here ignores the difference between qualities and substances, and *guṇa*, the ordinary word for quality, stands here for substance (*guṇa-guṇinor abhedopacārāt*—Cakrapāṇi, *ibid.*).

² Dalhaṇa explains *kalala* as *siṅghāna-prakhyam*.

³ On the meanings of the words *peśī* and *arbuda* there is a difference of opinion between Dalhaṇa and Gayī. Thus Gayī says that *peśī* means quadrangular (*catur-aśra*) and *arbuda* means the form of the bud of a silk cotton tree (*śālmali-mukulākāraṇa*).

limbs become complete; in the eighth, the vital element (*ojas*) still remains unsettled, and so, if a child is born at this time, it becomes short-lived¹.

Caraka, in describing the part played by different material elements in the formation of the body, says that from the element *ākāśa* are formed sound, the organ of hearing, lightness (*lāghava*), subtleness of structure (*saukṣmya*) and porosity (*vireka*); from *vāyu* (air) are formed the sensation of touch, the organ of touch, roughness, power of movement, the disposition of the constituent elements (*dhātu-vyūhana*), and bodily efforts; from fire, vision, the organ of vision, digestion, heat, etc.; from water, the sensation of taste and the taste-organ, cold, softness, smoothness and watery characteristics; from earth, smell, organ of smell, heaviness, steadiness and hardness. The parts of the body which are thus formed from different material elements grow and develop with the accession of those elements from which they have grown². As the whole world is made up of five elements (*bhūta*), so the human body is also made up of five elements³. Caraka maintains that the senses and all other limbs of the body which grow before birth make their appearance simultaneously in the third month⁴. When, in the third month, the sense-organs grow, there grow in the heart feelings and desires. In the fourth month the foetus becomes hard, in the fifth it gets more flesh and blood, in the sixth there is greater development of strength and colour, in the seventh it becomes complete with all its limbs, and in the eighth month there is a constant exchange of vital power (*ojas*) between the mother and the foetus. The foetus being not yet perfectly developed, the vital fluid passes from the mother to the foetus; but, since the latter cannot retain it, it returns to the mother⁵. Cakrapāṇi, commenting on this, says that such an exchange is only possible because the foetus

¹ *Suśruta-saṃhitā*, III. 3. 30.

² *Caraka-saṃhitā*, IV. 4. 12.

³ *evam ayaṃ loka-sammitaḥ puruṣaḥ—yāvanto hi loka bhāva-viśeṣaś tāvantaḥ puruṣe, yāvantaḥ puruṣe tāvanto loka* (*Caraka-saṃhitā*, IV. 4. 13). In *ibid.* IV. 3, it is said that the foetus gets its skin, blood, flesh, fat, navel, heart, *kloma*, spleen, liver, kidneys, bladder, colon, stomach, the larger intestines, and the upper and the lower rectum from the mother, and its hair, beard, nails, teeth, bones, veins and semen from the father; but, however this may be, it is certain that the development of all these organs is really due to the assimilation of the five elements of matter. So the development of the human foetus is, like the development of all other things in the world, due to the accretion of material elements.

⁴ *Ibid.* IV. 4. 14.

⁵ *mātur oja garbham gacchatīti yad ucyate, tad-garbhaḥ eva mātṛ-sambaddhaḥ san mātṛo ja iti vyapadiśyate*. Cakrapāṇi, IV. 4. 24.

is still undeveloped, and the foetus, being associated with the mother, serves also as the mother's vital power (*ojas*); for otherwise, if the *ojas* went out altogether from the mother, she could not live.

There is a good deal of divergence of opinion as regards the order of the appearance of the different limbs of the foetus. Two different schools of quarrelling authorities are referred to by Caraka and Suśruta. Thus, according to Kumārasīras and Śaunaka the head appears first, because it is the seat of the senses; according to Kāṅkāyana, the physician of Bālhika, and Kṛtavīrya the heart appears first, because according to Kṛtavīrya (as reported in Suśruta) this is the seat of consciousness (*cetanā*) and of *buddhi* and *manas*; according to Bhadrakāpya (as reported by Caraka) the navel comes first, since this is the place where food is stored, and according to Pārāśara (as reported in Suśruta), because the whole body grows from there. According to Bhadra Śaunaka (as reported by Caraka) the smaller intestine and the larger intestine (*pakvāśaya*) appear first, since this is the seat of air (*mārutādhiṣṭhānatvāt*); according to Baḍiśa (as reported by Caraka) the hands and feet come out first, because these are the principal organs, and according to Mārkaṇḍeya (as reported by Suśruta), because they are the main roots of all efforts (*tan-mūlatvāc ceṣṭāyāḥ*); according to Vaideha Janaka (as reported by Caraka) the senses appear first, for they are the seats of understanding (*buddhy-adhiṣṭhāna*); according to Mārici (as reported by Caraka) it is not possible to say which part of the body develops first, because it cannot be seen by anyone (*parokṣatvād acintyam*); according to Subhūti Gautama (as reported by Suśruta) the middle part of the body (*madhya-śarīra*) appears first, since the development of other parts of the body is dependent on it (*tan-nibaddhatvāt sarva-gātra-sambhavasya*); according to Dhanvantari (as reported by both Caraka and Suśruta) all the parts of the body begin to develop together (*yugapat sarvāṅgābhivṛtti*), though on account of their fineness and more or less undifferentiated character such development may not be properly noticed, as with the parts of a growing bamboo-shoot or a mango fruit (*garbhasyasūkṣmatvān nopalabhyante vaṁśāṅkuravat cūta-phalavaca*)¹. Just as the juicy parts and the stone, which are undifferentiated in a green mango at its early stages, are all found clearly developed and differentiated when it

¹ *Suśruta-saṁhitā*, III. 3. 32 and *Caraka-saṁhitā*, IV. 6. 21.

is ripe, so, when the human foetus is even in the early stages of development, all its undifferentiated parts are already developing there *pari passu*, though on account of their fineness of structure and growth they cannot then be distinguished.

Referring to the early process of the growth of the foetus, Suśruta says that, as the semen and blood undergo chemical changes through heat, seven different layers of skin (*kalā*) are successively produced, like the creamy layers (*santānikā*) formed in milk. The first layer, one-eighteenth of a paddy seed (*dhānya*) in thickness, is called *avabhāsinī*; the second, one-sixteenth of a paddy seed, *lohitā*; the third, one-twelfth of a paddy seed, *śvetā*; the fourth, one-eighth, is called *tāmrā*; the fifth, one-fifth, *vedinī*; the sixth, of the size of a paddy seed, *rohini*; the seventh, of the size of two paddy seeds, *māṃsa-dharā*. All these seven layers of skin come to about six paddy seeds, or roughly one inch. This is said to hold good only in those places of the body which are fleshy. Apart from these seven *kalās* of skin there are also seven *kalās* between the different *dhātus*. A *dhātu* (from the root *dhā*, to hold) is that which supports or sustains the body, such as chyle (*rasa*), blood (*rakta*), flesh (*māṃsa*), fat (*medas*), bone (*asthi*), marrow (*majjā*), semen (*śukra*) and the last vital fluid (*ojas*). Lymph (*kapha*), bile (*pitta*) and excreta (*purīṣa*) have also to be counted as *dhātus*. These *kalās*, however, are not visible; their existence is inferred from the fact that the different *dhātus* must have separate places allotted to them, and the *kalās* are supposed to divide the layer of one *dhātu* from another and are covered with lymph and tissues (*snāyu*)¹. In the first *kalā*, known as the *māṃsa-dharā*, the veins, tissues, etc. of the flesh are found; in the second, the *rakta-dharā*, is found the blood inside the flesh; in the third, called the *medo-dharā*, there is the fat which is found in the abdomen and also between the smaller bones². The fourth *kalā* is the *śleṣma-dharā*, which exists in the joints; the fifth is the *purīṣa-dharā*, which exists in the intestine (*pakvāsaya*) and separates the excreta; the sixth and the seventh are the *pitta-dharā* and the *śukra-dharā*.

Suśruta thinks that the liver and spleen are produced from

¹ The *kalā* is defined by Vṛddha-Vāgbhaṭa as *yas tu dhātu āśayāntareṣu kledo 'vatiṣṭhate yathāsvam uṣmabhīr vipakvaḥ snāyu-śleṣma-jarāyu-cchannah kāṣṭha iva sāro dhātu-sāra-śeṣol 'patvāt kalā-saṃjñāḥ* (*Aṣṭāṅga-saṃgraha*, *Śāstra*, v).

² The fat inside the smaller bones is called *medas*, whereas that inside the larger ones is called *majjā*, or marrow, and the fat of pure flesh only is called *vapā*, or fat.

blood, *pupphusa* (lungs) from the froth of blood, and *uṇḍuka* (a gland in the colon?) from the dirt of blood (*śoṇita-kiṭṭa-prabhava*). The best parts (*prasāda*) of blood and lymph are acted upon by bile, and *vāyu* works in association therewith; by this process the entrails, rectum and bladder are produced; and, when the heating process goes on in the abdomen, the tongue is produced, as the essence of lymph, blood and flesh. The air, being associated with heat, enters the flesh and changes the currents, the muscles (*peśī*) are differentiated, and by the oily part of fat the *vāyu* produces the veins (*śīrā*) and tissues (*snāyu*). From the essential part of blood and fat the kidneys (*vrkka*) are produced, from the essential part of flesh, blood, lymph and fat the testicles, and from the essence of blood and lymph the heart, which is the centre of the *dhamanī* through which flows the current of life (*prāṇa-vahā*). Underneath the heart on the left side there are the spleen and the *pupphusa*, and on the right side the liver and the *klōma* (right lung?), and this is particularly the place of consciousness. At the time of sleep, when it is covered with *śleṣman* having a superabundance of *tamas*, the heart remains contracted.

The foetus grows through the chyle of the mother and also through the inflation of the body of the foetus by air¹. The navel of the body is the heating centre (*jyotiḥ-sthāna*), and the air, starting from here, continues to inflate the body.

It must be borne in mind that a foetus is the product of several causes operating jointly. A defect of any particular limb at birth is due to some defect in that part of one or more of the operating causes through the influence of which that particular limb was produced. The cause of foetal development is not a question of organs or limbs which were absolutely non-existent: they already existed, in the potential form, in the causes operating jointly. The joint causes did not produce something absolutely new, but their joint operation helped to actualize all that was already inherent in them. Of all the joint causes the self remains unchanged in all changes of the body. The changes of pleasure and pain or such other characteristics as are considered to be due to the soul are really due either to *sattva* or *manas*, or to the body². Cakrapāṇi, commenting on this, says that the fact that a soul may

¹ *Suśruta-saṃhitā*, III. 4. 57.

² *nir-vikāraḥ paraś tv ātmā sarva-bhūtānāṃ nirviśeṣa-sattva-śarīrayoḥ tu viśeṣād viśeṣopalabdhīḥ. Caraka-saṃhitā*, IV. 4. 34.

take its birth as this or that animal does not imply that the soul is liable to change (*paramātma-vikārā na bhavanti*); for such a change is due to the excessive preponderance of *sattva*, *rajas* or *tamas*, which are in reality due to virtue and vice, which in themselves are but the characteristics of mind (*sattva-rajas-tamaḥ-prabalatā-rūpa-vikāraja-manojanya-dharmādharma-janyāny eva*)¹.

There are three kinds of morbid elements (*doṣa*) of the body, viz. *vāta*, *pitta* and *śleṣman*, and two morbid elements which affect the mind (*sattva*), viz. *rajas* and *tamas*. By the disorder of the first three the body becomes diseased, and by that of the second two the mind becomes affected. These, however, will be dealt with more fully later on.

Growth and Disease.

The three elements, *vāyu*, *pitta* and *kapha*, are counted both as constituents (*dhātus*) and as *doṣas*, or morbid elements. *Dhātus* are those elements which uphold the body. The body is the conglomeration (*samudāya*) of the modification of five *bhūtas*, or elements, and it works properly so long as these elements are in proper proportions (*sama-yoga-vāhin*) in the body². The modifications of the five elements which co-operate together to uphold the body are called *dhātus*. When one or more of the *dhātus* fall off or exceed the proper quantity (*dhātu-vaiṣamya*), one or more *dhātus* may be in excess or deficient either in partial tendencies or in entirety (*akārtsnyena prakṛtyā ca*). It has to be noted that, as Cakrapāṇi explains, not every kind of excess or deficiency of *dhātus* produces *dhātu-vaiṣamya*, or disturbance of the equilibrium of the *dhātus*: it is only when such deficiency or excess produces affections of the body that it is called *dhātu-vaiṣamya*. That amount of excess or deficiency which does not produce trouble or affection of the body is called the normal measure of the *dhātus* (*prākṛta-māna*)³. It is indeed obvious that such a definition of *prākṛta-māna* and *dhātu-vaiṣamya* involves a vicious circle, since the normal measure or *prākṛta-māna* of *dhātus* is said to be that which exists when there is no trouble or affection, and *dhātu-vaiṣamya* is that which exists when there is trouble

¹ Cakrapāṇi's commentary, *Caraka*, IV. 4.

² *Caraka-saṃhitā*, IV. 6. 4. Cakrapāṇi, in commenting on the word *sama-yoga-vāhin*, explains *sama* as meaning *ucita-pramāṇa* (proper quantity).

³ *etad eva dhātūnām prākṛta-mānam yad avikāra-kāri*, Cakrapāṇi's comment on *Caraka-saṃhitā*, IV. 6. 4.

in the body; the trouble or affection of the body has thus to be defined in terms of *dhātu-vaiṣaṃya*. The only escape from this charge is that *dhātu-vaiṣaṃya* and disease are synonymous, and the *prākṛta-māna* of *dhātus* is the same as health. When the *dhātus* are in their normal measure, there cannot be any *vaiṣaṃya*, except of a local nature, as when, for example, the *pitta* existing in its own proper measure is somehow carried by *vāyu* to a part of the body and there is consequently a local excess. Whatever leads to the increase of any particular *dhātu* automatically leads also to the decrease of other *dhātus* which are opposed to it. Things having the same sort of composition as a particular bodily *dhātu* increase it, and things having a different composition decrease it (*sāmānyam ekatva-karaṇi viśeṣas tu prthaktva-kṛt*)¹. The normal health of a man is but another name for his *dhātu-sāmya*; a man is said to be unhealthy, or to be in a state of *dhātu-vaiṣaṃya*, when symptoms of disease (*vikāra*) are seen. Slight variations of the due proportion of *dhātu* do not entitle us to call them instances of *dhātu-vaiṣaṃya* unless there is *vikāra* or symptoms of it externally expressed. The daily course of a healthy man ought to be such that the equilibrium of *dhātus* may be properly maintained. The sole aim of Āyur-veda is to advise diet, medicines, and a course of behaviour, such that, if they are properly followed, a normally healthy person may maintain the balance of his *dhātus* and a man who has lost the equilibrium of his *dhātus* may regain it. The aim of Āyur-veda is thus to advise men how to secure *dhātu-sāmya* (*dhātu-sāmya-kriyā cuktā tantrasyāśya prayojanam*)².

If a normally healthy man wishes to keep his health at its normal level, he has to take things of different tastes, so that there may not be an excess of any particular kind of substance in the body. Diseases are caused through the excessive, deficient, and wrongful administration of sense-objects, the climatic characteristics of heat and cold, and the misuse of intelligence³. Thus the sight of objects with powerful light, the hearing of loud sounds like the roaring of thunder, the smelling of very strong odours, too much eating, the touching of too much cold or heat or too much bathing or massage are examples of *atiyoga*, or excessive association with sense-objects. Not to see, hear, smell, taste or

¹ *Caraka-saṃhitā*, I. 1. 44.

² *Ibid.* I. 1. 52.

³ *kāla-buddhīndriyārthānām yogo mithyā na cāti ca dvayaśrayānām vyādhinām tri-vidho hetu-saṃgrahaḥ.*

Ibid. I. 1. 53.

touch at all would be *ayoga*, or deficient association with sense-objects. To see objects very near the eye, at a very great distance, or to see frightful, hideous, unpleasant and disturbing sights, would be examples of the improper use (*mithyā-yoga*) of the visual sense. To hear grating and unpleasant sounds would be examples of the improper use of the ear; to smell bad and nauseating odours would be examples of *mithyā-yoga* of the nose; to eat together different kinds of things, which in their combination are so opposed as to be unhealthy, is an example of the improper use of the tongue; to be exposed to sudden heat and cold are examples of the improper use of touch¹. Similarly, all activities of speech, mind and body, when they are performed to an excessive degree, or not performed at all, or performed in an undesirable or unhealthy manner, are to be considered respectively as examples of *atiyoga*, *ayoga* and *mithyā-yoga* of the effort of speech, mind and body (*vān-manah-śarīra-pravṛtti*)². But these are all due to the misuse of intelligence (*prajñāparādha*). When a particular season manifests its special characteristics of heat, cold or rains to an excessive degree or to a very deficient degree or in a very irregular or unnatural manner, we have what are called *atiyoga*, *ayoga* and *mithyā-yoga* of time (*kāla*)³. But the misuse of intelligence, or *prajñāparādha*, is at the root of all excessive, deficient or wrongful association with sense-objects⁴; for, when proper things are not taken at the proper time or proper things are not done at the proper time, it is all misuse of intelligence and is therefore included under *prajñāparādha*. When certain sinful deeds are performed by *prajñāparādha*, and, by the sins (*adharma*) associated with those deeds, which become efficient only after a certain lapse of time, illness is produced, the real cause of the illness is primarily *adharma* or its root cause, *prajñāparādha*; *kāla*, or time, however, may still be regarded in some sense as the cause through which the *adharma* is matured and becomes productive.

The principle of growth and decay is involved in the maxim

¹ *Caraka-saṃhitā*, I. 11. 37.

² *Ibid.* I. 11. 39, 40. Cakrapāṇi says that this includes sinful deeds which produce illness and unhappiness, *śāstra-mānasika-vācanika-karma-mithyā-yogaivā-dharmotpādāvāntara-vyūpāreṇaivādharma-janyānām vikārāṇām kriya-mānatvāt*.

³ Three seasons only are mentioned, *Śiṭoṣma-varṣa-lakṣaṇāḥ punar heman-ta-grīṣma-varṣāḥ*. *Ibid.* I. 11. 42.

⁴ Thus Cakrapāṇi, commenting on this, says, "*buddhy-aparādhasyaiva indri-yārthātiyogādi-hetutvāt*." *Ibid.* I. 1. 53.

that the different constituents of the body grow when articles of food having similar constituents are taken, and that they decay when articles of food having opposite qualities are taken (*evam eva sarva-dhātu-guṇānām sāmānya-yogād vṛddhir viparyayādd hrāsaḥ*)¹. Thus, flesh increases by the intake of flesh, so does blood by taking blood, fat by fat, bones by cartilages, marrow by marrow, semen by semen and a foetus by eggs². But the principle applies not only to the same kind of substances as taken in the above example, but also to substances having largely similar qualities, just as the seminal fluid may be increased by taking milk and butter (*samāna-guṇa-bhūyiṣṭhānām anyaprakṛtīnām apy-āhāra-vikārānām upayogaḥ*)³. The ordinary conditions of growth always hold good, namely, proper age of growth, nature, proper diet and absence of those circumstances that retard growth. The assimilation of food is effected by heat which digests, air which collects together all things for the action of heat, water which softens, fat which makes the food smooth, and time which helps the process of digestion⁴. As any particular food is digested and changed, it becomes assimilated into the body. The hard parts of the food form the hard parts of the body and the liquid parts form the liquid parts such as blood and the like; and unhealthy food, i.e. food which has qualities opposed to the natural qualities of the body, has a disintegrating influence on the body.

As regards the growth of the body through the essence of the food-juice, there are two different views summed up by Cakrapāṇi (I. 28. 3). Some say that the chyle is transformed into blood, and the blood into flesh, and so forth. As regards the method of this transformation, some say that, just as the whole milk is changed into curd, so the whole chyle is transformed into blood, while others say that this transformation is somewhat like the circulation in irrigation (*kedari-kulyā-nyāya*). The *rasa* (chyle) produced as a result of the digestive process, coming into association with *rasa* as the body-constituent (*dhātu-rūpa-rasa*), increases it to a certain extent; another part of the *rasa*, having the same colour and smell as blood, goes to blood and increases it, and another part similarly goes to flesh and increases it; and the same process takes place with reference to its increasing fat, etc. Here the whole circula-

¹ *Caraka-saṃhitā*, I. 1. 43 and 44, also IV 6. 9 and particularly IV. 6. 10.

² *Ibid.* IV. 6. 10. Cakrapāṇi explains *āma-garbha* as *aṇḍa*.

³ *Ibid.* IV. 6. 11.

⁴ *Ibid.* IV. 6. 14 and 15.

tion begins by the entrance of the entire chyle into the constituent *rasa* (*rasa-dhātu*); in passing through some part remains in the *rasa* and increases it, the unabsorbed part passes into blood, and what is unabsorbed there passes into flesh and so on to the other higher constituents of bones, marrow and semen¹. But others think that, just as in a farm-house pigeons of different descriptions sit together (*khale kapota-nyāya*), so not all the digested food-juice passes through the channel of the *rasa-dhātu*, but different parts of it pass through different channels from the very first stage. That part of it which nourishes *rasa* enters into the channel of its circulation, that part of it which nourishes the blood goes directly into that, and so on. But there is generally this time limitation, that the part which nourishes the blood enters into it only when the part which nourishes *rasa-dhātu* has been absorbed in it; so again the part which enters into flesh can only do so when the part which nourishes blood has been absorbed in it. Thus the circulatory system is different from the very beginning; and yet the nourishment of blood takes place later than that of *rasa*, the nourishment of flesh later than that of blood, and so on (*rasād raktaṃ tato māṃsam ityāder ayam arthaḥ yad rasa-puṣṭi-kālād uttara-kālāṃ raktaṃ jāyate*, etc.). The upholders of the last view maintain that the other theory cannot properly explain how a nourishing diet (*vr̥ṣya*), such as milk, can immediately increase the seminal fluid, and that, if it had to follow the lengthy process of passing through all the circulatory systems, it could not do its part so quickly; but on the second theory, milk through its special quality (*prabhāva*) can be immediately associated with the seminal fluid and thereby increase it². But Cakrapāṇi remarks that the earlier theory (*kedāri-kulyā*) is as good as the later one. For on that view also it might be held that by milk its special quality (*prabhāva*)

¹ There are two kinds of *rasa*, called *dhātu-rasa* and *poṣaka-rasa*. See Cakrapāṇi's comment on *Caraka-saṃhitā*, vi. 15. 14 and 15.

² *pariṇāma-pakṣe, vr̥ṣya-prayogasya raktādi-rūpāpatti-krameṇāticireṇa śukraṃ bhavattīti; kṣīrādayaś ca sadya eva vr̥ṣyā dysyante, khale-kapota-pakṣe tu vr̥ṣyotpanno rasaḥ prabhāvāc chighram eva śukreṇa saṃbaddhaḥ san tat-puṣṭim karotīti yuktam* (Cakrapāṇi on *Caraka-saṃhitā*, i. 28. 3). Elsewhere (*ibid.* vi. 15. 32) it is said that those articles of food which stimulate semen (*vr̥ṣya*) are, according to some authorities, changed into semen in six days and nights, whereas in the ordinary course, as is said in *Suśruta*, it takes a month for the transformation of ordinary articles of food into semen. But Caraka does not favour any time limitation and urges that, just as the movement of a wheel depends upon the energy spent on it, so the time that a particular food takes for getting itself transformed into semen or into any other *dhātu* depends upon the nature of the food and the powers of digestion.

passed quickly through the various stages and became associated with the seminal fluid. Nor can it be said that according to the first theory every case of impurity of *rasa* (*rasa-duṣṭi*) is also a case of impurity of blood (*rakta-duṣṭi*), as is argued; for not the whole of *rasa* is transformed into blood, but only a part of it. So the *rasa* part may be impure, but still the part that goes to form blood may be pure; thus both theories are equally strong, and nothing can be said in favour of either. In *Caraka-saṃhitā*, VI. 15. 14 and 15, it is said that from *rasa* there is *rakta* (blood), from *rakta* flesh, from flesh fat, from fat bones, from bones marrow, from marrow semen. The two theories above referred to deal with the supposed ways in which such transformations occur.

In addition to the seven *dhātus*, or body-constituents, spoken of above there are ten *upā-dhātus*, which are counted by Bhoja as *śirā*, *snāyu*, ovarian blood and the seven layers of skin¹. Caraka says in VI. 15. 15 that from *rasa* is also produced milk, and from milk ovarian blood; again, the thick tissues or ligaments (*kaṇḍarā*) and *śirās* are produced from blood, and from flesh are produced fat (*vasā*) and the six layers of skin, and from fat (*medas*) are produced the five tissues. The chyle, or *rasa*, becomes tinged with red by the heat of bile. The blood, again, being worked upon by *vāyu* and heat, becomes steady and white, and is called fat (*medas*). The bones are a conglomeration of earth, heat and air and therefore, though produced from flesh and fat, are hard. They are made porous by *vāyu* running through them, and the pores are filled in by fat, which is called marrow. From the oily parts of marrow, again, semen is produced. Just as water percolates through the pores of a new earthen jug, the semen percolates through the pores of the bones, and there is also a flow of this seminal fluid through the body by way of its own ducts. By the rousing of desires and sex joy and by the heat of the sex act the semen oozes out and collects in the testes, from which it is ultimately liberated through its proper channel².

¹ Cakrapāṇi on *Caraka-saṃhitā*, VI. 15. 14 and 15, a quotation from Bhoja. *Ojas* is counted as an *upā-dhātu*.

² *Caraka-saṃhitā*, VI. 15. 22-29.

Vāyu, Pitta and Kapha.

The qualities of the body are briefly of two kinds, those which make the system foul, the *mala*, and those which sustain and purify the body, the *prasāda*. Thus in the pores of the body are formed many undesirable bodily growths which seek egress; some constituents of the body, such as blood, are often turned into pus; the *vāyu* (air), *pitta* (bile) and *kapha* (phlegm or lymph) may become less or more than their normal measure (*prakupita*), and there are other entities which, existing in the body, tend to weaken or destroy it; these are all called *malas*. Others which go towards the sustenance and the growth of the body are called *prasāda*¹.

But *vāyu*, *pitta* and *kapha* are primarily responsible for all kinds of morbidities of the body, and they are therefore called *doṣa*. It must, however, be noted that the *vāyu*, *pitta* and *kapha* and all other *malas*, so long as they remain in their proper measure (*svamāna*), do not pollute or weaken the body or produce diseases. So even *malas* like *vāyu*, *pitta* and *kapha*, or sweat, urine, etc., are called *dhātus*, or body-constituents, so long as they do not exceed their proper measure, and thus instead of weakening the body they serve to sustain it. Both the *mala-dhātus* and the *prasāda-dhātus* in their proper measure co-operate together in sustaining the body². When various kinds of healthy food and drink are exposed in the stomach to the internal fire of the digestive organs, they become digested by heat. The essential part of the digested food is the chyle (*rasa*), and the impurities which are left out and cannot be assimilated into the body as its constituents are called *kiṭṭa* or *mala*. From this *kiṭṭa* are produced sweat, urine, excreta, *vāyu*, *pitta*, *śleṣman* and the dirt of ear, eye, nose, mouth and of the holes of the hairs of the body, the hair, beard, hair of the body, nails, etc.³ The impurity of food is excreta and urine, that of *rasa* is phlegm (*kapha*), that of flesh bile (*pitta*) and that of fat (*medas*) sweat⁴. This view of *vāyu*, *pitta* and *kapha* seems to indicate that these are secretions, waste-products (*kiṭṭa*), like the other waste-products of the body. But the theory of waste-products is that, when they are in their proper measure, they serve to sustain the body and perform important functions, but, when

¹ *Caraka-saṃhitā*, iv. 6. 17.

² *evaṃ rasa-malau sva-pramāṇāvasthitav āśrayasya sama-dhātor dhātu-sām-
yam anuvartayataḥ* (*ibid.* 1. 28. 3).

³ *Ibid.* i. 28. 3.

⁴ *Ibid.* vi. 15. 30.

they exceed the proper limit or become less than their proper measure, they pollute the body and may ultimately break it. But of all waste-products *vāyu*, *pitta* and *kapha* are regarded as being fundamentally the most important entities, and they sustain the work of the body by their mutual co-operation in proper measure, and destroy it by the disturbance of balance due to the rise or fall of one, two or all three of them.

As has already been said, the body is composed of certain constituents, such as *rasa* and *rakta*. The food and drink which we take go to nourish the different *dhātus*. Not all the food and drink that we take, however, can be absorbed into the system, and consequently certain waste-products are left¹. The question arises, what is it that sustains the system or breaks it? It has already been noticed that the due proportion of the *dhātus* is what constitutes the health of the body. This due proportion, however, must, as is easy to see, depend on the proper absorption of food and drink in such a way that each of the *dhātus* may have its due share and that only, neither less nor more. It is also necessary that there should be a due functioning of the causes of waste or accretion, working in a manner conducive to the preservation of the proper proportion of the constituents with reference to themselves and the entire system. Deficiency or excess of waste-products is therefore an invariable concomitant of all disturbances of the balance of *dhātus*, and hence the deficiency or excess of waste-products is regarded as the cause of all *dhātu-vaiṣamya*. So long as the waste-products are not in deficiency or excess, they are the agents which constitute the main working of the system and may themselves be therefore regarded as *dhātus*. It is when there is excess or deficiency of one or more of them that they oppose in various ways the general process of that working of the system and are to be regarded as *doṣas* or polluting agents. There are various waste-products of the body; but of all these *vāyu*, *pitta* and *kapha* are regarded as the three most important, being at the root of all growth and decay of the body, its health and disease. Thus

¹ Śārṅgadharma (iv. 5) counts seven visible waste-products which are different from the three *malas* referred to here as *vāyu*, *pitta* and *kapha*. These are (1) the watery secretions from tongue, eyes and cheeks, (2) the colouring *pitta*, (3) the dirt of ears, tongue, teeth, armpits and penis, (4) the nails, (5) the dirt of the eyes, (6) the glossy appearance of the face, (7) the eruptions which come out in youth, and beards. Rāḍhamalla, in commenting on this, refers to *Caraka-saṃhitā*, vi. 15. 20-30, in support of the above passage of Śārṅgadharma. Most of the *malas* are *chidra-malas*, or impurities of the openings.

Ātreya says in answer to Kāpyavaca's remarks in the learned discussions of the assembly of the sages, "In one sense you have all spoken correctly; but none of your judgments are absolutely true. Just as it is necessary that religious duties (*dharma*), wealth (*artha*) and desires (*kāma*) should all be equally attended to, or just as the three seasons of winter, summer and rains all go in a definite order, so all the three, *vāta*, *pitta* and *śleṣman* or *kapha*, when they are in their natural state of equilibrium, contribute to the efficiency of all the sense-organs, the strength, colour and health of the body, and endow a man with long life. But, when they are disturbed, they produce opposite results and ultimately break the whole balance of the system and destroy it¹." There is one important point to which the notice of the reader should particularly be drawn. I have sometimes translated *mala* as "polluting agents or impurities" and sometimes as "waste-products," and naturally this may cause confusion. The term *mala* has reference to the production of diseases². *Kiṭṭa* means waste-products or secretions, and these may be called *mala* when they are in such proportions as to cause diseases. When, however, a *mala* is in such proportions that it does not produce any disease, it is not a *mala* proper but a *mala-dhātu* (*nirbādha-karāṇ malādīn prasāṃde saṃcaks-mahe*)³. In another passage of *Caraka* (I. 28. 3), which has been referred to above, it is said that out of the digested food and drink there are produced *rasa* and *kiṭṭa* (secretion) called *mala* (*tatrāhāra-prasādākhyā-rasaḥ kiṭṭam ca malākhyam abhinirvartate*), and out of this *kiṭṭa* is produced sweat, urine, excreta, *vāyu*, *pitta* and *śleṣman*. These *malas* are also *dhātus*, inasmuch as they sustain the body as much as the other *dhātus*, *rasa* or *rakta*, etc. do, so long as they are in their proper proportions and balance (*te sarva eva dhātavo malākhyāḥ prasādākhyāś ca*)⁴. Vāgbhaṭa, however, takes a different view of this subject. He separates the *doṣa*, *dhātu* and *mala* and speaks of them as being the roots of the body. Thus he says that *vāyu* sustains the body, contributing energy (*utsāha*), exhalation (*ucchvāsa*), inspiration (*niḥśvāsa*), mental and bodily movement (*ceṣṭā*), ejective forces (*vega-pravartana*); *pitta* helps the body by

¹ *Caraka-saṃhitā*, I. 12. 13.

² *tatra mala-bhūtās te ye śūvīrasya bādhakarāḥ syuḥ. Caraka-saṃhitā*, IV. 6. 17.

³ Cakrapāṇi on *Caraka-saṃhitā*. Compare *Śārngadhara*, IV. 8: *vāyuh pittaṃ kapho doṣā dhātavaś ca malā matāḥ*, i.e. *vāyu*, *pitta* and *kapha* are known as *doṣa*, *dhātu* and *mala*.

⁴ Also *evam rasa-malau sva-pramāṇāvasthitav āśrayasya sama-dhātor dhātu-sāmyam anuvartayataḥ* (*Caraka-saṃhitā*, I. 28. 3).

digestive function, heat, the function of sight, imagination (*medhā*), power of understanding (*dhī*), courage (*śaurya*), softness of the body; and *śleṣman*, by steadiness, smoothness, by serving to unite the joints, etc. The functions of the seven *dhātus*, beginning with *rasa*, are said to be the giving of satisfaction through the proper functioning of the senses (*prīṇana* or *rasa*), the contribution of vitality (*jīvana*), the production of oiliness (*sneha*), the supporting of the burden (*dhāraṇa*) of the bones (*asthi*), the filling up of bone cavities (*pūraṇa* or *majjā*) and productivity (*garbhotpāda* of *śukra*); of males it is said that the excreta has the power of holding the body, while urine ejects the surplus water and sweat holds it back¹. The elder Vāgbhaṭa distinguishes the *dhātus* from *vāyu*, *pitta* and *kapha* by calling the latter *doṣa* (polluting agents) and the former *dūṣya* (the constituents which are polluted). He further definitely denies that the *malas* of *dhātus* could be the cause of disease. He thus tries to explain away this view (that of Caraka as referred to above) as being *aupacārika*, i.e. a metaphorical statement². The body, according to him, is a joint product of *doṣa*, *dhātu* and *mala*³. Indu, the commentator on the *Aṣṭāṅga-saṃgraha*, however, emphasizes one important characteristic of the *doṣas* when he says that the dynamic which sets the *dhātus* in motion (*doṣebhya eva dhātūnām pravṛttiḥ*) is derived from the *doṣas*, and the circulation chemical activities, oiliness, hardness, etc. of the chyle (*rasa*) are derived from them⁴. Owing to the predominance of one or other of the *doṣas* from the earliest period, when the foetus begins to develop, the child is said to possess the special features of one or other of the *doṣas* and is accordingly called *vāta-prakṛti*, *pitta-prakṛti* or *śleṣma-prakṛti*. Vāgbhaṭa further says that disease is not *dhātu-vaīṣamya*, but *doṣa-vaīṣamya*, and the equilibrium of *doṣas* or *doṣa-sāmya* is health. A disease, on this view, is the disturbance of *doṣas*, and, as *doṣas* are entities independent of the *dhātus*, the disturbance of *doṣas* may not necessarily mean the disturbance of *dhātus*⁵. In another passage the elder Vāgbhaṭa says

¹ *Aṣṭāṅga-hṛdaya*, I. 11. 1-5.

² *tajjān ity-upacāreṇa tān āhur ghr̥ta-dāhavaṭ
rasādīsteṣu doṣeṣu vyādhayas sambhavanti ye.*

Aṣṭāṅga-saṃgraha, I. 1.

³ Indu, the commentator on the *Aṣṭāṅga-saṃgraha*, puts it as *śarīraṃ ca doṣa-dhātu-mala-samudāyaḥ* (I. 1).

⁴ *tathā ca dhātu-ṣoṣāya rasasya vahana-pāka-sneha-kāthinyādi doṣa-prasāda-labhyam eva* (ibid.).

⁵ Āyur-veda is closely associated with the Sāṃkhya and Nyāya-Vaiśeṣika, which alone deal with some sort of physics in Indian philosophy. It is pointed

that, as the manifold universe is nothing but a modification of the *guṇas*, so all diseases are but modifications of the three *doṣas*, or, as in the ocean waves, billows and foam are seen which are in reality the same as the ocean, so all the different diseases are nothing but the three *doṣas*¹. The elder Vāgbhaṭa uses also in another place the simile of the three *guṇas* with reference to the three *doṣas*. Thus he says, "As the three *guṇas* co-operate together for the production of the world in all its diversity, in spite of the mutual opposition that exists among themselves, so the three *doṣas* also co-operate together, in spite of natural opposition, for the production of the diverse diseases²." In the treatment of the bone system the present writer agrees with Dr Hoernle that Vāgbhaṭa always attempted to bring about a reconciliation between Caraka and Suśruta by explaining away the unadjustable views of one or the other. Here also the same tendency is seen. Thus, on the one hand, he explained away as being metaphorical (*aupacārikī*) the expressed views of Caraka that the *dhātu-malas* are the *doṣas*. On the other hand, he followed the statements of the *Uttara-tantra* that the three *doṣas*, the *dhātus*, excreta and urine sustain a man's body. He further follows the *Uttara-tantra* in holding that the three *doṣas* are the three *guṇas* (*bhinnā doṣāḥ trayo guṇāḥ*). Ḍalhaṇa identifies *vāyu* with *rajas*, *pitta* with *sattva* and *kapha* with *tamas*³.

In the *Sūtra-sthāna* Suśruta mentions blood (*śoṇita*) as having the same status as *vāyu*, *pitta* and *kapha* and holds that the body out by Narasiṃha Kavirāja (a writer from the south) in his *Vivaraṇa-siddhānta-cintāmaṇi* (the only manuscript of which is in possession of the present writer) that according to Sāṃkhya it is the *doṣa* transforming itself from a state of equilibrium to a state of unbalanced preponderance of any of them that is to be called a disease (*vaiṣamyā-sāmyāvasthā-bhinnāvasthā-viśeṣavad doṣatvaṃ rogatvaṃ*). The Naiyāyikas, however, hold that disease is a separate entity or substance, which is produced by *doṣa*, but which is not itself a *doṣa* (*dravyatve sati doṣa-bhinnā-doṣa-janyatvaṃ rogatvaṃ*). So a disease is different from its symptoms or effects. Narasiṃha further holds that, since Caraka speaks of diseases as being fiery (*āgneya*) and aerial (*vāyavya*), he tacitly accepts the diseases as separate substances. That Caraka sometimes describes a disease as being *dhātu-vaiṣamyā* is to be explained as due to the fact that, since *dhātu-vaiṣamyas* produce diseases, they are themselves also called diseases in a remote sense (*yat tu Carakena dhātu-vaiṣamyasya rogatvaṃ uktam tat teṣāṃ tathāvidha-duḥkha-kartytvād aupacārikam*. *Vivaraṇa-siddhānta-cintāmaṇi*, MS. p. 3).

¹ *Aṣṭāṅga-saṃgraha*, 1. 22.

² *ārambhakaṃ virodhe 'pi mitho yad yad guṇa-trayaṃ viśvasya dṛṣṭaṃ yugapad vyādher doṣa-trayaṃ tathā* (ibid. 1. 21).

³ *rajo-bhuyiṣṭho mārutaḥ, rajo hi pravartakaṃ sarva-bhāvānāṃ pittaṃ sattvot-kaṣaṇaṃ laghu-prakāśakatvāt, rajo-yuktaṃ vā ity eke kaphas tamo-bahulaḥ, guru-prāvaraṇātmakatvāt ity āhur bhiṣajāḥ. Yady evam tat katham kapha-prakṛtike puṃsi sattva-guṇopapannatā pañhiā, ucyate, guṇa-dvīṭayam api kapha jñātavyaṃ sattva-tamo-bahulā āpa* (Ḍalhaṇa on Suśruta, *Uttara-tantra*, 66. 9).

depends on food and drink as well as on the various combinations of *vāyu*, *pitta*, *kapha* and *śoṇita* in health and disease. Ḍalhaṇa, in commenting on this, says that, Suśruta's work being principally a treatise on surgery, its author holds that blood with all its impurities plays an important part in producing disturbances in all wounds¹. Suśruta further speaks of *vāta*, *pitta* and *śleṣman* as the causes of the formation of the body (*deha-sambhava-hetavaḥ*). The *vāta*, *pitta* and *kapha*, situated in the lower, middle and upper parts of the body, are like three pillars which support the body, and blood also co-operates with them in the same work. Ḍalhaṇa remarks that *vāta*, *pitta* and *kapha* are concomitant causes, working in co-operation with semen and blood². Suśruta further derives *vāta* from the root *vā*, to move, *pitta* from *tap*, to heat, and *śleṣman* from *śliṣ*, to connect together. The *Sūtra-sthāna* of Suśruta compares *kapha*, *pitta* and *vāyu* with the moon (*soma*), the sun (*sūrya*) and air (*amīla*) but not with the three *guṇas*, as is found in the supplementary book, called the *Uttara-tantra*. In discussing the nature of *pitta*, he says that *pitta* is the fire in the body and there is no other fire but *pitta* in the body. *Pitta* has all the qualities of fire, and so, when it diminishes, articles of food with fiery qualities serve to increase it, and, when it increases, articles of food with cooling properties serve to diminish it. *Pitta*, according to Suśruta, is situated between the stomach (*āmāśaya*) and the smaller intestines (*pakvāśaya*), and it cooks all food and drink and separates the chyle on the one hand, and the excreta, urine, etc. on the other. Being situated in the above place, between the stomach and the smaller intestines (*tatra-stham eva*), by its own power (*ātma-śaktyā*) it works in other *pitta* centres of the body and by its heating work (*agni-karma*) sets up the proper activities at those places. In its function of cooking it is called *pācaka*, in its function in the liver and spleen, as supplying the colouring matter of blood, it is called "colouring" (*rañjaka*), in its function in the heart it serves intellectual purposes (*sādhaka*), in its function in the eyes it is called "perceiving," or *locaka*, in its function of giving a glossy appearance to the skin it is called *bhrājaka*. It is hot, liquid and blue or yellow, possesses bad smell, and after

¹ *etad dhi śalya-tantram, śalya-tantre ca vranṇṇ pradhāna-bhūtaḥ vranṇe ca duṣṭyeṣu madhye raktasya prādhānyam iti śoṇitopādānam (ibid.)*. Suśruta also uses the word *doṣa* to mean pus (*pūya*) (I. 5. 12).

² Suśruta, I. 21. 3 and 4. Ḍalhaṇa, commenting on this, writes: "*śukrārtavādi sahakāritayā deha-janakā abhipretāḥ*."

passing through unhealthy digestive actions tastes sour. Coming to *śleṣman*, Suśruta says that the stomach is its natural place; being watery, it flows downwards and neutralizes the bile-heat, which otherwise would have destroyed the whole body by its excessive heat. Being in *āmāśaya*, it works in the other centres of *śleṣman*, such as the heart, the tongue, the throat, the head and in all the joints of the body. The place of *vāyu* is the pelvic regions and the rectum (*śroni-guda-saṁśraya*); the main place of the blood, which is counted as *doṣa* by Suśruta, is regarded as being the liver and the spleen¹. I have noticed above, that in the *Atharva-Veda* mention is found of three kinds of diseases, the airy (*vātaja*), the dry (*śuṣma*) and the wet (*abhraja*)². In the *Caraka-saṁhitā* *vāta*, *pitta* and *kapha* are regarded as being produced from *kiṭṭa*, or secretions. They are thus regarded here as being of the nature of internal waste-products of unassimilated food-juice at the different stages of its assimilation, as chyle, flesh, etc., which have important physiological functions to perform for the preservation of the process of the growth of the body, when they are in due proportions, and they break up the body when they are in undue proportions. What exactly *kiṭṭa* means is difficult to determine. It may mean merely the part of the food-juice unassimilated as chyle, or the part of it unassimilated as blood, and so forth; or it may mean such unassimilated products, together with the secretions from the respective *dhātus*, which absorb the substantial part of the food-juice and throw off some of its impurities into the unabsorbed material; this at least is what *kiṭṭa* ought to mean, if it is interpreted as *dhātu-mala*, or impurities of *dhātus*. These secretions and waste-products form the source of most of the constructive and destructive forces of the body. The watery character of *kapha* and the fiery character of *pitta* are not ignored; but their essence or substance is considered to be secretive, or of the nature of waste-product. Suśruta, however, does not seem to refer to this secretive aspect, but he seems to have grasped the essential physiological activity of the body as being of the nature of digestive operation and the distribution of the heat and the products of digestion; and the analogy of cooking, as requiring fire, water and air, seems to have been well before his mind. Suśruta also seems to

¹ *Suśruta-saṁhitā*, I. 11. 8-16.

² *Ye abhrajā vātajā yaś ca śuṣmo* (*Atharva-Veda*, I. 12. 3); again, *agner ivāśya dahata eti śuṣmaṇaḥ* (*ibid.* VI. 20. 4).

have leant more towards the view of the physiological operations of the body as being due to elemental activities, the food-juice taking the place of earth and the other three principles being fire (*pitta*), water (*śleṣman*) and air (*vāta*). The reason why the principles of the body are here regarded as being transformations of fire, water and air is not explained by Suśruta. The supplementary *Uttara-tantra*, however, thinks that they are the three *guṇas*. Vāgbhaṭa, always fond of taking a middle course in his endeavour to reconcile the different attempts to grasp the principles under discussion, holds that they are comparable to the three *guṇas*, because, though opposed to one another, they also co-operate together; and, because diseases are but modifications of the *doṣas*, he further thinks that *doṣas*, *dhātus* and *dhātu-malas* are quite different entities; but he is unable to give any definite idea as to what these *doṣas* are. The person who seems to have had the most definite conception of the *doṣas* was Caraka. In the *Uttara-tantra* and by Vāgbhaṭa the Sāṃkhya analogy of the *guṇas* seems to have had a very distracting influence, and, instead of trying to find out the true physiological position of the *doṣas*, these writers explain away the difficulty by a vague reference to the Sāṃkhya *guṇas*.

Let us now return to Caraka. By him *vāyu* is described as being dry (*rukṣa*), cold (*śīta*), light (*laghu*), subtle (*sūkṣma*), moving (*cala*), scattering everything else in different directions (*viśada*) and rough (*khara*)¹. It is neutralized in the body by those things which have opposite qualities. In the healthy constructive process the *vāyu* is said to perform physiological functions as follows: it sustains the machinery of the body (*tantra-yantra-dharaḥ*), it manifests itself as *prāṇa*, *udāna*, *samāna* and *apāna* and is the generator of diverse kinds of efforts; it is the force which controls (*niyantā*) the mind from all undesirables and directs (*praṇetā*) it to all that is desirable, is the cause of the employment of the sense-organs, is the carrier of the stimulation of sense-objects, collects together

¹ *Caraka-saṃhitā*, I. 1. 58. Cakrapāṇi, in commenting on this, says that, though *vāyu* is described as neither hot nor cold according to the Vaiśeṣika philosophy, yet, since it is found to increase by cold and decrease by heat, it is regarded as cold. Of course, when connected with *pitta* it is found to be hot, but that is on account of its association with the heat of *pitta* (*yoga-vāhivāt*). In the Vāta-kālā-kaliya chapter (I. 12. 4), six qualities of *vāta* are mentioned; *sūkṣma* is not mentioned, however, and, in place of *cala*, *dāruṇa* is mentioned. Cakrapāṇi says that *dāruṇa* means the same as *cala*. In the same chapter (I. 12. 7) *vāyu* is qualified as *śuṣīra-kara*, i.e. that which makes holes.

the *dhātus* of the body, harmonizes the functions of the body as one whole, is the mover of speech, is the cause of touch and sounds, as also of the corresponding sense-organs, the root of joy and mental energy, the air for the digestive fire, the healer of morbidities, the ejecter of extraneous dirt, the operating agent for all kinds of circulation, the framer of the shape of the foetus, and is, in short, identical with the continuity of life (*āyuso 'nuvṛtti-pratyaya-bhūta*). When it is in undue proportions, it brings about all sorts of troubles, weakens the strength, colour, happiness and life, makes the mind sad, weakens the functions of the sense-organs, causes malformations of the foetus, produces diseases and all emotions of fear, grief, delirium, etc., and arrests the functions of the *prāṇas*.

It is interesting to note how Vāyorveda describes the cosmic functions of air as the upholding of the earth, causing the burning of fire, the uniform motion of the planets and stars, the production of clouds, the showering of rains, the flow of rivers, the shaping of flowers and fruits, the shooting out of plants, the formation of the seasons, the formation of the strata of minerals, the production of the power of seeds to produce shoots, the growing up of crops, etc.¹ In the same discussion Mārīci considers fire to be contained in the *pitta* and productive of all good and bad qualities, digestion and indigestion, vision and blindness, courage and fear, anger, joy, ignorance, etc., according as it is in equilibrium or is disturbed. Kāpya maintains that *soma*, contained in *śleṣman*, produces all good and bad qualities, such as firmness and looseness of the body, fatness, leanness, energy and idleness, virility and impotence, knowledge and ignorance, etc.²

These discussions seem to indicate that before Ātreya's treatise was written attempts were made to explain the physiological functions of the body in health and disease by referring them to the operation of one operative principle. The *Chāndogya Upaniṣad* speaks of earth, water and fire as being world-principles of construction: the different *vāyus* were known as early as the *Atharva-Veda*, and *vāyu* is regarded in many of the Upaniṣads as the principle of life. It seems fairly certain that the theory of *vāta*, *pitta* and *kapha* is a later development of the view which regarded air (*pavana*), fire (*dahana*) and water (*toya*) as the fundamental constitutive principles of the body. Thus Suśruta refers to this view

¹ *Caraka-saṃhitā*, I. 12. 8.

² *Ibid.* I. 12. 11 and 12.

in III. 4. 80: "Some say that the constitution (*prakṛti*) of the human body is elemental (*bhautikī*), the three constitutive elements being air, fire and water¹." The advance of the medical schools of thought over these speculations and over others which consider the body to be a product of one *bhūta* or of many *bhūtas* is to be sought in this, that, besides allowing the material causes (*upādāna*) of the body to be the *dhātus*, they emphasized the necessity of admitting one or more inherent dynamic principles for the development and decay of the body. This explains how *vāta*, *pitta* and *kapha* are regarded both as *dhātu* and as *doṣa*, as *prakṛti* and as *vikṛti*. Thus Caraka says, as has already been mentioned, that from the time of the formation of the foetus the *vāta*, *pitta* and *kapha* are working, but in more or less diverse ways and in diverse systems, with equal *vāyu*, *pitta*, *mala* and *kapha* (*sama-pittāmila-kapha*) or different degrees of predominance of them as *vātala*, *pittala* and *śleṣmala*². Men of the *śleṣmala* type are generally healthy, whereas *vātala* and *pittala* persons are always of indifferent health. Later on, when there is a disease with the predominance of that *doṣa* which is predominant in man's constitution from his birth, the newly collected *doṣa* produces morbidity on the lines on which the predominating *doṣa* of his constitution is working; but this newly collected *doṣa* does not augment the corresponding original *doṣa*. The original *doṣa* is never increased, and, whatever may be the predominance of a *doṣa* due to any disease, the constitutional condition of the *doṣas* remains the same. Thus a *vāta-prakṛti* person does not become *śleṣma-prakṛti* or *pitta-prakṛti*, and vice-versa. The *doṣas* which are constitutional always remain as the

*prakṛtim iha narāṇām bhautikīm kecid āhuḥ
pavana-dahana-toyair kīrtitās tās tu tisrah.*

Suśruta, III. 4. 80.

² Caraka refers to a view that there are none who may be regarded as *sama-vāta-pitta-śleṣman* (or having equal *vāta*, *pitta* and *śleṣman*). Since all men take various kinds of diet (*viśamāhāropayogitvāt*), they must be either *vāta-prakṛti*, *pitta-prakṛti*, or *śleṣma-prakṛti*. Against this Caraka says that *sama-vāta-pitta-śleṣman* is the same thing as health or freedom from disease (*aroga*). All medicines are applied for attaining this end, and there cannot be any doubt that such a state exists. Again, the terms *vāta-prakṛti*, *pitta-prakṛti* and *śleṣma-prakṛti* are incorrect; for *prakṛti* means health. What they mean by *vāta-prakṛti* is that *vāta* is quantitatively predominant (*ādhyakya-bhāvāt sā doṣa-prakṛtir ucyate*), and quantitative predominance is the same as *vikāra*; so the proper terms are *vātala*, *pittala*, etc. When a *vātala* person takes things which increase *vāta*, his *vāta* increases at once; but when he takes things which increase *pitta* or *śleṣman*, these do not increase in him as rapidly as *vāta* does. So in the case of a *pittala* person *pitta* increases rapidly when articles which increase *pitta* are taken, and so with regard to *śleṣman* (*Caraka-saṃhitā*, III. 6. 14-18).

constant part engaged in their physiological operations. The later accretion of the *doṣas* or their deficiency has a separate course of action in producing diseases, and there is no interchange between these later collections of *doṣas* or their deficiency and the constitutional constant parts of the *doṣas* known as *prakṛti*¹. The only sense (as Cakrapāṇi says) in which a *doṣa* is related to a constitutional (*prakṛti*) *doṣa* is that a *doṣa* grows strong in a system in which a corresponding *doṣa* is constitutionally predominant, and it grows weaker when the opposite is the case². It is not out of place in this connection to say that, though the *doṣas* are mutually opposed to one another, they do not always neutralize one another, and it is possible for them to grow simultaneously violent in a system. In the six seasons of rains (*varṣā*), autumn (*śarat*), late autumn (*hemanta*), winter (*śīta*), spring (*vasanta*) and summer (*grīṣma*) there is an alternate collection (*caya*), disturbance (*prakopa*) and lowering down (*praśama*) of the three *doṣas*, *pitta*, *śleṣman* and *vāyu* respectively. Thus, for example, in the rains (*varṣā*) there is collection of *pitta*, in the autumn (*śarat*) there is disturbance of *pitta*, in the harvesting season (*hemanta*) there is lowering of *pitta* and collection of *śleṣman*, in the summer there is collection of *vāta*, and so forth³. Contrasting the functions of the *doṣas* in the normal (*prakṛti*) and abnormal (*vikṛti*) states, Caraka says that in the normal state the heat of

¹ *Ibid.* 1. 7. 38-41. The passage *prakṛti-stham yadā pittam mārutaḥ śleṣmanāḥ kṣaye* (1. 17. 45) is often referred to in support of the view that the new accretions of *doṣas* affect the *prakṛti-doṣas*. But Cakrapāṇi explains it differently. He says that a disease may be caused by a *doṣa* which is not in excess of the constant constitutional quantity (*prakṛti-māna*) by virtue of the fact that it may be carried from one part of the body to another and thereby may produce a local accretion or excess, though the total quantity of *doṣa* may not be in excess.

² *samānām hi prakṛtiṃ prāpya doṣaḥ pravṛddha-balo bhavati, asamānām tu prāpya tathā balavān na syāt* (Cakrapāṇi on *Caraka-saṃhitā*, 1. 17. 62).

³ *Ibid.* 1. 17. 112. See also Cakrapāṇi's comments on these. Ḍalhana, in commenting on *Suśruta-saṃhitā*, 1. 21. 18, says that *sañcaya* of *doṣas* means aggregation or accumulation in general (*dehe 'tirupāṇyāddhīḥ cayaḥ*); *prakopa* of *doṣas* means that the accumulated *doṣas* are spread through the system (*vilayana-rūpā vṛddhiḥ prakopah*). The external signs of the *caya* of *vāta* are fullness of the stomach and want of motions; of *pitta* yellowish appearance and reduction of heat (*mandoṣnatā*); of *kapha* heaviness of the limbs and feeling of laziness. In all cases of *caya* there is a feeling of aversion to causes which increase the particular *doṣa* of which there has been *caya* (*caya-kāraṇa-vidveṣaś ca*). The stage of *caya* is the first stage of operation in the growth and prevention of diseases. If the *doṣas* can be removed or neutralized at this stage, there is no further disease. The usual indication of the disturbance (*prakopa*) of *vāyu* is disorders of the stomach; of *pitta*, acidity, thirst and burning; of *kapha*, aversion to food, palpitation (*hṛdayotkleda*), etc. The *prakopa* of blood (*śonita*) is always due to the *prakopa* of *vāta*, *pitta* or *kapha*. This is the second stage of the progress of diseases. The

pitta occasions digestion; *śleṣman* is strength and vitality, and *vāyu* is the source of all activities and the life of all living beings; but in the abnormal state *pitta* produces many diseases; *śleṣman* is the dirt of the system and the cause of many troubles, and *vāta* also produces many diseases and ultimately death. The places (*sthānāni*) at which the affections of *vāta*, *pitta* and *kapha* are mostly found are thus described by Caraka: of *vāta* the bladder, rectum, waist and the bones of the leg, but the smaller intestine (*pakvāsaya*) is its particular place of affection; of *pitta* sweat, blood and the stomach, of which the last is the most important; of *śleṣman* the chest, head, neck, the joints, stomach and fat, of which the chest is the most important. There are eighty affections of *vāta*, forty of *pitta* and twenty of *śleṣman*¹. But in each of these various affections of *vāta*, *pitta* and *śleṣman* the special features and characteristics of the corresponding *doṣas* are found. Thus Caraka in I. 20. 12–23 describes certain symptoms as leading to a diagnosis of the disease as being due to the disturbance of *vāta*, *pitta* or *kapha*. But a question may arise as to what may consistently with this view be considered to be the nature of *vāyu*, *pitta* and *kapha*. Are they only hypothetical entities, standing as symbols of a number of symptoms without any real existence? In such an interpretation reality would belong to the symptoms, and the agents of morbidity, or the *doṣas*, would only be convenient symbols for collecting certain groups of these symptoms under one name. Wherever there is one particular set of symptoms, it is to be considered that there is disturbance of *vāyu*; wherever there is another set of symptoms, there is disturbance of *pitta*, and so

third stage is called *prasāra*. At this stage there is something like a fermentation of the *doṣas* (*paryuṣita-kīnvodaka-piṣṭa-samavāya iva*). This is moved about by *vāyu*, which though inanimate, is the cause of all motor activities. When a large quantity of water accumulates at any place, it breaks the embankment and flows down and joins on its way with other streams and flows on all sides; so the *doṣas* also flow, sometimes alone, sometimes two conjointly, and sometimes all together. In the whole body, in the half of it, or in whatever part the fermented *doṣas* spread, there the symptoms of diseases are showered down, as it were, like water from the clouds (*doṣo vikāraṃ nabhasi meghavat tatra varṣati*). When one *doṣa*, e.g. *vāyu*, spreads itself in the natural place of another *doṣa*, e.g. *pitta*, the remedy of the latter will remove the former (*vāyoh pitta-sthānagatasya pittavat pratikārah*). The difference between *prakopa* and *prasāra* is thus described by Dālhaṇa: just as when butter is first stirred up, it moves a little; this slight movement is like *prakopa*; but, when it is continuously and violently stirred to flow out, in froths and foams, it may then be called *prasāra* (*Suśruta-saṃhitā*, I. 21. 18–32). The fourth stage is when the *pūrva-rūpa* is seen, and the fifth stage is the stage of *rūpa* or *vyādhi* (disease) (*ibid.* 38, 39).

¹ Caraka-saṃhitā, I. 20. 11.

forth. But there are serious objections against such an interpretation. For, as we have shown above, there are many passages where these *doṣas* are described as secretions and waste-products, which in their normal proportions sustain and build the body and in undue proportions produce diseases and may ultimately break up the system. These passages could not be satisfactorily explained upon the above interpretation. Moreover, there are many passages which describe *pitta* and *kapha* as entities having a particular colour and material consistency, and it is also said that there are particular places in the body where they collect, and this would be impossible upon the interpretation that they are not real entities, but hypothetical, having only a methodological value as being no more than convenient symbols for a collective grasp of different symptoms¹.

The attribution of a certain number of specific qualities to the *doṣas* is due to a belief that the qualities of effects are due to the qualities of causes. So, from the diverse qualities of our bodies considered as effects, the causes were also considered as having those qualities from which those of the effects were derived. Thus, in connection with the description of the qualities of *vāta*, Caraka says that on account of the qualities of *rauḥṣya* the bodies of those having congenital *vāta* tendency are rough, lean and small, and

¹ The secretory character of these *doṣas* is amply indicated by such passages as those which regard *vāta*, *pitta* and *śleṣman* as requiring some space in the stomach for digesting the food materials, e.g. *ekaṃ punar vāta-pitta-śleṣmanām* (*ibid.* III. 2. 3); *śleṣma hi snigdha-ślakṣṇa-mṛdu-madhura-sāra-sāndra-manda-stimīta-guru-śīta-vijjalācchaḥ* (*śleṣman* is smooth, pleasing, soft, sweet, substantial, compact, inert, benumbed, heavy, cold, moist and transparent—*ibid.* III. 8. 14. 7. 5); *pittam uṣṇaṃ tīkṣṇaṃ dravaṃ visraṃ amlaṃ kaṭukaṃ ca* (*pitta* is hot, sharp and liquid, and possesses bad odour, and is acid and pungent and bitter—*ibid.* III. 8. 14. 7. 6); *vātas tu rūkṣa-laghu-cala-bahu-śīghra-śīta-paruṣa-viśadaḥ* (*vāta* is rough, light, moving, manifold, quick, cold, coarse and scattering—*ibid.* III. 8. 14. 7. 7).

It must, however, be noted that the translation I have given of some of these words cannot be regarded as satisfactory; for in the translation I could only give one sense of a word, which in the original Sanskrit has been used in a variety of senses which the word has. Thus, for example, I have translated *rūkṣa* as "rough." But it also means "slim," "lean," "having insomnia," or (of a voice) "broken," and so forth. There is no English synonym which would have so many senses. Mahāmahopādhyāya Kaviraj Gaṇanātha Sen, of Calcutta, tries to divide the *doṣas* into two classes, invisible (*sūkṣma*) and visible (*sthūla*)—*Siddhānta-mīdāna*, pp. 9-11. But though such a distinction can doubtless be made, it has not been so distinguished in the medical literature, as it is of little value from the medical point of view; it also does not help us to understand the real nature of the *doṣas*. The nature and the functions of the *doṣas* do not depend in the least on their visibility or invisibility, nor can the visible *doṣa* be regarded as always the product of the invisible one.

the voices of such people are rough, weak, grating, slow and broken, and they cannot sleep well (*jāgarūka*); again, on account of the quality of lightness of *vāyu*, the movements of a man with congenital *vāta* tendency would be light and quick, and so would be all his efforts, eating, speech, and so forth. It is easy to see that the resemblance of the qualities of *vāyu* to the qualities of the body is remote; yet, since the special features and characteristics of one's body were considered as being due to one or the other of the body-building agents, these characteristics of the body were through remote similarity referred to them.

There is another point to be noted in connection with the enumeration of the qualities of the *doṣas*. The disturbance of a *doṣa* does not necessarily mean that all its qualities have been exhibited in full strength; it is possible that one or more of the qualities of a *doṣa* may run to excess, leaving others intact. Thus *vāyu* is said to possess the qualities of *rūkṣa*, *laghu*, *cala*, *bahu*, *śighra*, *śīta*, etc., and it is possible that in any particular case the *śīta* quality may run to excess, leaving others undisturbed, or so may *śīta* and *rūkṣa*, or *śīta*, *rūkṣa* and *laghu*, and so forth. Hence it is the business of the physician not only to discover which *doṣa* has run to excess, but also to examine which qualities of which *doṣa* have run to excess. The qualities of *doṣas* are variable, i.e. it is possible that a *doṣa* in its state of disturbance will remain a *doṣa*, and yet have some of its qualities increased and others decreased. The nature of the disturbance of a *doṣa* is determined by the nature of the disturbance of the qualities involved (*aṁśāṁśa-vikalpa*)¹. The natural inference from such a theory is that, since the entities having this or that quality are but component parts of a *doṣa*, a *doṣa* cannot be regarded as a whole homogeneous in all its parts. On this view a *doṣa* appears to be a particular kind of secretion which is a mixture of a number of different secretions having different qualities, but which operate together on the same lines. When a particular *doṣa* is in a healthy order, its component entities are in certain definite proportions both with regard to themselves and to

¹ *Caraka-saṁhitā*, II. 1. 10. 4. Cakrapāṇi, in commenting on this, says: “*tatra doṣāṇāmaṁśāṁśu-vikalpoyuthā—vāteprakūpīte* ’*pi kadācid vātasya śītāṁśo balavān bhavati, kadācil laghu-aṁśaḥ, kadācid rūkṣāṁśaḥ kadācil laghu-rūkṣāṁśaḥ.*” The *doṣa* or *doṣas* which become prominently disturbed in a system are called *anubandhya*, and the *doṣa* or *doṣas* which at the time of diseases are not primarily disturbed are called *anubandha*. When three of the *doṣas* are jointly disturbed, it is called *sannipāta*, and when two are so disturbed it is called *samsarga* (*ibid.* III. 6. 11).

the total *doṣa*. But, when it is disturbed, some of the component secretions may increase in undue proportions, while others may remain in the normal state; of course, the quantity of the whole *doṣa* may also increase or decrease. A *doṣa* such as *kapha* or *pitta* should therefore be regarded as a name for a collection of secretions rather than one secretion of a homogeneous character. It will be easily seen that, on taking into consideration the comparative strengths of the different components of a *doṣa* and the relative strengths of the other components of other *doṣas* and the relative strengths and proportions of each of the *doṣas* amongst themselves, the number of combinations is innumerable, and the diseases proceeding from such combinations are also innumerable. The whole system of Caraka's treatment depends upon the ascertainment of the nature of these affections; the names of diseases are intended to be mere collective appellations of a number of affections of a particular type¹.

One further point which ought to be noted with regard to the constructive and destructive operations of *vāyu*, *pitta* and *kapha* is that they are independent agents which work in unison with a man's *karma* and also in unison with a man's mind. The operations of the mind and the operations of the body, as performed by *vāyu*, *pitta* and *kapha* on the materials of the *dhātus*, *rasa*, *rakta*, etc., run parallel to each other; for both follow the order of human *karma*, but neither of them is determined by the other, though they correspond to each other closely. This psycho-physical parallelism is suggested throughout Caraka's system. Caraka, in trying to formulate it, says: "*śārīram api satvaṁ anuvīdhīyate satvaṁ ca śārīram*" (the mind corresponds to the body and the body to the mind). It may be remembered in this connection that the ultimate cause of all *dhātu-vaiṣaṇya* or *abhighāta* (bodily injuries through accidents, a fall and the like) is foolish action (*prajñā-parādha*). Again *vāta*, *pitta* and *kapha* are found to perform not only physical operations, but also intellectual operations of various kinds. But all intellectual operations belong properly to mind. What is meant by attributing intellectual functions to *vāyu*, *pitta* and *kapha* seems to be a sort of psycho-physical parallelism, mind corresponding to body, body corresponding to mind, and both corresponding to *karma*.

¹ *yad vātārabdhavādi-jñānam eva kāraṇam rogāṇāṁ cikitsāyām upakāri; nāma-jñānam tu vyavahāra-mātra-prayojanārtham* (Cakrapāṇi on *Caraka-saṃhitā*, I. 18. 53).

Head and Heart¹.

The most vital centres of the body are the head, the heart and the pelvis (*vasti*). The *prāṇas*, i.e. the vital currents, and all the senses are said to depend (*śritāḥ*) on the head². The difference between head (*śiṛṣa*) and brain (*mastiṣka*) was known as early as the *Atharva-Veda*. Thus in A.V. x. 2. 6 the word *śiṛṣa* is used in the sense of "head," and in verses 8 and 26 of the same hymn the word *mastiṣka* is used in the sense of "brain³." Head-disease is also mentioned in the *Atharva-Veda*, I. 12. 3, as *śiṛṣakti*. The brain-matter is called *mastuluṅga* in *Caraka-saṃhitā*, VIII. 9. 101; the word *mastiṣka* is used in the same chapter in the sense of brain-matter (VIII. 9. 80), as has also been explained by Cakrapāṇi⁴. The passage from Caraka, VIII. 9. 4, quoted above shows that at least Dṛḍhabala considered the head to be the centre of the senses and all sense currents and life currents. Cakrapāṇi, in commenting upon this passage, says that, though the currents of sensation and life pass through other parts of the body as well, yet they are particularly connected with the head (*śiṛasi viśeṣeṇa prabaddhāni*), because, when there is an injury to the head, they are also injured. According to Caraka and Dṛḍhabala all the senses are particularly connected with the head, as well as the *prāṇas*, but the heart is regarded as the vital centre of the *prāṇas*, as well as of the *manas*, as I shall point out later on. Bhela, who is as old as Caraka, considers the brain to be the centre of the *manas*, a view which is, so far as I know, almost unique in the field of Sanskrit

¹ The different names of the heart in *Caraka-saṃhitā* are *mahat*, *artha*, *hṛdaya* (I. 30. 3).

² Cakrapāṇi, however, explains it as *śritā iva śritāḥ*, i.e. "as if they depended on" (I. 17. 12), because, when the head is hurt, all the senses are hurt. It is said in *ibid.* vi. 26. 1 that there are one hundred and seven vital centres (*marma*), and of these the three most important are the head, the heart and the pelvis. Also in VIII. 9. 16, *hṛdi mūrdhni ca vastau ca nṛṇām prāṇāḥ pratiṣṭhītāḥ*. In VIII. 9. 4 it is distinctly said that all the senses and the currents of senses and *prāṇa* are dependent on the head as the rays of the sun are dependent on the sun—*śiṛasi indriyāṇi indriya-prāṇa-vahāni ca srotāṃsi sūryam iva gabhastayaḥ saṃśritāni*.

³ "Which was that god who (produced) his brain, his forehead, his hindhead (*kakāṭika*), who first his skull, who, having gathered a gathering in man's jaw, ascended to heaven" (A.V. x. 2. 8). "Atharvan, having sewed together his head (*mūrdhānam*) and also his heart, aloft from the brain the purifying one sent (them) forth, out of the head" (*ibid.* 26). (Whitney's translation, Harvard oriental series.)

⁴ *Mastiṣkam śiro-majjū*. Cakrapāṇi, VIII. 9. 80 of *Caraka-saṃhitā*. The word *mastiṣka* is sometimes, though rarely, used in the sense of head, as in the passage quoted by Cakrapāṇi in VIII. 9. 80—*mastiṣke 'ṣṭāṅgulam paṭtam*.

literature. He says that *manas*, which is the highest of all senses (*sarvendriya-param*), has its seat between the head and the palate (*śiras-tālv-antara-gatam*). Being situated there, it knows all the sense-objects (*viśayān indriyāṇām*) and the tastes which come near it (*rasādikān samīpa-sthān*). The original cause of *manas* and the energy of all the senses and the cause of all feelings and judgments (*buddhi*), the *citta*, is situated in the heart. The *citta* is also the cause of all motor functions and activities, such that those who are possessed of good *cittas* follow a good course and those who are possessed of bad *cittas* follow a bad course. The *manas* knows the *citta*, and thence proceeds the choice of action; then comes the understanding, deciding what is worth doing and what is not. *Buddhi*, or understanding, is the understanding of certain actions as good (*śubha*) and certain others as bad (*aśubha*)¹. It seems plain that Bhela distinguishes between *manas*, *citta* and *buddhi*. Of these *manas* is entirely different from *citta* and, so far as can be made out from Bhela's meagre statements, it is regarded as the cause of all cognitions and as having its seat in the brain. The *citta* was regarded as the cause of all activities, feelings and judgments, and the heart was regarded as its seat. *Buddhi* was probably the determinate understanding and judgment which was but a function of the *citta*. Bhela says that the *doṣas* in the brain affect the *manas*, and, as a result of this, the heart is affected, and from the affections of the heart the understanding (*buddhi*) is affected, and this leads to madness². In another passage, while describing the different functions of *pitta*, Bhela says that there is a special kind of *ālocaka pitta* called the *caḥsur-vaiśeṣika*, which, by bringing about the contact of *manas* with the soul, causes cognition and, transmitting it to the *citta*, produces the discriminative visual knowledge by which different objects are comprehended by the eye. The

evam pravartate vyādhir
ummādo nāma dāruṇaḥ.*

judgmental state, however, is different, and it is produced by a special kind of *ālocaka pitta* called the *buddhi-vaiśeṣika*, which is situated at the point between the eyebrows, and, being there, holds together the subtle forms emanating from the self (*susūkṣmān arthān ātma-kṛtān*), associates the data (*dhārayati*), integrates them with other similar known facts (*pratyudāharati*), remembers the past, and, after producing our knowledge in conceptual and judgmental forms, wills for future realization, generates instructive actions, and is the force which operates in meditation (*dhyāna*) and restraint of thoughts (*dhāraṇā*)¹.

Suśruta does not state anything of importance concerning the brain; but there seems to be little doubt that he knew that particular nerves in the head were connected with particular sense functions. Thus he says in III. 6. 28 that there are two nerves (*śīrā*) lower down the ears on their back, called *vidhurā*, which, if cut, would produce deafness; on both sides of the nasal aperture inside the nasal organ there are two nerves called *phaṇa*, which, if cut, would destroy the sensation of smell; at the back of the eyebrows, below the eyes, there are the nerves called the *apāṅga*, which, if cut, would produce blindness. All these cognitive nerves meet in passing at the centre of the eyebrow (*śṛṅgātaka*)². He further says that the nerves are attached to the brain inside the skull on the upper part of it (*mastakābhyantaropariṣṭhāt śīrā-sandhi-sannipāta*) and this place, called the *romāvarta*, is the supreme superintendent (*adhipati*). Caraka says that the head is the place for the senses. It cannot be decided whether he took this in any deeper sense or whether he means simply that the sense-organs of ear, eyes, nose and taste are situated in the head.

Caraka considers the heart (*hṛdaya*) to be the only seat of consciousness³. The seats of *prāṇa* are said to be the head, throat, heart, navel, rectum, bladder, the vital fluid *ojas*, semen, blood and flesh⁴. In I. 19. 3 Caraka, however, excludes navel and flesh and includes the temples (*śaṅkha*) in their place. It is difficult to determine what is exactly meant by *prāṇa* here. But in all probability the word is used here in a general way to denote the vital parts. In I. 30. 4 and 5 Caraka says that the whole body with

² *ghrāṇa-śrotākṣi-jihvā-santarpaṇīnām śīrāṇām madhye śīrā-sannipātaḥ śṛṅgātakāni*. Suśruta-saṃhitā, III. 6. 28.

³ Caraka-saṃhitā, IV. 7. 8, *hṛdayam cetanādhiṣṭhānam ekam*.

⁴ *Ibid.* 9.

the four extremities, the trunk, and the head, collectively called *ṣaḍ-aṅga*, knowledge (*vijñāna*), the senses, the sense-objects, the self, *manas* and the objects of thought (*cintya*), are all supported (*saṁśrita*) by the heart, just as a house is supported by pillars and rafters¹. It is plain, as Cakrapāṇi explains, that the body cannot subsist in the heart. What is meant is that, when all is well with the heart, it is well with all the rest. Caraka holds that the *manas* and the soul reside in the heart and so also do cognition, pleasure and pain, not, however, in the sense that the heart is the place where these reside, but in the sense that they depend on the heart for their proper functioning; if the heart is wrong, they also go wrong, if the heart is well, they also work well. Just as rafters are supported by pillars, so are they all supported by the heart. But Cakrapāṇi does not seem to agree with this view of Caraka, and he holds that, since the heart is affected by strong thoughts, pleasure and pain, the mind and the soul actually reside in the heart and so do pleasure and pain. The self, which is the cause of all knowledge of sense-objects and the upholder (*dhārin*) of the system, resides in the heart. It is for this reason that, if a man is struck in the heart, he swoons away, and, if the heart bursts, he dies. It is also the place of the supreme vitality (*param ojas*)². The heart is also regarded as the place where all consciousness is concentrated (*tatra caitanya-saṁgrahaḥ*). Caraka says that the heart is the centre of the *prāṇa* currents (*prāṇa-vahānām srotasām hṛdayam mūlam*, III. 5. 9) and also of the currents of mental activity (II. 7. 3). In the *Aśmāra-nidāna* (II. 8. 4) Caraka speaks of the heart as being the supreme place of the inner self (*antar-ātmanah śreṣṭham āyatanam*).

It may not be out of place here to point out that the *Taittirīya Upaniṣad* (I. 6. 1) also speaks of the heart as being the space where

¹ *Caraka-saṁhitā*, I. 30. 5.

² Cakrapāṇi says that the mention of *param ojas* here proves that Caraka believed in another, *aparam ojas*. The total quantity of *aparam ojas* in the body is half a handful (*urdhūñjali-parimāṇa*), while that of *param ojas* is only eight drops of a white-red and slightly yellowish liquid in the heart. The *dhamanīs* of the heart contain half a handful of *aparam ojas*, and in the disease known as *prameha* (urinary disease) it is this *ojas* that is wasted; but even with waste of this *ojas* a man may live, whereas with the slightest waste of the *param ojas* a man cannot live. *Ojas* ought not to be regarded as the eighth *dhātu*; for it only supports (*dhārayati*) the body, but does not nourish it. *Ojas*, however, is sometimes used also in the sense of *rasa* (*Caraka-saṁhitā* I. 30. 6, Cakrapāṇi's commentary). See also *ibid.* I. 17. 74 and 75 and Cakrapāṇi's comment on the same. *Ojas* is, however, regarded in the *Atharva-Veda*, II. 17, as the eighth *dhātu*.

manomaya puruṣa, i.e. the mind-person, resides. In many other Upaniṣads the heart is the centre of many *nāḍis*, or channels¹. Śaṅkara, in explaining *Bṛh.* II. 1. 19, says that the *nāḍis* or *śīrās*, called *hitā*, which are developed out of the food-juice and are 272,000 in number, emanate from the heart and spread over the whole body (*purītat*)². The *buddhi* resides in the heart and from there controls the external senses. Thus, for example, at the time of hearing in the awakened state the *buddhi* passes through these *nāḍis* to the ear and from there expands the auditory organ and superintends it. When the *buddhi* thus expands, we have the state of awakening, when it contracts, the state of deep sleep (*susupti*).

The Circulatory and the Nervous System.

The names *śīrā* (also *hirā*) and *dhamanī*, of two different kinds of channels in the body, seem to have been distinguished at a period as early as the *Atharva-Veda*³. The *Bṛhad-āraṇyaka Upaniṣad* describes the *hitā nāḍis* of the heart as being as fine as a thousandth part of a hair, and they are said to carry white, blue, yellow and green liquids; Śaṅkara, commenting on this, says that these various colours are due to the various combinations of *vāta*, *pitta* and *śleṣman* which the *nāḍis* carry⁴. He states that the seventeen elements (five *bhūtas*, ten senses, *prāṇa* and *antaḥkaraṇa*) of the subtle body, which is the support of all instinctive desires, abide

¹ See *Bṛh.* II. 1. 19, IV. 2. 2 and 3, IV. 3. 20, IV. 4. 8 and 9; *Chānd.* VIII. 6. 6; *Kaṭha*, VI. 16; *Kaus.* IV. 19; *Muṇḍ.* II. 2. 6; *Maitrī*, Bibliotheca Indica, 1870, VI. 21, VII. 11; *Praśna*, III. 6 and 7.

² The word *purītat* means principally the covering of the heart. But Śaṅkara takes it here to mean the whole body.

³ *śatam hirāṇ sahasraṃ dhamanī uta. Atharva-Veda*, VII. 36. 2. Sāyaṇa explains *hirā* as *garbha-dhāraṇārtham antar-avasthītāḥ sūkṣmā nāḍyaḥ* and *dhamanī* as *garbhāśayasya avasthambhikā sthūlā nāḍyaḥ. Atharva-Veda*, I. 17. 1, 2, also seems to distinguish *hirā* from *dhamanī*. In I. 17. 1 the *hirās* are described as being of red garments (*lohita-vāsasah*), which Sāyaṇa explains as *lohitasya rudhīrasya nīvāsa-bhūtā hi* (the abode of blood) and paraphrases as *rajo-vahana-nāḍyaḥ*. It seems, therefore, that the larger ducts were called *dhamanīs*. In I. 17. 3 the *Atharva-Veda* speaks of hundreds of *dhamanīs* and thousands of *hirās*.

⁴ *Bṛh.* IV. 3. 20, with Śaṅkara's commentary. Ānandagiri, in commenting on the same, quotes a passage from *Suśruta* which is substantially the same as *Suśruta-saṃhitā*, III. 7. 18, to show that those *śīrās* which carry *vāta* are rosy (*aruṇa*), those which carry *pitta* are blue, those which carry blood are red, and those which carry *śleṣman* are white:

*aruṇāḥ śīrā vāta-vahā nīlāḥ pitta-vahāḥ śīrāḥ
asṛg-vahās tu rohiṇyo gauryaḥ śleṣma-vahāḥ śīrāḥ.*

in these *nāḍis*. In *Bṛhad-āraṇyaka*, IV. 2. 3 it is said that there is the finest essence of food-juice inside the cavity of the heart; it is this essence which, by penetrating into the finest *nāḍis*, serves to support the body. It is surrounded by a network of *nāḍis*. From the heart it rushes upwards through the extremely fine *hitā nāḍis*, which are rooted in the heart. *Chāndogya*, VIII. 6. 6 speaks of 101 *nāḍis* proceeding from the heart, of which one goes towards the head¹. In *Mund.* II. 2. 6 it is said that, like spokes in a wheel, the *nāḍis* are connected with the heart. *Praśna*, III. 6 and 7, however, says that in the heart there are one hundred *nāḍis* and in each of these are twenty-two hundred branches and the *vyāna vāyu* moves through these. The *Maitrī Upaniṣad* mentions the *suṣumnā nāḍī* proceeding upwards to the head, through which there is a flow of *prāṇa*². None of these passages tell us anything definite about the *nāḍis*. All that can be understood from these passages is that they are some kind of ducts, through which blood and other secretions flow, and many of these are extremely fine, being about the thousandth part of a hair in breadth. The *naḍa*, or hollow reed, is described in the *Rg-Veda* (VIII. 1. 33) as growing in ponds and in the *Atharva-Veda* (IV. 19. 1) as being *vārṣika*, or "produced in the rains." This word may have some etymological relation with *nāḍī*³. In another place it is said that women break *naḍa* with stones and make mats out of them⁴. The word *nāḍī* is also used in the *Atharva-Veda* in the sense of "ducts"⁵. In *Atharva-Veda*, V. 18. 8 the word *nāḍikā* is used

¹ This passage is sometimes referred to in later literature to show that the *suṣumnā nāḍī*, which goes towards the head, was known as early as the *Chāndogya Upaniṣad*. See also *Kaṭha*, VI. 16.

² *Ūrdhva-gā nāḍī suṣumnākhyā prāṇa-saṃcārīṇī*. *Maitrī*, VI. 21. Sāyaṇa, in his commentary on A.V. I. 17. 3, quotes the following verse:

*madhya-sthāyāḥ suṣumnāyāḥ parva-pañcaka-saṃbhavāḥ
śākhopasākhātām prāptūḥ śirā lakṣa-trayāt param
ardha-lakṣam iti prāhuḥ sarīrārtha-vicārakāḥ.*

³ Macdonell makes the following remarks in his *Vedic Index*, vol. I, p. 433: "*Naḍa* is found in several passages of the *Rg-Veda* (I. 32. 8; 179. 4; II. 34. 3; VIII. 69. 2; X. 11. 2; 105. 4) but its sense is still obscure. It is identified by Pischel (*Zeitschrift der Deutschen Morgenländischen Gesellschaft*, 35, 717 *et seq.*; *Vedische Studien*, I. 183 *et seq.*) with *Naḍa*, being explained by him in one passage (I. 32. 8). Here Caland and Henry, *L'Agniṣṭoma*, p. 313 would read *naḷam*. See also Wackernagel, *Altindische Grammatik*, I. 173, as a reed boat, which is split, and over which the waters go, etc."

⁴ *yathā naḍam kaṣipune striyo bhindanty aśmanā* (*Atharva-Veda*, VI. 138. 5).

⁵ In the *Atharva-Veda*, VI. 138. 4, the *nāḍis* are described as ducts over the testes, through which the seminal fluid flows: *ye te nāḍyau deva-krte yayoḥ tiṣṭhati vṛṣṇyam te te bhīnadmi* (I break with a stone upon a stone those two ducts of yours

to denote the speech organ (*vāk*). The word *dhamanī* is used in *Rg-Veda*, II. 11. 8 and is paraphrased by Sāyaṇa as sound (*śabda*) and by Macdonell as "reed" or "pipe¹." If Sāyaṇa's explanations are to be accepted, then in A.V. II. 33. 6 the word *snāva* means fine *śīrās* (*sūkṣmāḥ-śīrāḥ*) and *dhamanī* the larger ducts (*dhamanī-śabdena sthūlāḥ*). In VI. 90. 5 one hundred *dhamanīs* are said to surround the body of a person suffering from colic or gout (*śūla*), and Sāyaṇa paraphrases *dhamanī* here as *nāḍī*. In *Chāndogya*, III. 19. 2, the rivers are said to be *dhamanīs* (*yā dhamanayas tā nāḍyaḥ*), and Śaṅkara paraphrases *dhamanī* as *śīrā*. I have already referred to the use of the word *hirā* in the *Atharva-Veda*; the word is also used in the *Rg-Veda*².

The above references show that *nāḍīs*, *śīrās* (or *hirās*) and *dhamanīs* were all ducts in the body, but sometimes the *nāḍīs* or *śīrās* had also the special sense of finer channels, whereas the *dhamanīs* were the larger ducts. I shall now come to Caraka: it will be found that there was not much advance towards a proper understanding of the significance of their distinction and functions.

Caraka plainly regards *dhamanīs*, *śīrās* and *srotas* (secretory currents) as ducts and thinks that different names are applied to them on account of their different functions. He says that the roots of the ten *dhamanīs* are in the heart. These carry throughout the body the *ojas*, by which all people live and without which they all die. It is the essence by which the foetus is formed, and which goes to the heart at a later stage, when the heart is formed; when it is lost, life also ceases to exist; it is the essence of the body and the seat of the *prāṇus*. These ducts are called *dhamanīs*, because they are filled with chyle from outside; they are called *srotas*, because the chyle, etc. which nourish the body are secreted (*sraṇāt*) out of these; and they are called *śīrā*,

made by God over your two testes, through which your semen flows). In X. 7. 15 and 16, the hollows of the seas are described as *nāḍīs* (*samudro yasya nāḍyaḥ*), and so also the interspace of the quarters of the sky (*yasya catasraḥ pradiśo nāḍyaḥ*).

¹ "Dhamanī, 'reed,' appears to denote 'pipe' in a passage of the *Rg-Veda* (II. 11. 8) and in a citation appearing in the *Nirukta* (VI. 24)." *Vedic Index*, vol. I, p. 390. The word *śīrā* is spelt with a palatal "ś" in Caraka and with a dental in the Vedas, and it has therefore been differently spelt in this chapter in different contexts.

² *tvaṃ vjtram āśayānaṃ śīrāsu maho vajreṇa śiṣvapaḥ*. R.V. I. 121. 11. The word *dhamanī* is spelt with a long "ī" in Caraka and with a short "i" in the *Atharva-Veda*.

because they go (*saraṇāt śīrāḥ*) to the different parts of the body¹. The ten *dhamanīs* spread out in manifold branches throughout the body. In the *Caraka-saṃhitā* *srotas* means properly the path through which the successive evolutionary products of the body-constituents (*dhātus*) or other kinds of secretion run and accumulate together with elements of their own types². Cakrapāṇi explains it thus: The transformation into blood takes place in connection with chyle (*rasa*). The coming together of *rasa* with blood at a different part of the body cannot take place without a path of transmission, called *srotas*. So the transformation of *dhātus* takes place through the function of this path of transmission. So for each kind of product there is a separate *srotas*. *Vāyu*, *pitta* and *kapha* may be said to go about through all the *srotas*, though there are, no doubt, special channels for each of the three³. Gaṅgādhara, however, takes the *srotas* as being the apertures through which the *dhātus* and other waste-products flow⁴. In whatever way it may be looked at, the *srotas* is, according to Caraka, nothing but the duct of the *dhamanīs*. Caraka opposes the view of those who think that the body is nothing but a collection of *srotas*, for the simple reason that the substances which pass through these *srotas* and the parts of the body where they are attached are certainly different from the *srotas* themselves. There are separate *srotas* for the flow of *prāṇu*, water, food-juice, blood, flesh, fat, bony materials, marrow, semen, urine, excreta and sweat; *vāta*, *pitta* and *śleṣman*, however, flow through the body and all the channels (*sarva-srotāṃsi ayana-bhūtāni*). For the supply of materials for the suprasensual elements of the body, such as *manas*, etc., the whole of the living body serves as a channel⁵. The heart is the root of all

¹ *dhmānād dhamanyaḥ sraṇāṇāt srotāṇsi saraṇāt śīrāḥ*. *Caraka-saṃhitā*, I. 30. II.

² *Ibid.* III. 5. 3.

³ *Doṣāṇāṃ tu sarva-śarīra-caratvena yathā-sthūla-sroto 'bhūdhāne 'pi sarva-srotāṃsy eva gamanārthaṃ vaksyante . . vātādīnāṃ api pradhāna bhūtādhamanyaḥ santi eva*. Cakrapāṇi's comment on *ibid.*

⁴ *āhāra-pariṇāma-raso hi srotasāṃ chidra-rūpaṃ panthānaṃ vinā gantuṃ na śaknoti, na ca srotas chidra-pathena gamanaṃ vinā tad-uttarottara-dhātutvena paripamati*, etc. Gaṅgādhara's *Jalpa-kalpa-taru* on *ibid.*

⁵ Gaṅgādhara, in commenting on this passage (*Caraka-saṃhitā*, III. 5. 7), "*tadvad atīndriyāṇāṃ punaḥ sattvādīnāṃ kevalaṃ cetanāvac charīram ayana-bhūtāṃ adhiṣṭhāna-bhūtaṃ ca*," says, "*mana ātmā śrotra-sparśana-nayana-rasaṇa-ghrāṇa-buddhy-ahāṅkāradīnāṃ kevalaṃ cetanāvat sajjvaṃ śarīra-sroto 'yana-bhūtaṃ adhiṣṭhāna-bhūtaṃ ca*." There are several passages in Caraka where we hear of *mano-vaha* currents (currents carrying *manas*); if *manas*, *buddhi*, *ahāṅkāra*, etc. can all be carried in currents, they must be considered as having some material spatial existence. These *manas*, *buddhi* and *ahāṅkāra* may be *atīndriya*, but they are not on that account non-physical.

prāṇa channels, i.e. the channels of the *prāṇa vāyu*; for *vāyu* in general moves through all parts of the body. When these are affected, there is either too much or too little respiration; the respiration may be very slow or very quick, and it is attended with sound and pain. From these signs therefore one can infer that the *prāṇa* channels have been affected. The source of water channels is the palate, and the seat of thirst is in the heart (*kloma*)¹. When these are affected, the tongue, palate, lips, throat and *kloma* become dried up, and there is great thirst. The stomach is the source of all currents carrying food, and, when these are affected, there is no desire for food, but indigestion, vomiting and the like. The heart is the source, and the ten *dhamanīs* are the paths, of the chyle (*rasa*) currents. The liver and spleen are the source of blood currents. The tendons and skin are the sources of flesh currents. The kidneys are the sources of fat channels; fat and pelvis, of bone channels; the bones and joints, of marrow channels; the testes and penis, of semen channels; the bladder, the pubic and the iliac regions, of urine channels; the intestines and the rectum, of the excreta channels, and the fat and pores of hairs, of perspiration channels². It is curious, however, to note that, in spite of the fact that here the *śīrās* and *dhamanīs* are regarded as synonymous, their number is differently counted in iv. 7. 13, where it is said that there are two hundred *dhamanīs* and seven hundred *śīrās*, and the finer endings of these are counted as 29,956. It is reasonable to suppose, in accordance with the suggestions found in the *Atharva-Veda*, that, though the *dhamanīs* and *śīrās* were regarded by Caraka as having the same functions, the former were larger than the latter³. Gaṅgādhara, in commenting on this passage, says that *śīrās*, *dhamanīs* and *srotas* are different on account of their being different in number and of their having different functions and different appearances. It is well known that a distinction between *śīrās* and *dhamanīs* is drawn by Suśruta, to which I shall presently refer, but Caraka positively denies any such distinction; and this

¹ *Caraka-saṃhitā*, III. 5. 10. Cakrapāṇi explains it (*kloma*) as *hṛdaya-stham pipāsā-sthānam*, and Gaṅgādhara as the point of conjunction between the throat and the heart (*kaṇṭhorasoḥ sandhiḥ*).

² The synonyms for *srotas* given by Caraka are *śīrā*, *dhamanī*, *rasa-vāhini*, *nāḍī*, *panthā*, *mārga*, *śarīra-chidra*, *saṃvṛtāsaṃvṛtāni* (open at the root, but closed at the end), *sthāna*, *āśaya* and *niketa*.

³ There is one passage of Dṛḍhabala (*Caraka-saṃhitā*, VI. 29. 23) which seems to draw a distinction between *śīrās* and *dhamanīs*; for there, as a symptom of a disease, it is said that the *śīrās* have expanded (*āyāma*) and the *dhamanīs* have become contracted (*saṅkoca*).

is accepted by his commentator Cakrapāṇi also¹. Gaṅgādhara is unable to point out any passage in *Caraka* to prove his opinion or to state more explicitly what is the difference of functions and appearances between the *dhamanīs* and *śīrās*. In fact Gaṅgādhara's remarks are directly borrowed from *Suśruta*, III. 9. 3, without acknowledgment, and it is very surprising that he should not know the difference of views on this point between Caraka and Suśruta and should try to support Caraka by a quotation from Suśruta on the very point on which they materially differ.

Suśruta refers to Caraka's view that *śīrās*, *srotas* and *dhamanīs* are the same and opposes it, saying that they are different in appearance, number and functions. Ḍalhaṇa, in explaining this, says that the *śīrās* carry *vāta*, *pitta*, *śleṣman*, blood, etc., and are rosy, blue, white and red, whereas the *dhamanīs* that carry sense-impressions of sound, etc. have no distinctive colour, and the *srotas* have the same colour as the *dhātus* which flow through them. Again, the principal *śīrās* are forty in number, the principal *dhamanīs* twenty-four and the principal *srotas* twenty-two in number. The *śīrās* permit us to contract or expand our limbs or perform other motor functions, and they allow the mind and senses to operate in their own ways and serve also to fulfil other functions of moving rapidly (*prasyandana*), etc., when *vāyu* works in them. When *pitta* flows through the *śīrās*, they appear shining, create desire for food, increase digestive fire and health. When *śleṣman* passes through them, they give an oily appearance to the body, firmness of joints and strength. When blood passes through them, they become coloured and filled also with the different *dhātus* and produce the sense-cognition of touch. *Vāyu*, *pitta*, *śleṣman* and blood—any one of these may flow through any and every *śīrā*². The *dhamanīs* are more like sensory nerves, since they carry sensations of sound, colour, taste and smell (*śabda-rūpa-rasa-gandha-vahatvādikam dhamaninām*). The *srotas* carry *prāṇa*, food, water, chyle, blood, flesh and fat³. It is on account of their close proximity, similar functions, fineness (*saukṣmyāt*), and also because of the fact that they have been referred to in similar terms by older authorities, that they have sometimes been regarded as performing the same work, though their functions are really different⁴.

¹ *na ca Carake Suśruta iva dhamanī-śīrā-srotasām bhedo vivakṣitaḥ*. Cakrapāṇi's commentary on *Caraka*, III. 5. 3.

² *Suśruta-saṃhitā*, III. 7. 8-17.

³ Ḍalhaṇa on *ibid.* III. 9. 3.

⁴ *Ibid.*

Ḍalhaṇa, in explaining this, says that, as, when a bundle of grass is burning, the burning of each separate blade of grass cannot be perceived on account of their contiguity, so the *śirās*, *dhamanīs* and *srotas* are situated so close to one another that it is very difficult to observe their separate functions and work. *Śirā*, *srotas*, *mārga*, *kha* and *dhamanī* are the general names used to denote the canals or ducts of the body¹. It is on account of the similarity of action of all these ducts that their functions are sometimes confused.

The *dhamanīs* start from the navel; ten proceed to the upper part of the body, ten to the lower part and four crosswise (*tiryag-gāḥ*). Those ten which go to the upper part of the body, branch out, are divided into three classes, and are thirty in number. Of these there are altogether ten for carrying *vāta*, *pitta*, *kapha*, *śoṇita* and *rasa*, two for each; there are eight for carrying *śabda*, *rūpa*, *rasa* and *gandha*, two for each; there are two for the organ of speech, two for making noise (*ghoṣa*), as distinguished from speech; two for going to sleep, two for being awake; two for bearing tears, two for carrying milk in women, and it is the same two *dhamanīs* that carry the semen in men. It is by these *dhamanīs* that the body on the upper side of the navel (e.g. sides, back, chest, shoulders, hands, etc.) is held fast to the lower part. The carrying of *vāta*, etc. is the common quality of all these *dhamanīs*.

Those *dhamanīs* which branch out downwards are thirty in number. They eject *vāta*, urine, excreta, semen, menstrual blood, etc. downwards. They are connected with the place of *pitta* (*pittāśaya*), draw downwards the materials not fit for being absorbed, and nourish the body with the assimilable products of digestion. The *dhamanīs* connected with the *pittāśaya* carry the food-juice throughout the body, as soon as it is digested by the action of heat, by supplying it to the upper circulatory *dhamanīs* and through them to the heart, which is designated as the seat of *rasa* (*rasa-sthāna*)². Ten *dhamanīs* carry *vāta*, *pitta*, *śoṇita*,

¹ Thus Ḍalhaṇa remarks:

*ākāṣṭyāvākāśānām dehe nāmāni dehinām
śirāḥ srotāṃsi mārgāḥ khaṃ dhamanyah.*

² *Suśruta*, *Śārīra*, ix. 7 and 8; see also Ḍalhaṇa's commentary on it. The apertures of some *dhamanīs* by which the food-juice is circulated through the body are as fine as lotus fibres, and some grosser than them, as the apertures of lotus stalks. Thus some *dhamanīs* have very fine apertures, and others grosser apertures.

*yathā svabhāvataḥ khāni mṛṇāleṣu biseṣu ca
dhamanīnām tathā khāni raso yair upacṛiyate.*

Ibid. ix. 10.

kapha and *rasa*; two, connected with the intestines, carry the food-juice; two carry water; two are connected with the bladder for ejecting urine; two are for the production of semen (*śukra-prādur-bhāva*), two for its ejection, and it is these which regulate the menstrual flow in the case of women; two, connected with the larger intestines, eject the excreta; there are eight others which carry perspiration. It is by these *dhamanīs* that the intestines, waist, urine, excreta, rectum, bladder and penis are held together.

Each of the other four *dhamanīs*, which go crosswise (*tiryag-gāh*), has hundreds and thousands of branches, which, innumerable as they are, are spread all over the body, like so many windows; their mouths are at the holes of the hairs, through which perspiration goes out and which nourish the body with *rasa*, and through these the effective principles (*vīrya*) of oil, watery sprinklings, ointments, etc. enter the body after being acted on by *bhrājaka* (heat of the skin)¹. It is again these which carry the pleasurable and painful sense-impressions of touch². The *dhamanīs* direct the five senses to the five sense-objects for their cognition. There is the cognizer (*mantr*) and the *manas* organ; the *dhamanī* which is connected with *manas* on one side and the *dhamanīs* which carry the different sense-impressions on the other make the sense-data cognized by the self³. The various sensory and motor *dhamanīs* are further named in Suśruta, III. vi. 28. Down below the back of the ear there are two *dhamanīs*, called *vidhura*, which, when injured, produce deafness; inside the two nostrils there are the two *dhamanīs* called *phaṇa* which, when hurt, arrest the sensation of smell. Below the eyebrows on the two sides of the eye there are the two *dhamanīs*, called *apāṅga*, which, when hurt, produce blindness: there are also two other *dhamanīs*, above the eyebrows and below them, called *āvarta*, which, when hurt, also produce blindness. Suśruta also speaks in this connection of a place inside

¹ Suśruta, *Sārīra*, ix. 7 and 8; see also Dalhaṇa's commentary on it.

² Dalhaṇa, in commenting on this passage of Suśruta, III. ix. 9, says: "*tair eva mano-'nugataiḥ sukhāsukha-rūpaṃ sparśaṃ karmātmā grhṇāte.*" (It is through these *dhamanīs*, as connected by *manas*, that the self, as associated with the subtle body, receives the pleasurable and painful impressions of touch.)

³

*pañcābhūbhūtās tv atha pañca-kṛtvāḥ
pañcendriyaṃ pañcasu bhāvayanti
pañcendriyaṃ pañcasu bhāvayitvā
pañcatvaṃ āyānti vināśa-kāle.*

Suśruta, III. ix. 11.

Dalhaṇa, in commenting on the above, says: "*mantā hi śarīre eka eva, mano 'py ekam eva, tena manasā yaiva dhamanī śabdādi-vahāsu dhamanīṣu abhiprapannā saiva dhamanī sva-dharmaṃ grāhayati mantāraṃ nānyeti.*"

the skull on the upper part of the brain, where all the *śirās* have met together, as the *adhipati* superintendent.

In describing the *śirās* (700 in number) Suśruta says that these are like so many canals by which the body is watered and by the contraction and expansion of which the movements of the body are rendered possible. They start from the navel and branch out like so many fibres of leaves. The principal *śirās* are forty in number; of these ten are for the circulation of *vāta*, ten for *pitta*, ten for *kapha* and ten for *rakta* (blood). The *śirās* of *vāta* circulation again branch out into 175 *śirās*, and the same is the case with those which circulate *pitta*, *kapha* and *rakta*. We have thus altogether 700 *śirās*. When *vāta* is properly circulated through the *śirās*, it becomes possible for us to move our limbs without obstruction and to exercise our intellectual functions. But it should be noted that, though some *śirās* are regarded as mainly circulating *vāyu* or *pitta* or *kapha*, yet they all, at least to some extent, circulate all three¹.

There are 900 *snāyus*, and these have also holes within them (*suśirāḥ*), and these, as well as the *kaṇḍarās*, which are also but special kinds of *snāyus*, serve to bind the joints of the body, just as the several pieces of planks are held together in a boat. Suśruta also mentions five hundred muscles. The *marmas* are vital spots in flesh, *śirā*, *snāyu* and bones which are particularly the seats of *prāṇa*: when persons are hurt in these places, they may either lose their lives or suffer various kinds of deformity. The *srotas* are again described by Suśruta as being ducts, other than *śirā* and *dhamanī*, which start from the cavity of the heart and spread out through the body². These *srotas* carry the currents of *prāṇa*, food-juice, water, blood, flesh, fat, urine, excreta, semen and menstrual blood.

The Nervous System of the Tantras.

The nerve system of the Tantras, however, is entirely different from that of the medical systems of Caraka and Suśruta. It starts with the conception of the spinal column (*meru-daṇḍa*), which is regarded as one bone from the bottom of the back to the root of

¹ *na hi vātaṃ śirāḥ kāscin na pittaṃ kevalaṃ tathā
śleṣmānam vā vahanty etā atah sarvavahāḥ smṛtāḥ.*

Suśruta, III. vii. 16.

² *Suśruta*, *Sārira*, IX. 13:

*mūlāt khād antaraṃ dehe prasṛtaṃ tv abhivāhi yat
srotas tad iti vijñeyaṃ śirā-dhamanī-varjitaṃ.*

the neck. In the passage inside this spinal column there is a nerve (*nāḍī*), called *suṣumnā*, which is again in reality made up of three *nāḍīs*, *suṣumnā*, *vajrā* and *citrinī*¹. All *nāḍīs* start from the root at the end of the vertebral column, called *kāṇḍa*, and they proceed upwards to the highest cerebral nerve-plexus, called *sahasrāra*, and are seventy-two thousand in number. The place of the root of these *nāḍīs* (*kāṇḍa*) is an inch above the anus and an inch below the root of the penis. If *suṣumnā* is the central nerve of the spinal cord, then on its extreme right side is the *idā*, and then parallel to it towards the *suṣumnā* are the *gāndhārī*, stretching from the corner of the left eye to the left leg, *hastī-jihvā*, stretching from the left eye to the left foot, *śaṅkhinī*, branching on the left, *kuḥū* (the pubic nerve on the left) and also the *viśvodarā*, the lumbar nerves. On the extreme left of it is the *piṅgalā*, and between it and the *suṣumnā* are the *pūṣā*, stretching from below the corner of the right eye to the abdomen, *paśyantī*, the auricular branch or the cervical plexus, *sarasvatī* and *vāraṇā* (the sacral nerve). The *śaṅkhinī* (the auricular branch or the cervical plexus on the left) goes parallel to the *suṣumnā*, but takes a turn in the region of the neck and passes on to the root of the left ear-holes; in another branch it passes through the inner side of the region of the forehead, where it gets joined with the *citrinī nāḍī* and enters into the cerebral region. The *suṣumnā nāḍī* is a sort of duct inside the spine, which encases within it the *vajrā nāḍī*, and that again encases within it the *citrinī nāḍī*, which has within it a fine aperture running all through it, which is the fine aperture running through the spinal cord². This inner passage

¹ But according to the *Tantra-cūḍāmaṇi*, *suṣumnā* is not inside the spinal column but outside it. Thus it says, “*tad-bāhye tu tāyora madhye suṣumnā vahnī-samyuta*.” This, however, is against the view of the *Ṣaṭ-cakra-nirūpaṇa*, which takes *suṣumnā* to be inside the passage of the spine. According to the *Nigama-tattva-sāra-tantra*, *idā* and *piṅgalā* are both inside the spine, but this is entirely against the accepted view. Dr Sir B. N. Seal thinks that *suṣumnā* is the central passage or channel of the spinal cord and not a separate *nāḍī* (*The Positive Sciences of the Ancient Hindus*, pp. 219, 226, 227). Mr Rele in his *The Mysterious Kuṇḍalinī* (pp. 35, 36) thinks that it is a *nāḍī* which is situated centrally and passes through the spinal column (*meru-daṇḍa*); but, judging from the fact that it is said to originate in the sacrum, from which it goes upwards to the base of the skull, where it joins with the plexus of a thousand nerves called *brahma-cakra* (cerebrum in the vault of the skull) and is divided at the level of the larynx (*kaṇṭha*) into anterior and posterior parts between the two eyebrows (*ājñā-cakra*) and the cavity in the brain (*brahma-randhra*) respectively, Rele thinks that this *suṣumnā nāḍī* is nothing but the spinal cord.

² *Nāḍī* is derived by Pūrṇānanda Yati, in his commentary on the *Ṣaṭ-cakra-nirūpaṇa*, from the root *naḍ*, to go, as a passage or duct (*naḍa gatau iti dhātor naḍyate gamyate* ‘*naḍa padavyā iti nāḍī*’). Mahāmahopādhyāya Gaṇanātha Sen makes a

within the *citrinī nāḍi* is also called *brahma-nāḍi*; for there is no further duct or *nāḍi* within the *citrinī*¹. The *suṣumṇā* thus in all probability stands for our spinal cord. The *suṣumṇā*, however, is said to take a turn and get connected with the *śaṅkhiṇī* in the inside region of the forehead, whence it becomes connected with the aperture of the *śaṅkhiṇī* (*śaṅkhiṇī-nālam ālambya*) and passes to the cerebral region. All the *nāḍis* are connected with the *suṣumṇā*. *Kuṇḍalinī* is a name for supreme bodily energy, and, because the channel of the *suṣumṇā*, the *brahma-nāḍi*, is the passage through which this energy flows from the lower part of the trunk to the regions of the nerve-plexus of the brain, *suṣumṇā* is sometimes called *kuṇḍalinī*; but *kuṇḍalinī* itself cannot be called a nerve, and it is distinctly wrong to call it the vagus nerve, as Mr Rele does². The *iḍā nāḍi* on the left side of the *suṣumṇā* outside the spine goes upwards to the nasal region, and *piṅgalā* follows a corresponding course on the right side. Other accounts of these *nāḍis* hold that the *iḍā* proceeds from the right testicle and the *piṅgalā* from the left testicle and passes on to the left and the right of the *suṣumṇā* in a bent form (*dhanur-ākāre*). The three, however, meet at the root of the penis, which is thus regarded as the junction of the three rivers, as it were (*trivenī*), viz. of *suṣumṇā* (compared to the river Gaṅgā), *iḍā* (compared to Yāmuna) and *piṅgalā* (compared to Sarasvatī). The two *nāḍis*, *iḍā* and *piṅgalā*, are also described as being like the moon and the sun respectively, and *suṣumṇā* as fire³. In addition to these *nāḍis* the *Yogi-yājñavalkya* mentions the name of another *nāḍi*, called *alambuṣā*, making the number of the important *nāḍis* fourteen, including *suṣumṇā* and counting *suṣumṇā* as one *nāḍi* (i.e. including *vajrā* and *citrinī*), though the total number of *nāḍis* is regarded as being seventy-two thousand. Śrīkaṇāda in his *Nāḍi-vijñāna* counts the number of *nāḍis* as thirty-five millions. But, while the Tantra school, as represented in the works *Ṣaṭ-cakra-nirūpaṇa*, *Jñāna-saṃkalinī*, *Yogi-yājñavalkya*, etc., regards the *nāḍis* as originating from the nerve-plexus very serious mistake in his *Pratyakṣa-śārīraka* when he thinks that the *nāḍis* are to be regarded as being without apertures (*nirandhra*). They are certainly not so regarded in the Āyur-veda or in the *Ṣaṭ-cakra-nirūpaṇa* and its commentaries. In Yoga and Tantra literature the term *nāḍi* generally supersedes the term *śīrā* of the medical literature.

¹ *Śabda-brahma-rūpāyāḥ kuṇḍalinyāḥ parama-śiva-sannidhi-gamana-pātha rūpa-citrinī-nāḍy-antargata-śūnya-bhāga iti*. Pūrṇananda's commentary on *Ṣaṭ-cakra-nirūpaṇa*, St. 2.

² *Suṣumṇāyai kuṇḍalinyai. Haṭha-yoga-pradīpikā*, IV. 64.

³ *Ṣaṭ-cakra-nirūpaṇa*, St. 1 and *Yogi-yājñavalkya-saṃhitā*, p. 18.

lying between the root of the penis and the anus, and while Caraka regards them as originating from the heart, Śrīkaṇāda regards them as originating from the region of the navel (*nābhi-kanda*) and going upwards, downwards and sideways from there. Śrīkaṇāda, however, compromises with the Tantra school by holding that of these thirty-five millions there are seventy-two thousand *nāḍīs* which may be regarded as gross and are also called *dhamanīs*, and which carry the sense-qualities of colour, taste, odour, touch and sound (*pañcendriya-guṇāvahā*). There are again seven hundred *nāḍīs* with fine apertures, which carry food-juice by which the body is nourished. Of these again there are twenty-four which are more prominent.

The most important feature of the Tantra school of anatomy is its theory of nerve-plexuses (*cakra*). Of these the first is the *ādhāra-cakra*, generally translated as sacro-coccygeal plexus. This plexus is situated between the penis and the anus, and there are eight elevations on it. It is in touch with the mouth of the *suṣumṇā*. In the centre of the plexus there is an elevation called *svayambhū-līṅga*, like a fine bud with an aperture at its mouth. There is a fine thread-like fibre, spiral in its form, attached to the aperture of the *svayambhū-līṅga* on one side and the mouth of the *suṣumṇā* on the other. This spiral and coiled fibre is called *kula-kunḍalinī*; for it is by the potential mother-energy, as manifested in its movement of a downward pressure of the *apāna vāyu* and an upward pressure of the *prāṇa vāyu*, that exhalation and inhalation are made possible and life functions operate. Next comes the *svādhiṣṭhāna-cakra*, the sacral plexus, near the root of the penis. Next comes the lumbar plexus (*maṇi-pura-cakra*), in the region of the navel. Next is the cardiac plexus (*anāhata-cakra* or *viśuddha-cakra*), in the heart, of twelve branches. Next is the laryngeal and pharyngeal plexus, at the junction of the spinal cord and the medulla oblongata, called the *bhārati-sthāna*. Next comes the *lalanā-cakra*, opposite the uvula. Next to this is the *ājñā-cakra* between the eyebrows, within which is the *manas-cakra*, the centre of all sense-knowledge and dream-knowledge, and the seat of *manas*, the mind-organ. Vijñānabhikṣu says in his *Yoga-vārttika* that one branch of the *suṣumṇā* goes upwards from here, which is the *nāḍī* for carrying the functions of *manas* and is called *mano-vahā nāḍī*; the *jñāna-saṃkalinī tantra* calls it *jñāna-nāḍī*. It seems, therefore, that it is through this *nāḍī* that connection is established

between the soul, residing in the brain, and the *manas*, residing in the *manas-cakra*. Śaṅkara Miśra argues in his commentary on the *Vaiśeṣika-sūtras*, v. 2. 14 and 15, that the *nāḍīs* are themselves capable of producing tactile impressions; for, had it not been so, then eating and drinking, as associated with their corresponding feelings, would not have been possible, as these are effected by the automatic functions of *prāṇa*¹. Above the *ājñā-cakra* comes the *soma-cakra*, in the middle of the cerebrum, and finally, in the upper cerebrum, there is the *sahasrāra-cakra*, the seat of the soul. The process of Yoga consists in rousing the potential energy located in the *ādhāra-cakra*, carrying it upwards through the aperture of the *citrīṇī* or the *brahma-nāḍī*, and bringing it to the *brahma-randhra* or the *sahasrāra*. This *kuṇḍalinī* is described as a fine fibre like a lightning flash (*taḍid iva vilasat tantu-rūpa-svarūpa*), which raises the question whether this is actually a physical nerve or merely a potential energy that is to be carried upwards to the upper cerebrum in the *sahasrāra-cakra*; and it cannot, I think, be yet satisfactorily explained. But, judging from a wide comparison of the texts, it seems pretty certain that it is the *kuṇḍalī śakti* or the *kuṇḍalī* energy which is carried upwards. If the *kuṇḍalī* energy is inexhaustible in its nature, the whole discussion as to whether the *ādhāra-cakra* is depleted or not or whether the *kuṇḍalinī* herself rises or her eject, as raised in Sir John's *Serpent Power*, pp. 301–320, loses its point. How far the *cakras* can themselves be called nerve-plexuses is very doubtful, since the nerve-plexuses are all outside the spinal aperture; but, if the *kuṇḍalinī* is to pass through the aperture of the *citrīṇī nāḍī* and at the same time pass through the *cakras*, the *cakras* or the lotuses (*padma*) must be inside the spinal cord. But, supposing that these nerve-plexuses represent the corresponding places of the *cakras* inside the spinal cord, and also because it has become customary to refer to the *cakras* as plexuses, I have ventured to refer to the *cakras* as such. But it must be borne in mind that, as the *kuṇḍalinī* is a mysterious power, so also are the *cakras* the mysterious centres in the path of the ascent of the *kuṇḍalinī*. A nerve-physical interpretation of them as nerve-plexuses would be very unfaithful to the texts. A more detailed discussion on these subjects will be found in the treatment of Tantra philosophy in a later volume of this work. The chief interest of the present section is only to show that the Tantra

¹ See Dr Sir B. N. Seal's *Positive Sciences of the Ancient Hindus*, pp. 222–225.

anatomy is entirely different in its conception from the Āyur-veda anatomy, which has been the subject of our present enquiry. Another fact of importance also emerges from these considerations, namely, that, though in Dr̥ḥabala's supplementary part of the *Siddhi-sthāna* the head is associated with sensory consciousness, Caraka's own part refers to the heart as the central seat of the soul. But the Tantra school points to the upper cerebrum as the seat of the soul and regards the spinal cord and its lower end as being of supreme importance for the vital functions of the body.

The Theory of Rasas and their Chemistry.

The theory of *Rasas* or tastes plays an important part in Āyur-veda in the selection of medicines and diet and in diagnosing diseases and arranging their cures. In 1. 26 of Caraka we hear of a great meeting of sages in the Caitraratha Forest, attended by Ātreya, Bhadrakāpya, Śākunteya, Pūrṇākṣa Maudgalya, Hiranyākṣa Kauśika, Kumāraśiras Bharadvāja, Vāryovida, the Vaideha king Nimi, Baḍiśa and Kāṅkāyana, the physician of Balkh, for the purpose of discussing questions of food and tastes.

Bhadrakāpya held that taste, or *rasa*, was that which could be perceived by the organ of the tongue and it was one, viz. that of water. Śākunteya held that there were two *rasas*, nutritive (*upaśamanīya*) and denutritive (*chedanīya*). Pūrṇākṣa held that there were three *rasas*, *upaśamanīya*, *chedanīya* and neutral (*sādhāraṇa*). Hiranyākṣa held that there were four *rasas*, sweet and good, sweet and harmful, distasteful and good, distasteful and harmful. Kumāraśiras held that there were five *rasas*, earthy, watery, fiery, airy and ethereal (*āntarikṣa*). Vāryovida held that there were six *rasas*, heavy (*guru*), light (*laghu*), cold (*śīta*), hot (*uṣṇa*), smooth (*snigdha*) and dry (*rūkṣa*). Nimi held that there were seven *rasas*, sweet (*madhura*), sour (*amla*), salt (*lavaṇa*), hot (*kaṭu*), bitter (*tikta*), pungent (*kaṣāya*) and alkaline (*kṣāra*). Baḍiśa added one more to these, viz. unmanifested (*avyakta*), and held that there were eight *rasas*. Kāṅkāyana held that the *rasas* were of infinite variety and could not be counted, on account of the diversity of substances in which they are located (*āśraya*), their specific properties as light or heavy (*guṇa*), their action in developing or reducing the constituents of the body (*karma*) and their diversity as apparent to the organ of taste. Ātreya Punarvasu held that there are six *rasas* only,

sweet (*madhura*), acid (*amla*), saline (*lavana*), hot and pungent (*katu*), bitter (*tikta*) and astringent (*kaṣāya*). The source (*yonī*) of all these *rasas* is water. Its actions are sedative (*upāśamana*) and denutritive (*chedana*), and a basis of equilibrium (*sādhāraṇatva*) of the *rasas* is reached when those having the above opposite actions are mixed together. Pleasantness (*svādu*) or unpleasantness (*asvādu*) of taste depends on liking or disliking. The seats of *rasas* are the essences of the five elements (*pañca-mahā-bhūta-vikārāḥ*) modified in accordance with five conditions, viz. (1) specific nature of the substance (*prakṛti*); (2) as acted upon by heat or other agents (*vikṛti*); (3) association with other things (*vicāra*); (4) the place in which the substance is grown (*deśa*); (5) the time at which it is produced (*kāla*)¹. The *guṇas* of heaviness, lightness, cold, warm, moisture and dryness belong to the things to which the *rasas* belong. The alkaline (*kṣāra*) should not be counted as a separate *rasa*, as it is made up of more than one *rasa* and affects more than one sense-organ; for it has at least two important *rasas* (of “hot and pungent” and “saline”) and it affects not only the organ of taste, but also that of touch, and does not naturally belong to any substance, but has to be created by artificial processes. There is no such separate *rasa* which can be called unmanifested (*avyakta*). Water is the origin of all *rasas*; so all *rasas* may be considered as existing in an unmanifested state in water, but that is no reason why we should say that water has a separate taste called “unmanifested”; moreover, when a substance has two *rasas*, one dominant and the other extremely feeble, the feeble *rasa* may be regarded as unmanifested; or, when in a compound of different *rasas*, say, of a syrup, a slight hot taste is added, this may be considered as unmanifested; but certainly there is no *rasa* to which the name “unmanifested” (*avyakta*) could be given. The view that there is an infinite number of *rasas* is untenable; for, though it may be urged that the same *rasa* may occur differently in different objects, that would only go to show that there are various grades of forms of each particular *rasa* and not prove that with each variety of a particular *rasa* the *rasa* itself is wholly different. Again,

¹ Thus *mudga* (a sort of kidney-bean), which is a *bhūta-vikāra*, has the *rasas* of astringent and sweet and is yet light by nature, though one would expect it to be heavy on account of its *rasas* of astringent and sweet. *Vikṛti* is best exemplified in the case of fried paddy, which is lighter than rice. It is well known that by composition wholly new properties may be generated in the product. Medicinal herbs vary in their properties in accordance with the time of plucking.

if different *rasas* are mixed together, the mixed *rasa* itself is not entitled to be counted as a separate *rasa*; for its qualities are just as the sum total of the qualities of the different *rasas* which are its constituents, and no independent work can be attributed to this mixed *rasa* (*na saṃśṛṣṭānāṃ rasānāṃ karmopadiśanti bud-dhimantaḥ*), as in the case of a compound of two or more substances, as mentioned above (*vicāra*).

Though on account of the predominance of one or the other of them they are called earthy (*pārthiva*), watery (*āpya*), fiery (*āgneya*), airy (*vāyavya*) or ethereal (*ākāśātma*), yet all substances are compounded of the five elements. All substances, whether animate or inanimate, are to be considered as medicines (*auśadha*), provided they are applied in the proper way (*yukti*) and for specific purposes (*artha*). A substance can be a medicine only when it is applied in the proper way and for specific purposes; nothing can unconditionally be considered a medicine. The medicative influence is exerted both by virtue of the specific agency of a substance (*dravya-prabhāva*) and by the specific agency of its qualities, as also by their joint influence¹. The action of medicines is called *karman*, its potency *vīrya*, the place where they operate *adhikaraṇa*, the time of operation *kāla*, the mode of operation *upāya*, and the result achieved *phala*.

As regards the origin of *rasas*, it is suggested that water gets mixed with the five elements in the air and also after its fall on the ground. These *rasas* nourish the bodies of all plants and animals. All the five elements are present in all *rasas*; but in some *rasas* some of the elements predominate, and in accordance with this there are differences among the various *rasas*. Thus, with the predominance of *soma* there is a sweet taste, with the predominance of earth and fire an acid taste, with water and fire a saline taste, with air and fire, hot and pungent, with air and *ākāśa*, bitter, with air and earth, astringent. The different elements

¹ The medicinal effect of substances may be distinguished from the medicinal effect of qualities, as when by certain stones (*maṇi*) poison may be removed or by the use of certain amulets certain diseases may be cured. Again, there may be cases where simply by the application of heat a certain disease may be cured, irrespective of the substance which possesses heat as its property. It seems that only the sense-properties and mechanical properties are here counted as *guṇas*; other kinds of properties were considered as being due to the thing (*dravya*) itself. For, in addition to the sense-properties, the twenty qualities, *guru*, *laghu*, *śīta*, *uṣṇa*, *snigdha*, *rūkṣa*, *manda*, *tikṣṇa*, *sthira*, *sāra*, *mṛdu*, *kāṭhina*, *viśada*, *picchīla*, *ślakṣṇa*, *khara*, *sūkṣma*, *sthūla*, *sāndra* and *drava*, are counted as *guṇas* (*Caraka-saṃhitā*, I. i. 48; I. 25. 35; I. 26. 11).

which take part in the formation of *rasas* are said to be instrumental causes (*nimitta-kāraṇa*) of the *rasas*; this explains how, though fire has no *rasa*, yet it may help the generation of a particular *rasa*¹. Destiny or unknown cause (*adṛṣṭa*) is, however, the general cause of such combinations of elements with water.

In the very first chapter of the *Caraka-saṃhitā*, substances (*dravya*) are counted as being the five elements, viz. *ākāśa*, air, light, heat, water and earth, together with soul, *manas*, time and space. Of these those substances which possess sense-organs are called animate and those which do not are called inanimate². The *guṇas* are the sense-properties of hearing, touch, colour, taste and smell, the mechanical and other properties which all elements have in common, such as heaviness, lightness, cold, heat, and moisture, dryness, dullness, sharpness, steadiness, mobility, softness, hardness, motion, slipperiness, smoothness, roughness, grossness, fineness, thickness, liquidity, etc., and desire, hatred, pleasure, pain and effort, intelligence (including memory), consciousness, patience, egoism, etc., distance (*para*), nearness (*apara*), combination (*yukti*), number, contact, disjunction (*vibhāga*), separateness, measure, inertia (*saṃskāra*) and repetition (*abhyāsa*). The definition of substance (*dravya*) is, that which possesses quality (*guṇa*) and action (*karma*) in the relation of inherence and is also the inseparable material cause (*samavāyi-kāraṇa*) of all effects. *Guṇas* are things which are themselves inactive and exist in *dravyas* in an inseparable relation of inherence. The *guṇas* themselves cannot contain any further *guṇas*³.

The above being the theory of *dravya* and *guṇa*, the question arises as to the way in which medicines operate in human bodies. The most general and obvious way in which the different medicines were classified was by their different tastes, which were considered primarily to be six in number, as has already been pointed out. Each of the tastes was considered as being capable of producing certain good or bad physiological effects. Thus the sweet taste is

¹ *Iha ca kāraṇatvaṃ bhūtānāṃ rasasya madhuratvādi-viśeṣa eva nimitta-kāraṇatvaṃ ucyate*. Cakrapāṇi on *Caraka*, I. 26. 38.

² *Caraka-saṃhitā*, I. 1. 47. Even trees were regarded as being possessed of senses and therefore animated or *cetana*. Cakrapāṇi says that, since the sunflower continues to turn its face towards the sun, it may be regarded as being possessed of the sense of sight; again, since the *lavalī* (*Averrhoa acida*) plant fructifies through hearing the sound of thunder, the plants have auditory organs, etc.

³ *Ibid.* I. 1. 47, 48 and 50, with Cakrapāṇi's commentary.

said to increase blood, flesh, fat, marrow, semen, life, to do good to the six senses, and to produce strength and colour of the body; to do good to the skin and throat, to destroy *pitta*, poison and *māruta* (morbidness of air), and to produce moistening, cold and heaviness, etc. The acid (*amla*) is said to rouse digestion, develop the body, and to remove *vāta*; it is light, warm, moist, etc. The saline taste is digestive; it removes *vāta*, secretes *kapha*; and it is moist, warm, etc. And so on with the other tastes. But, of course, all these qualities cannot belong to the tastes; as has already been pointed out, the *guṇas* cannot possess further *guṇas*, and the tastes (*rasa*) are themselves *guṇas*; so, when certain functions or properties are attributed to the *rasas*, they must be considered as belonging to the substances which possess those specific *rasas* (*rasā iti rasa-yuktāni dravyāṇi*)¹.

From Suśruta's statements it appears that there was a great difference of opinion regarding the relative prominence of *dravya* and its properties². There were some who held that *dravya* was the most important, since *dravya* remained permanent, whereas *rasa*, etc. are always changed; so *dravya* is relatively permanent. Again, *dravya* is grasped by the five senses, and not its *guṇas*. The *dravya* is also the support of the *rasas*, etc. All operations have to be done with the *dravya*, and the authoritative texts also speak of operations with the *dravyas*, and not with the *rasas*; the *rasas* depend largely on the nature of the *dravyas*. Others hold that *rasas* are the most important, since it is of them that we become directly aware when we take our food, and it is said that they remove the various morbidities of *vāta*, etc. Others hold that the potency (*vīrya*) of things is the most important, since it is by their potency that medicines act³. This potency is of two kinds, hot (*uṣṇa*) and cold (*śīta*); some think that it is of eight kinds, hot (*uṣṇa*), cold (*śīta*), moist (*snigdha*), dry (*rūkṣa*), moving (*viśada*), slippery (*picchila*), soft (*mṛdu*) and sharp (*tikṣṇa*). Sometimes potency or *vīrya* overcomes *rasa* by its power and makes its own tendencies felt; thus, though sugar-cane ought to remove *vāta* on account of its sweetness, it really increases it on account of its being *śīta-vīrya* (of cold

¹ *Caraka-saṃhitā*, I. 26. 39, Cakrapāṇi's commentary.

² *Suśruta, Sūtra-sthāna*, 40. 3. *Dravya* is defined by Suśruta as *kriyā-guṇavat samavāyi-kāraṇam*.

³ *iha uṣadha-karmāṇi ūrdhvādho-bhāgobhayabhāga-saṃśodhana-saṃśamana-saṃgrāhākāgni-dīpaina-praṇīdana-lekhana-rasāyana-vājīkaraṇa-śvaya-thūkāra-vilāyana-dahana-dāraṇa-mādana-prāṇaghna-viṣa-praśamanāni vīrya-prādhanyād bhavanti. Suśruta*, I. 40. 5.

potency)¹. Others say that the *rasa*, as digested by the stomach (*pāka*), is most important, since things can produce good or bad effects only when they are digested. Some hold that each *rasa* remains unchanged by digestion, though according to others there are only three kinds of *rasa* resulting from digestion or *pāka*, viz. sweet, acid and hot (*kaṭu*); whereas Suśruta held that there were only two kinds of *rasa* resulting from digestion, viz. sweet and hot; for, in his view, acid was not the result of digestion (*amlo vipāko nāsti*). According to Suśruta it is the *pitta* which is turned into acid. Those objects which have more of earth and water in them are turned into sweet taste, whereas those which have *tejas*, air and *ākāśa* as their ingredients are turned into hot taste (*kaṭu*).

Speaking of the differences of view regarding the relative importance of *dravya*, *rasa*, *virya* and *vipāka*, Suśruta says that they are all important, since a medicine produces effects in all those four ways according to its own nature². The view of Suśruta, as explained by Cakrapāṇi in the *Bhānumatī*, seems to be that food, drink and medicine are all products of the five *mahā-bhūtas*, and *rasa*, *virya* and *vipāka* are dependent on the *dravya* and are like its potency (*śakti*), through which it works³. Cakrapāṇi, commenting on this in the *Bhānumatī*, says that even in those cases where certain *rasas* are said to remove or increase certain morbidities (*doṣa*) it is only because of their importance that they are so described; the real agent in all such cases is the *dravya*, since the *rasa*, etc. are always dependent on the *dravya*. Apart from the *śakti* as manifested in *rasa*, etc., the *dravya* also operates by itself in an unthinkable way (*acintya*), which is also called *prabhāva* and which is comparable with the attractive force exerted by magnets on iron. The *dravya* by itself is thus differentiated from its *śakti*, and it is said to have a peculiar operative mode of its own, as distinguished from that of its *śakti* or potency, as manifested in *rasa*, *virya* or *vipāka*, and this mode of operation is considered to

¹ *etāni khalu vīryāṇi sva-bala-guṇotkarṣāt rasam abhībhuṣyātma-karma kurvanti. Suśruta, ibid.* The *virya* is said to remain both in the *dravya* and in the *rasa*. Thus in Suśruta, I. 40. 5-8, it is said that, if in those *rasas* which remove *vāta* there is dryness (*rauḁṣya*), lightness (*lāghava*) and cold (*śaitya*), then they will not remove *vāyu*; so, if in those which remove *pitta* there is sharpness (*taikṣṇya*), heat (*auṣṇya*) and lightness (*laghutā*), then they will not remove *pitta*, and so on.

² *caturṇām api sāmāgryam icchanty atra vipāścītaḥ. Suśruta, I. 40. 13.*

³ *dravya-śakti-rūpakā rasa-vīrya-vipākā yathā-yogam nimitta-kāraṇatām samavāyi-kāraṇatām vā bhajanto na kartṛtaya vyapadiśyante dravya-parā-dhīnatvāt. Bhānumatī, I. 40. 13.*

be quite unthinkable (*acintya*) as to the way in which it operates¹. Thus some medicines operate by *rasa*, some by *vipāka*, or the *rasa* resulting from the digestive operation (e.g. *śuṇṭhī*, which, though hot in taste and hot in *vīrya*, is sweet after digestive operation), some by *vīrya* (e.g. *kulattha*, though pungent, yet removes *vāyu* on account of its hot *vīrya*), some by both *rasa* and *vipāka*, some by *dravya-prabhāva*, *vīrya* and *rasa*, some by *dravya-prabhāva*, *vīrya*, *rasa* and *vipāka*.

Caraka, however, differs from Suśruta in this view of *dravya* and *rasa*, *vīrya* and *vipāka*; for, according to him, *rasa*, *vīrya* and *vipāka*, themselves being *guṇas*, cannot possess further *guṇas*. He does not admit a *śakti* as different from the *dravya*. Thus in the case of *prabhāva*, while Suśruta holds that it is a specific *śakti*, or the thing operating in unaccountable ways, Caraka thinks that this *śakti* is identical with the thing itself. Thus Cakrapāṇi in explaining *Caraka-saṃhitā*, I. 26. 72, says, “*śaktir hi svarūpam eva bhāvānām, nātiriktaṃ kincid dharmāntaraṃ bhāvānām*” (potency is the nature of things and is no separate property distinct from them). *Vīrya* in its general sense means “the potency or power of medicines to produce effects,” and as such includes within it both *rasa* and *vipāka*; but, since these have special names, the term *vīrya* is not applied to them². Apart from this there is special *vīrya* in a technical sense (*pāribhāṣika*). In the view which considers this *vīrya* to be of two kinds, *snigdha* and *rūkṣa*, these are to be taken as specific characteristics; but in the view which considers the *vīrya* to be of eight kinds, these are to be taken as a different set of characteristics of *dravya* or substance³. This *vīrya* is believed to be more powerful than *rasa*, so that, when the *vīrya* and *rasa* of a thing come into conflict, it is the *vīrya* which predominates and not the *rasa*.

Vāgbhaṭa junior makes some remarks in support of the name *vīrya*, as given to the characteristics which go by that name. He says that, since the *vīrya* characteristics of things remain unchanged even after digestion, and since the things are primarily

¹ *dravyam ātmanā śaktyā prabhāvākhyayā doṣaṃ hanti . . atra dravya-śakti-kāryodāharaṇam yathā karṣaka-mañir loha-śalyam ākarṣati. Bhānumati*, I. 40. 13.

² *tasya pākasya tad-rasasya vipākasya ca prthaṅ-nirdeśān na vīrya-vyavahāraḥ śāstre . . . Carake tu sāmānya-vīrya-śabdena te 'pi grhīṭāḥ. Ibid.* I. 40. 5.

in use for medical purposes and each of them would include many substances and *rasas*, this character justly deserves to be called *vīrya*, or the potency-in-chief for producing medical effects¹. He further says that *rasa* is baffled by *vipāka*, that *rasa* and *vipāka* can baffle *vīrya*, if they work in the same direction, and that they may all be baffled by *prabhāva*. These remarks, however, are true only in those cases where *rasa*, *vīrya* and *vipāka* exist in the same proportion, and it must be borne in mind that some objects may have *rasa* of such a predominant type that it may overcome the *vipāka* or the *vīrya*². As regards the relative priority of *vīrya* and *vipāka*, Śivadāsa in commenting on Cakrapāṇi's *Dravya-guṇa-saṃgraha* says that *vīrya* is prior to *vipāka*; and this would imply that, as *vīrya* can supersede *rasa*, so *vipāka* may supersede *vīrya*.

If we look back to the earliest history of the development of Indian medical ideas in the *Atharva-Veda*, we see that there were two important classes of medicines, viz. the amulets, *maṇis* and water. *Atharva-Veda*, I. 4. 4, I. 5, I. 6, I. 33, VI. 24, VI. 92, etc. are all in praise of water as medicine, and water is regarded there as the source of all *rasa* or taste. Thus from the earliest times two different kinds of medicines were used. Of these the amulets were more or less of a miraculous effect. It was not possible to judge which kind of amulet or *maṇi* would behave in which way; their mode of operation was unthinkable (*acintya*). It is easy to see that this mode of operation of medicines was what was considered a *prabhāva* by Caraka and Suśruta. With them *prabhāva* means the mysterious operation of a medicine acting in an unaccountable way, so that, though two medicines might be exactly similar in *rasa*, *vīrya* and *vipāka*, they might behave differently with regard to their medicinal effects³. Such an effect was thus naturally considered as unthinkable. But the analogy of the old *maṇis* was fresh in the minds of these medical thinkers when conceiving this *prabhāva*, and it was in reality an extension of that idea to other unaccountable effects of medicines⁴. As none of the chemical effects

¹ *Aṣṭāṅga-hṛdaya*, I. 9. 15.

² *Ibid.* I. 28.

³ *rasa-vīrya-vipākāṇaṃ sāmānyam yatra lakṣyate viśeṣaḥ karmaṇāṃ caiva prabhāvas tasya ca smṛtaḥ. Caraka-saṃhitā*, I. 26. 69. Cakrapāṇi, in commenting on this, says, “*rasādi-kāryatvena yan nāvadhārayitūṃ śakyate kāryaṃ tat prabhāva-kṛtaṃ iti sūcayati; ata evoktaṃ 'prabhāvo 'cintya ucyate' rasa-vīrya-vipākā-tayācintya ity arthaḥ.*”

⁴ *maṇinām dhāraṇyānām karma yad vivīdhātmaṃ, tat-prabhāva-kṛtaṃ teṣāṃ prabhāvo 'cintya ucyate.* (The various actions of amulets are to be considered as being due to a *prabhāva* which is unthinkable—*ibid.* I. 26. 72.)

(in the modern sense) of medicines on human organs were known, the most obvious way in which the medical effects of herbs, roots, etc. could be classified was on the basis of taste, and by Caraka and Suśruta we are told the effects of the different *rasas* on the different morbidities of the body, *vāyu*, *pitta* and *kapha*. As the main source of all diseases was unequal increase or decrease of *vāyu*, *pitta* and *kapha*, a classification which described the *rasas* in such a way that one could know which *rasa* increased or decreased which of the morbidities was particularly useful. But it is obvious that such a classification, though simple, could not be universally true; for, though the taste is some indication of the medicinal property of any substance, it is not an infallible one. But no other mode of classification was known; it was supposed that the taste (*rasa*) of some substances changed altogether after digestion and that in such cases the taste which changed after digestion (*pāka*) would be operative. Cakrapāṇi says that in those cases where the taste on the tongue (*rasa*) agrees with the taste as produced after the digestive process, the effect in that direction becomes very strong, but in the case where the latter differs from the former the operation of *rasa* becomes naturally weak, because the force of the taste produced by the final operation of the digestive process is naturally strong¹. Caraka thought that there were only three *rasas* as the result of digestion, viz. *kaṭu*, *madhura* and *amla*; Suśruta rejected the last, as has already been described. But even this was not sufficient; for there were many other effects of medicine which could not be explained on the above suppositions. In explaining this, the theory of *virya* was introduced. In addition to taste substances were considered to possess other properties of heat and cold, as judged by inference, tactual properties of slipperiness, movement, moisture and dryness, etc., sharpness, etc. as manifested by odour, and these were supposed to produce effects in supersession of *rasa* and *vipāka*. It was only in the cases where no sensible data of any kind could be found to indicate the medical properties of the thing that the idea of *prabhāva* was introduced. The chapters in Āyur-veda on *dravya*

¹ Cakrapāṇi on Caraka, 1. 26. 65. Cakrapāṇi points out that the hot (*kaṭu*) taste is at first useful in cleaning the phlegm of the throat, but, since it becomes sweet after digestion, it acts as a nutrient (*viśya*). But, except in the case of such local actions, it is difficult to understand why the *rasa* which was altered by digestion should have any such effect as Cakrapāṇi suggests (*viparyaye tu durbalam iti jñeyam*).

and *guṇa* deal with the enumeration of *prabhāva* and also of *rasa*, *vipāka* and *vīrya* wherever there is a divergence among them, as determined by empirical observation. This is very necessary not only for the selection of medicines and diet in the cure of diseases, but also for prevention of diseases. It is well to remember that many diseases were supposed to arise through eating together things which are opposed to each other in *rasa*, *vipāka* or *vīrya*.

The Psychological Views and other Ontological Categories.

Caraka in the eighth chapter of the *Sūtra-sthāna* counts the senses as being five in number. Though both the Sāṃkhya and the Vaiśeṣika systems, to which Āyur-veda is largely indebted for its philosophical ideas, admit *manas*, or mind-organ, as a separate sense (*indriya*), Āyur-veda here differs from them and, as Cakrapāṇi says, separates *manas* from the ordinary senses by reason of the fact that it has many functions which are not possessed by any of the other senses (*caḥsur-ādibhyo 'dhika-dharma-yogitayā*)¹. Caraka himself, however, in another place speaks incidentally of a sixth sense (*ṣaḍ-indriya*) in connection with the description of sweet taste². *Manas* is, however, here described as transcending the senses (*atindriya*). Cakrapāṇi, in explaining the *atindriya* character of *manas*, says that it is called *atindriya* because it is not a cause of the knowledge of external objects like the other senses. *Manas* is, indeed, the direct cause of pleasure and pain, but it is the superintendent of all the senses (*adhiṣṭhāyaka*). *Manas* is also called *sattva* and *cetas*. The self is, however, the permanent subject of all acts of consciousness (*cetanā-pratisandhātā*). When the *manas* comes into contact with its objects, viz. pleasure or pain or the objects of thought, and the self makes an effort at grasping these objects, then there is a movement on the part of *manas*, by which it feels pleasure or pain, or thinks the objects of thought, or moves the sense-organs. Thus, when the self makes an effort and the objects of pleasure or pain or thought are present, then the *manas* turns to these as its objects and moves the senses, and the senses, guided by it, grasp their respective objects and produce their knowledge.

¹ Cakrapāṇi's commentary on *Caraka-saṃhitā*, I. 8. 3.

² *Caraka-saṃhitā*, I. 26. 41, *tatra madhuro rasah...ṣaḍ indriya-prasādanah*.

The one *manas* appears as diverse on account of the diversity of its objects of thought (e.g. the mind may sometimes take religious thoughts and appear religious and at other times take lustful thoughts and appear lustful), diversity of sense-objects with which it is associated (e.g. the mind may grasp colour, smell or sound, etc.), and diversity of ways of imagination (e.g. "This will do good to me" or "This will do me harm," etc.). In the same man the mind may sometimes appear as angry, ignorant or virtuous. But in reality the *manas* is one and the same for each person; all these differences do not appear at the same time with the same person, as might have been the case if there were many minds for one and the same person. Moreover, the *manas* is atomic; for otherwise many different objects or functions could be performed by one and the same *manas* at the same time.

It may be asked, if one and the same *manas* can show different kinds of moral propensities, *sattva*, *rajas* or *tamas*, how can any person be characterized as *sāttvika*, *rājasika* or *tāmasika*? The answer is that a man is called *sāttvika*, *rājasika* or *tāmasika* according as predominance of one or other of these *guṇas* is observed in that man.

Manas is supposed to move the senses, which are constituted of *ākāśa*, air, light, heat, water and earth; and the seats of the senses are the physical sockets of the eye, the ear, the nostrils, the tongue and the skin. The five sense-cognitions are produced through the contiguity of the senses, the sense-objects, *manas* and soul. They are short-lived (*kṣaṇika*), but not exactly momentary, as the Buddhists would like to have them¹. They also are of determinate nature (*niścayātmikāḥ*). As Cakrapāṇi says, it is quite possible for transitory sense-cognitions to give a determinate report of their objects. Though all the senses are made up of the five elements, yet those senses which contain any element in a preponderating degree were conceived as made up of that element. The sense that has a particular element in a preponderating degree is regarded as having by virtue of that a special capacity for grasping that particular element².

The connection of the body, the senses, the *manas* and the self

¹ Cakrapāṇi's commentary on *Caraka-saṃhitā*, 1. 8. 11. *Kṣaṇikā ity āsutaravinaśīnyah na tu bauddha-siddhāntavad eka-kṣaṇāvasthāyīnyah.*

² *tatra yad-yad-ātmakam indriyaṃ viśeṣāt tat-tad-ātmakam evārtham anugrhmāti tat-svabhāvād vibhūtvāc ca.* (Caraka, 1. 8. 14.)

is called life (*jīvita*)¹. The self is everywhere regarded as the agent which unites the acts of consciousness (*jñāna-pratisandhātā*). Cakrapāṇi says that, since the body is momentary (*śarīrasya kṣaṇikatvena*), it may be argued that the union of the self with the body is also momentary. The answer that Cakrapāṇi gives to such an objection is that, though the body is momentary, yet, since the momentary bodies are repeated in a series, the series as a whole may be looked upon as one; and, though the union of the self with each term of the series is momentary, yet, since the series may be looked upon as one, its union with the self may also be regarded as one (*santāna-vyavasthito 'yam ekatayā ucyate*)². In another place Caraka says that the *manas*, the self and the body are connected together like a tripod, on which life rests; if any one of the components is missing, the unity is broken³.

It has already been pointed out that, according to Caraka, the self is active and that by its activity the mind moves; and it is by the operation of mind that the senses move. The self is also regarded as being *cetana* (conscious). But this consciousness does not belong to the self in itself, it is attained only by its connection with the senses through *manas*⁴. It is, however, necessary to note that apart from this self there is, according to Caraka, another transcendent self (*paraḥ ātmā*), different from the self which participates in the union of the body and the senses (which is also technically called the *saṃyogi-puruṣa*)⁵. The subtler, or transcendent, self is unchangeable (*nir-vikāra*). Knowledge implies a process and a change, and this self manifests consciousness only in those parts where it becomes associated with *manas* and the senses. Thus, though the self is eternal, yet the rise of consciousness in it is occasional. The unchangeableness of the self consists in its being able to unite with itself its past and future states⁶. If the self were not permanent, it could not unite with itself all its past experiences. The sufferings and enjoyment

pāṇi on Caraka, I. 1. 55.

that affect us should not be attributed to the self, but to *manas* (*dṛśyamāna-rāgādi-vikāras tu manasi*).

The special feature of this view of self is that it is permanent and unchangeable; this self seems to hold within it all the individual egos which operate in association with their respective senses, *manas* and body. It becomes endowed with consciousness only when it is in association with the senses. Pleasure, pain and the movements involved in thought-processes are attributed to *manas*, though the *manas* is also considered to derive its activity from the self. The states of consciousness that are produced are all united in the self. The self, thus diverted in its subtler aspect from the senses and *manas*, is eternal and unchangeable, whereas in its aspect as associated with *manas* and the senses it is in the sphere of change and consciousness. This view is therefore different from those of the orthodox schools of Indian philosophy.

It is well to note in this connection that the *Caraka-saṃhitā* begins with an enumeration of the Vaiśeṣika categories, and, though it often differs from the Vaiśeṣika view, it seems to take its start from the Vaiśeṣika. It enumerates the five elements, *manas*, time, space and self as substances (*dravya*); it enumerates the *guṇas*, such as the sensible qualities, the mechanical or physical qualities given in the list beginning with heaviness (*gurv ādayaḥ*), intelligence (*buddhi*), and those beginning with remoteness (*para*) and ending with effort (*prayatna*). But what is this *gurv ādi* list? There is no such list in the *Vaiśeṣika-sūtras*. Cakrapāṇi, however, refers to an enumeration given in a later chapter (I. 25. 35) by Caraka, where however these *guṇas* are not enumerated as belonging to all substances, but only to the food and drink that we take¹. But the list referred to as *parādi* (beginning with *parādi*) *prayatnānta* (ending in *prayatna*) is not to be found anywhere in the *Caraka-saṃhitā*. This may be a reference to the *Vaiśeṣika-sūtra*, I. 1. 6². But, if this is so, it leaves out a number of other *guṇas* enumerated in the *Vaiśeṣika-sūtra* which were counted there in the *parādi* list³. Caraka himself gives a list of *guṇas* beginning with *para* which includes some of those *guṇas* included in the *Vaiśeṣika-sūtra* already

¹ *āhāratvam āhārasyaikavidham arthābhedāt sa punaḥ...viṃśati-guṇo guru-laghu-śītoṣṇa-snigdha-rūkṣa-manda-tikṣṇa-sthīra-sara-mṛdu-kāṭhina-viśada-pic-chīla-ślakṣṇa-khara-sūkṣma-sthūla-sāndra-dravānugamāt. Caraka-saṃhitā*, I. 5. 35.

² *paratvāparatve buddhayaḥ sukha-duḥkhe icchā-dveṣau prayatnā ca guṇāḥ. Vaiśeṣika-sūtra*, I. 1. 6.

³ *rūpa-rasa-gandha-śparśāḥ saṃkhyā-parimāṇāni prthaktvaṃ saṃyoga-vibhāgau paratvāparatve. Ibid.*

referred to and some more. The *guṇas* enumerated are *para*, *apara*, *yukti*, *saṃkhyā*, *saṃyoga*, *vibhāga*, *prthaktva*, *parimāṇa*, *saṃskāra*, and *abhyāsa*¹. *Para* means “superiority” or “importance” (*pradhāna*), *apara* means “inferiority” or “unimportance” (*apradhāna*). This importance or unimportance is with reference to country, time, age, measure, the *rasa* resulting from digestion (*pāka*), potency (*vīrya*) and taste (*rasa*). Thus, a dry country is called *para* and a marshy one *apara*; the rains (*visarga*) of early and late autumn (*śarat* and *hemanta*) are called *para*, whereas the season of drought (winter, spring and summer) is called *apara*; with reference to *pāka*, *vīrya* and *rasa*, *para* and *apara* mean “suitability” and “unsuitability”—that which is suitable to one is *para* and that which is unsuitable to him is *apara*. *Yukti* means proper selection of medicines with reference to certain diseases (*doṣādyapekṣayā bheṣajasya samīcīna-kalpanā*); *saṃkhyā* means “number”; *saṃyoga*, the mixing up or compounding of two or more substances; *vibhāga*, separation; *prthaktva*, difference. The mountains Himālaya and Meru are *prthak*, because they are situated in different places and cannot unite; again, even though a pig and a buffalo may meet together, they always remain different from each other; and again, in the same class, say in a collection of peas, each pea is different in identity from the other; in the last case difference in number constitutes a difference in identity; thus, wherever there is a numerical difference (*anekatā*), there is difference in identity. *Prthaktva* thus stands for three kinds of difference, spatial difference, difference of characters and difference of identity due to numerical distinction. *Parimāṇa* means measurement by weight, *saṃskāra* means the production of new qualities and *abhyāsa* means habit due to constant practice (*satata-kriyā*). It is evident from the above that, though the terms used are the same as those used by Kaṇāda in the *Vaiśeṣika-sūtra*, yet they are mostly used in different senses in accordance, probably, with medical tradition. But this list does not end with *prayatna*; it seems therefore that *parādi* and *prayatnānta* stand for two different lists and should not be combined together. We have above the *parādi* list. The *prayatnānta* is a different list of *guṇas*. It includes, as Cakrapāṇi says, *icchā* (desire), *dveṣa* (hatred), *sukha*

¹ *Parāparatve yuktis ca saṃkhyā saṃyoga eva ca, vibhāgaś ca prthaktvaṃ ca parimaṇam athāpi ca, saṃskārābhyāsa ity ete guṇāḥ jñeyāḥ parādayaḥ. Caraka-saṃhitā*, I. 26. 27-29.

(pleasure), *duḥkha* (pain) and *prayatna* (effort). *Prayatna* means that particular quality by the rise of which in the soul the *manas* is moved to activity.

Karma (movement) is described as *prayatnādi-ceṣṭitam*, i.e. a movement of the nature of conscious effort; the word *ādi* in *prayatnādi* is explained by Cakrapāṇi as meaning "of the nature of¹."

Samavāya means the relation of inseparable inherence, as in the case of qualities and substances. Cakrapāṇi, in explaining the nature of *samavāya*, says that it is eternal, so that, even when in a particular case it may disappear, it continues to exist in other cases. It is never destroyed or created anew, but only its appearance is or is not manifested in particular cases². In the case of *sāmānya* and *viśeṣa*, again, Caraka seems to add a new sense to the words. In the Vaiśeṣika systems the word *sāmānya* means a class concept; but here it means the concrete things which have similar constituents or characteristics; and *viśeṣa*, which means in Vaiśeṣika ultimate specific properties differentiating one atom from another, means in Caraka concrete things which have dissimilar and opposite constituents or characteristics. *Sāmānya* and *viśeṣa* thus have a significance quite different from what they have in the *Vaiśeṣika-sūtras*. The principle of *sāmānya* and *viśeṣa* is the main support of Āyur-veda; for it is the principle which underlies the application of medicines and the course of diets. Substances having similar constituents or characteristics will increase each other, and those having dissimilar constituents or characteristics will decrease each other. Thus a substance having the characteristics of *vāta* will increase *vāta* and decrease *śleṣman*, which is dissimilar to it, and so on. *Sāmānya* is thus defined as *tulyārthatā*, i.e. performing similar purposes. Instead of having only a conceptual value, *sāmānya* and *viśeṣa* are here seen to discharge a pragmatic work of supreme value for Āyur-veda. As regards the theory of substances (*dravya*) also, though Caraka borrowed the enumeration of categories, Cakrapāṇi says that the simpler *bhūtas* formed parts of the complex ones (*bhūtāntarānupraveśa*), and in support of this idea he quotes a *sūtra* from the *Nyāya-sūtra*, which, however, there occurs as an opponent's view, since the theory of *bhūtānupraveśa* was not believed in by the Nyāya-

¹ *ādi-śabdāḥ prakāravāci*. Cakrapāṇi's commentary on *Caraka-saṃhitā*, I. 1. 48.

² *Ibid.* I. 1. 49.

Vaiśeṣika school; with that school none of the elements entered into any other, and their qualities were fixed in themselves. However, in spite of these modifications, the relation of Nyāya-Vaiśeṣika with Caraka seems to be close. But the detailed description of the school of Sāṃkhya, in IV. 1, as has already been mentioned and explained in the first volume of the present work, in the chapter on Sāṃkhya, does not seem to have much bearing on the needs of Āyur-veda; and so the whole chapter does not appear to fit in with the rest of the work, and it is not referred to in other parts of the book. It is not improbable that this chapter was somehow added to the book from some other treatise.

Suśruta does not, like Caraka, enumerate the categories of the Vaiśeṣika, and his account of Sāṃkhya is very faithful to the traditional account given in Īśvarakṛṣṇa's *Kārikā* and in the *Sāṃkhya-sūtra*. Having described the Sāṃkhya theory, Suśruta says that according to medical science the causes of things are sixfold, viz. (1) nature of things (*svabhāva*), (2) God (*Īśvara*), (3) time (*kāla*), (4) accidental happenings (*yadycchā*), (5) destiny (*niyati*) and (6) evolution (*pariṇāma*)¹. As Ḍalhaṇa points out, Suśruta has in several places referred to the operation of all these causes. Thus the formation of the limbs of the body in the foetus-state is said to be due to nature (*svabhāva*); God as fire is said to operate as the digestive fire in the stomach and to help digestion; time as seasons is said to be the cause of the increase and decrease of *doṣas*; destiny means virtue and vice, and diseases and recovery from them are sometimes attributed to these. Jejjāta, in commenting on Suśruta (as reported by Ḍalhaṇa), says that all the above six causes, with the exception of God, are but different names of *prakṛti*. Gayī, however, thinks that the above six causes represent the instrumental cause, though *prakṛti* may still be considered as being the material cause (*upādāna-kāraṇa*).

As Ḍalhaṇa and Gayī think, there is no reason to suppose that Suśruta described the Sāṃkhya doctrine; for, immediately after describing the sixfold causes, he speaks of the elements as being constituted of the three *guṇas*, *sattva*, *rajas* and *tamas*. Even the senses are regarded as being material. Souls are according to Āyur-veda eternal, though they are limited to their bodies and are not all-pervasive. They are manifested when the semen and the blood combine, and it is this bodily self, suffering transmigration owing

¹ *Suśruta-saṃhitā*, III. 1. 11.

to virtue and vice (called *karma-puruṣa*), with which medical science is concerned. When the self is in association with *manas*, it has the following qualities: pleasure, pain, desire, hatred, effort, *prāṇa* and *apāna* (the upward current of breath and the downward force acting in the direction of the rectum), the opening and closing of the eyelids, the action of the intellect as decision or *buddhi* (*niścaya*), imagination (*saṃkalpa*), thought (*vicāraṇā*), memory (*smṛti*), scientific knowledge (*viññāna*), energy (*adhyavasāya*) and sense-cognitions (*viśayopalabdhi*). The qualities of *manas* are divided into three classes, viz. *sāttvika*, *rājasa* and *tāmasa*; of these the *sāttvika* ones are kind actions, the desire of enjoying gradually, mercy, truthfulness, virtue, faith, self-knowledge, retentive power (*medhā*), intelligence (*buddhi*), self-control (*dhṛti*), and sense of duty for the sake of duty (*anabhiśaṅga*); the *rājasa* qualities are suffering, impatience, pride, untruthfulness, cruelty, boastfulness, conceit (*māna*), joy, passion and anger; the *tāmasa* qualities are dullness, viciousness, want of retentive power, idleness and sleepiness.

Logical Speculations and Terms relating to Academic Dispute.

Things are either existent (*sat*) or non-existent (*asat*), and they can be investigated by the four *pramāṇas*, viz. the testimony of trusty persons (*āptopadeśa*), perception (*pratyakṣa*), inference (*anumāna*) and the coming to a conclusion by a series of syllogisms of probability (*yukti*)¹.

Those whose minds are free from the impurities of *rajas* and *tamas* through the force of their ascetic endeavours, who possess unlimited knowledge extending through the past, present and future, are to be considered as trustworthy (*āpta*). Such persons neither have any deficiency of knowledge nor would they willingly say anything untrue. They must be considered as absolutely trusty (*āpta*), and their testimony may be regarded as true².

The valid and certain knowledge that arises as the result of the relation of self, senses, *manas* and sense-objects is called "perception." This contact of the sense with the object is regarded by Cakrapāṇi as being of five kinds, viz. (1) contact with the *dravya* (substance), called *saṃyoga*; (2) contact with the *guṇas*

¹ *Caraka-saṃhitā*, I. II. 17.

² *Ibid.* I. II. 18, 19.

(qualities) through the thing (*saṃyukta-samavāya*) in which they inhere by *samavāya* (inseparable) relation; (3) contact with the *guṇas* (such as colour, etc.) in the generic character as universals of those qualities, e.g. colouredness (*rūpatva*), which exist in the *guṇas* in the *samavāya* relation; this is called *saṃyukta-samaveta-samavāya* since the eye is in contact with the thing and the colour is in the thing by *samavāya* relation, and in the specific colour there is the universal colour or the generic character of colour by *samavāya* relation; (4) the contact called *samavāya* by which sounds are said to be perceived by the ear: the auditory sense is *ākāśa*, and the sound exists in *ākāśa* by the *samavāya* relation, and thus the auditory sense can perceive sound by a peculiar kind of contact called *samaveta-samavāya*; (5) the generic character of sound as the sound universal (*śabdatva*) is perceived by the kind of contact known as *samaveta-samavāya*. It is only immediately resulting (*tadātve*) cognition of such a contact that is called perception (*pratyakṣa*); for inference, memory, etc. also may come in as a result of such a cognition at later stages through other successive processes (*pāramparya*).. Cakrapāṇi further notes that the four kinds of contact spoken of here are the real causes of the phenomenon of perception; in reality, however, “knowledge that results as the effect of sense-contact” would be a sufficient definition of *pratyakṣa*; so in the perception of pleasure, though none of these contacts are necessary, it is regarded as a valid case of direct perception. Contact with the self is, of course, necessary for all kinds of cognition¹. It is easy to see that the above theory of perception is of the same type as that found in the Nyāya system. The *nir-vikalpa* perception is not taken into consideration; for there is nothing corresponding to the term *avyapadeśya* in the *Nyāya-sūtra*². Inference must be based on perception, by which the concomitance of the *hetu* can first be observed. Inference is of three kinds, viz. from *kārya* (effect) to *kāraṇa* (cause), as the inference of cohabitation from pregnancy; from cause to effect, as the inference of the future production of

¹ Cakrapāṇi on *Caraka-saṃhitā*, I. 11. 20.

² The definition of *pratyakṣa* given in *Caraka-saṃhitā*, I. 11. 20, is:

*ātmendriya-mano-rthānām sannikarṣāt pravartate
vyaktā tadātve yā buddhiḥ pratyakṣam sā nirucyate.*

The definition of *pratyakṣa* in the *Nyāya-sūtra* is as follows:

*indriyārtha-sannikarṣotpannam jñānam avyapadeśyam
avyabhicāri vyavasāyātmakam pratyakṣam.*

For a discussion thereon see vol. I, pp. 333-343.

fruit from a seed with the other attendant causes, sprinkling with water and the like; and inference by associations other than that of cause and effect, as the inference of fire from smoke¹.

Yukti is not counted as a separate *pramāṇa* by any other system of Indian thought. When our intelligence judges a fact by a complex weighing in mind of a number of reasons, causes or considerations, through which one practically attains all that is desirable in life, as virtue, wealth or fruition of desires, we have what may be called *yukti*². As Cakrapāṇi points out, this is not in reality of the nature of a separate *pramāṇa*; but, since it helps *pramāṇas*, it is counted as a *pramāṇa*. As an example of *yukti*, Caraka mentions the forecasting of a good or bad harvest from the condition of the ground, the estimated amount of rains, climatic conditions and the like. Cakrapāṇi rightly says that a case like this, where a conclusion is reached as the combined application of a number of reasonings, is properly called *ūha* and is current among the people by this name. It is here counted as a separate *pramāṇa*. It is in reality an inference of an effect from causes and, as such, cannot be used at the present time, and hence it cannot be called *tri-kāla*, valid in all the three times, past, present and future, as Caraka says.

The Buddhist, writes Śāntarakṣita in discussing Caraka's doctrine of *yukti* as a separate *pramāṇa*, holds that *yukti* consists in the observation that, since, when this happens, that happens, and, since, when this does not happen, that does not happen, this is the cause of that. It may be argued that this is not a case of inference, since there is no proposition equivalent to the proposition with a *dr̥ṣṭānta*, or example, in Nyāya inference (e.g. whatever is smoky is fiery, as the kitchen). It is held, as Kamalaśīla interprets, that the cause-effect idea is derived from the idea of "this happening, that happens," and there is no other idea in the notion of causality; if in any case any particular example is given, then another example might be asked for, and after that another, and we should have *regressus*

1

2

*buddhiḥ paśyati yā bhāvān bahu-kāraṇa-yogajān
yuktis tri-kāla sā jñeyā tri-vargaḥ sādhyate yayā. Ibid.* I. 11. 25.

*ad infinitum*¹. These arguments in support of *yukti* as the concluding of the cause-effect relation from "this happening, that happens" relation are refuted by Śāntarakṣita and Kamalaśīla, who point out that there are no separate cognitive processes which link up the relation of "this happening, that happens" with the cause-effect relation, because both these convey the same concept. The cause-effect relation is the same as "this happening, that happens." It may be argued that, whenever anything invariably and unconditionally happens on the happening of any other thing, then the two are considered to be related as cause and effect, just as a jug, etc. are invariably seen to appear after the proper operations of the potter and his wheels. If this is *yukti*, then it is not a different source of knowledge.

Cakrapāṇi, however, points out that these criticisms are all beside the point, since *yukti*, according to Caraka, is not *kārya-kāraṇatā* from *tad-bhāva-bhāvitā*; it is the arriving at a conclusion as a result of a series of reasonings. But it is important to note that in III. 4. 6 and 7 Caraka speaks of three kinds of *pramāṇas*, viz. *pratyakṣa*, *anumāna* and *śabda*, and describes *anumāna* as being *tarka* depending on *yukti*. *Tarka* is explained by Cakrapāṇi as being the knowledge of things which cannot be perceived (*tarko 'pratyakṣa-jñānam*), and *yukti* is here paraphrased by Cakrapāṇi as the relation of *a-vinā-bhāva*. It is said in this connection that a disease is to be determined by *pratyakṣa*, the medical texts (*āptopadeśa*) and inference. But in III. 8. 6. 33 and 34 Caraka counts *aitihya* as *āptopadeśa*, though ordinarily *aitihya* is considered in

¹ *drṣtānte 'py ata eva tad-bhāva-bhāvitvāt kāryatā-pratipattiḥ, tatrāpi drṣtānto 'nyo 'nveṣaṇīyah, tatrāpy apara ity anavasthā*. Kamalaśīla as quoted by Cakrapāṇi on *Caraka-saṃhitā*, I. 11. 25.

Śāntarakṣita misrepresents Caraka's view of *yukti* in a very strange manner. He says that, when from the fact that in all cases when *A* is present *B* is present and in all cases when *A* is absent *B* is also absent one thinks *A* to be the cause of *B*, this is regarded by Caraka as the new *pramāṇa* of *yukti*. Śāntarakṣita's exact words are:

*asmīn sati bhavaty eva na bhavaty asaṁtīti ca
tasmād ato bhavaty eva yuktir eṣa 'bhidhīyate
pramāṇāntaram evaṃ ity āha carako munīḥ
nānumānam iyaṃ yasmād drṣtānto 'tra na labhyate.*

Tattva-saṃgraha, p. 482.

This, however, is entirely different from what Caraka says, as is pointed out by Cakrapāṇi in his commentary on *Caraka-saṃhitā*. Caraka's idea of *yukti* is the logic of probability, i.e. when from a number of events, circumstances, or observations one comes to regard a particular judgment as probable, it is called *yukti*, and, as it is different from inference or any of the other accepted *pramāṇas*, it is to be counted as a separate *pramāṇa*. So far as I know, this is the only example of the introduction of the logic of probability in Indian thought.

Indian philosophy as being "tradition" or long-standing popular belief, different from *āptopadeśa*; *upamāna*, under the name of *aupamya*, is also referred to.

It may not be out of place here to note that the obstacles to perception referred to in the *Sāṃkhya-kārikā* are all mentioned here. Thus it is said that even those things which have colour (*rūpa*) cannot be perceived if they are covered by a veil, or if the senses are weak, or if the mind is unsettled, or if they are mixed up in any homogeneous medium indistinguishable from them, or when in the case of smaller lights they are overcome by stronger luminaries, or when they are too fine or too subtle¹.

Logic was of use with Indian medical men not only in diagnosing a disease, but also in the debates which they had with one another. The rival practitioners often had to show their skill and learning in debates on occasions of the treatment of illness of rich patients. The art of carrying on a dispute successfully was considered an important acquisition among medical practitioners. Thus we have a whole set of technical terms relating to disputes, such as are never found in any other literature, excepting the *Nyāya-sūtra*. In the *Caraka-saṃhitā* almost the whole of the chapter called the "*Roga-bhīṣag-jītiya-vimāna*" (III. 8) is devoted to this purpose. It is well to remember that different kinds of disputes and fallacies are mentioned in the *Nyāya-sūtra*, and it will be useful to refer to these when dealing with similar topics from either the *Caraka-saṃhitā* or the *Suśruta-saṃhitā*.

The four terms referred to in connection with disputes in the *Nyāya-sūtra* are *tarka*, *vāda*, *jalpa* and *vitandā*. *Tarka* is said to be the same as *ūha*, and this is explained as a process of reasoning carried on in one's mind before one can come to any right conclusion. It is a name for the subjective weighing of different alternatives on the occasion of a doubt before a conclusive affirmation or denial (*nirṇaya*) is made. Disputes are said to be of three kinds, *vāda*, *jalpa* and *vitandā*. *Vāda* means a discussion for the ascertainment of truth, *jalpa* a dispute in which the main object is the overthrow of the opponent rightly or wrongly, and *vitandā* a dispute in which attempts are made to discover the faults of the opponent's thesis without any attempt to offer any alternative thesis. *Vāda* is thus essentially different in its purpose from *jalpa* and *vitandā*; for *vāda* is an academical discussion with pupils,

¹ *Caraka-saṃhitā*, I. 11. 8.

teachers, fellow-students and persons seeking truth solely for the purpose of arriving at right conclusions, and not for fame or gain¹. *Jaḷpa*, on the other hand, is that dispute which a man carries on while knowing himself to be in the wrong or unable to defend himself properly from his opponents except by trickery and other unfair methods of argument.

Caraka, in III. 8, says that a medical man should hold discussions (*sambhāṣā*) with other medical men. Discussion increases zeal for knowledge (*saṃharṣa*), clarifies knowledge, increases the power of speech and of achieving fame, removes doubts in the learning acquired before and strengthens convictions. In the course of these discussions many new things may be learnt, and often out of zeal an opponent will disclose the most cherished secret teachings of his teachers. These discussions are of two classes, friendly (*sandhāya sambhāṣā*) and hostile (*vighya sambhāṣā*). A friendly discussion is held among wise and learned persons who frankly and sincerely discuss questions and give their views without any fear of being defeated or of the fallacies of their arguments being exposed. For in such discussions, even though there may be the fallacies described, no one would try to take advantage of the other, no one is jubilant over the other's defeat and no attempt is made to misinterpret or misstate the other's views.

Caraka then proceeds to give instructions as to how one should behave in an assembly where one has to meet with hostile disputes. Before engaging oneself in a hostile discussion with an opponent a man ought carefully to consider whether his opponent is inferior (*para*) to him and also the nature of the assembly (*pariṣat*) in which the discussion is undertaken. A *pariṣat* may be learned (*jñānavatī*) or ignorant (*mūḍhā*), and these again may be friendly (*suhṛt*), neutral (*udāsīnā*), or hostile (*pratiniṣṭā*). When an opponent is to be judged, he is to be judged from two points of view, intellectual and moral. Thus, on the one hand, it has to be considered whether he is learned and wise, whether he remembers the texts and can reproduce them quickly and has powers of speech, and on the other hand, whether he is of an irritable temperament, or of a fearful nature, etc. A man must carefully consider whether his opponent is superior to him in these qualifications or not.

¹ *vādam ca nirmaya-phalārthūbhīr eva śiṣya-sabrahmacāri-gurubhiḥ saha vīta-rāgaib, na khyāti-lābha-rabhāsa-pratīvardhamāna-spardhāmubandha-vidhurātma-bhīr ārabheta. Nyāya-mañjarī, p. 594.*

No disputes should be undertaken in a hostile assembly; for even the best arguments might be misinterpreted. In an ignorant, friendly or neutral assembly it is possible to win a debate by proceeding tactfully against an opponent who is looked down upon by famous or otherwise great persons. In beginning conversations with such persons attempts may be made to puzzle them by reciting long *sūtras* and to demoralize or stun them, as it were, by jokes, banter and gestures and by using satirical language.

When a man has to enter into a dispute with his equal, he should find out the special point in which his opponent is weak and attack him there and should try to corner him in such positions as are generally unacceptable to people in general. Caraka then proceeds to explain a number of technical terms in connection with such disputes. Like the Nyāya, Caraka divides such hostile disputes (*vāda*) into two classes, *jalpa* and *vitandā*. *Pratijñā* is the enunciation of a thesis which is sought to be proved, e.g. "The *puruṣa* is eternal." *Sthāpanā* is the establishing of a thesis by syllogistic reasonings involving propositions with *hetu*, *drṣtānta*, *upanaya* and *nigamana*. Thus the above thesis (*pratijñā*), "The *puruṣa* is eternal," is to be supported by a reason (*hetu*), "because it is uncreated"; by an example (*drṣtānta*), "The sky is uncreated and it is eternal"; by a proposition showing the similarity between the subject of the example and the subject of the thesis (*upanaya*), viz. "Just as the *ākāśa* is uncreated, so the *puruṣa* is also uncreated"; and finally by establishing the thesis (*nigamana*), "Therefore the *puruṣa* is eternal¹."

Pratiṣṭhāpanā is the attempt to establish a proposition contrary to the proposition or the thesis put forth by the opponent. Thus, when the thesis of the *sthāpanā* is "*Puruṣa* is eternal," the *prati-sthāpanā* proposition would be "*Puruṣa* is non-eternal," because "it is perceivable by the senses," and "The jug which is perceptible to the senses is non-eternal," and "*Puruṣa* is like the jug," so "*Puruṣa* is non-eternal."

Caraka defines *hetu* as "the cause of knowledge" (*hetur nāma upalabdhi-kāraṇam*), and the cause of knowledge is the *pramāṇas* of *pratyakṣa*, *anumāna*, *aitihya* and *aupamya*. The definition of *hetu* in the *Nyāya-sūtra* refers only to the perceived *hetu* in the case of inference, through a similarity or dissimilarity to which a

¹ It is easy to see that Caraka admitted in a syllogism all the five propositions that are admitted in the *Nyāya-sūtra*.

relation is established by inference¹. Here Caraka points out that a *hetu* may be either perceived, inferred or found by analogy or from the scriptures, but, in whichever way it may be found, when it leads to knowledge, it is called a *hetu*. Thus, when I say, "The hill is fiery, because it smokes" (*parvato vahnimān dhūmavattvāt*), the smoke is the *hetu*, and it is directly perceived by the eye. But when I say, "He is ill, because he is of low digestion," the *hetu* is not directly perceived, but is only inferred; for the fact of one's being in low digestion cannot be directly perceived. Again, when it is said, "*Puruṣa* is eternal, because it is uncreated" (*nityaḥ puruṣaḥ a-kṛtakatvāt*), the uncreatedness (*a-kṛtakatva*) is the *hetu*, but it is neither perceived, nor inferred, but accepted from the testimony of the scriptures. Again, in the proposition, "His face is most beautiful, because it has been compared with the moon" (*asya mukhaṃ kāntatamaṃ candropamatvāt*), the fact of being compared with the moon is the *hetu* and it is known by *upamā*². Thus Caraka's definition of *hetu* does not really come into conflict with that of Gautama: he only says that a *hetu* may be discovered by any of the *pramāṇas*, and, by whichever *pramāṇa* it may be discovered, it may be called a *hetu*, if it is invariably and unconditionally (*a-vinā-bhāva*) associated with the major term (*sādhya*)³.

Caraka then proceeds to describe *uttara*, which is in purport the same as the *jāti* of the *Nyāya-sūtras*. When an opponent wants to prove a thesis on the basis of a similarity of the subject of the thesis with the *hetu*, attempts have to be made to upset the thesis by showing its dissimilarity to the *hetu*. Thus one may say that the feeling of cold in a man must be due to his being affected by snow, dews, or chilly air, because effects arise from causes similar to them; in reply it may be said that effects are dissimilar from their causes, since a burning fever may often be an effect of cold⁴.

pratyakṣādi-pramāṇāṇy eva yathokta-hetu-mūlatvena hetu-śabdenāha.*

Cakrapāṇi on Caraka, III. 8. 6. 25.

⁴ *sādharmya-vaidharmyābhyāṃ pratyavasthānaṃ jātiḥ. Nyāya-sūtra, I. 2. 18.* There are twenty-four kinds of this *jāti*, e.g. (1-2) *sādharmya-vaidharmya-sama*, (3-8) *utkarṣāpakarṣa-varṇyāvārṇya-vikalpa-sādhyā-sama*, (9-10) *prāpti-aprāpti-sama*, (11-12) *prasaṅga-pratidrṣṭānta-sama*, (13) *anutpatti-sama*, (14) *saṃśaya-sama*, (15) *prakaraṇa-sama*, (16) *ahetu-sama*, (17) *arthāpatti-sama*, (18) *aviśeṣa-sama*, (19) *upapatti-sama*, (20) *upalabdhi-sama*, (21) *anupalabdhi-sama*, (22) *nitya-sama*, (23) *amitya-sama*, (24) *kārya-sama*.

Sādharmya-vaidharmya-sama is that in which, when an argument is given on

The long list of *jātis* given in the *Nyāya-sūtra* and explained in the commentaries and in the *Nyāya-mañjari* is not referred to

the basis of the similarity or dissimilarity to a certain *hetu*, it is pointed out that quite the opposite conclusions may be drawn from other points of similarity or dissimilarity with other *hetus*. Thus, when it is said, "*Śabda* is non-eternal, because it is produced by an effort, and whatever is produced by an effort is non-eternal, as a jug," it may be answered, "*Śabda* is eternal, because it is partless: a partless entity like the *ākāśa* is found to be eternal; there is no special reason why on account of its similarity to a jug sound should be non-eternal, and not eternal owing to its similarity to *ākāśa*." An escape from the dilemma is possible by enquiring as to what may constitute an unconditional and invariable (*avyabhicāri*) similarity.

Utkarṣāpakarṣa-varṇyāvārṇya-vikalpa-sādhyā-sama is that in which similarity is pressed too far. Thus it is urged that, because sound is non-eternal like a jug, it must also be visible like a jug, and, if it is not so, it cannot be non-eternal like a jug. Moreover, it may be said that the reason why sound is expected to be non-eternal like a jug is that the former is produced by an effort (*prayatnāntariyaka*). But things which are produced by efforts differ in many of their qualities; thus a cloth is soft, and a jug is hard, though both of them are produced by effort; so it may be argued that, though *śabda* is as much a product of effort as a jug, it may not agree with the jug in being non-eternal. Moreover, instead of arguing that sound is like a jug, it may as well be argued that a jug is like sound; so that the status of the jug is as uncertain as sound itself (*yadī yathā ghaṭas tathā śabdaḥ prāptam tarhi yathā śabdaḥ tathā ghaṭa iti śabdaś cānityatayā sādhyā iti ghaṭo 'pi sādhyā eva syād anyathā hi na tena tulyo bhavet*—*Nyāya-mañjari*, p. 624). In answer to these kinds of fault-finding the proper argument is that no similarity should be extended beyond its limits, and an example (*dṛṣṭānta*) should not be considered to have the same status as a probandum (*sādhyā*); for an example is that which is already agreed upon among the disputants and the common people (*laukika-parīkṣakāṇām yasmīn arthe buddhi sāmyam sa dṛṣṭāntaḥ*).

Prāpty-aprāpti-sama is that in which it is urged that, if the *hetu* and the probandum are together, they cannot be distinguished from each other; if they are separate, *hetu* cannot lead us to the *sādhyā*. The answer to this is that a *hetu* can produce an effect either by direct contact (e.g. the rope and the stick in contact with clay produce a jug) or from a distance (e.g. the *śyena* sacrifice can destroy an enemy from a distance).

Prasaṅga-sama is that in which a reason for the *hetu* is asked. Thus, if the character of immediately following an effort (*prayatnāntariyakatva*) is the cause of non-eternality, what can establish the *prayatnāntariyakatva* of a jug, etc.? The answer to this is that a reason is necessary only for that which is not directly experienced as being evident in itself. That a jug immediately follows the efforts that produce it is directly experienced and does not require any argument or reason to establish it, as no light is required to see a burning lamp.

Dṛṣṭānta-sama is that in which from the same *hetu* two different conclusions are seen to result. Thus it may be said that both the jug and *ākāśa* have the character of immediately following an effort (e.g. as by digging new space is produced in underground wells which before the effort of digging were solid earth without space—*kūpa-khanana-prayatnānantaram tad-upalambhāt*—and this character is therefore to be regarded as *prayatnāntariyaka*); yet, as a jug is non-eternal and *ākāśa* eternal, so *śabda*, though it immediately follows an effort, is eternal. The answer is that, if such an opposite conclusion is drawn, a separate *hetu* has to be given, which is not done in the present case.

If sound is non-eternal, it must possess the character of coming into existence immediately after an effort that produces it; but how can it possess that character before being produced or coming into existence? If it cannot at that stage

by Caraka; nor does the technical name of *jāti* find any place in Caraka's description of it. If these elaborate descriptions of *jāti*

possess that character, it must be eternal, since the cause of its non-eternality is absent. This objection is called *anutpatti-sama*. The reply is that, unless the sound is in existence, its eternality or non-eternality cannot be discussed. If it is non-existent, of what is the eternality to be affirmed by the opponent?

Again, it may be argued that *śabda* has *prayatnāntariyakatva*, and therefore it may be expected to be non-eternal; it is perceived by the senses, and therefore it may be expected to be eternal, like so many other sensible objects. This doubt is called *saṁśaya-sama*. A doubt remains a doubt only so long as the special features which remove a doubt are not discovered. Though a man may have many qualities in common with a post, the doubt cannot remain when the special features of a man (e.g. his having a head and hands and feet) are known.

Prakarana-sama is that in which an entity is equally related to *hetu*s, so that no one conclusion can properly be drawn. Thus, sound has both *prayatnāntariyakatva* and *niravayavatva* (partlessness). Though, according to the first, it may be said to be non-eternal, according to the second it may be said to be eternal; so it is eternal. The answer is that the second *hetu* cannot be pressed as leading to a conclusion, because the first also is admitted to exist.

Ahetu-sama is the objection that there can be no argument from a *hetu*; for, if there is no *sādhya* (probandum), what is it that the *hetu* produces? and again, if there is no *hetu* before the *sādhya*, how can the *sādhya* be produced? So, as *hetu* is only a concomitant of *sādhya*, no inference is possible from it. The answer is that it is quite possible that from the previously existing *hetu* the non-existing *sādhya* should be produced. *Arthāpatti-sama* is where, for example, owing to the fact that sound is partless, it appears to be similar to *ākāśa* and hence by implication to be eternal. This is against the previous thesis that it is non-eternal owing to its being *prayatnāntariyaka*. *Aviśeṣa-sama* is the objection, that if on account of having the same characteristic of *prayatnāntariyakatva*, *śabda* and *ghaṭa* are said to be equally non-eternal, then, owing to all things having the same quality of existence (*sattā*), they are all the same. The answer to this is that equality in one respect does not mean equality in all respects.

Upapatti-sama is where a jug may be expected to be non-eternal owing to its *prayatnāntariyakatva* and eternal owing to its being partless like *ākāśa*. *Upalabdhi-sama* is where it is urged that, when by a terrible storm a tree is broken, there is sound which is not the result of any human effort (*prayatnāntariyakatva*), and yet it is non-eternal; again, lightning is not the result of human effort, still it is non-eternal. The answer is that the concomitance is between *prayatnāntariyakatva* and non-eternality and not between non-eternality and *prayatnāntariyakatva*; so that all that is produced by human effort is non-eternal, but not vice-versa. It should also be noted that by *prayatnāntariyakatva* emphasis is laid on the fact that all things that possess this character are produced. *Anitya-sama* is an objection where it is urged, for example, that, if on account of the similarity of sound to a jug, the former is non-eternal, then, since in some way or other all things in the world must have some similarity to a jug, all things must be non-eternal. The *anitya-sama* objection runs as follows: Is non-eternality in sound non-eternal or eternal? If the latter, then in order that an eternal quality may abide in it, sound itself must be eternal. If the former, then on some occasions at least sound must be eternal.

The *kārya-sama* objection suggests that *prayatnāntariyakatva* leads to production in two ways, either by bringing into existence that which was non-existent, or by removing the veil from something which was in a veiled condition; and it remains undecided what sort of *prayatnāntariyakatva* applies to *śabda*.

The above interpretations are all based on Jayanta's *Nyāya-mañjari*.

were known to Caraka, it is unlikely that he should have passed them over without referring to them.

An example (*dr̥ṣṭānta*) is that on which the common folk and the learned are of the same opinion, since examples involve facts which are perceived by all and known to all, e.g. the fire is hot, water is liquid, the earth is firm. A *siddhānta*, or conclusion, is that to which one could arrive after a searching enquiry and demonstration by proper reasons. This *siddhānta* is of four kinds, viz. (1) *sarva-tantra-siddhānta*, or conclusions accepted by all, e.g. "There are causes of diseases; there are diseases; curable ones can be cured"; (2) *prati-tantra-siddhānta*, or conclusions which are not accepted by all, but are limited to particular books or persons: e.g. some say that there are eight *rasas*, others say that there are six; some say that there are five senses, others, that there are six; (3) *adhikaraṇa-siddhānta*, or conclusions which being accepted or proved, other conclusions also become proved or accepted: e.g. if it is proved that emancipated souls do not reap the fruits of *karma*, as they are without any desire, then the doctrine of the suffering of the fruits of *karma*, emancipation, the existence of soul and existence after death will have to be considered as refuted; (4) *abhyupagama-siddhānta*, or conclusions which are accepted only for the sake of an argument, and which are neither examined critically nor considered as proved¹.

Śabda is a collection of letters which may be of four kinds, viz. (1) *dr̥ṣṭārtha*—of experienced purport (e.g. "The *doṣas* lose their equilibrium through three causes"); (2) *adr̥ṣṭārtha*—of unperceivable purport (e.g. "There is after-life; there is emancipation"); (3) *satya*, or truth, that which tallies with facts (e.g. "There is Āyur-veda; there are means for curing curable diseases"); (4) *anṛta*, the opposite of truth, untruth². *Samśaya*, or doubt, occurs with reference to things about which no certainty is attained. Thus those who are unhealthy and inactive die soon, whereas those who are healthy and active live a long life. So there is a doubt whether in this world death happens timely or untimely. *Prayojana*, or the object of action, is that for which anything is begun. Thus one may think that, if there is untimely death, I shall form healthy habits and leave off unhealthy habits, so that untimely death may

¹ All these *siddhāntas* occur under the same names in the *Nyāya-sūtra*, 1. 1. 28, 29, 30, 31.

² The first two divisions, *dr̥ṣṭārtha* and *adr̥ṣṭārtha*, occur in the *Nyāya-sūtra*, 1. 1. 8, *sa dvividho dr̥ṣṭārthatvāt*.

not touch me¹. *Sa-vyabhicāra* means variability, e.g. "This may or may not be a medicine for this disease²." *Jijñāsā* means experimenting; a medicine is to be advised after proper experiments (*jijñāsā*). *Vyavasāya* means decision (*niscaya*), e.g. "This is a disease due to predominance of *vāyu*; this is the medicine for this disease." *Artha-prāpti* is the same as the well-known *arthāpatti*, or implication, when on making a statement, some other thing which was not said becomes also stated; it is a case of implication, e.g. the statement, "This disease cannot be cured by allowing the patient to take his normal food and drink," implies that it can be cured by fasting, or, if it is said, "He should not eat during the day," this means that "He should eat during the night³." *Sambhava* is the source from which anything springs, e.g. the six *dhātus* may be considered as the *sambhava* of the foetus; wrong diet, of disease; and right course of treatment, of health.

Anuyojya means a faulty answer which omits such details as should have been given in the answer, e.g. "This disease can be cured by purificatory action"; such an answer is faulty, as it does not state whether the purification should be made by vomiting or purging. *Ananuyojya* is what is different from *anuyojya*. *Anuyoga* is a question put by a learned man in a discussion as an enquiry about the reason for a thesis put forward by a learned colleague: e.g. a learned man says, "*Puruṣa* is eternal," and another learned man asks, "What is the reason?" Such a question is called *anuyoga*. A counter-question, such as "What is the reason for your asking such a question?" is called *pratya-anuyoga*.

Vākya-doṣa, or faulty statement, is of five kinds, viz. *nyūna*, *adhika*, *anarthaka*, *apārthaka* and *viruddha*. *Nyūna*, or the fault of omission, is that in which any of the five propositions necessary for a syllogism is omitted. It may also be applied to those cases in which, when a statement has to be supported by a number of

¹ *Prayojana*, which means pleasure and pain, is referred to in the *Nyāya-sūtra*, 1. 1. 1, though it is nowhere critically examined. It is explained by Vātsyāyana as that which goads men to action (*yena prayuktaḥ pravartate*). Uddyotakara explains it as the realization of pleasure and the fear of pain (*sukha-prāpti-duḥkha-hāni*).

² *anāikāntikaḥ sa-vyabhicāraḥ*. *Nyāya-sūtra*, 1. 2. 5. E.g. "sound is eternal" because it is untouchable; but untouchability does not lead to eternality, since the touchable atoms are eternal, whereas untouchable thoughts are short-lived.

³ Cakrapāṇi says that Caraka does not think that *artha-prāpti* is a separate *pramāṇa*; according to him it is a case of inference, and hence is not included in the list of *pramāṇas*.

reasons, only one is offered and others are omitted, materially affecting the strength of the support of the original statement. Thus several reasons are given in support of the eternality of *puruṣa*, viz. beginninglessness, not being the product of any effort, unchangeableness, etc. Proposing to give all these reasons, and giving only one, is an instance of *nyūna*. *Adhika* is where, when Āyurveda is being discussed, the opponent makes irrelevant references to learned works on politics or the art of government. It may also mean cases where words or statements are needlessly repeated. Such a repetition is of two kinds, verbal repetition and sense repetition. Verbal repetition is the repetition of the same word, while the other is the repetition of the sense only, though different words may be used. *Anarthaka* and *apārthaka* mean the use of meaningless and unconnected words or expressions. *Viruddha*, or contrary statement, means the making of a statement contrary to the example (*drṣṭānta-viruddha*) or the accepted conclusion (*siddhānta*), e.g. cold water is hot, for so is fever; or when a medical man (*vaidya*) says that medicine does not cure diseases.

Samaya-viruddha is the making of any statement against the accepted conclusions of any particular *śāstra*. Thus, for example, if a Mīmāṃsaka says that animals should not be sacrificed, it will be against his accepted doctrine that animals should be sacrificed. Or, if in any system of philosophy treating of emancipation (*mokṣa-śāstra*) it be said that injury to living beings is good, then this is against the accepted tenet of that *śāstra*. *Vākya-praśaṃsā* is that kind of statement in which the faults mentioned above in *vākya-doṣa* do not occur.

Chala means a rejoinder in which the statement of the opponent is wilfully misinterpreted. It is of two kinds, *vāk-chala* and *sāmānyachala*. The word *nava* means "nine" as well as "new," and if, when one says about one's opponent, "This physician is *nava-tantra*" (has newly learnt his texts), and the opponent replies, "I have not nine text-books, I have one text," the other person objects, "I do not say you have nine texts, I say that you are *navābhyasta-tantra*" (have newly learnt the texts), *navābhyasta-tantra* might also mean "read nine times"; and then the opponent might well say, "I have several times read the texts, and not nine times, as you say." This is an example of *vāk-chala*.

Again, when a physician says "Medicine cures diseases," the opponent may take the most general characteristics of the terms

and say that the above statement comes to this, that an existent entity cures another existent entity; and, if this is so, then, since bronchitis exists (*san kāsah*) and consumption exists (*san kṣayah*), bronchitis, being an existent entity, must cure another existent entity, consumption. This is called *sāmānya-chala*¹.

Fallacies (*a-hetu*) are of three kinds, *prakaraṇa-sama*, *saṁśaya-sama* and *varṇya-sama*². *Prakaraṇa-sama* is where that which

¹ *Chala* is treated in the *Nyāya-sūtra* exactly on the same lines as here. Thus the definition of *chala* there (*Nyāya-sūtra*, 1. 2. 10) is *vacana-vighāto 'rtha-vikalpopapattiyā chalam* (to attack one's speech by a wilful misinterpretation of it is *chala*). This is divided into three classes, *vāk-chala*, *sāmānya-chala* and *upacāra-chala*; of these *vāk-chala* is exactly the same as in *Caraka-saṁhitā*, and so also the *sāmānya-chala* (because a Brahman is well-read in scriptures, a *vrātya* (outcast Brahman) is also well-read, because he also is a Brahman in some sense). *Upacāra-chala*, which, however, resembles *vāk-chala*, is not mentioned in the *Caraka-saṁhitā*. Its definition in the *Nyāya-sūtra*, 1. 2. 14, is *dharma-vikalpa-nirdeśe 'rtha-sad-bhāva-pratiṣedha upacāra-chalam*: (to make one's statement impossible by taking it in one sense, say the primary, when the secondary one was intended). Thus, if it is said, "This porter is an ass," it may be objected that the porter, being a man, cannot at the same time be an ass. Gautama, however, tentatively raises the objection that *chalas* should be regarded as three in number and not two, taking *upacāra-chala* within *sāmānya-chala*. This means a criticism in view of Caraka's division of *chala* into two classes. For Gautama argues that, if on account of some similarity *upacāra-chala* should be included within *sāmānya-chala*, and *chalas* should be counted as being of two kinds instead of three, then for the very same reason of similarity *chalas* may as well be regarded as being of one kind instead of two. So, in view of the specific differences that exist between the *chalas*, they should be regarded as being of three kinds.

² *Nyāya-sūtra*, 1. 2. 4, describes the fallacies (*hetu-ābhāsa*) as of five kinds, *sa-vyabhicāra*, *viruddha*, *prakaraṇa-sama*, *sādhyā-sama* and *kālātita*.

Sa-vyabhicāra hetu is that which has no invariable concomitance with the probandum, e.g. sound is eternal because it is untouchable, and that which is touchable is non-eternal, like a jug. But untouchability has no invariable concomitance with eternity; for an atom is touchable and at the same time eternal, and thoughts (*buddhi*) are untouchable and at the same time non-eternal.

Viruddha hetu is where the reason (*hetu*) demolishes the very theory on which its security depends, e.g. this changeable world (*vikāro*) disappears (*vyakter apaiti*), because it is non-eternal (*nityatva-pratiṣedhāt*); but, though it disappears (*apeto 'pi*), yet it exists (*asti*), because it is not destructible (*vināśa-pratiṣedhāt*). Now a thing which is non-eternal cannot but be destructible. Destructibility and eternity cannot abide together.

Prakaraṇa-sama is where two opposite *hetus* exist in a thing, so that nothing can be affirmed by either of them. Thus it may be argued with as much force that "sound is eternal, because it has in it the qualities of eternal things," as that "sound is non-eternal, because it has in it the qualities of non-eternal things"; so no conclusion can be drawn from either of these *hetus*.

Sādhyā-sama is where the *hetu* itself remains to be proved. Thus in the argument, "shadow is a substance because it moves," the movability of shadows is a doubtful point and is itself in need of proof. Does a shadow move like a man, or is it that because the covering entity moves that at different places the light is veiled and this gives rise to the formation of shadows at different places?

Kālātita is where the *hetus* in the case of the accepted example and the case to be proved vary, because in the latter case the *hetu* is not properly a

is given as the *hetu* remains to be proved. Thus, when it is said that, since the self is different from the body, it is eternal, and because the body is unconscious it is non-eternal, it may be urged (as by the Cārvāka school of philosophers) that both the points, viz. that the self is different from the body and that the body is not endowed with consciousness, which are offered as the *hetu*, are themselves to be proved; for according to the Cārvākas the body is endowed with consciousness and is non-eternal. A reference to the footnote below shows that this *prakaraṇa-sama* is different from the *prakaraṇa-sama* of the *Nyāya-sūtra*. *Samśaya-sama* is that in which that which is the cause of doubt is offered as the *hetu* for a particular conclusion, e.g. This person quotes a passage from Āyur-veda—is he or is he not a physician? Even a man who is not a physician might have heard a passage somewhere and quoted it. Now, therefore, quoting a passage from Āyur-veda leaves us in doubt as to the man's being a physician or not. If this itself is offered as the *hetu* for a particular conclusion and if it is said, "He is a physician because he has quoted a passage from Āyur-veda," it becomes a case of *saṁśaya-sama*. Gautama speaks of *saṁśaya-sama* as an instance of *jāti*; but the former is a case where a doubt is not removed because of the fact that the thing about which anything is affirmed possesses two opposite qualities, so that no affirmation can be made on the strength of any of these characteristics. Here, however, *saṁśaya-sama* is used in the sense that what is itself doubtful is adduced as the reason for a particular conclusion.

Varṇya-sama is where an affirmation is made about a thing on the strength of another affirmation which itself remains to be proved and is hence in the same condition as the previous affirmation, e.g. "Buddhi is non-eternal, like sound, as it is un-touchable, like the latter." But the non-eternality of sound stands as much in need of proof as that of *buddhi*, and the former affirmation cannot be made on the basis of the latter. This fallacy is

hetu; for the *hetu* and *sādhya* exist in two successive moments and are therefore not concomitant; but in the former case they are concomitant and simultaneous, e.g. sound is eternal, because it is manifested, like colour, owing to a particular contact, like light, being manifested by the contact of a stick and a drum, just as colour is manifested by the contact of light with a thing. But the similarity fails; for, while colour is manifested simultaneously with the contact of light and the things, sound is heard at a moment different from that at which actual contact of the stick and the drum takes place.

similar to the *jāti* called *sādhya-sama* and the fallacy *sādhya-sama* of Gautama already described in the footnotes to page 386.

Atīta-kāla is that in which that which should be said first is said later, e.g. the thesis, or *pratijñā*, should be stated first and the conclusion, or *niḡamana*, last; if instead the *niḡamana* is stated first and the *pratijñā* after, then we have the fault of *kālātīta*.

Upālambha (criticism) is the finding fault with the *hetu*, also called *a-hetu*, as described above, or *hetv-ābhāsas*. *Parihāra* (reply) means the reply given to the objections pointed out by an opponent; e.g. the self is eternal, since so long as it remains in the body it shows signs of life, and, when it is away, though the body still remains the same, yet there is no sign of life; therefore the self is different from the body and is eternal. *Pratijñā-hāni* (to give up one's thesis) is where, being cornered by the opponent, one is forced to give up one's original thesis. Thus one may start with the thesis that *puruṣa* is eternal, but, being cornered, one may give it up and say that *puruṣa* is not eternal. *Abhyanuññā* (to bring a counter-charge) is that in which a disputant, instead of refuting the charge brought against him by his opponent, charges his opponent with the same defects¹. *Hetu-antara* (dodging with a wrong reason) is where, when the cause of some root fact (*prakṛti*) is asked, the reply refers to the cause of the modifications or manifestations (*vikṛti*) of that root fact². *Arthāntara* (wrong answer) is where, when the definition of one thing (e.g. fever) is asked, a definition of another thing (e.g. diabetes) is given³. *Nigraha-sthāna* is where, in a learned assembly, a statement, though thrice repeated, is not understood by the opponent. Caraka counts among the *nigraha-sthānas* many of the cases which have already been enumerated and described. Thus he counts *pratijñā-hāni*, *abhyanuññā*, *kālātīta*, *a-hetu*, *nyūna*, *atirikta*, *vyartha*, *apārthaka*, *punar-ukta*, *viruddha*, *hetv-antara*, *arthāntara*⁴.

¹ This corresponds to *matāmññā* of the *Nyāya-sūtra*, v. 1. 42.

² In *Nyāya-sūtra*, v. 2. 6, we hear of a *hetv-antara*, but that seems to be different from this. The significance of *hetv-antara*, as it stands there, may be illustrated as follows. An adherent of Sāṃkhya says that all this world of things is derived from one root cause, because all these are limited and whatever is limited is derived from one root cause. This may be refuted by pointing out that there are many limited things which are derived from more than one root cause. To this the Sāṃkhya adherent replies that only those which are associated with pleasure and pain and ignorance are to be regarded as proceeding from one root cause; but this is an addition which was not contained in the original thesis.

³ This is also mentioned in the *Nyāya-sūtra*, v. 2. 7.

⁴ The *nigraha-sthānas* mentioned in the *Nyāya-sūtra*, v. 2. 1, are the following: *pratijñā-hāni*, *pratijñāntara*, *pratijñā-virodha*, *pratijñā-sannyāsa*, *hetv-antara*,

After this Caraka further describes the ten categories, a knowledge of which he thinks is very necessary for a mastery of the subject-matter of Āyur-veda. These are *kāraṇa* (the agent or the mover), *kaṛaṇa* (the instrument necessary for an agent to bring about an effort), *kārya-yoni* (the material cause by the modification of which effects are produced), *kārya* (that for the production of which the mover makes his effort), *kārya-phala* (that for which a particular effect is intended by the agent), *anubandha* (the good or bad result which attaches itself to the doer after the production of the effect), *deśa* (place), *kāla* (the seasons, days, etc.), *pravṛtti* (the effort and the action needed for the production of the effect) and *upāya* (the passivity and special aptitude of the agent, the instrument and the material cause which can make the effect possible). The physician is the cause (*kāraṇa*), the medicines the instruments (*kaṛaṇa*); the want of equilibrium of the *dhātus* the *kārya-yoni*; the restoration of the equilibrium of the *dhātus* the *kārya*; the happy state of body and mind the *kārya-phala*; length of life, *anubandha*; the place and the diseased person, *deśa*; the year and the condition of the diseased person, *kāla*; the efforts of the physician, *pravṛtti*; the qualifications of the physician, the qualities of the medicine, etc., *upāya*.

It may be pointed out in this connection that the *Uttara-tantra* of Suśruta also mentions thirty-two technical terms helpful to physicians in refuting the statements of hostile critics and in establishing their own points, which are called *tantra-yukti*¹. These are said to be *adhikaraṇa*, *yoga*, *padārtha*, *hetv-artha*, *uddēśa*, *nirdeśa*, *upadeśa*, *apadeśa*, *pradeśa*, *atideśa*, *apavarja*, *vākya-śeṣa*, *arthāpatti*, *viparyaya*, *prasaṅga*, *ekānta*, *anekānta*, *pūrva-pakṣa*, *nirṇaya*, *anumata*, *vidhāna*, *anāgatāvekṣaṇa*, *atīkrāntāvekṣaṇa*, *saṁśaya*, *vyākhyāna*, *sva-saṁjñā*, *nirvacana*, *nidarśana*, *niyoga*, *samuccaya*, *vikalpa* and *ūhya*. But these technical terms are maxims for the interpretation of textual topics, like the maxims of Mīmāṃsā, and are not points of dispute or logical categories. It is said that these maxims are like the sun to a group of lotuses, or like a lamp to a house,

arthāntara, *nīrarthaka*, *avijñātārtha*, *apārthaka*, *aprāpta-kāla*, *nyūna*, *adhika*, *punar-ukta*, *ananubhāṣana*, *ajñāna*, *apratibhā*, *vikṣepa*, *matāmujñā*, *paryanuyojoyo-pekṣeṇa*, *niranuyojoyānyoga*, *apa-siddhānta*, *hetv-ābhāsa*. Many of these, however, are not mentioned by Caraka.

¹ *asad-vādi-prayuktānām vākyaṇām pratiṣedhānam sva-vākya-siddhir api ca kriyate tantra-yuktitaḥ*. *Suśruta-saṁhitā*, *Uttara-tantra*, 65. 5.

for the illumination or the expression of the subject of discourse¹. This remark very much resembles the remark of Vātsyāyana that *ānvīkṣikī* (logic) is like a light to all sciences (*pradīpaḥ sarva-vidyānām*). But the difference between *tantra-yukti* and *ānvīkṣikī* is this, that, while the former refers to the laws of thought, the latter refers to technical modes of expression in medical science in general and in the *Suśruta-saṃhitā* in particular. They therefore refer to the ways of deducing the inner meaning or intention of the medical texts from their abbreviated forms of expression. Thus, when one reads in the text, “about *rasa* or *doṣa*,” and nothing else is said, one understands that this style of expression signifies that it is an *adhikaraṇa* (topic of discourse) and that something is going to be related about *rasa* or *doṣa*, though it is not explicitly so stated. Now the maxim (*tantra-yukti*) of *yoga* means that the verb at a distant part of the sentence may be joined with its relevant case in another part of the sentence². The maxim of *padārtha* means that, when a word having two or more senses is used, then that meaning alone has to be accepted which suits the previous and the later contexts. Thus, when it is said in a medical text that we shall now describe the origin of the Veda, then only Āyur-veda is to be meant and not Ṛg, Yajus or Atharva. The maxim of *hetv-artha* illustrates the condition of invisible things by visible and known examples. Thus it is said that, just as a muddy ball becomes dissolved and sticky through water, so do milk and other drugs dissolve a boil by their application. The maxim of *uddeśa* is the method of briefly touching a subject without going into details. Thus, when one says “disease” (*śalya*), it means both internal and external diseases without any kind of specification. The maxim of *nirdeśa* is the method of describing a thing in detail. The maxim of *upadeśa* is the method of giving a general instruction. Thus it is said that one should not sit up at night nor sleep during the day. This is, however, only a general instruction which has its exceptions. The

¹ *yathāmbuśa-vanasyārkaḥ pradīpo veśmano yathā
prabodhyasya prakāśārthas tathā tantrasya yuktayaḥ.*

Suśruta-saṃhitā, Uttara-tantra, 65. 7.

² *tailam pivec cāmyta-vallī-nimba-himsrābhayā-vṛkṣaka-pippalibhiḥ
siddham balābhyāṃ ca sa-devadāru hitāya nityaṃ gala-gaṇḍa-roge.*

Ibid. 9, 10.

In the above verse it is enjoined that a particular medical decoction is to be made with a number of drugs which are to be boiled (*siddham*), and this boiled decoction has to be drunk (*pivet*). But the word *pivet* is in the first line and the word *siddham* is in the third line, and it is allowed that these two distant words may be combined (*yoga*).

maxim of *apadeśa* is the method of showing the reasons of things. Thus it is said that phlegm (*śleṣman*) increases through the taking of sweet things (*madhureṇa śleṣmā 'bhivardhate*). The maxim of *pradeśa* is the analogy by which a present difficulty is solved in the way in which a past difficulty was solved (*prakṛtasya atikrāntena sādhanam pradeśaḥ*). Thus it may be said that, since this has cured Devadatta in this way in the past, it would also cure Yajñadatta in a similar way now. The maxim of *atideśa* is that of anticipating a future event from a present indication or prognostication. Thus from the fact of the increase of uprising wind in a man's system it may be predicted that he will have a specific bowel-disease (*udāvarta*). The maxim of *apavarja* consists in allowing exceptions to general directions (e.g. cases of poisoning should not be fomented, except in the case of poisoning through the bites of insects). The maxim of *vākya-śeṣa* consists in supplying an idea suggested by the context, but not expressly mentioned. Thus when it is said "of the head, hands, feet, sides, back, belly, heart," it is the whole man that is to be understood though it is not expressly stated in the context. That which is understood, by implication, though not directly mentioned, is called the maxim of *arthāpatti*. Thus, when a man says "I shall eat rice," it is understood that he is not thirsty, but hungry. The maxim of *viparyaya* is that by virtue of which from a positive or a negative assertion its contrary is asserted also, e.g. when it is said that those who are lean, weak and of fearful temperament are difficult to be cured. The maxim of *prasaṅga* is that by virtue of which allusion is made to things repeatedly described in another chapter. The maxim of *ekānta* allows of affirming a specific action of things unexceptionably (e.g. *madana* fruit induces vomiting, i.e. under all circumstances). The maxim of *anekānta* is that by virtue of which one understands that different opinions prevail on a particular subject. Thus some teachers think that substances are the most important, while others think that *rasa* is so; others, again, think that the inner essence (*vīrya*) is the most important, while still others think that chemical action through digestion (*vipāka*) is so. The maxims of *pūrva-pakṣa* and *uttara-pakṣa* allow of discussing a matter in the form of question and answer. The maxim of *anumata* is that by virtue of which it is to be understood that, when the opinion of other authorities is referred to and not contradicted, it is signified that it is approved. The maxim of *vidhāna* is that by virtue of

which one understands that, when certain descriptions follow certain enumerations, the former are to be taken in the order in which the latter are related. The maxim of *anāgatāvekṣaṇa* allows of leaving certain things for future description and elaboration, and *atīkrāntāvekṣaṇa* permits alluding to things described before (e.g. it is said in the *Śloka-sthāna* that this matter will be described in the *Cikitsā* chapter, and about another matter it may be said in the *Cikitsā* chapter that it has been described in the *Śloka-sthāna*). The maxim of *saṁśaya* allows a way of statement which may create doubt and confusion in the mind of the reader. The method of elaborate description is called *vyākhyāna*. The method of using words in a sense different from what they have in other literatures is called *śva-saṁjñā*, i.e. technical use (e.g. *mithuna* in Āyur-veda means honey and clarified butter). A definition is called *nirvacana*. The maxim of *nidarśana* allows of describing anything after the analogy of other things. Thus it may be said that, just as fire in a room grows bigger and bigger with wind, so does a boil grow with *vāta*, *pitta* and *kapha*. *Niyoga* means a direction (e.g. "only what is good to the system is to be taken"). *Samuccaya* means the taking of two or more things together as having equal value. *Vikalpa* is the method of giving alternative or optional directions. *Ūhya* is the maxim by which things which are apparent from the context can be understood.

It is easy to see that of these thirty-two maxims some are ways of interpreting ideas, others are ways of interpreting the arrangement and manner of textual words and their connections, while there are others which are but descriptions of specific peculiarities of style. The redactor (Nāgārjuna) says that he has collected all these maxims as general principles of textual understanding, and he calls them *śabda-nyāyārtha*, i.e. the meaning of the maxims of verbal interpretation.

Did Logic Originate in the Discussions of Āyur-veda Physicians?

Dr Mahāmahopādhyāya Satish Chandra Vidyabhusan in his *History of Indian Logic* supposes without adducing any reason that the *Caraka-saṁhitā* gives a summary of the principal doctrines of Ānvikṣikī, possibly as propounded by Medhātithi Gautama. He further says that the doctrines of Ānvikṣikī evidently did not con-

stitute a part of the original Āyur-veda of Punarvasu Ātreya, and that these doctrines seem to have been incorporated into the *Caraka-saṃhitā* by the redactor Caraka, in whose time they were widely known and studied. Dr Vidyabhusan's theory is that both Caraka and Akṣapāda borrowed the Nyāya doctrines from Medhātithi Gautama, but, while Caraka accepted them in their crude forms, Akṣapāda pruned them thoroughly before they were assimilated in the *Nyāya-sūtra*¹.

But Dr Vidyabhusan's Medhātithi Gautama is more or less a mythical person, and there is no proof that he ever wrote anything, or that Caraka borrowed anything from a Medhātithi Gautama, or that the Nyāya doctrines found in the *Caraka-saṃhitā* were not contained in the original treatise of Agniveśa, now lost. Dr Vidyabhusan refers to the evidence of a number of works, such as the *Kusumāñjali*, *Naiṣadha-carita* and *Nyāya-sūtra-vṛtti*, which refer to Gautama as being the founder of Ānvikṣikī. But none of these authorities are earlier than the tenth century. He refers also to the authority of the *Padma-purāṇa*, *Skanda-purāṇa* and *Gandharva-tantra*, none of which can be regarded as a work of any considerable antiquity. Vātsyāyana himself refers to Akṣapāda as the person to whom Nyāya (the science of Logic) revealed itself². Uddyotakara also refers to Akṣapāda as the utterer of the *Nyāya-śāstra*, and so also does Vācaspati³. There is therefore absolutely no reason why the original authorship of Nyāya should be attributed to a Gautama, as against Akṣapāda, on evidence which cannot be traced to any period earlier than the tenth century and which is collected from Purāṇa sources directly contradicted by the earliest Nyāya authorities. The *Nyāya-śāstra*, therefore, cannot be traced on the evidence of the earliest Nyāya authorities to any earlier Gautama; for, had this been so, it would certainly have been mentioned

¹ *History of Indian Logic*, pp. 25 and 26, by Mahāmahopādhyāya Satish Chandra Vidyabhusan. Calcutta University, 1921.

² *Yo 'kṣapādam ṛṣim nyāyah pratyabhād vadatām varam tasya Vātsyāyana idaṃ bhāṣya-jātam avartayat.*

Vātsyāyana-bhāṣya, 2. 24, A.D. 400.

Dr Vidyabhusan's translation of it as "The Nyāya philosophy manifested itself (in a regular form) before Akṣapāda" is inexact.

³ *yad Akṣapādaḥ pravaro munīnām śamāya śāstram jagato jagāda.*

Nyāya-vārttika of Uddyotakara (A.D. 600). Opening lines. *atha bhagavatā Akṣapādena mīśreyasa-hetau śāstre pranīte. Nyāya-vārttika-tātparyā-ṅkā* of Vācaspati. Dr Vidyabhusan's translation of the *Nyāya-vārttika* word *śāstra* as "Nyāyaśāstra in a systematic way" is again inexact.

by either Vātsyāyana, Uddyotakara or Vācaspati. Jayanta also attributes the elaborate Nyāya work to Akṣapāda and does not seem to know that this elaborate treatise, the *Nyāya-sūtra*, was based on the teachings of an earlier authority¹. If any such authorities were known, they would certainly have been mentioned for the dignity and the prestige of the *Śāstra*. Gautama is an old name, and we find it attached to one of the Ṛṣis of the *Rg-veda* (I. 62. 78. 85; IV. 4); he is mentioned in the *Śatapatha-brāhmaṇa* (I. 4. I. 10; III. 3. 4. 19, etc.); in the *Taittirīya-prātiśākhya* (I. 5), in the *Āśvalāyana-śrauta-sūtra* (I. 3; II. 6, etc.) and in other similar older works; but nowhere is he spoken of as being the author of the *Nyāya-śāstra*. Gautama is also mentioned in the *Mahā-bhārata* several times, but nowhere is he referred to as the author of the *Nyāya-śāstra*. The passage of the *Mahā-bhārata* on which Dr Vidyabhusan bases his theory of a Medhātithi Gautama does not say that Medhātithi was the author of Ānvikṣikī or Nyāya, nor does it say that Medhātithi and Gautama were identical persons². The name Gautama is a patronymic, and the passage of the *Mahā-bhārata* referred to by Dr Vidyabhusan clearly means that the highly wise Medhātithi of the Gautama race was engaged in asceticism. This is corroborated by the fact that the passage of Bhāsa referred to by Dr Vidyabhusan mentions Medhātithi as a teacher of *Nyāya-śāstra* and does not call him Gautama, nor does it say that Medhātithi was the originator of Nyāya³. Dr Vidyabhusan's theory, therefore, of Medhātithi Gautama being the originator of the *Nyāya-śāstra* falls down like a house of cards. His identification of Medhātithi Gautama's birthplace as Mithilā, his ascertainment of his date, his identification of Persian references to Medhātithi Gautama and his so-styled references to Medhātithi Gautama in the *Aṅguttara-nikāya* and the *Brahma-jāla-sutta* are no less fictitious⁴. The Gautama tradition of Nyāya need not be followed; but it may incidentally be mentioned that an Ātreya Gautama, who is described as being Sāṃkhya (probably in the sense of wise, philosopher, or learned), is counted in the list of the

sages who assembled together to discover the causes and remedies of diseases; side by side with this Ātreya, another Ātreya is also mentioned as *bhikṣu Ātreya*¹. A number of sages are mentioned in the *Caraka-saṃhitā* as persons who discussed the problem of the rise of diseases and how they could be removed. Among these Bharadvāja volunteered to proceed to Indra to learn from him the science of healing. Indra instructed him in the subject, being learned in the three subjects of the (*hetu*) causes (of diseases), knowledge of the (*liṅga*) signs (of diseases) and the knowledge of medicines. Bharadvāja, having learnt this elaborate science in three divisions, repeated it to the sages in exactly the same manner in which he learnt it. After this it is said that Punarvasu taught Āyur-veda to his six disciples, Agniveśa, Bhela and others. Cakra-pāṇi, the commentator, says that Punarvasu was the disciple of Bharadvāja, and quotes as his authority a statement of Hārīta. But on this point Caraka himself is silent.

But one thing emerges from this half-mythical account of the origin of Āyur-veda, viz. that the Āyur-veda was occupied from the beginning with the investigation of the nature of causes (*hetu*) and reasons (*liṅga*) for legitimate inferences in connection with the enquiry into the causes of diseases and the apprehension of signs or indications of the same. In the *Nidāna-sthāna* of Caraka eight synonyms for reason (*hetu*) are given, viz. *hetu*, *nimitta*, *āyatana*, *karṭṛ*, *kāraṇa*, *pratyaya*, *samutthāna* and *nidāna*. It is curious enough that the words *pratyaya* and *āyatana* are used, which are presumably Buddhistic. The word *pratyaya*, in the sense of cause, is hardly found in Indian philosophy, except in Buddhism. The use of so many terms to denote cause evidently suggests that before Caraka's redaction there must have been an extensive literature which had used these words to denote cause. As a matter of fact, the word *pratyaya* is hardly ever used in the *Caraka-saṃhitā* to signify cause, though it is counted here as one of the synonyms of *hetu*, or cause. The natural implication of this is that the word *pratyaya* was used for *hetu* in some earlier literature, from which Caraka collected it; so with other words, such as *samutthāna*, *āyatana*, which are counted in the list as synonyms for *hetu*, but are not actually used in the body of the text. This may lead us to think that the discussion of *hetu* under

¹ *Ātreya Gautamaḥ sāmṅkhyah*. In this passage Ātreya may, however, be taken as a man separate from the wise Gautama.

various names is an old subject in Āyur-veda literature existing before Caraka, from which Caraka collected them.

We know that Āyur-veda was primarily concerned with three questions, viz. how diseases originated, how they were known, and what were their cures. It was in this connection that the principle of causality was first from a practical necessity applied in Āyur-veda. Thus, if it is known that a person has been exposed to sudden cold or has enjoyed a heavy feast, then, since it is known that cold leads to fever and over-feeding to indigestion, with the very first symptoms of uneasiness one may at once infer that the patient is likely to get fever or to have diarrhœa or acute indigestion. Or, if it is known that the patient has a strong diarrhœa, then it can similarly be inferred that he has eaten indigestible articles. Thus the two principal kinds of inference which were of practical use to the Āyur-veda physicians were inference of the occurrence of a disease from a knowledge of the presence of the causes of that disease, i.e. from cause to effect, and inference of the specific kinds of unhygienic irregularity from the specific kind of disease of the patient, i.e. from the effect to the cause. The other and third kind of inference is that of inference of disease from its early prognostications (*pūrva-rūpa*). Cakrapāṇi, in commenting on the possibility of inference of specific diseases from their early specific prognostications, compares it with inference of rain from an assemblage of dark clouds or of the future rise of the Kṛttika constellation from the rise of the constellation Rohiṇī, which immediately precedes it. Both these are cases of inference of future occurrences of causation or coexistence. The prognostication may, however, be of the nature of an immediately and invariably associated antecedent which may drop altogether when the disease shows itself. Thus before a high fever the hair of the patient may stand erect; this standing erect of the hair in a specific manner is neither the cause nor is it coexistent with fever, since it may vanish when the fever has actually come. It is, however, so invariably associated with a specific kind of fever that the fever can be inferred from it¹. Again, when there is any doubt among a number of causes as to which may be the real cause of the disease, the physician has to employ the method of difference or

¹ These two kinds of *pūrva-rūpa* are thus described by Cakrapāṇi in his commentary on *Caraka-saṃhitā*, II. 1. 7: *tac ca pūrva-rūpaṃ dvi-vidham ekam bhāvi-vyādhy-avyakta-liṅgam...dvitīyaṃ tu doṣa-dūṣya-sammūrchanā-janyam avyakta-liṅgād anyad eva yathā jvare bāla-pradveṣa-roma-harṣādi.*

the method of concomitant variation for its proper ascertainment. That similar things produce the same kind of effects and opposite things produce opposite results are two of the accepted postulates of the law of *sāmānya* and *viśeṣa* in the *Caraka-saṃhitā*¹. Now, applying these two principles, it is held that in a case of doubt as to any kind of irregularity being the cause of any particular disease it has to be found out by experiment whether the application of the suspected cause (e.g. cold) increases the disease (e.g. fever); if it does, and if the application of its opposite (e.g. heat) decreases the disease, then cold is to be regarded as the cause of the disease. If the application of any particular kind of element increases an effect (a particular kind of disease) and the application of its opposite decreases it, then that particular element may be regarded as the cause of that effect. Caraka holds that the three methods, viz. the cause and effect relation (*nidāna*), the method of invariable prognostication (*pūrva-rūpa*) and the method of concomitant variation (*upāśaya*, which includes *anupāśaya* also) are to be employed either jointly or separately for the ascertainment of the nature of diseases which have already occurred or which are going to happen in the near future². Caraka thus urges that the physician should examine carefully the causes of diseases by the application of all these methods, so that they may be ascertained from their visible effects. Caraka then goes on to give examples of a number of diseases and the causes or prognostications by which their nature can be ascertained. He then says that a disease which is at first only an effect of some other causes may act as a cause of other diseases and may thus be regarded both as an effect and as a cause. There is therefore no absolute difference between a cause and an effect, and that which is a cause may be an effect and that which is an effect may also in its turn be a cause. Sometimes a disease may behave as cause of another disease and then cease to exist itself, whereas again, one disease may exist side by side with another disease which it has produced and aggravate its effects. Then, again, a disease (cause) may produce a disease (effect), and that effect another effect. Thus one cause may produce one effect as well as many effects, and one effect may be due to one or to many causes, and

¹ *Caraka-saṃhitā*, I. 1. 44.

² The other two methods of *saṃprāpti* and *rūpa* need not be discussed in this connection.

again many causes may jointly produce many effects. Thus, though fever, delirium, etc. may all be produced by dryness (*rūkṣa*), yet under certain circumstances fever alone may be produced by it. Again, fever may also be produced by the combination of a number of causes which under other circumstances may produce jointly a number of diseases. So one entity may be an invariable concomitant (*liṅga*) of one event or of many events, and there may also be a number of invariable concomitants of one event. Thus fever is the invariable concomitant of hygienic irregularities in general, and all fevers have heat as their invariable concomitant. From certain kinds of hygienic irregularities fever can be inferred; but these can also be associated with a number of other diseases¹.

Hence it is evident that the determination of the nature of causes and effects and the inference of facts or events of invariable concomitance were an indispensable necessity for the Āyur-veda physicians in connection with the diagnosis of diseases and the ascertainment of their causes and cures. It was for this reason that Caraka divided inference into three classes, from causes to effects, from effects to causes and from the association of other kinds of invariable concomitants. The *Nyāya-sūtra* of Akṣapāda contains expressions which seem to have been borrowed from Nāgārjuna's *Mādhyamika-kārikā* and from the *Laṅkāvatāra-sūtra* and the regulations of Buddhistic idealism, and hence it is generally believed to have been composed in the second or the third century A.D.² In this fundamental and earliest work of Nyāya philosophy inference (*anumāna*) is described as being of three kinds, viz. from cause to effect (*pūrvavat*), from effect to cause (*śeṣavat*), and inference from similarities (*sāmānyato-dṛṣṭa*) not comprehended under the cause-effect relation. Now it is exactly these three forms of inference that are described in the *Caraka-saṃhitā*, and, so far as is known to the present writer, this is the earliest work which describes inference in such a systematic manner, and so it

¹ See *Caraka-saṃhitā*, II. 8. 22-27.

² H. Ui's *The Vaiśeṣika Philosophy*, p. 16. L. Suali's *Filosofia Indiana*, p. 14. Jacobi, article in *J.A.O. Society*, vol. XXXI, p. 29, 1911.

A commentary on Nāgārjuna's *Pramāṇa-vidhvaṃsana* called *Pramāṇa-vidhvaṃsana-sambhāṣita-vṛtti* reproduces Nāgārjuna's definition of the categories, which are the same as the categories enumerated in the first *sūtra* of Akṣapāda's *Nyāya-sūtra*. But, as Walleser points out in his *Life of Nāgārjuna from Tibetan and Chinese Sources*, it is impossible to fix Nāgārjuna's date exactly. He may have lived at any time between the second and the fourth centuries A.D. So no fruitful result can be attained by considerations of this kind.

may naturally be regarded as the source from which Akṣapāda drew his ideas. Now Caraka's work may be regarded as a revision of Agniveśa's work, based on Atri's teachings, based on Bhara-dvāja's instructions. Agniveśa's work is now lost, and it is not known what exactly were the contributions of Caraka in his revision of Agniveśa's work; but, since we find no work of an earlier date, Hindu, Buddhist or Jaina, which treats of the logical subjects found in the *Caraka-saṃhitā*, and since these logical discussions seem to be inextricably connected with medical discussions of diagnosis of diseases and the ascertainment of their causes, it seems very natural to suppose that Caraka got his materials from Agniveśa, who probably got them from still earlier sources. Incidentally it may be mentioned that Jayanta, in his *Nyāya-mañjarī*, discussing the question of the probable sources from which Akṣapāda drew his materials, suggests that he probably elaborated his work from what he may have gathered from some other science (*śāstrāntarābhyāsāt*); but it is difficult to say whether by *śāstrāntara* Jayanta meant Āyur-veda. The *Nyāya-sūtra*, however, expressly justifies the validity of the Vedas on the analogy of the validity of Āyur-veda, which is a part of the Vedas¹.

The similarity of the *Nyāya-sūtra* definition of inference to Caraka's definition is also very evident; for while the former begins *tat-pūrvakam tri-vidham* (where *tat-pūrvakam* means *pratyakṣa-pūrvakam*), the latter begins *pratyakṣa-pūrvakam tri-vidham tri-kālam*. But, while Caraka knows only the three forms of inference, he has no names for these three types such as are supplied by Akṣapāda, viz. *pūrvavat* (related to *pūrvā*, the prior, or the cause), *śeṣavat* (related to *śeṣa*, the later, or the effect) and *sāmānyato-dṛṣṭa* (from observed similarity in the past, present and future, which is also emphasized by Caraka in the same manner)². From the con-

¹ *Mantrāyurveda-prāmāṇyavac ca tat-prāmāṇyam āpta-prāmāṇyāt.*

Nyāya-sūtra, II. 1. 68.

Jayanta enters into a long discussion in his *Nyāya-mañjarī*, trying to prove that it was through his omniscience that Caraka could write his work and that he neither discovered the science by inductive methods nor derived it from previous traditional sources.

² *Evam vyavasyanty alītam bijāt phalam anāgatam
dṛṣṭvā bijāt phalam jātam ihaiva sadṛśam budhāḥ.*

Caraka-saṃhitā, I. 11. 22.

Vātsyāyana, in his commentary on the *Nyāya-sūtra*, illustrates *pūrvavat* (from cause to effect) as the inference of rain from the rise of clouds, *śeṣavat* (from effect to cause) as the inference of rain in the uplands from the flooding of the river in the lower regions and *sāmānyato-dṛṣṭa* (from similar behaviour) as the inference of the motion of heavenly bodies from their changes of position in the sky at

siderations detailed in the preceding footnote it may well be assumed that Akṣapāda's contribution to the definition of inference consists in his giving names to the types of floating inference described in *Caraka-saṃhitā*. It is not improbable that the *Nyāya-sūtra* derived its theory of five propositions, and in fact most of the other logical doctrines, from Caraka, as there are no earlier works to which these can be traced¹. Caraka's definition of perception as the knowledge

different times. But he also gives another meaning of these three terms *pūrvavat*, *śeṣavat* and *sāmānyato-dṛṣṭa*. He interprets *pūrvavat* here as the inference of fire from smoke "on the analogy of past behaviour of co-presence," *śeṣavat* as the inference of the fact that sound is quality because it is neither substance nor action, by the method of residues (*śeṣa*), and *sāmānyato-dṛṣṭa* as the inference of the existence of soul from the existence of desire, which is a quality and as such requires a substance in which it would inhere. This is not an inference from similarity of behaviour, but from the similarity of one thing to another (e.g. that of desire to other qualities), to extend the associations of the latter (inference in a substance) to the former (desire), i.e. the inference that desire must also inhere in a substance.

In the case of the terms *pūrvavat* and *śeṣavat*, as these two terms could be grammatically interpreted in two different ways (with *matuṣ* suffix in the sense of possession and *vati* suffix in the sense of similarity of behaviour), and as the words *pūrvā* and *śeṣa* may also be used in two different ways, Vātsyāyana interprets them in two different ways and tries to show that in both these senses they can be justified as modes of inference. It seems obvious that the names *pūrvavat*, *śeṣavat* and *sāmānyato-dṛṣṭa* were given for the first time to the threefold inference described by Caraka, as this explains the difficulty felt by Vātsyāyana in giving a definite meaning to these terms, as they had no currency either in traditional or in the contemporaneous literature of Vātsyāyana. Uddyotakara, in his commentary on Vātsyāyana, contributes entirely original views on the subject. He takes Akṣapāda's sūtra, *atha tat-pūrvakam tri-vidham anumānam pūrvavac cheṣavat sāmānyato-dṛṣṭam ca*, and splits it up into *atha tat-pūrvakam tri-vidham anumānam* and *pūrvavac cheṣavat sāmānyato-dṛṣṭam ca*; by the first *tri-vidha* he means inference from positive instances (*anvayi*), from negative instances (*vyatireki*) and from both together (*anvaya-vyatireki*). He gives two possible interpretations of the terms *pūrvavat*, *śeṣavat* and *sāmānyato-dṛṣṭa*, one of which is that *pūrvavat* means argument from cause to effect, *śeṣavat* that from effect to cause and *sāmānyato-dṛṣṭa* is the inference on the basis of relations other than causal. The *Saṃkhyā-kārikā* also mentions these kinds of inference. The *Māthara-vṛtti* again interprets the threefold character of inferences (*tri-vidha anumāna*) in two ways; it says, firstly, that *tri-vidha* means that an inference has three propositions, and, secondly, that it is of three kinds, viz. *pūrvavat* (from the effect, e.g. flooding of the river, to the inference of the cause, e.g. showers in the upper region), *śeṣavat* (from part to whole, e.g. tasting a drop of sea-water to be saline, one infers that the whole sea is saline), and *sāmānyato-dṛṣṭa* (inference from general association, e.g. by seeing flowering mangoes in one place one infers that mangoes may have flourished in other places as well). Curiously enough, the *Māthara-vṛtti* gives another example of *sāmānyato-dṛṣṭa* which is very different from the examples of *sāmānyato-dṛṣṭa* hitherto considered. Thus it says that, when one says, "It is illuminated outside," another replies, "The moon must have risen."

¹ For more or less fanciful reasons Mr Dhruva suggests that the terms *pūrvavat* and *śeṣavat* were borrowed in the *Nyāya-sūtra* from the *Mīmāṃsā-sūtra* and that this *sūtra* must therefore be very old (*Proceedings and Transactions of the First Oriental Conference*, Poona, 1922). This argument is invalid for more

that arises through the contact of the self, the senses, the mind and the objects seems very much like an earlier model for Akṣapāda's definition of perception, which adds three more qualifications to make the meaning more complex and precise¹. The idea that in the first instance perception is indeterminate (*nir-vikalpa* or *a-vyapadeśya*) is a later development and can hardly be traced in Hindu philosophy earlier than the *Nyāya-sūtra*². The similarity of the various categories of *vāda*, *jalpa*, *vitandā*, *chala*, *jāti*, *nigraha-sthāna*, etc., as enumerated in Caraka, to those of the *Nyāya-sūtra* has been duly pointed out in a preceding section. The only difference between the two sets of enumeration and their elaboration is that Caraka's treatment, being the earlier one, is less full and less complex than that of Akṣapāda.

The fact that physicians in counsel earnestly discussed together, in order to arrive at right conclusions regarding both the theoretical causes of diseases and their cures and their actual practical discernment in individual cases, is abundantly clear from even a very superficial study of the *Caraka-saṃhitā*. The entire work seems to be a collection of discussions of learned physicians with Atri as their chairman. Where differences of opinion are great, they are all noted, and Atri's own opinion on them is given, and, where there was more or less unanimity, or where Atri himself lectured on specific problems, his own opinion alone is given. It is also related how a good and clever physician is to defeat his opponents in dispute, not only in a legitimate and scientific way, but also by sophistic wrangling and unfair logical tricks. It was a practical necessity for these physicians to earn their bread in the face of strong competition, and it is easy to see how the logical tricks of *chala*, *jāti* and *nigraha-sthāna* developed into a regular art of debate, not always for the discovery of truth, but also for gaining the victory over opponents. We hear of debates, discussions or logical disputes in literature much earlier than the

than one reason. Firstly, granting that the *Mīmāṃsā-sūtra* is very old (which is doubtful), the fact that these two logical terms were borrowed from it does not show that it must be a very old work; for even a modern work may borrow its terminology from an older treatise. Secondly, the fact that these three terms were borrowed from early sources does not show that the theory of *tri-vidha anumāna* in the *Nyāya-sūtra* is either its own contribution or very old. Mr Dhruva's arguments as to the *Māthara-vṛtti* being subsequent to Vātsyāyana's commentary are also very weak and do not stand criticism.

¹ *indriyārtha-sannikarṣotpattim jñānam avyapadeśyam avyabhicāri vyavasāyātmakam pratyakṣam. Nyāya-sūtra*, I. 1. 4.

² Caraka uses the word *vikalpa* in II. 1. 10. 4 in the sense of distinction (*bheda*) of superiority and inferiority (*utkarṣa-prakarṣa-rūpa*).

Caraka-saṃhitā; but nowhere was the acquirement of this art deemed so much a practical necessity for earning a living as among the medical men. And, since there is no mention of the development of this in any other earlier literature, it is reasonable to suppose that the art of debate and its other accessories developed from early times in the traditional medical schools, whence they are found collected in Caraka's work. The origin of the logical art of debate in the schools of Āyur-veda is so natural, and the illustrations of the modes of dispute and the categories of the art of debate are so often taken from the medical field, that one has little reason to suspect that the logical portions of the *Caraka-saṃhitā* were collected by Caraka from non-medical literature and grafted into his work.

Āyur-veda Ethics.

The length of the period of a man's lifetime in this iron age (*kali-yuga*) of ours is normally fixed at one hundred years. But sinful actions of great enormity may definitely reduce the normal length to any extent. Ordinary vicious actions, however, can reduce the length of life only if the proper physical causes of death, such as poisoning, diseases and the like, are present. If these physical causes can be warded off, then a man may continue to live until the normal length of his life, one hundred years, is reached, when the body-machine, being worn out by long work, gradually breaks down. Medicines may, however, in the case of those who are not cursed by the commission of sins of great enormity, prolong the normal length of life. It is here that Caraka and his followers differ from all other theories of *karma* that flourished on the soil of India. The theory is not accepted in any Indian system of thought except that of Caraka. In spite of the many differences that prevail amongst these theories, they may still be roughly divided into four classes. Thus there are, first, the *pauruṣa-vādins*, such as those who follow the *Yoga-vāsiṣṭha* school of thought and are idealists of the extreme type, thinking that all our experiences can be controlled by a determined effort of the will and that there is no bond of previous *karma*, destiny, or fatality which cannot be controlled or overcome by it. Human will is all-powerful, and by it we can produce any change of any kind in the development of our future well-being. There is, again, the view that God alone is responsible for all our actions, and that He makes those whom He wants to

raise perform good actions and those whom He wants to take the downward path commit sinful deeds. There is also the view that God rewards or praises us in accordance with our good or bad deeds, and that we alone are responsible for our actions and free to act as we choose. There is a further view, elaborately dealt with in Patañjali's *Yoga-sūtra*, that our deeds determine the particular nature of our birth, the period of our lifetime and the nature of our enjoyments or sufferings. Ordinarily the fruits of the actions of a previous birth are reaped in the present birth, and the ripened fruits of the actions of the present birth determine the nature of the future birth, period of life and pleasurable or painful experiences, while the fruits of extremely good or bad actions are reaped in this life. In none of these theories do we find the sort of common-sense eclecticism that we find in Caraka. For here it is only the fruits of extremely bad actions that cannot be arrested by the normal efforts of good conduct. The fruits of all ordinary actions can be arrested by normal physical ways of well-balanced conduct, the administration of proper medicines and the like. This implies that our ordinary non-moral actions in the proper care of health, taking proper tonics, medicines and the like, can modify or arrest the ordinary course of the fruition of our *karma*. Thus, according to the effects of my ordinary *karma* I may have fallen ill; but, if I take due care, I may avoid such effects and may still be in good health. According to other theories the laws of *karma* are immutable. Only the fruits of unripe *karma* can be destroyed by true knowledge. The fruits of ripe *karma* have to be experienced in any case, even if true knowledge is attained. The peculiar features of Caraka's theory consist in this, that he does not introduce this immutability of ripe *karmas*. The effects of all *karmas*, excepting those which are extremely strong, can be modified by an apparently non-moral course of conduct, involving the observance of the ordinary daily duties of life. Ordinarily the law of *karma* implies the theory of a moral government of the universe in accordance with the good or bad fruits of one's own *karma*. We may be free to act as we choose; but our actions in this life, excepting those of great enormity, determine the experiences of our future lives, and so an action in this life cannot ordinarily be expected to ward off any of the evils of this life which one is predestined to undergo in accordance with the *karma* of a previous birth. Moreover, it is the moral or immoral aspects of an action that

determine the actual nature of their good or bad effects, success or failure. This implies a disbelief in our power of directly controlling our fortunes by our efforts. The theory of *karma* thus involves a belief in the mysterious existence and ripening of the sinful and virtuous elements of our actions, which alone in their course of maturity produce effects. If the theory that sins bring their punishment, and virtues produce their beneficial effects, of themselves, is accepted, its logical consequences would lead us to deny the possibility of mere physical actions modifying the fruition of these *karmas*. So the acceptance of the moral properties of actions leads to the denial of their direct physical consequences. If through my honest efforts I succeed in attaining a happy state, it is contended that my success is not due to my present efforts, but it was predestined, as a consequence of the good deeds of my previous birth, that I should be happy. For, if the fruition was due to my ordinary efforts, then the theory that all happy or unhappy experiences are due to the ripening of the *karmas* of the previous births falls to the ground. If, on the other hand, all success or failure is due to our proper or improper efforts, then the capacity of sins or virtues to produce misery or happiness may naturally be doubted, and the cases where even our best efforts are attended with failure are not explained. But, if our ordinary efforts cannot effect anything, and if the modes of our experiences, pleasures and sufferings, and the term of our life are already predestined, then none of our efforts are of any use in warding off the calamities of this life, and the purpose of the science of medicine is baffled. In common-sense ways of belief one refers to "fate" or "destiny" only when the best efforts fail, and one thinks that, unless there is an absolute fatality, properly directed efforts are bound to succeed. Caraka's theory seems to embody such a common-sense view. But the question arises how, if this is so, can the immutability of the law of *karma* be preserved? Caraka thinks that it is only the extremely good or bad deeds that have this immutable character. All other effects of ordinary actions can be modified or combated by our efforts. Virtue and vice are not vague and mysterious principles in Caraka, and the separation that appears elsewhere between the moral and the physical sides of an action is not found in his teaching¹.

He seems to regard the "good," or the all-round manifold

¹ *Caraka-samhitā*, III. 3. 28-38.

utility (*hita*) of an action, as its ultimate test. What a man has to do before acting is carefully to judge and anticipate the utility of his action, i.e. to judge whether it will be good for him or not; if the effects are beneficial for him, he ought to do it, and, if they are harmful, he ought not to do it¹. Our ultimate standard of good actions lies in seeking our own good, and to this end the proper direction and guidance of our mind and senses are absolutely necessary. Caraka applies here also his old principle of the golden mean, and says that the proper means of keeping the mind in the right path consists in avoiding too much thinking, in not thinking of revolting subjects, and in keeping the mind active. Thoughts and ideas are the objects of the mind, and one has to avoid the *atiyoga*, *mithyā-yoga* and *a-yoga* of all thoughts, as just described. "Self-good," or *ātma-hita*, which is the end of all our actions, is described as not only that which gives us pleasure and supplies the material for our comfort, ease of mind and long life, but also that which will be beneficial to us in our future life. Right conduct (*sad-vṛtta*) leads to the health and well-being of body and mind and secures sense-control (*indriya-vijaya*).

The three springs of action are our desire for self-preservation (*prāṇaiśaṇā*), our desire for the materials of comfort (*ghanaiśaṇā*), and our desire for a happy state of existence in the future life (*paralokaiśaṇā*). We seek our good not only in this life, but also in the after-life, and these two kinds of self-good are summed up in our threefold desire—for self-preservation, for the objects that lead to happiness, and for a blessed after-life. Right conduct is not conduct in accordance with the injunctions of the Vedas, or conduct which leads ultimately to the cessation of all sorrows through cessation of all desires or through right knowledge and the extinction of false knowledge, but is that which leads to the fulfilment of the three ultimate desires. The cause of sins is not transgression of the injunctions of the scriptures, but errors of right judgment or of right thinking (*prajñāparādha*). First and foremost is our desire for life, i.e. for health and prolongation of life; for life is the precondition of all other good things. Next to our desire for life is our desire for wealth and the pursuit of such vocations of life as lead to it. The third is

¹ *buddhyā samyag idaṃ mama hitam idaṃ mamāhitam ity avekṣyāvekṣya karmaṇāṃ pravṛttināṃ samyak pratipādanena ity ahita-karma-parityāgena hita-karmācāraṇena ca.* Cakrapāṇi on Caraka, 1. 8. 17.

the desire for a blessed after-life. In this connection Caraka introduces a discussion to prove the existence of a future state of existence. He says that a wise man should not entertain doubts regarding the existence of a future life, since such doubts might hinder the performance of right conduct. The mere fact that we cannot experience its existence with our senses is not a sufficient negative proof. For there are few things which can be directly experienced by the senses, and there are many which exist, but are never experienced by the senses. The very senses with which we experience other things cannot themselves be subject to sense-experience¹. Even sensible things cannot be perceived if they are too near or too distant, if they are covered, if the senses are weak or diseased, if the mind is otherwise engaged, if they are mixed up with similar things, if their light is overcome by stronger light, or if they are too small². It is therefore wrong to say that what is not perceived by the senses does not exist. If, again, it is argued that the foetus must derive its soul from the parents, then it may be pointed out that, if the soul of the foetus migrated from either of the parents, then, since the soul is without parts, it could not have migrated in parts, and such a total migration would mean that the parents would be left without any soul and would die. As the soul could not migrate from the parents to the child, so neither can the mind nor the intellect be said to have so migrated. Moreover, if all life must be derived from the migration of other souls, then how can insects come into being, as many do, without parent insects³? Consciousness exists as a separate and beginningless entity, and it is not created by anyone else. If, however, the supreme soul be regarded as its cause, then in that sense it may be conceived as having been produced therefrom⁴. The theory of the after-life consists according to Caraka principally in the view that the soul is existent and uncreated, and that it is associated with the foetus at a certain stage of its development in the womb. He also refers to the evidence of rebirth which we

¹ *yair eva tavad indriyair pratyakṣam upalabhyate tāny eva santi cāpratyakṣāṇi*. Caraka, I. 11. 7.

² *satām ca rūpānām ati-sannikarṣād ati-viprakarṣād āvaraṇāt karaṇa-daurbalyān mano 'navasthānāt samānābhīhārāt abhībhavād ati-saukṣmyāc ca pratyakṣānupalabdhiḥ*. *Ibid.* 11. 8.

³ *śaṃsveda-jānām maśakādīnām tathodbhij-jānām gaṇḍūpadādīnām cetanānām mātā-pitarau na vidyete tatas teṣām accaitanyaṃ syān mātā-pitroś cetana-kāraṇayorabhāvāt*. Cakrapāṇi on Caraka, II. 11.

⁴ On this point Cakrapāṇi gives a different interpretation in I. 11. 13.

have in the difference of the child from the parents; in the fact that, though other causes are more or less the same, two children differ in colour, voice, appearance, intelligence and luck; in the fact that some are servants, whereas others are their rich masters; in the fact that some are naturally in good health, while others are in bad, or are different in the length of life; from the fact that infants know how to cry, suck, smile or fear without any previous instruction or experience; that with the same kind of efforts two persons reap two different kinds of results; that some are naturally adepts in certain subjects and dull in others; and that there are at least some who remember their past lives; for from these facts the only hypothesis that can be made is that these differences are due to the *karma* of one's past life, otherwise called *daiva*, and that the fruits of the good and bad deeds of this life will be reaped in another. It has also been pointed out in a previous section that a child does not owe his or her intellectual parts to the father or to the mother. These gifts belong to the soul of the child, and there is therefore no reason to suppose that the son of an intellectually deficient person will on that account be necessarily dull.

Caraka further urges that the truth of rebirth can be demonstrated by all possible proofs. He first refers to the verdict of the Vedas and of the opinions of philosophers, which are written for the good of the people and are in conformity with the views of the wise and the virtuous and not in opposition to the opinions of the Vedas. Such writings always recommend gifts, penances, sacrifices, truthfulness, non-injury to all living beings and sex-continence as leading to heavenly happiness and to liberation (*mokṣa*). The sages say that liberation, or the cessation of rebirth, is only for those who have completely purged off all mental and bodily defects. This implies that these sages accepted the theory of rebirth as true; and there have been other sages who also have distinctly announced the truth of rebirth. Apart from the testimony of the Vedas and of the sages, even perception (*pratyakṣa*) also proves the truth of rebirth. Thus it is seen that children are often very different from their parents, and even from the same parents the children born are often very different in colour, voice, frame of body, mental disposition, intelligence and luck, as described above. The natural inference to be based on these data directly experienced is that no one can avoid the effects of the

deeds he has performed, and that therefore what was performed in a past birth is indestructible and always follows a man in his present birth as his *daiva*, or *karma*, the fruits of which show in his present life. The deeds of the present birth will again accumulate fruits, which will be reaped in the next birth. From the present fruits of pleasurable or painful experiences their past seeds as past *karma* are inferred, and from the present deeds as seeds their future effects as pleasurable or painful experiences in another birth are also inferred. Apart from this inference other reasons also lead to the same condition. Thus the living foetus is produced by the combination of the six elements, to which connection with the self from the other world is indispensable; so also fruits can only be reaped when the actions have been performed and not if they are not performed—there cannot be shoots without seeds. It may be noted in this connection that in no other system of Indian thought has any attempt been made to prove the theory of rebirth as has here been done. A slight attempt was made in the Nyāya system to prove the theory on the ground that the crying, sucking and the natural fear of infants implies previous experience. But Caraka in a systematic manner takes up many more points and appeals to the different logical proofs that may be adduced. Again, we find the nature of the fruits of action (*karma*) discussed in the *Vyāsa-bhāṣya* on the *Yoga-sūtra* of Patañjali. It is said in the *Yoga-sūtra*, II. 13, that the *karmas* of past life determine the particular birth of the individual in a good or bad or poor or rich family and the length of life and pleasurable or painful experiences. But that physical differences of body, colour, voice, temperament, mental disposition and special intellectual features are also due to the deeds of the past life seems to be a wholly new idea. It is, however, interesting to note that, though Caraka attributes the divergence of intelligence to deeds of the past life, yet he does not attribute thereto the weakness or the strength of the moral will.

Caraka further refers to the collective evil effects of the misdeeds of people living in a particular locality, which may often lead to the outbreak of epidemics. Speaking of the outbreak of epidemic diseases, he says that they are due to the pollution of air and water, and to country and climatic revolutions. The pollution of air consists in its being unnatural for the season, dull and motionless, too violent, too dry, too cold, too warm, stormy, of the nature of whirlwind, too humid, dusty, smoky, impure or of

bad smell. The pollution of water consists in its being of unnatural colour, bad smell, bad taste, containing impurities (when devoid of its natural qualities), which are often avoided by water birds, and being unpleasant, and having its sources largely dried up. The pollution of a particular locality occurs when it is infested with lizards, wild animals, mosquitoes, flies, insects, mice, owls, predatory birds or jackals, or when it is full of wild creepers, grass, etc., or when there is a failure of crops, the air smoky, etc. The pollution of time consists in the happening of unnatural climatic conditions. The cause of these epidemic conditions is said to be the demerit (*adharma*) due to the evil deeds of past life, the commission of which is again due to bad deeds of previous life. When the chief persons of a country, city or locality transgress the righteous course and lead the people in an unrighteous manner, the people also in their conduct continue to grow vicious and sinful. And, as a result of the misdeeds of the people of the locality, the gods forsake that place, there is no proper rain, the air, water and the country as a whole become polluted and epidemics break out. Thus the misdeeds of a people can, according to Caraka, pollute the whole region and ultimately ruin it. When a country is ruined by civil war, then that also is due to the sins of the people, who are inflated with too much greed, anger, pride and ignorance. Thus epidemics are caused by the conjoint sins of the people of a particular region. But even at the time of the outbreak of such epidemics those who have not committed such bad actions as to deserve punishment may save themselves by taking proper medicines and by leading a virtuous life. Continuing to establish his theory that all climatic and other natural evils are due to the commission of sins or *adharma*, Caraka says that in ancient times people were virtuous, of strong and stout physique and extremely long-lived, and on account of their virtuous ways of living there were no climatic disturbances, no famines, no failure of crops, no drought and no pollutions leading to epidemics and diseases. But at the close of the *satya-yuga*, through over-eating some rich men became too fat, and hence they became easily tired, and hence became lazy, and on account of laziness they acquired the storing habit (*sañcaya*), and, through that, the tendency to receive things from others (*parigraha*), and, through that, greed (*lobha*). In the next, Tretā, age, from greed there arose malice, from malice lying, from lying desire, anger, conceit, antipathy, cruelty,

violence (*abhighāta*), fear, sorrow and anxiety. Thus in the Tretā age *dharma* diminished by a quarter, and so the earthly production of harvest, etc. also diminished by a quarter, and the bodies of living beings lost their vitality accordingly; their length of life diminished, and diseases began to grow. So in the Dvāpara age there was a further diminution of the quantities of earthly productions and a further weakening of human constitution and shortening of the length of life.

It may be remembered that in Suśruta, III. 1, it is said that many persons of the medical school of thought had conceived this world to have come into being either through time (*kāla*), in the natural process by a blind destiny (*niyati*), or through a mere nature (*svabhāva*), accidental concourse of things (*yadycchā*), or through evolution (*pariṇāma*) by the will of God; and they called each of these alternatives the *prakṛti*, or the origin of the world¹. But the notion of the Sāṃkhya *prakṛti* holds within it all these concepts, and it is therefore more appropriate to admit one *prakṛti* as the evolving cause of the world. Gayī, in interpreting this, holds that *prakṛti* is to be regarded as the evolving material cause, whereas time, natural process, etc. are to be regarded as instrumental causes for the world-manifestation. According to Suśruta the selves (*kṣetra-jñā*) are not in the medical school regarded as all-pervasive (*a-sarva-gata*), as they are in the Sāṃkhya system of thought. These selves, on account of their virtues or vices, transmigrate from one life to another as men or as different animals; for, though not all-pervasive, they are eternal and are not destroyed by death. The selves are not to be regarded as self-revealing, as in Sāṃkhya or the Vedānta; but they can be inferred, as the substance or entity to which the feelings of pleasure and pain belong, and they are always endowed with consciousness, though they may not themselves be regarded as of the nature of pure consciousness. They are *cetanāvantah* (endowed with con-

¹ The primary use of *prakṛti* may have been due to the idea of an enquiry regarding the source and origin of the world. *Prakṛti* literally means "source" or "origin." So the term was probably used in reference to other speculations regarding the origin of the world before it was technically applied as a Sāṃkhya term. The ideas of *svabhāva*, *kāla*, etc. seem to have been combined to form the technical Sāṃkhya concept of *prakṛti*, and two schools of Sāṃkhya, the Kapila and the Patañjali schools, arose in connection with the dispute as to the starting of the evolution of *prakṛti* accidentally (*yadycchā*) or by the will of God. The idea of *prakṛti* was reached by combining all the alternative sources of world-manifestation that were current before, and so they are all conserved in the notion of *prakṛti*.

sciousness) and not *cit-svarūpāh* (of the nature of consciousness). They are extremely subtle or fine (*parama-sūkṣma*), and this epithet is explained by Ḍalhaṇa as meaning that the selves are as small as atoms. But, being always endowed with consciousness, they can also through self-perception (*pratyakṣa*) be perceived as existing. The transmigration of these selves is regulated by the merit and demerit of their deeds. Ḍalhaṇa says that through excessive sins they are born as animals, through an admixture of virtues and sins they are born as men, and through a preponderance of virtues they are born as gods. But according to Caraka not only is the nature of transmigration controlled by the good or bad deeds of a man, but even the productivity of nature, its purity or pollution; and the thousand and one things in which nature is helpful or harmful to men are determined by good and bad deeds (*dharma* and *adharma*). *Dharma* and *adharma* are therefore regarded as the most important factors in determining most of the human conditions of life and world-conditions of environment. Such a view is not opposed to the Sāṃkhya theory of world-creation; for there also it is held that the evolution of *prakṛti* is determined by the good or bad deeds of the selves; but, though implied, yet in no Sāṃkhya work is such a clear and specific determination of world-conditions and world-evolution through the merit and demerit of human beings to be found. Freedom of human will is almost wholly admitted by Caraka, and, where the fruits of previous actions are not of a confirmed character, they can be averted or improved by our efforts. Our efforts thus have on the one hand a cosmical or universal effect, as determining the conditions of the development of the material world, and on the other hand they determine the fate of the individual. The fruits of our actions determine our birth, our experiences and many intellectual gifts; but they do not determine the nature of our will or affect its strength of application in particular directions.

Springs of action in the Caraka-saṃhitā.

The chief feature of Caraka's springs of action consists in the fact that he considers three primary desires as the motive causes of all our actions. These are, as has already been said, the desire for life, the desire for riches and the desire for future life. In this Caraka seems to have a view uniquely different from that of most

of the systems of philosophy, which refer to a number of emotions as the root causes prompting us to action. Thus the Vaiśeṣika regards attraction to pleasure and aversion to pain as the cause of all our actions. Pleasure is defined as being a sort of feeling which is approved and welcomed and towards which an attraction is naturally felt. Pleasures, therefore, when they arise, must always be felt, and there cannot be anything like unfelt pleasures. Apart from sensory pleasures, Śrīdhara in his *Nyāya-kandalī* discusses the existence of other kinds of pleasure, due to the remembering of past things, or to calmness and contentedness of mind or self-knowledge. Pleasures are, however, regarded as the fruits of meritorious deeds (*dharma*) performed before. Pain, the reverse of pleasure, may be defined as an experience from which we are repelled and which is the result of past misdeeds. Desire, as the wish to have what is unattained (*aprāpta-prārthanā*), may be either for the self (*svārtha*) or for others (*parārtha*). Such desires may be prompted by any of the following: longing for happiness in heaven or on earth (*kāma*), appetites (*abhilāṣa*), longing for the continuation and recurrence of the enjoyment of pleasurable objects, compassion for others (*karuṇā*), disinclination to worldly enjoyment (*vairāgya*), intention of deceiving others (*upadhā*), subconscious motives (*bhāva*). Praśastapāda, however, distinguishes between desires for enjoyment and desires for work. But he does not include the positive Buddhist virtues of friendship (*maitrī*) and a feeling of happiness in the happiness of others (*mudītā*), and he is content with only the negative virtue of compassion (*karuṇā*). He also counts anger, malice, suppressed revengefulness (*manyu*), jealousy of the good qualities of others (*akṣamā*), and envy arising from a sense of one's inferiority (*amarṣa*). But, in spite of this elaborate classification, Praśastapāda makes in reality two broad divisions, namely, desires arising from attachment to pleasures, and those from aversion to pain. Pain is as much a positive feeling as pleasure and cannot be regarded as mere negation of pleasure. Though Praśastapāda knows that there is such a thing as desire for work, yet he does not give it any prominent consideration, and the net result of his classification of the springs of action is that he thinks that all desires are prompted by attachment to feelings of pleasure and antipathy to pain. Feelings, therefore, are to be regarded here as fundamentally determining all desires and through them all actions.

The Naiyāyikas think that attachment and antipathy can be

traced to a more fundamental root, viz. ignorance or delusion (*moha*). Thus Vātsyāyana, by tracing attachment or antipathy to ignorance, tends to intellectualize the psychological basis of Praśastapāda. For *moha* would mean want of knowledge, and, if attachment and antipathy be due to want of knowledge, then one can no longer say that feelings ultimately determine our actions, as it is the absence of right knowledge that is found to be ultimately the determinant of the rise of all feelings and emotions. Jayanta, however, in his *Nyāya-mañjarī*, counts ignorance (*moha*), attachment (*rāga*) and antipathy (*dveṣa*) as being three parallel defects (*doṣa*) which prompt our efforts¹. Under attachment he counts sex-inclination (*kāma*), disinclination to part with that which would not diminish by sharing with others (*matsara*), jealousy (*spṛhā*), inclination towards birth again and again (*trṣṇā*) and inclination towards taking forbidden things (*lobha*). Under *dveṣa* he counts emotional outbursts of anger with burning bodily conditions, envy (*īrṣyā*), jealousy at the good qualities of others (*asūyā*), injuring others (*droha*) and concealed malice (*manyu*). Under ignorance he counts false knowledge (*mithyā-jñāna*), perplexity due to indecision (*vicikitsā*), sense of false superiority (*mada*) and mistakes of judgment (*pramāda*). But he adds that of the three defects, *rāga*, *dveṣa* and *moha*, *moha* is the worst, since the other two arise through it. For it is only the ignorant who are under the sway of attachment and antipathy. To the objection that in that case *moha* ought not to be counted as a defect in itself, but as the source of the other two defects, Jayanta replies that, though it is a source of the other two defects, it of itself also leads people to action and should therefore be counted as a defect in itself. It is no doubt true that all defects are due to false knowledge and are removed by right knowledge; yet it would be wrong to count the defects as being of only one kind of false knowledge (*mithyā-jñāna*); for the three defects are psychologically felt to have three distinctive characteristics. Jayanta, while admitting that the feelings of attachment or antipathy are due to ignorance, considers them to be psychologically so important as to be regarded as independent springs of action. Thus, while he was in nominal agreement with Vātsyāyana in regarding attachment and antipathy as being due to *moha*, he felt their independent

¹ *Teṣāṃ doṣāṇāṃ trayo rāśayo bhavanti rāgo dveṣo moha iti. Nyāya-mañjarī*, p. 500.

psychological importance and counted them as parallel defects prompting our efforts.

Patañjali divides all our actions into two classes, vicious (*kliṣṭa*) and virtuous (*akliṣṭa*). The virtuous actions are prompted by our natural propensity towards emancipation, while the vicious ones are prompted by ignorance (*avidyā*), egoism (*asmitā*), attachment (*rāga*), antipathy (*dveṣa*) and the will to live (*abhiniveśa*). The latter four, though of the nature of feeling, are yet regarded as being only manifestations of the growth and development of ignorance (*avidyā*). It is a characteristic peculiarity of the Sāṃkhya philosophy that thoughts and feelings are not regarded there as being intrinsically different; for the *guṇas* form the materials of both thoughts and feelings. What is thought in one aspect is feeling in another. It was on this account that false knowledge could be considered to have developed into the feelings of egoism, attachment and antipathy, and could be regarded as being of the same stuff as false knowledge. In the Nyāya psychology, thought and feelings being considered intrinsically different, a difficulty was felt in reconciling the fact that, while ignorance could be regarded as being the cause of the feelings of attachment and antipathy, the latter could not be regarded as being identical with ignorance (*moha*). Jayanta, therefore, while he traced *rāga* and *dveṣa* to *moha*, ontologically considered them as parallel factors determining our actions psychologically. In the Sāṃkhya-Yoga metaphysics this difficulty could be obviated; for that school did not consider feelings to be different from thoughts, since the thoughts are themselves made up of feeling-stuff; hence even false knowledge (*avidyā*) need not be regarded as being wholly an intellectual element, since it is itself the product of the feeling-stuff—the *guṇas*.

It is needless to refer in detail to the theories of the springs of action in other systems of Indian thought. From what has already been said it would appear that most systems of Indian Philosophy consider false knowledge to be at the root of all our worldly activities through the mediation of feelings of attachment, antipathy and self-love. There is an inherent pessimism in most systems of Indian thought, which consider that normally we are all under the evil influence of false knowledge and are all gliding on the downward path of sins and afflictions. They also consider that all attachments lead to bondage and slavery to passions, and thereby lead us away from the path of liberation. Actions are

judged as good or bad according as they lead to liberation or bondage; their efficacy is in securing the transcendental realization of the highest truth and the cessation of rebirth, or obscuration of the nature of reality and exposure to the miseries of rebirth.

But Caraka gives us a scheme of life in which he traces the springs of all our actions to the three fundamental motives or biological instincts of life-preservation, worldly desire of acquiring riches for enjoyment, and other worldly aspirations of self-realization. According to him these three fundamental desires sum up all springs of action. On this view will appears to be more fundamental than feeling or knowledge. Caraka does not seem to begin from the old and stereotyped idea that false knowledge is the starting-point of the world. His is a scheme of a well-balanced life which is guided by the harmonious play of these three fundamental desires and directed by perfect wisdom and unerring judgment. Evil and mischief creep in through errors of judgment, by which the harmony of these desires is broken. All kinds of misdeeds are traced, not to feelings of attachment or antipathy, but to errors of judgment or foolishness (*prajñāparādha*). This *prajñāparādha* may be compared to the *moha* or *avidyā* of the Nyāya and Yoga. But, while the Nyāya and Yoga seem to refer to this *moha* or *avidyā* as a fundamental defect inherent in our mental constitution and determining its activities as a formative element, Caraka's *prajñāparādha* is not made to occupy any metaphysical status, but expresses itself only in the individual lapses of judgment.

Caraka, however, did not dare to come into conflict with the prevailing ethical and philosophical opinions of his time, and we find that in *Śārīra*, I he largely accepts the traditional views. He says there that it is the phenomenal self (*bhūtātman* or *saṃyoga-puruṣa*) that feels pleasure and pain, and in connection with the duty of a physician to remove all physical sufferings produced by diseases he says that the ultimate healing of all pain consists in the permanent *naiṣṭhikī* (removal) of pain by the removal of grasping (*upadhā*)¹. He says there that grasping (*upadhā*) is itself sorrowful and the cause of all sorrows. All sorrows can be removed by the removal of all grasping tendencies. Just as a silk-worm draws out its cocoon thread to its own destruction, so does

¹ Cakrapāṇi interprets *upadhā* as desire (*tṛṣṇā*); but it seems to me that it would have been more correct to interpret it as the Buddhist *upādāna*, or grasping. Cakrapāṇi on Caraka, IV. 1. 93.

the miserable man of ignorance draw desires and longings from the objects of sense. He is wise indeed who considers all objects as fire and withdraws himself from them. With the cessation of all actions (*anārambha*) and dissociation from sense-objects there is no more fear of being afflicted with sorrows. Sorrows, again, are said to proceed from four causes, namely, the wrong notion of non-eternal things (e.g. sense-objects) as eternal (*buddhi-vibhramśa*), the want of the power of controlling the mind from undesirable courses (*dhṛti-vibhramśa*), forgetfulness of the nature of right knowledge (*smṛti-vibhramśa*) and the adoption of unhygienic courses (*asātmya-arthāgama*). *Prajñāparādha* is defined here as a wrong action that is done through the confusion of intelligence and want of self-control and right knowledge (*dhī-dhṛti-smṛti-vibhramśa*), and this is supposed to rouse up all maladies and defects (*sarva-doṣa-prakopana*). Some of the offences that may be counted under *prajñāparādha* are as follows: to set things in motion, to try to stop moving objects, to let the proper time for doing things pass by, to begin an action in the wrong manner, not to behave in the accustomed manner, not to behave modestly and politely, to insult respected persons, to go about in wrong places or at wrong times, to take objects which are known to be harmful, not to abide by the proper course of conduct described in the *Caraka-saṃhitā*, I. 1. 6; the passions of jealousy, vanity, fear, anger, greed, ignorance, egoism, errors, all actions prompted by these and whatever else that is prompted by ignorance (*moha*) and self-ostentation (*rajas*). *Prajñāparādha* is further defined as error of judgment (*viśama-vijñāna*) and as wrong enterprise (*viśama-pravartanā*), proceeding out of wrong knowledge or erroneous judgment. It will thus appear that it is wise to take *prajñāparādha* in the wider sense of error of judgment or misapplied intelligence, regarding it as the cause of all kinds of moral depravity, unhealthy and unhygienic habits and accidental injuries of all kinds. As Caraka admitted the existence of the self and of rebirth and regarded moral merit (*dharma*) and demerit (*adharma*) as the causes of all human enjoyment and sufferings, and of the productivity or unproductivity of the ground, and the hygienic or unhygienic conditions of water, air and the seasons, he had to include within *prajñāparādha* the causes that led to vices and sins. The causes of all sorrows are, firstly, wrong consideration of the non-eternal as eternal and of the injurious as good; secondly, want of self-control; and, thirdly, the defect of

memory (*smṛti-bhramśa*), through which the right knowledge and right experience of the past cannot be brought into effect. Thus, though in a sense Caraka compromises with the traditional schools of philosophy in including philosophical ignorance or misconception within *prajñāparādha*, and though he thinks that philosophical ignorance produces sins, yet he takes *prajñāparādha* in the very wide sense of error of judgment, leading to all kinds of transgression of laws of health and laws of society and custom, risky adventures, and all other indiscreet and improper actions. *Prajñāparādha*, therefore, though it includes the philosophical *moha* of the traditional school of philosophy, is yet something very much more, and is to be taken in the wider sense of error of judgment. Caraka, no doubt, admits jealousy, vanity, anger, greed, ignorance (*moha*), etc., as producing improper action, but he admits many other causes as well. But the one supreme cause of all these subsidiary causes is *prajñāparādha*, or error of judgment, taken in its wide sense. It will not, therefore, be wrong to suppose that, according to Caraka, all proper actions are undertaken through the prompting of three fundamental desires, the desire for life, the desire for wealth and enjoyment, and the desire for spiritual good. And all improper actions are due to improper understanding, confusion of thought, and misdirected intelligence (*prajñāparādha*). The three fundamental desires, unassociated with any error of judgment or lack of understanding, may thus be regarded as the root cause of all proper actions. There is, therefore, nothing wrong in giving full play to the functioning of the three fundamental desires, so long as there is no misdirected understanding and confusion to turn them into the wrong path. Caraka does not seem to agree with other systems of philosophy in holding the feelings of attachment and antipathy to be the springs of all actions. Actions are prompted by the normal active tendencies of the three fundamental desires, and they become sinful when our energies are wrongly directed through lack of understanding. Though Caraka had to compromise with the acknowledged view of the systems of Indian Philosophy that the cessation of all sorrows can be only through the cessation of all actions, yet it seems clear that the course of conduct that he approves consists in the normal exercise of the three fundamental desires, free from the commission of any errors of judgment (*prajñāparādha*). Thus Caraka does not preach the ideal of leaving off desires,

attachments, feelings and actions of all kinds, nor does he advocate the *Gitā* ideal of the performance of duties without attachment. His is the ideal of living one's life in a manner that is most conducive to health, long life, and proper enjoyment. Our only care should be that we do not commit any mistake in eating, drinking and other actions of life which may directly or indirectly (through the production of sins) produce diseases and sufferings or jeopardize our life and enjoyment in any way. This unique character of Caraka's ethical position is very clearly proved by the code of conduct, virtues and methods of leading a good life elaborated by Caraka. He no doubt shows a lip-sympathy with the ideal of giving up all actions (*sannyāsa*); but his real sympathies seem to be with the normal scheme of life, involving normal enjoyments and fruition of desires. A normal life, according to Caraka, ought also to be a virtuous life, as vices and sins are the sources of all sorrows, sufferings and diseases in this life and the next.

Good Life in Caraka.

It is well worth pointing out at the outset that "good life" in Caraka means not only an ethically virtuous life, but a life which is free from diseases, and which is so led that it attains its normal length. Moral life thus means a life that is free from the defect of *prajñāparādha*. It means wise and prudent life; for it is only the want of wisdom and prudence that is the cause of all physical, social, physiological, moral and spiritual mischiefs. To be a good man, it is not enough that one should practise the ethical virtues: a man should practise the physical, physiological and social virtues as well. He must try to live a healthy and long life, free from diseases and sufferings and free from reproaches of any kind. It is important to note that Caraka does not believe in the forced separation of the physical life from the mental and the moral. Physical diseases are to be cured by medicines, while mental diseases are to be cured by right and proper knowledge of things, self-control and self-concentration. The close interconnection between body and mind was well known from early times, and even the *Mahā-bhārata* (XII. 16) says that out of the body arise the mental diseases and out of the mind arise the bodily diseases. Caraka also thinks that a physician should try to cure not only the bodily diseases but also the mental diseases.

The *Mahā-bhārata* further says in the same chapter that there are three elements in the body, viz. heat, cold and air; when they are in a state of equipoise, the body is healthy, and when any one of them predominates, there is disease. The mind is constituted of *sattva*, *rajas* and *tamas*; when these are in a state of equipoise, the mind is in proper order, and when any one of them predominates, it becomes diseased. Caraka, however, thinks that it is only when *rajas* and *tamas* predominate that the mind gets diseased. But, whatever these differences may be, it is evident that, when Caraka speaks of life, he includes both mind and body, and it is the welfare of both that is the chief concern of the physician. Caraka's prohibitions and injunctions are therefore based on this twofold good of body and mind that ought to be aimed at.

After speaking of the harmfulness of attempting to control some of the bodily excretory movements, he recommends the necessity of attempting to control certain other mental and bodily tendencies. Thus he forbids all persons to indulge rashly in their unthinking tendencies to commit mistakes of mind, speech and action. A man should also control his passion of greed, and his feelings of grief, fear, anger, vanity, shamelessness, envy, attachment and solicitude. He should not speak harshly or talk too much or use stinging words or lie or speak irrelevantly or untimely. He should not injure others by his body, indulge in unrestricted sex-gratifications, or steal. Injury to living beings (*hiṃsā*) is supposed to produce sins and thereby affects one's longevity. Non-injury is thus described as being the best way of increasing life (*ahimsā prāṇa-vardhanānām*). The man who follows the above right course of life is called virtuous, and he enjoys wealth, satisfies his desires, abides by the laws (*dharma*) of a good life, and is happy. Along with the proper and well-controlled exercise of the moral functions Caraka advises people to take to well-controlled bodily exercises (*vyāyāma*). When moderately performed, they give lightness, power of doing work, steadiness (*sthāirya*) and fortitude (*duḥkha-sahiṣṇutā*). Avoidance of unwise courses and non-commission of errors of judgment (*tyāgaḥ prajñāparādhānām*), sense-control, remembrance of past experiences (*smṛti*), due knowledge of one's own powers, due regard to proper time and place and good conduct prevent the inrush of mental and bodily diseases; for it is these which are the essentials of a good life, and a wise man always does what is good for himself. Caraka further advises

that one should not keep company with those who are sinful in character, speech and mind, or with those who are quarrelsome, greedy, jealous, crooked, light-minded or fond of speaking ill of others or cruel or vicious, or with those who associate with one's enemies. But one should always associate with those who are wise, learned, aged, with men of character, firmness, self-concentration, ready experience, with those who know the nature of things and are full of equanimity, and those who direct us in the right path, are good to all beings, possess a settled character and are peaceful and self-contented. In these ways a man should try, on the one hand, to secure himself against the inrush of mental troubles which upset one's moral life and, on the other hand, properly to attend to his bodily welfare by taking the proper kind of food at the proper time and attending to other details of physical well-being¹.

The rules of good conduct (*sad-vṛtta*) are described in detail by Caraka as follows²:

A man should respect gods, cows, Brāhmaṇas, preceptors (*guru*), elderly persons, saints and teachers (*ācārya*), hold auspicious amulets, bathe twice and clean all the pores of the body and feet and cut his hair, beard and nails three times in a fortnight. He should be well-dressed, should always oil his head, ears, nose and feet, comb his hair, scent himself and smoke (*dhūma-pā*). He should recognize others with a pleasant face, help others in difficulties, perform sacrifices, make gifts, talk delightfully, nicely and for the good of others, be self-controlled (*vaśyātman*) and of a virtuous temperament. He should envy the cause of another's prosperity in the form of his good character and other causes of his personal efficiency (*hetāv irṣyu*), but should not be jealous of the fruits of these in the form of a man's prosperity or wealth (*phale nerṣyu*). He should be of firm decision, fearless, susceptible to the feeling of shame, intelligent, energetic, skilful, of a forgiving nature, virtuous and a believer (*āstika*). He should use umbrellas, sticks, turbans and shoes, and should at the time of walking look four cubits of ground in front of him; he should avoid going to impure, unclean and dirty places; he should try to appease those who are angry, soothe the fears of those who have become afraid, help the poor, keep his promises, bear harsh words, be self-controlled, remove the causes of attachments and antipathy (*rāga-dveṣa*) and behave as the friend of all living beings. Again,

¹ See Caraka-saṃhitā, I. 7.

² Ibid. I. 8.

one should not tell lies, or take that which belongs to others, should not commit adultery, or be jealous at other people's wealth, should not be given to creating enemies, should not commit sins, or do wrong even to a sinner, or speak about the defects or secrets of others; should not keep company with the sinful or with those who are the king's enemies or with madmen, the mean, wicked, out-cast, or those who make abortions. One should not climb into bad vehicles, lie on hard beds, or beds without sheets or pillows, should not climb steep mountain sides or trees or bathe in fast flowing rivers with strong currents; one should not go about places where there are great fires raging, or laugh loudly or yawn or laugh without covering the face, or pick one's teeth. Again, one should not break the laws ordained by a large number of persons, or other laws in general; should not go about at night in improper places, or make friends with youngsters, old or greedy people, fools, sinners or eunuchs; one should not be fond of wines, gambling, prostitutes, divulge secrets, insult others, be proud or boastful or speak ill of old people, teachers, kings or assemblages of persons, or talk too much; one should not turn out relations, friends or those who know one's secrets. One should attend at the proper time to every action, should not undertake to do anything without properly examining it, or be too procrastinating, or be under the influence of anger and pleasure; one should not be very down-hearted in afflictions, or too elated in success, or too disappointed in failures; should practice sex-continence, try to be wise, make gifts, be friendly and compassionate to all and always contented. It is needless to continue to enumerate all the qualities, which would commonly be included within the requisites of a good life. In this Caraka seems to cut an absolutely new way, and in no other branch of Indian thought can we note such an assemblage of good qualities of all the different kinds necessary not only for a virtuous life, but for the healthy and successful life of a good citizen.

It has already been pointed out that error of judgment or delusion, in whichever sphere it may be exercised, is the root of all mischiefs and all troubles. And Caraka demonstrates this by enumerating in his schedule of good conduct proper behaviour in all the different concerns and spheres of life. To Caraka the conception of life is not as moral or immoral, but as good (*hita*) and bad (*ahita*). It is true, no doubt, that here and there stray statements are

found in the *Caraka-saṃhitā* which regard the cessation of all sorrows as the ultimate end of life; but it is obvious that Caraka's main approach to the subject shows very clearly that, though moral virtues are always very highly appreciated, yet the non-moral virtues, such as the proper taking care of the well-being of one's own body and the observance of social rules and forms of etiquette or normal prudent behaviour, are regarded as being equally necessary for the maintenance of a good life. Transgressions and sins are the causes of mental worries, troubles and also of many mental and physical diseases, and one ought therefore to take proper care that they may not enter into one's life; and it is said that the diseases produced by strong sinful acts cannot be cured by the ordinary means of the application of medicines and the like, until with the proper period of their sufferings they subside of themselves. But sins and transgressions are not the only causes of our desires, accidents and other domestic, social and political troubles. It is through our imprudent behaviour and conduct, which are due to error of judgment (*prajñāparādha*), as our other sins and immoral acts are, that all our bodily and mental troubles happen to us. A good life, which is the ideal of every person, is a life of peace, contentment and happiness, free from desires and troubles of all kinds. It is a life of prudence and well-balanced judgment, where every action is done with due consideration to its future consequences and where all that may lead to troubles and difficulties is carefully avoided. It is only such a life that can claim to be good and can be regarded as ideal. A merely moral or virtuous life is not our ideal, which must be good in every respect. Any transgression, be it of the rules of hygiene, rules of polite society, rules of good citizenship, or any deviation from the path which prudence or good judgment would recommend to be wise, may disturb the peace of life. A scheme of good life thus means a wise life, and observance of morality is but one of the many ways in which wisdom can be shown.

Āyur-veda, or the Science of Life, deals primarily with the ways in which a life may be good (*hita*), bad (*ahita*), happy (*sukha*) or unhappy (*asukha*). A happy life is described as a life undisturbed by bodily and mental diseases, full of youth and proper strength, vitality, energy, power of launching new efforts, endowed with wisdom, knowledge and efficient sense-organs—a life which is full of all kinds of desirable enjoyments and in which the ventures that

are undertaken are all successful. The opposite of this is what may be called an unhappy life. The happy life thus represents a life so far as it is happy and enjoyable and so far as it satisfies us. The good life is the life as it is moulded and developed by our right conduct. In a way it is the good life that makes a happy life. They who seek a good life should desist from the sins of taking other people's possessions and be truthful and self-controlled. They should perform every action with proper observation, care and judgment, and should not be hasty or make mistakes by their carelessness; they should attend to the attainment of virtue, wealth and the enjoyments of life without giving undue emphasis to any of them; they should respect those who are revered, should be learned, wise and of a peaceful mind and control their tendencies to attachment, anger, jealousy and false pride; they should always make gifts; they should lead a life of rigour (*tapas*) and attain wisdom, self-knowledge or philosophy (*adhyātma-vidāḥ*), and behave in such a way that the interests of both the present life on earth and the life hereafter may be attended to with care and judgment, always remembering the lessons of past experience¹. It is now clear that the ideal of good life in Caraka is not the same as that of the different systems of philosophy which are technically called the Science of Liberation (*mokṣa-śāstra*). The fundamental idea of a good life is that a life should be so regulated that the body and mind may be free from diseases, that it should not run into unnecessary risks of danger through carelessness, that it should be virtuous, pure and moral; that it should be a prudent and wise life which abides by the laws of polite society and of good and loyal citizens, manifesting keen alertness in thought and execution and tending constantly to its own good—good for all interests of life, body, mind and spirit.

Āyur-veda Literature.

The systematic development of Indian medicine proceeded primarily on two principal lines, viz. one that of Suśruta and the other that of Caraka. It is said in Suśruta's great work, *Suśruta-saṃhitā*, that Brahmā originally composed the Āyur-veda in one hundred verses, divided into one thousand chapters, even before he had created human beings, and that later on, having regard to the shortness of human life and the poverty of the human intellect,

¹ *Caraka-saṃhitā*, 1. 30. 22.

he divided it into the eight parts, *Śalya*, *Śālākya*, etc., alluded to in a previous section. But this seems to be largely mythical. It is further said in the same connection in the *Suśruta-saṃhitā*, I. 1 that the sages Aupadhenava, Vaitaraṇa, Aurabhra, Pauṣkalāvata, Karavīrya, Gopurarakṣita, Suśruta and others approached Dhanvantari or Divodāsa, king of Kāśī, for medical instruction. Suśruta's work is therefore called a work of the Dhanvantari school. Though it was revised at a later date by Nāgārjuna, yet Suśruta himself is an old writer. A study of the Jātakas shows that the great physician Ātreya, a teacher of Jivaka, lived in Taxila shortly before Buddha¹. It has been said in a preceding section that in the enumeration of bones Suśruta shows a knowledge of Ātreya's system of osteology. Hoernle has further shown in sections 42, 56, 60 and 61 of his "Osteology," that the *Śatapatha-Brāhmaṇa*, which is at least as old as the sixth century B.C., shows an acquaintance with Suśruta's views concerning the counting of bones. But, since Ātreya could not have lived earlier than the sixth century B.C., and since the *Śatapatha-Brāhmaṇa* of about the sixth century B.C. shows an acquaintance with Suśruta's views, Hoernle conjectures that Suśruta must have been contemporary with Ātreya's pupil, Agniveśa². But, admitting Hoernle's main contentions to be true, it may be pointed out that by the term *veda-vādinah* in *Suśruta-saṃhitā*, III. 5. 18 Suśruta may have referred to authorities earlier than Ātreya, from whom Ātreya also may have drawn his materials. On this view, then, the lower limit of Suśruta's death is fixed as the sixth or seventh century B.C., this being the date of the *Śatapatha-Brāhmaṇa*, while practically nothing can be said about the upper limit.

But it is almost certain that the work which now passes by the name of *Suśruta-saṃhitā* is not identically the same work that was composed by this elder Suśruta (*vrddha Suśruta*). Ḍalhaṇa, who lived probably in the eleventh or the twelfth century, says in his *Nibandha-saṃgraha* that Nāgārjuna was the reviser of the *Suśruta-saṃhitā*³; and the *Suśruta-saṃhitā* itself contains a supplementary part after the *Kalpa-sthāna*, called the *Uttara-tantra* (later work). In the edition of Suśruta by P. Muralidhar, of Pharuknagar, there is a verse at the beginning, which says that that which was

³ *Pratisaṃskartāpītha Nāgārjuna eva*. Ḍalhaṇa's *Nibandha-saṃgraha*, I. 1. 1.

so well taught for the good of the people by the great sage Dhanvantari to the good pupil Suśruta became famous all over the world as *Suśruta-saṃhitā*, and is regarded as the best and the chief of the threefold Āyur-veda literature, and that it was strung together in the form of a book by no other person than Nāgārjuna¹. Cakra-pāṇi also in his *Bhānumatī* refers to a reviser (*pratisaṃskartṛ*); but he does not mention his name. Gayadāsa's *pañjikā* on Suśruta, *Suśruta-candrikā* or *Nyāya-candrikā*, has an observation on the eighth verse of the third chapter of the *Nidāna-sthāna*, in which he gives a different reading by Nāgārjuna, which is the same as the present reading of Suśruta in the corresponding passage². Again, Bhaṭṭa Narahari in his *Ṭippaṇī* on the *Astāṅga-hṛdaya-saṃhitā*, called *Vāgbhaṭa-khaṇḍana-maṇḍana*, in discussing *mūḍha-garbha-nidāna*, annotates on the reading *vasti-dvāre vipannāyāh*, which Vāgbhaṭa changes in borrowing from Suśruta's *vastimāra-vipannāyāh* (II. 8. 14), and says that *vasti-dvāre* is the reading of Nāgārjuna³. That Nāgārjuna had the habit of making supplements to his revisions of works is further testified by the fact that a work called *Yoga-śataka*, attributed to Nāgārjuna, had also a supplementary chapter, called *Uttara-tantra*, in addition to its other chapters, *Kāya-cikitsā*, *Śālākya-tantra*, *Śalya-tantra*, *Viśa-tantra*, *Bhūtavidyā*, *Kaumāra-tantra*, *Rasāyana-tantra* and *Vājikaraṇa-tantra*. This makes it abundantly clear that what passes as the *Suśruta-saṃhitā* was either entirely strung together from the traditional teachings of Suśruta or entirely revised and enlarged by Nāgārjuna on the basis of a nuclear work of Suśruta which was available to Nāgārjuna. But was Nāgārjuna the only person who revised the *Suśruta-saṃhitā*? Ḍalhaṇa's statement that it was Nāgārjuna who was the reviser of the work (*pratisaṃskartāpiha Nāgārjuna eva*) is attested by the verse of the Muralidhar edition (*Nāgārjunenaiva grathitā*); but the use of the emphatic word *eva* in both suggests that there may have been other editions or revisions of Suśruta by other writers as well. The hopelessly muddled condition of the readings,

chapter-divisions and textual arrangements in the chapters in different editions of the *Suśruta-saṃhitā* is such that there can be no doubt that from time to time many hands were in operation on this great work. Nor it is proper to think that the work of revising Suśruta was limited to a pre-Cakrapāṇi period. It is possible to point out at least one case in which it can be almost definitely proved that a new addition was made to the *Suśruta-saṃhitā* after Cakrapāṇi, or the text of Suśruta known to Ḍalhaṇa was not known to Cakrapāṇi. Thus, in dealing with the use of catheters and the processes of introducing medicine through the anus (*vasti-kriyā*) in IV. 38, the texts of the *Suśruta-saṃhitā* commented on by Ḍalhaṇa reveal many interesting details which are untouched in the chapter on *Vasti* in the *Caraka-saṃhitā* (*Uttara-vasti*, *Siddhi-sthāna*, XII). This chapter of the *Caraka-saṃhitā* was an addition by Dṛḍhabala, who flourished in Kāśmīra or the Punjab, probably in the eighth or the ninth century. When Cakrapāṇi wrote his commentary in the eleventh century, he did not make any reference to the materials found in the *Suśruta-saṃhitā*, nor did he introduce them into his own medical compendium, which passes by the name of *Cakradatta*. Cakrapāṇi knew his *Suśruta-saṃhitā* well, as he had commented on it himself, and it is extremely unlikely that, if he had found any interesting particulars concerning *vasti-kriyā* in his text, he should not have utilized them in his commentary or in his own medical work. The inference, therefore, is almost irresistible that many interesting particulars regarding *vasti-kriyā*, absent in the texts of the *Suśruta-saṃhitā* in the ninth and eleventh centuries, were introduced into it in the twelfth century. It is difficult, however, to guess which Nāgārjuna was the reviser or editor of the *Suśruta-saṃhitā*; it is very unlikely that he was the famous Nāgārjuna of the *Mādhyamika-kārikā*, the great teacher of Śūnyavāda; for the accounts of the life of this Nāgārjuna, as known from Chinese and Tibetan sources, nowhere suggest that he revised or edited the *Suśruta-saṃhitā*. Alberuni speaks of a Nāgārjuna who was born in Dihaka, near Somanātha (Gujarat), about one hundred years before himself, i.e. about the middle of the ninth century, and who had written an excellent work on alchemy, containing the substance of the whole literature of the subject, which by Alberuni's time had become very rare. It is not improbable that this Nāgārjuna was the author of the *Kakṣapuṭa-tantra*, which is

avowedly written with materials collected from the alchemical works of various religious communities and which deals with the eightfold miraculous acquirements (*aṣṭa-siddhi*). But Vṛnda in his *Siddha-yoga* refers to a formula by Nāgārjuna which was said to have been written on a pillar in Pāṭaliputra¹. This formula is reproduced by Cakrapāṇi Datta, Vaṅgasena and by Nityanātha Siddha in his *Rasa-ratnākara*. But since Vṛnda, the earliest of these writers, flourished about the eighth or the ninth century, and since his formula was taken from an inscription, it is not improbable that this Nāgārjuna flourished a few centuries before him.

Of the commentaries on the *Suśruta-saṃhitā* the most important now current is Ḍalhaṇa's *Nibandha-saṃgraha*. Ḍalhaṇa quotes Cakrapāṇi, of A.D. 1060, and is himself quoted by Hemādri, of A.D. 1260. He therefore flourished between the eleventh and the thirteenth centuries. It has been pointed out that sufficient textual changes in the *Suśruta-saṃhitā* had occurred between Cakrapāṇi and Ḍalhaṇa's time to have taken at least about one hundred years. I am therefore inclined to think that Ḍalhaṇa lived late in the twelfth, or early in the thirteenth, century at the court of King Sahapāla Deva. Cakrapāṇi had also written a commentary on the *Suśruta-saṃhitā*, called *Bhānumatī*, the first book of which has been published by Kaviraj Gangaprasad Sen. Dr Cordier notes that there is a complete manuscript of this at Benares. Niścala Kara and Śrikanṭha Datta sometimes quote from Cakrapāṇi's commentary on the *Suśruta-saṃhitā*. Ḍalhaṇa's commentary is called *Nibandha-saṃgraha*, which means that the book is collected from a number of commentaries, and he himself says in a colophon at the end of the *Uttara-tantra* that the physician Ḍalhaṇa, son of Bharata, had written the work after consulting many other commentaries². At the beginning of his *Nibandha-saṃgraha* he refers to Jaiyyaṭa, Gayadāsa, Bhāskara's *pañjikā*, Śrīmādhava and Brahmadeva. In his work he further mentions Caraka, Hārīta, Jatukarṇa, Kāśyapa, Kṛṣṇātreya, Bhadrāśunaka, Nāgārjuna, the two Vāgbhaṭas, Videha, Hariścandra, Bhoja, Kārttika Kuṇḍa and others. Hariścandra was a commentator on the *Caraka-saṃhitā*. It is curious, however, that, though Ḍalhaṇa refers to Bhāskara and Śrīmādhava

¹ Nāgārjuna likhitā stambhe Pāṭaliputrake, v. 149.

² Nibandhān bahuśo vikṣya vaidyaḥ Śrībhāratātmanajā
uttara-sthānam akarot suspaṣṭam Ḍalhaṇo bhīṣak.

Concluding verse of Ḍalhaṇa's commentary on Suśruta's *Uttara-tantra*, chap. 66.

at the beginning of his commentary, he does not refer to them in the body of it. Hoernle, however, is disposed to identify Bhāskara and Kārttika Kuṇḍa as one person. Vijayarakṣita and Śrīkaṇṭha Datta, commentators on Mādhava's *Nidāna*, refer to Kārttika Kuṇḍa in connection with their allusions to the *Suśruta-saṃhitā*, but not to Bhāskara. A Patna inscription (E.I.I. 340, 345) says that King Bhoja had given the title of Vidyapati to Bhāskara Bhaṭṭa. Hoernle thinks that this Bhāskara was the same as Bhāskara Bhaṭṭa. Hoernle also suggests that Vṛnda Mādhava was the same as Śrīmādhava referred to by Ḍalhaṇa. Mādhava in his *Siddha-yoga* often modifies Suśruta's statements. It may be that these modifications passed as Mādhava's *Ṭippaṇa*. Since Gayadāsa and Cakrapāṇi both refer to Bhoja and do not refer to one another, it may be that Gayadāsa was a contemporary of Cakrapāṇi. Hoernle thinks that the Brahmadeva referred to by Ḍalhaṇa was Śrībrahma, the father of Maheśvara, who wrote his *Sāhasāṅka-carita* in A.D. 1111. Maheśvara refers to Hariścandra as an early ancestor of his. It is not improbable that this Hariścandra was a commentator on Caraka. The poet Maheśvara was himself also a Kavirāja, and Heramba Sena's *Gūḍha-bodhaka-saṃgraha* was largely based on Maheśvara's work. Jejjāta's commentary passed by the name of *Bṛhal-laghu-pañjikā*; Gayadāsa's commentary was called the *Suśruta-candrikā* or *Nyāya-candrikā* and Śrīmādhava or Mādhava-Kara's *Ṭippaṇa* was called *Śloka-vārttika*. Gayadāsa mentions the names of Bhoja, Suranandī and Svāmidāsa. Gayadāsa's *pañjikā* has been discovered only up to the *Nidāna-sthāna*, containing 3000 *granthas*. Among other commentators of Suśruta we hear the names of Gomin, Āṣāḍhavarman, Jinadāsa, Naradanta, Gadādhara, Bāṣpacandra, Soma, Govardhana and Praśnanidhāna.

It may not be out of place here to mention the fact that the Sāṃkhya philosophy summed up in the *Śārīra-sthāna* of Suśruta is decidedly the Sāṃkhya philosophy of Īśvarakṛṣṇa, which, as I have elsewhere pointed out, is later than the Sāṃkhya philosophy so elaborately treated in the *Caraka-saṃhitā*¹. This fact also suggests that the revision of Suśruta was executed after the composition of Īśvarakṛṣṇa's work (about A.D. 200), which agrees with the view expressed above that the revision of Suśruta was the work of Nāgārjuna, who flourished about the fourth or the fifth century A.D. But it is extremely improbable that the elaborate medical doctrines

¹ *History of Indian Philosophy*, vol. 1, pp. 313-322.

of an author who lived at so early a date as the sixth century B.C. could have remained in a dispersed condition until seven, eight or nine hundred years later. It is therefore very probable that the main basis of Suśruta's work existed in a codified and well-arranged form from very early times. The work of the editor or reviser seems to have consisted in introducing supplements, such as the *Uttara-tantra*, and other chapters on relevant occasions. It does not seem impossible that close critical and comparative study of a number of published texts of the *Suśruta-saṃhitā* and of unpublished manuscripts may enable a future student to separate the original from the supplementary parts. The task, however, is rendered difficult by the fact that additions to the *Suśruta-saṃhitā* were probably not limited to one period, as has already been pointed out above.

It is well known that Atri's medical teachings, as collected by Agniveśa in his *Agniveśa-tantra*, which existed at least as late as Cakrapāṇi, form the basis of a revised work by Caraka, who is said to have flourished during the time of Kaṇiṣka, passing by the name of *Caraka-saṃhitā*¹. It is now also well known that Caraka did not complete his task, but left it half-finished at a point in the *Cikitsā-sthāna*, seventeen chapters of which, together with the books called *Siddhi-sthāna* and *Kalpa-sthāna*, were added by Kapilabala's son, Dṛḍhabala, of the city of Pañcanada, about the ninth century A.D. The statement that Dṛḍhabala supplemented the work in the above way is found in the current texts of the *Caraka-saṃhitā*². Niścala Kara in his *Ratna-prabhā* describes him as author of the *Caraka-pariśiṣṭa*, and Cakrapāṇi, Vijayarakṣita and Aruṇadatta (A.D. 1240), whenever they have occasion to quote passages from his supplementary parts, all refer to Dṛḍhabala as the author. The city of Pañcanada was identified as the Punjab by Dr U. C. Dutt in his *Materia Medica*, which identification was accepted by Dr Cordier and referred to a supposed modern Panjpur, north of Attock in the Punjab. There are several Pañcanadas in different parts of India, and one of them is mentioned in the fifty-ninth chapter of the *Kāśi-khaṇḍa*; Gaṅgādhara in his commentary identifies this with Benares, assigning no reason for such identification. Hoernle, however, thinks that this Pañcanada is the modern village of

¹ On Caraka's being the court-physician of Kaṇiṣka see S. Levi, *Notes sur les Indo-Scythes*, in *Journal Asiatique*, pp. 444 sqq.

² *Caraka-saṃhitā*, vi. 30 and *Siddhi-sthāna*, vii. 8.

Pantzinor ("five channels" in Kashmir) and holds that Dr̥ḍhabala was an inhabitant of this place. There are many passages in Caraka which the commentators believe to be additions of the Kāśmīra recension (*Kāśmīra-pāṭha*). Mādhava quotes a number of verses from the third chapter of the sixth section, on fevers, which verses are given with the omission of about twenty-four lines. Vijaya-rakṣita, in his commentary on Mādhava's *Nidāna*, says that these lines belong to the Kāśmīra recension. Existing manuscripts vary very much with regard to these lines; for, while some have the lines, in others they are not found. In the same chapter there are other passages which are expressly noted by Cakrapāṇidatta as belonging to Kāśmīra recensions, and are not commented upon by him. There are also other examples. Hoernle points out that Jīvānanda's edition of 1877 gives the Kāśmīra version, while his edition of 1896, as well as the editions of Gaṅgādhara, the two Sens and Abinas, have Caraka's original version. Mādhava never quotes readings belonging to the Kāśmīra recension. Hoernle puts together four points, viz. that Caraka's work was revised and completed by Dr̥ḍhabala, that there existed a Kāśmīra recension of the *Caraka-saṃhitā*, that Dr̥ḍhabala calls himself a native of Pañcanada city, and that there existed a holy place of that name in Kāśmīra; and he argues that the so-called Kāśmīra recension represents the revision of the *Caraka-saṃhitā* by Dr̥ḍhabala. Judging from the fact that Mādhava takes no notice of the readings of the Kāśmīra recension, he argues that the latter did not exist in Mādhava's time and that therefore Mādhava's date must be anterior to that of Dr̥ḍhabala.

But which portions were added to the *Caraka-saṃhitā* by Dr̥ḍhabala? The obvious assumption is that he added the last seventeen chapters of the sixth book (*Cikitsā*) and the seventh and eighth books¹. But such an assumption cannot hold good, since there is a great divergence in the counting of the number of the chapters in different manuscripts. Thus, while Jīvānanda's text marks Arśas, Atisāra, Visarpa, Madātyaya and Dvivraṇīya as the ninth, tenth, eleventh, twelfth and thirteenth chapters of *Cikitsā* and therefore belonging to the original Caraka, Gaṅgādhara's text

1

*asmīn sapṭādaśādhyā kalpāḥ siddhaya eva ca
nāsādyante 'grīveśasya tantrē Carakasamskṛte
tān etān Kāpilabalaḥ śeṣān Dr̥ḍhabalo 'karot
tantrasyāśya mahārthasya pūranārthaṃ yathāyatham.*

calls the ninth, tenth, eleventh, twelfth and thirteenth chapters Unmāda, Apasmāra, Kṣataksīṇa, Śvayathu and Udara. The seventeen chapters attributed to Dṛḍhabala have consequently different titles in the Gaṅgādhara and Jīvānanda editions. Hoernle has discussed very critically these textual problems and achieved notable results in attributing chapters to Caraka or Dṛḍhabala¹. But it is needless for us to enter into these discussions.

Mahāmahopādhyāya Kaviraj Gaṇanātha Sen, merely on the strength of the fact that the *Rāja-taraṅgiṇī* is silent on the matter², disputes the traditional Chinese statement that Caraka was the court-physician of Kaṇiṣka. There is no ground to believe as gospel truth a tradition, which cannot be traced to any earlier authority than Bhoja (eleventh century), that Patañjali was the author of a medical work, and that therefore Patañjali and Caraka could be identified. His comparisons of some passages from Caraka (IV. 1) with some *sūtras* of Patañjali are hardly relevant and he finally has to rest for support of this identification on the evidence of Rāmabhadra Dīkṣita, a man of the seventeenth or the eighteenth century, who holds that Patañjali had written a work on medicine. He should have known that there were more Patañjalis than one, and that the alchemist and medical Patañjali was an entirely different person from Patañjali, the grammarian.

The most important commentary now completely available to us is the *Āyur-veda-dīpikā*, or *Caraka-tātparyā-ṭikā*, of Cakrapāṇi-datta. Another important commentary is the *Caraka-pañjikā* by Svāmikumāra. He was a Buddhist in faith, and he refers to the commentator Hariścandra. The *Caraka-tattva-pradīpikā* was written in later times by Śivadāśasena, who also wrote the *Tattva-candrikā*, a commentary on Cakradatta. We hear also of other commentaries on Caraka by Bāṣpacandra or Vāpyacandra, Īśāna-deva, Īśvarasena, Vakulakara, Jinadāsa, Munidāsa, Govardhana, Sandhyākara, Jaya nandī and the *Caraka-candrikā* of Gayadāsa.

Among other ancient treatises we may mention the *Kāśyapa-saṃhitā*, discovered in Kaṭhmāṇḍū, a medical dialogue between Kāśyapa, the teacher and Bhārgava, the student. It is interesting to note that it has some verses (MS., pp. 105-110) which are identical with part of the fifth chapter of the first book of Caraka. There is another important manuscript, called *Bhāradvāja-*

¹ *J.R.A.S.*, 1908 and 1909.

² *Pratyakṣa-śārīram*, introduction.

saṃhitā, which contains within it a small work called *Bhesaja-kalpa*, a commentary by Venkaṭeśa¹. Agniveśa's original work, the *Agniveśa-saṃhitā*, which was the basis of Caraka's revision, was available at least up to the time of Cakrapāṇi; Vijayarakṣita and Śrīkaṇṭhadatta also quote from it². Jātūkarṇa's work also existed till the time of the same writers, as they occasionally quote from *Jātūkarṇa-saṃhitā*³. The *Parāśara-saṃhitā* and *Kṣārāpāṇi-saṃhitā* were also available down to Śrīkaṇṭhadatta's, or even down to Śivadāsa's, time. The *Hārīta-saṃhitā* (different from the printed and more modern text) was also available from the time of Cakrapāṇi and Vijayarakṣita, as is evident from the quotations from it in their works. Bhela's work, called *Bhela-saṃhitā*, has already been published by the University of Calcutta. It may be remembered that Agniveśa, Bhela, Jātūkarṇa, Parāśara, Hārīta and Kṣārāpāṇi were all fellow-students in medicine, reading with the same teacher, Ātreya-Punarvasu; Agniveśa, being the most intelligent of them all, wrote his work first, but Bhela and his other fellow-students also wrote independent treatises, which were read before the assembly of medical scholars and approved by them. Another work of the same school, called *Kharaṇada-saṃhitā*, and also a *Viśvāmītra-saṃhitā*, both of which are not now available, are utilized by Cakrapāṇi and other writers in their commentaries. The name *saṃhitā*, however, is no guarantee of the antiquity of these texts, for the junior Vāgbhaṭa's work is also called *Aṣṭāṅga-hṛdaya-saṃhitā*. We have further a manuscript called *Vararuci-saṃhitā*, by Vararuci, and a *Siddha-sāra-saṃhitā* by Ravigupta, son of Durgāgupta, which are of comparatively recent date. The *Brahma-vaivarta-purāṇa* refers to a number of early medical works, such as the *Cikitsā-tattva-vijñāna* of Dhanvantari, *Cikitsā-darśana* of Divodāsa, *Cikitsā-kaumudī* of Kāśīrāja, *Cikitsā-sāra-tantra* and *Bhrama-ghna* of Āśvinī, *Vaidyaka-sarvasva* of Nakula, *Vyādhi-sindhu-vimardana* of Sahadeva, *Jñānārṇava* of Yama, *Jivādāna* of Cyavana, *Vaidya-sandeha-bhañjana* of Janaka, *Sarva-sāra* of Candrasuta, *Tantra-sāra* of Jābāla, *Vedāṅga-sāra* of Jājali, *Nidāna* of Paila, *Sarva-dhara* of Karaṭha and *Dvaidha-nirṇaya-tantra* of

Agastya¹. But nothing is known of these works, and it is difficult to say if they actually existed.

It is well known that there were two Vāgbhaṭas (sometimes spelt Vāhaṭa). The earlier Vāgbhaṭa knew Caraka and Suśruta. It is conjectured by Hoernle and others that the statement of I-tsing (A.D. 675–685), that the eight arts formerly existed in eight books, and that a man had lately epitomized them and made them into one bundle, and that all physicians in the five parts of India practised according to that book, alludes to the *Aṣṭāṅga-saṃgraha* of Vāgbhaṭa the elder. In that case Vāgbhaṭa I must have flourished either late in the sixth century or early in the seventh century; for I-tsing speaks of him as having epitomized the work “lately,” and on the other hand time must be allowed for the circulation of such a work in the five parts of India. A comparison of Suśruta and Vāgbhaṭa I shows that the study of anatomy had almost ceased to exist in the latter’s time. It is very probable that Vāgbhaṭa was a Buddhist. The *Aṣṭāṅga-saṃgraha* has a commentary by Indu; but before Indu there had been other commentators, whose bad expositions were refuted by him².

Mādhava, Dṛḍhabala and Vāgbhaṭa II all knew Vāgbhaṭa I. Mādhava mentions him by name and occasionally quotes from him both in the *Siddha-yoga* and in the *Nidāna*, and so also does Dṛḍhabala³. Hoernle has shown that Dṛḍhabala’s 96 diseases of the eye are based on Vāgbhaṭa’s 94. Vāgbhaṭa II towards the end of the *Uttara-sthāna* of his *Aṣṭāṅga-hṛdaya-saṃhitā* definitely expresses his debt to Vāgbhaṭa I. But they must all have flourished before Cakrapāṇi, who often refers to Dṛḍhabala and Vāgbhaṭa II. If, as Hoernle has shown, Mādhava was anterior to Dṛḍhabala, he also must necessarily have flourished before Cakrapāṇi. Hoernle’s argument that Mādhava flourished before Dṛḍhabala rests upon the fact that Suśruta counts 76 kinds of eye-diseases, while Vāgbhaṭa I has 94. Dṛḍhabala accepts Vāgbhaṭa I’s 94 eye-diseases with the addition of two more, added by Mādhava, making his list come to 96. Mādhava had accepted Suśruta’s 76 eye-diseases and

¹ It is curious to notice that the *Brahma-vaivarta-purāṇa* makes Dhanvantari, Kāśirāja and Divodāsa different persons, which is contrary to Suśruta’s statement noted above.

² *Durvyākhyā-viṣa-sūptasya Vāhaṭasyāsmad-uktayaḥ santu saṃvitti-dāyinyas sad-āgama-pariṣkṛtā*. Indu’s commentary, I. 1.

³ *Siddha-yoga*, I. 27, *Aṣṭāṅga-saṃgraha*, II. 1, *Nidāna*, II. 22 and 23, *Samgraha*, I. 266, *Caraka-saṃhitā* (Jivānanda, 1896), *Cikitsita-sthāna*, XVI. 31, *Samgraha*, II. 26. Again, *Cikitsita-sthāna*, XVI. 53, etc., *Samgraha*, II. 27, etc.

added two of his own¹. The second point in Hoernle's argument is that Mādhava in his quotations from Caraka always omits the passages marked by Vijayarakṣita as Kāśmīra readings, which Hoernle identifies with the revision work of Dṛḍhabala. These arguments of Hoernle appear very inconclusive; for, if the so-called Kāśmīra recension can be identified with Dṛḍhabala's revision, both Dṛḍhabala's Kāśmīra nativity and his posteriority to Mādhava can be proved; but this proposition has not been proved. On the other hand, Cakrapāṇi alludes to a Dṛḍhabala saṃskāra side by side with a Kāśmīra reading, and this seems to indicate that the two are not the same². The suggestion of Mādhava's anteriority on the ground that he counts 78 eye-diseases is rather far-fetched. Mādhava's date, therefore, cannot be definitely settled. Hoernle is probably correct in holding that Dṛḍhabala is anterior to Vāgbhaṭa³. However, the relative anteriority or posteriority of these three writers does not actually matter very much; for they lived at more or less short intervals from one another and their dates may roughly be assigned to a period between the eighth and tenth centuries A.D.

Vāgbhaṭa II's *Aṣṭāṅga-hṛdaya-saṃhitā* has at least five commentaries, viz. by Aruṇadatta (*Sarvāṅga-sundarī*), Āśādharma, Candracandana (*Padārtha-candrikā*), Rāmanātha and Hemādri (*Āyur-veda-rasāyana*). Of these Aruṇadatta probably lived in A.D. 1220. Mādhava's *Rug-viniścaya*, a compendium of pathology, is one of the most popular works of Indian Medicine. It has at least seven commentaries, viz. by Vijayarakṣita (*Madhu-kośa*), Vaidya-vācaspati (*Ātanka-dīpana*), Rāmanātha Vaidya, Bhavānīśahāya, Nāganātha (*Nidāna-pradīpa*), Gaṇeśa Bhisaj and the commentary known as *Siddhānta-candrikā* or *Vivaraṇa-siddhānta-candrikā*, by Narasiṃha Kavirāja⁴. Vijayarakṣita's commentary, however,

¹ Hoernle thinks that the total number of 76 eye-diseases ordinarily found in the printed editions of Mādhava's *Nidāna* is not correct, as they do not actually tally with the descriptions of the different eye-diseases given by Mādhava and do not include *pakṣma-kopa* and *pakṣma-śātā* varieties. Hoernle's "Osteology," p. 13.

² Cakra's commentary, I. 7. 46-50.

³ See Hoernle's "Osteology," pp. 14-16.

⁴ Narasiṃha Kavirāja was the son of Nīlakaṇṭha Bhaṭṭa and the pupil of Rāmakṛṣṇa Bhaṭṭa. He seems to have written another medical work, called *Madhu-matī*. His *Vivaraṇa-siddhānta-candrikā*, though based on Vijaya's *Madhu-kośa*, is an excellent commentary and contains much that is both instructive and new. The only manuscript available is probably the one that belongs to the family library of the author of the present work, who is preparing an edition of it for publication.

closes with the 33rd chapter, and the rest of the work was accomplished by Śrīkaṇṭhadatta, a pupil of Vijayarakṣita. Vṛnda (who may be the same as Mādhava) wrote a *Siddha-yoga*, a book of medical formulas, well known among medical writers.

In connection with this brief account of Indian medical works the *Nava-nītaka*, and the other mutilated medical treatises which have been discovered in Central Asia and which go by the name of "Bower manuscript," cannot be omitted. This manuscript is written on birch leaves in Gupta characters and is probably as old as the fifth century A.D. It is a Buddhist work, containing many medical formulas taken from Caraka, Suśruta and other unknown writers. It will, however, be understood that an elaborate discussion of chronology or an exhaustive account of Indian medical works would be out of place in a work like the present. The Āyur-veda literature, and particularly that part which deals with medical formulas and recipes, medical lexicons and the like, is vast. Aufrecht's catalogue contains the names of about 1500 manuscript texts, most of which have not yet been published, and there are many other manuscripts not mentioned in Aufrecht's catalogue. Among the books now much in use may be mentioned the works of Śārṅgadharma, of the fourteenth century, Śivadāsa's commentary on Cakrapāṇi, of the fifteenth century, and the *Bhāva-prakāśa* of Bhāvamiśra, of the sixteenth. Vaṅgasena's work is also fairly common. Among anatomical texts Bhoja's work and Bhāskara Bhaṭṭa's *Śārīra-padminī* deserve mention. The *Aupadhenava-tantra*, *Pauṣkalāvata-tantra*, *Vaitaraṇa-tantra* and *Bhoja-tantra* are alluded to by Ḍalhaṇa. The *Bhāluki-tantra* and *Kapīla-tantra* are mentioned by Cakrapāṇi in his *Bhānumati* commentary. So much for the anatomical treatises. *Videha-tantra*, *Nīmi-tantra*, *Kāṅkāyana-tantra*, *Sātyaki-tantra*, *Karāla-tantra* and *Kṛṣṇātreyā-tantra* on eye-diseases are alluded to in Śrīkaṇṭha's commentary on Mādhava's *Nidāna*. The *Śaunaka-tantra* on eye-diseases is named in the commentaries of Cakrapāṇi and Ḍalhaṇa. The *Jīvaka-tantra*, *Parvataka-tantra* and *Bandhaka-tantra* are alluded to by Ḍalhaṇa as works on midwifery. The *Hiraṇyākṣya-tantra* on the same subject is named by Śrīkaṇṭha, whereas the *Kāśyapa-saṃhitā* and *Ālambāyana-saṃhitā* are cited by Śrīkaṇṭha on toxicology. The *Uśanas-saṃhitā*, *Sanaka-saṃhitā*, *Lātyāyana-saṃhitā* are also mentioned as works on toxicology.

Among some of the other important Tantras may be mentioned

Nāgārjuna's *Yoga-śataka*, containing the eight regular divisions of Indian Medicine, and Nāgārjuna's *Īva-sūtra* and *Bheṣaja-kalpa*, all of which were translated into Tibetan. Three works on the *Aṣṭāṅga-hṛdaya*, called *Aṣṭāṅga-hṛdaya-nāma-vaidūryaka-bhāṣya*, *Padārtha-candrikā-prabhāsa-nāma*, *Aṣṭāṅga-hṛdaya-vṛtti* and *Vaidyakā-ṣṭāṅga-hṛdaya-vṛtter bheṣaja-nāma-sūci*, were also translated into Tibetan.

The *Āyur-veda-sūtra* is a work by Yogānandanātha, published with a commentary by the same author in the Mysore University Sanskrit series in 1922, with an introduction by Dr Shama Sastry. It is rightly pointed out in the introduction that this is a very modern work, written after the *Bhāva-prakūṣa*, probably in the sixteenth century. It contains sixteen chapters and is an attempt to connect Āyur-veda with Patañjali's Yoga system. It endeavours to show how different kinds of food increase the *sattva*, *rajas* and *tamas* qualities and how *yoga* practices, fasting and the like, influence the conditions of the body. Its contribution, whether as a work of Āyur-veda or as a work of philosophy, is rather slight. It shows a tendency to connect *Yoga* with Āyur-veda, while the *Vira-siṃhāvalokita* is a work which tries to connect astrology with the same.

CHAPTER XIV

THE PHILOSOPHY OF THE *BHAGAVAD-GĪTĀ*

The *Gītā* Literature.

THE *Gītā* is regarded by almost all sections of the Hindus as one of the most sacred religious works, and a large number of commentaries have been written on it by the adherents of different schools of thought, each of which explained the *Gītā* in its own favour. Śaṅkara's *bhāṣya* is probably the earliest commentary now available; but from references and discussions found therein there seems to be little doubt that there were previous commentaries which he wished to refute.

Śaṅkara in his interpretation of the *Gītā* seeks principally to emphasize the dogma that right knowledge can never be combined with Vedic duties or the duties recommended by the legal scriptures. If through ignorance, or through attachment, a man continues to perform the Vedic duties, and if, as a result of sacrifices, gifts and *tapas* (religious austerities), his mind becomes pure and he acquires the right knowledge regarding the nature of the ultimate reality—that the passive Brahman is the all—and then, when all reasons for the performance of actions have ceased for him, still continues to perform the prescribed duties just like common men and to encourage others to behave in a similar manner, then such actions are inconsistent with right knowledge. When a man performs actions without desire or motive, they cannot be considered as *karma* at all. He alone may be said to be performing *karma*, or duties, who has any interest in them. But the wise man, who has no interest in his *karma*, cannot be said to be performing *karma* in the proper sense of the term, though to all outward appearances he may be acting exactly like an ordinary man. Therefore the main thesis of the *Gītā*, according to Śaṅkara, is that liberation can come only through right knowledge and not through knowledge combined with the performance of duties. Śaṅkara maintains that all duties hold good for us only in the stage of ignorance and not in the stage of wisdom. When once the right knowledge of identity with Brahman dawns and ignorance ceases, all notions of duality, which are presupposed by

the performance of actions and responsibility for them, cease¹. In interpreting *Gītā*, III. 1, Śaṅkara criticizes the opinions of some previous commentators, who held that obligatory duties cannot be given up even when true wisdom is attained. In reply he alludes to legal scriptures (*smṛti-śāstra*), and asserts that the mere non-performance of any duties, however obligatory, cannot lead to evil results, since non-performance is a mere negation and of mere negation no positive results can come out. The evil effects of the non-performance of obligatory duties can happen only to those who have not given up all their actions (*a-saṁnyāsi-viṣayatvāt pratyavāya-prāpteh*). But those who have attained true wisdom and have consequently given up all their actions transcend the sphere of duties and of the obligatory injunctions of the Vedas, and the legal scriptures cannot affect them at all. The performance of duties cannot by itself lead to liberation; but it leads gradually to the attainment of purity of mind (*sattva-sūddhi*) and through this helps the dawning of the right knowledge, with which all duties cease². In a very lengthy discussion on the interpretation of *Gītā*, XVIII. 67, Śaṅkara tries to prove that all duties presuppose the multiplicity of the world of appearance, which is due to ignorance or nescience, and therefore the sage who has attained the right knowledge of Brahman, the only reality, has no duties to perform. Final liberation is thus produced, not by true knowledge along with the performance of duties, but by true knowledge alone. The wise man has no duties of any kind. Śaṅkara's interpretation of the *Gītā* presupposes that the *Gītā* holds the same philosophical doctrine that he does. His method of interpretation is based not so much on a comparison of textual passages, as simply on the strength of the reasonableness of the exposition of a view which can be consistently held according to his Vedānta philosophy, and which he ascribes to the *Gītā*. The view taken in the present exposition of the *Gītā* philosophy is diametrically opposite to that of Śaṅkara. It has been repeatedly pointed out that the *Gītā* asserts that even the wise man should perform his allotted duties, though he may have nothing to gain by the performance of such duties. Even God Himself as Kṛṣṇa, though He had no unsatisfied cravings, passions or desires of any kind,

¹ Śaṅkara's interpretation of the *Gītā*, II. 69. Yogāśrama edition, Benares, 1919.

² *Ibid.* III. 4.

performed His self-imposed duties in order to set an example to all and to illustrate the fact that even the wise man should perform his prescribed duties¹.

Ānandajñāna wrote a commentary on Śaṅkara's *Bhagavad-gītā-bhāṣya*, called *Bhagavad-gītā-bhāṣya-vivaraṇa*, and Rāmānanda wrote another commentary on that of Śaṅkara, called *Bhagavad-gītā-bhāṣya-vyākhyā*. He is also said to have written another work on the *Gītā*, called *Gītāśāya*. After Śaṅkara there seems to have been some pause. We have two commentaries, one in prose and one in verse, by two persons of the same name, Yāmunācārya. The Yāmunācārya who was the author of a prose commentary is certainly, though a *viśiṣṭādvaita-vādin*, not the celebrated Yāmuna, the teacher of Rāmānuja. His commentary, which has been published by the Sudarśana Press, Conjeeveram, is very simple, consisting mainly of a mere paraphrase of the *Gītā* verses. He thinks that the first six chapters of the *Gītā* deal with the nature of true knowledge of God as a means to devotion, the second six with the nature of God as attainable by devotion and adoration, and the third six repeat the same subjects for a further clearing up of the problems involved.

Yāmuna, the great teacher of Rāmānuja, who is said to have been born in A.D. 906, summarized the subject-matter of the *Gītā* in a few verses called *Gītārtha-saṁgraha*, on which Nigamānta Mahādeśika wrote a commentary known as *Gītārtha-saṁgraha-rakṣā*. This also was commented on by Varavara Muni, of the fourteenth century, in a commentary called *Gītārtha-saṁgraha-dīpikā*, published by the Sudarśana Press, Conjeeveram. Another commentary, called *Bhagavad-gītārtha-saṁgraha-ṭīkā*, by Pratyakṣadevayathācārya, is mentioned by Aufrecht. Yāmuna says that the object of the *Gītā* is to establish the fact that Nārāyaṇa is the highest Brahman, attained only by devotion (*bhakti*), which is achieved through caste duties (*sva-dharma*), right knowledge and disinclination to worldly pleasures (*vairāgya*). It is said that the first six chapters of the *Gītā* describe the process of attaining self-knowledge by self-concentration (*yoga*) through knowledge and action along with self-subordination to God, the performance of all actions for God and detachment from all other things. Nigamānta Mahādeśika notes that *karma* may lead to self-realization either indirectly, through the production of knowledge, or directly by itself.

¹ *Gītā*, III. 22.

From the seventh to the twelfth chapters the processes of the attainment of devotion (*bhakti-yoga*) by knowledge and by actions are described, and it is held that the true nature of God can be realized only by such devotion. From the thirteenth to the eighteenth chapters, the nature of *pradhāna*, of *puruṣa*, of the manifested world and of the supreme lord are described and distinguished along with the nature of action, of knowledge and of devotion. Yāmunā then goes on to describe the contents of the chapters of the *Gītā* one by one. Thus he says that in the second chapter the nature of the saint of imperturbable wisdom (*sthita-dhī*) is described. Such right knowledge can be achieved only by a knowledge of the self as immortal and the habit of performing one's duties in an unattached manner. In the third chapter it is said that a man should perform his duties for the preservation of the social order (*loka-rakṣā*) without attachment, leaving the fruits of all his actions to God, and considering at the same time that the *guṇas* are the real agents of actions and that it is wrong to pride oneself upon their performance. The fourth chapter describes the nature of God, how one should learn to look upon actions as implying no action (on account of unattachment), the different kinds of duties and the glory of knowledge. The fifth describes the advantages and the diverse modes of the path of duties and also the nature of the state of realization of Brahman. The sixth describes the nature of *yoga* practice, four kinds of *yogins*, the methods of *yoga*, the nature of *yoga* realization and the ultimate superiority of *yoga* as communion with God. The seventh describes the reality of God, how His nature is often veiled from us by *prakṛti* or the *guṇas*, how one should seek protection from God, the nature of the different kinds of devotees, and the superiority of the truly enlightened person. The eighth describes the lordly power of God and the reality of His nature as the unchanged and the unchangeable; it also describes the duties of those who seek protection in God and the nature of the true wisdom. The ninth describes the glory of God and His superiority even when He incarnates Himself as man, and the nature of devotional communion. The tenth describes the infinite number of God's noble qualities and the dependence of all things on Him, for initiating and increasing devotion. The eleventh describes how the true nature of God can be perceived, and demonstrates that it is only through devotion that God can be known or attained. The twelfth

describes the superiority of devotion, methods of attaining devotion, and different kinds of devotion; it is also held that God is highly pleased by the devotion of His devotees. The thirteenth describes the nature of the body, the purification of the self for self-realization, the cause of bondage and right discrimination. The fourteenth describes how the nature of an action is determined by the ties of *guṇa*, how the *guṇas* may be made to cease from influencing us, and how God alone is the root of all the ways of the self's future destiny. The fifteenth describes how the supreme lord is different from the pure selves, as well as from selves in association with non-selves, on account of his all-pervasiveness and his nature as upholder and lord. The sixteenth describes the division of beings into godly and demoniac and also the privileged position of the scriptures as the authority for laying the solid foundation of knowledge of the true nature of our duties. The seventeenth distinguishes unscriptural things from scriptural. The eighteenth describes how God alone should be regarded as the ultimate agent of all actions, and states the necessity of purity and the nature of the effects of one's deeds. According to Yāmuna *karma-yoga*, or the path of duties, consists of religious austerities, pilgrimage, gifts and sacrifices; *jñāna-yoga*, or the path of knowledge, consists of self-control and purity of mind; *bhakti-yoga*, or the path of devotion, consists in the meditation of God, inspired by an excess of joy in the communion with the divine. All these three paths mutually lead to one another. All three are essentially of the nature of the worship of God, and, whether regarded as obligatory or occasional, are helpful for discovering the true nature of one's self. When by self-realization ignorance is wholly removed, and when a man attains superior devotion to God, he is received into God.

Rāmānuja, the celebrated Vaiṣṇava teacher and interpreter of the *Brahma-sūtra*, who is said to have been born in A.D. 1017, wrote a commentary on the *Gītā* on *viśiṣṭādvaita* lines, viz. monism qualified as theism. Veṅkaṭanātha, called also Vedāntācārya, wrote a sub-commentary thereon, called *Tātparyā-candrikā*. Rāmānuja generally followed the lines of interpretation suggested in the brief summary by his teacher Yāmuna. On the question of the imperativeness of caste duties Rāmānuja says that the *Gītā* holds that the duties allotted to each caste must be performed, since the scriptures are the commands of God and no one can transgress His orders; so the duties prescribed by the scriptures as obligatory

are compulsory for all. The duties have, therefore, to be performed without desire for their fruits and purely because they are the injunctions of the scriptures (*eka-śāstrārthatayā anuṣṭheyam*). It is only when duties performed simply to please God, and as adoration of Him, have destroyed all impurities of the mind, and when the senses have become controlled, that a man becomes fit for the path of wisdom. A man can never at any stage of his progress forsake the duty of worshipping God, and it is only through such adoration of God that the sins accumulating in him from beginningless time are gradually washed away and he can become pure and fit for the path of knowledge¹. In interpreting III. 8 Rāmānuja says that the path of duties (*karma-yoga*) is superior to the path of knowledge (*jñāna-yoga*). The path of duties naturally leads to self-knowledge; so self-knowledge is also included within its scope. The path of knowledge alone cannot lead us anywhere; for without work even the body cannot be made to live. Even those who adhere to the path of knowledge must perform the obligatory and occasional (*nitya-naimittika*) duties, and it is through the development of this course that one can attain self-realization by duty alone. The path of duties is to be followed until self-realization (*ātmāvalokana*) and, through it, emancipation are obtained. But the chief duty of a man is to be attached to God with supreme devotion.

Madhvācārya, or Ānandatīrtha, who lived in the first three-quarters of the thirteenth century, wrote a commentary on the *Bhagavad-gītā*, called *Gītā-bhāṣya*, commented on by Jayatīrtha in his *Prameya-dīpikā*, and also a separate monograph interpreting the main purport of the *Gītā*, called *Bhagavad-gītā-tātparya-nirṇaya*, commented on by Jayatīrtha in his *Nyāya-dīpikā*. His main emphasis was on the fact that God is different from everything else, and that the only way of attaining our highest goal is through devotion (*bhakti*) as love and attachment (*sneha*). In the course of his interpretation he also introduced long discussions in refutation of the monistic theory of Śaṅkara. Since everything is dominated by the will of Hari the Lord, no one ought to feel any attachment to mundane things. Duties are to be performed by all. Kṛṣṇabhaṭṭa Vidyādhirāja, the sixth disciple from

¹ *Anabhisamṛhita-phalena kevala-parama-puruṣārādhana-rūpenānuṣṭhītena karmaṇā vidhvasta-mano-malo 'vyākulendriyo jñāna-niṣṭhāyām adhikaroti*. Rāmānuja's commentary on the *Gītā*, III. 3. See also *ibid.* III. 4. Gujarati Press, Bombay, 1908.

Madhva, who lived in the first quarter of the fourteenth century, wrote a commentary on the *Gītā*, called *Gītā-ṭikā*. Rāghavendra Svāmin, who lived in the seventeenth century and was a pupil of Sudhīndra Yati, wrote three works on the *Gītā*, called *Gītā-vivṛti*, *Gītārtha-saṃgraha* and *Gītārtha-vivaraṇa*. Commentaries were also written by Vallabhācārya, Vijñānabhikṣu, Keśava Bhaṭṭa of the Nimbārka school (called *Gītā-tattva-prakāśikā*), Āñjaneya (called *Hamamad-bhāṣya*), Kalyāṇa Bhaṭṭa (called *Rasika-rañjini*), Jagaddhara (called *Bhagavad-gītā-pradīpa*), Jayarāma (called *Gītā-sārārtha-saṃgraha*), Baladeva Vidyābhūṣaṇa (called *Gītā-bhūṣaṇa-bhāṣya*), Madhusūdana (called *Gūdhārtha-dīpikā*), Brahmānanda Giri, Mathurānātha (called *Bhagavad-gītā-prakāśa*), Dattātreyā (called *Prabodha-candrikā*), Rāmakṛṣṇa, Mukundadāsa, Rāmanārāyaṇa, Viśveśvara, Śaṅkarānanda, Śivadayālu Śrīdharasvāmin (called *Subodhini*), Sadānanda Vyāsa (called *Bhāva-prakāśa*), Sūryapandita (*Paramārtha-prapā*), Nīlakaṇṭha (called *Bhāva-dīpikā*), and also from the Śaiva point of view by Rājānaka and Rāmakaṇṭha (called *Sarvato-bhadra*). Many other works were also written on the general purport of the *Gītā*, such as *Bhagavad-gītārtha-saṃgraha* by Abhinavagupta and Nṛsiṃha Ṭhakkura, *Bhagavad-gītārtha-sāra* by Gokulacandra, *Bhagavad-gītā-lakṣābharaṇa* by Vādirāja, *Bhagavad-gītā-sāra* by Kaivalyānanda Sarasvatī, *Bhagavad-gītā-sāra-saṃgraha* by Narahari and *Bhagavad-gītā-hetu-nirṇaya* by Viṭṭhala Dīkṣita. Most of these commentaries are written either from the point of view of Śaṅkara's *bhāṣya*, repeating the same ideas in other language, or from the Vaiṣṇava point of view, approving of the hold of normal duties of men in all stages of life and sometimes differing only in the conception of God and His relation with men. These can claim but little originality either of argument or of opinions, and so may well be left out of detailed consideration for our present purposes.

Gītā and Yoga.

Whoever may have written the *Gītā*, it seems very probable that he was not acquainted with the technical sense of *yoga* as the cessation of mental states (*citta-vṛtti-nirodha*), as used by Patañjali in his *Yoga-sūtra*, I. 1. I have elsewhere shown that there are three roots, *yujir yogē* and *yuj samādhau*, i.e. the root *yujir*, to join, and the root *yuj* in the sense of cessation of mental states or one-

pointedness, and *yuj samyamane*, i.e. *yuj* in the sense of controlling. In the *Gītā* the word *yoga* appears to have been used in many senses, which may seem to be unconnected with one another; yet it may not be quite impossible to discover relations among them. The primary sense of the word *yoga* in the *Gītā* is derived from the root *yujir yoge* or *yuj*, to join, with which is connected in a negative way the root *yuj* in the sense of controlling or restricting anything to that to which it is joined. Joining, as it means contact with something, also implies disjunction from some other thing. When a particular type of mental outlook or scheme of action is recommended, we find the word *buddhi-yoga* used, which simply means that one has intimately to associate oneself with a particular type of wisdom or mental outlook. Similarly, when the word *karma-yoga* is used, it simply means that one has to associate oneself with the obligatoriness of the performance of duties. Again, the word *yoga* is used in the sense of fixing one's mind either on the self (*ātman*) or on God. It is clear that in all these varying senses the dominant sense is that of "joining." But such a joining implies also a disjunction, and the fundamental and indispensable disjunction implied is dissociation from all desires for pleasures and fruits of action (*phala-tyāga*). For this reason cases are not rare where *yoga* is used to mean cessation of desires for the fruits of action. Thus, in the *Gītā*, VI. 2, it is said, "What is called cessation (of desires for the fruits of action) is what you should know, O Pāṇḍava, as Yoga: without renouncing one's desires (*na hy asaṁnyasta-saṅkalpa*) one cannot be a yogin¹." The reason why this negative concept of cessation of desires should be regarded as *yoga* is that without such a renunciation of desires no higher kind of union is possible. But even such a dissociation from the fruits of desires (which in a way also means *samyamana*, or self-control) is to be supplemented by the performance of duties at the preliminary stages; and it is only in the higher stages, when one is fixed in *yoga* (*yogārūḍha*), that meditative peace (*śama*) can be recommended. Unless and until one succeeds in conquering all attachments to sense-objects and actions and in giving up all desires for fruits of actions, one cannot be fixed in *yoga*. It is by our attempts at the performance of our duties, trying all the time

¹ *Asaṁnyasto 'parityaktaḥ phala-viśayaḥ saṅkalpo 'bhisandhir yena so 'saṁnyasta-saṅkalpaḥ*. Śaṅkara's commentary, VI. 2. *Na saṁnyastaḥ phala-saṅkalpo yena*. Śrīdhara's commentary on the above. Yogāśrama edition, Benares, 1919.

to keep the mind clear from motives of pleasure and enjoyment, that we gradually succeed in elevating it to a plane at which it would be natural to it to desist from all motives of self-interest, pleasure and enjoyment. It is at this stage that a man can be called fixed in *yoga* or *yogārūḍha*. This naturally involves a conflict between the higher self and the lower, or rather between the real self and the false; for, while the lower self always inclines to pathological and prudential motives, to motives of self-interest and pleasure, it has yet within it the higher ideal, which is to raise it up. Man is both a friend and a foe to himself; if he follows the path of his natural inclinations and the temptations of sense-enjoyment, he takes the downward path of evil, and is an enemy to his own higher interests; whereas it is his clear duty to raise himself up, to strive that he may not sink down but may elevate himself to a plane of detachment from all sense-pleasures. The duality involved in this conception of a friend and a foe, of conqueror and conquered, of an uplifting power and a gravitating spirit, naturally involves a distinction between a higher self (*paramātman*) and a lower self (*ātman*). It is only when this higher self conquers the lower that a self is a friend to itself. In a man who has failed to conquer his own passions and self-attachments the self is its own enemy. The implication, however, is that the lower self, though it gravitates towards evil, has yet inherent in it the power of self-elevation. This power of self-elevation is not something extraneous, but abides in the self, and the *Gītā* is emphatic in its command, "Thou shouldst raise thyself and not allow thyself to sink down; for the self is its own friend and its foe as well¹."

It is only when the self thus conquers its lower tendencies and rises to a higher plane that it comes into touch with the higher self (*paramātman*). The higher self always remains as an ideal of elevation. The *yoga* activity of the self thus consists, on the one hand, in the efforts by which the *yogin* dissociates himself from the sense-attachments towards which he was naturally gravitating, and on the other hand, in the efforts by which he tries to elevate himself and to come into touch with the higher self. At the first stage a man performs his duties in accordance with the injunctions of the *śāstras*; then he performs his duties and tries to dissociate himself from all motives of self-interest and

enjoyment, and at the next stage he succeeds in conquering these lower motives and is in touch with the higher self. Even at this stage he may still continue to perform his duties, merely for the sake of duty, or he may devote himself to meditative concentration and union with the higher self or with God. Thus the *Gītā* says that the person who has conquered himself and is at peace with himself is in touch with *paramātman*. Such a person is a true philosopher; for he not only knows the truths, but is happy in the inner realization and direct intuitive apperception of such truths; he is unshakable in himself; having conquered his senses, he attaches the same value to gold and to stones; he is the same to friends and to enemies, to the virtuous as to the sinful; he is in union (with *paramātman*) and is called a *yogin*¹. The fact that the word *yogin* is derived here from the root *yuj*, to join, is evident from a number of passages where the verb *yuj* is used in this connection².

The *Gītā* advises a *yogin* who thus wants to unite himself with *paramātman*, or God, in a meditative union, to lead a lonely life, controlling his mind and body, desiring nothing and accepting nothing³. The *yogin* should seat himself on level ground, in a clean place, and, being firm on his threefold seat composed of *kuśa* grass, a leopard skin and soft linen, he should control his thoughts, senses and movements, make his mind one-pointed in God (*tatra*), gather himself up in union, and thus purify himself⁴. The *yogin* should eat neither too much nor too little, should neither sleep too much, nor dispense with sleep. He should thus

¹ *Yukta ity ucyate yogi sama-loṣṭāśma-kāñcanaḥ*, vi. 8. Śaṅkara, however, splits it up into two independent sentences, as follows: *ya idr̥ṣo yuktaḥ samāhita itī sa ucyate kathyate; sa yogi sama-loṣṭāśma-kāñcanaḥ*. Śrīdhara, again, takes a quite different view and thinks it to be a definition of the *yogārūḍha* state and believes *yukta* to mean *yogārūḍha*, which in my opinion is unjustifiable. My interpretation is simpler and more direct than either of these and can be justified by a reference to the context in vi. 7 and vi. 10.

² *Yogī yuñjita satatam ātmānaṃ rahasi sthitaḥ*. *Ibid.* vi. 10.

Upaviśyāsane yuñjyāt yogam ātma-viśuddhaye. vi. 12.

Yukta āsita mat-parah. vi. 14.

Yuñjann evaṃ sadātmānaṃ yogī niyata-mānasaḥ. vi. 15, etc.

³ *Ekāki yata-cittātmā nirāśīr aparigrahaḥ*. vi. 10. The word *ātmā* in *yata-cittātmā* is used in the sense of body (*deha*), according to Śaṅkara, Śrīdhara and others.

⁴ Both Śaṅkara and Śrīdhara make *tatra* an adjective to *āsane*. Such an adjective to *āsane* would not only be superfluous, but would also leave *ekūgram* without an object. The verb *yuñjyāt*, literally meaning "should link up," is interpreted by Śrīdhara as "should practise," apparently without any justification (vi. 12).

lead the middle course of life and avoid extremes. This avoidance of extremes is very unlike the process of *yoga* advised by Patañjali. Patañjali's course of *yoga* formulates a method by which the *yogin* can gradually habituate himself to a condition of life in which he can ultimately dispense with food and drink altogether and desist from all movements of body and mind. The object of a *yogin* in making his mind one-pointed is ultimately to destroy the mind. According to Patañjali the advancement of a *yogin* has but one object before it, viz. the cessation of all movements of mind (*citta-vṛtti-nirodha*). Since this absolute cessation cannot be effected without stopping all movements of the body, desires and passions are to be uprooted, not only because they would make the mind fly to different objects, but also because they would necessitate movements of the body, which would again disturb the mind. The *yogin* therefore has to practise a twofold control of movements of body and mind. He has to habituate himself to dispensing with the necessity of food and drink, to make himself used to all kinds of privations and climatic inconveniences of heat and cold and ultimately to prepare himself for the stoppage of all kinds of bodily movements. But, since this cannot be successfully done so long as one inhales and exhales, he has to practise *prāṇāyāma* for absolute breath-control, and not for hours or days, but for months and years. Moral elevation is regarded as indispensable in *yoga* only because without absolute and perfect cessation of all desires and passions the movements of the body and mind could not be absolutely stopped. The *yogin*, however, has not only to cut off all new causes of disturbance leading to movements of body and mind, but also to practise one-pointedness of mind on subtler and subtler objects, so that as a result thereof the sub-conscious forces of the mind can also be destroyed. Thus, on the one hand, the mind should be made to starve by taking care that no new sense-data and no new percepts, concepts, thoughts, ideas or emotions be presented to it, and, on the other hand, steps are to be taken to make the mind one-pointed, by which all that it had apprehended before, which formed the great storehouse of the sub-conscious, is destroyed. The mind, thus pumped out on both sides, becomes absolutely empty and is destroyed. The ideal of Patañjali's Yoga is absolute extremism, consisting in absolute stoppage of all functions of body and mind.

The *Gītā*, on the other hand, prescribes the golden middle course

of moderate food, drink, sleep, movements of the body and activity in general. The object of the *yogin* in the *Gītā* is not the absolute destruction of mind, but to bring the mind or the ordinary self into communion with the higher self or God. To the *yogin* who practises meditation the *Gītā* advises steadiness of posture; thus it says that the *yogin* should hold his body, head and shoulders straight, and, being unmoved and fixed in his posture, should avoid looking to either side and fix his eyes on the tip of his nose. The *Gītā* is, of course, aware of the process of breath-control and *prāṇāyāma*; but, curiously enough, it does not speak of it in its sixth chapter on *dhyāna-yoga*, where almost the whole chapter is devoted to *yoga* practice and the conduct of *yogins*. In the fifth chapter, v. 27, it is said that all sense-movements and control of life-movements (*prāṇa-karmāṇi*) are like oblations to the fire of self-control. In the two obscure verses of the same chapter, v. 29 and 30, it is said that there are some who offer an oblation of *prāṇa* to *apāna* and of *apāna* to *prāṇa* and thus, stopping the movement of inhalation and exhalation (*prāṇāpāna-gatī ruddhvā*), perform the *prāṇāyāma*, while there are others who, taking a low diet, offer an oblation of *prāṇa* to *prāṇa*. Such actions on the part of these people are described as being different kinds of sacrifices, or *yajña*, and the people who perform them are called *yajña-vidah* (those who know the science of sacrifice), and not *yogin*. It is difficult to understand the exact meaning of offering an oblation of *prāṇa* to *prāṇa* or of *prāṇa* to *apāna* and of calling this sacrifice. The interpretations of Śaṅkara, Śrīdhara and others give us but little help in this matter. They do not tell us why it should be called a *yajña* or how an oblation of *prāṇa* to *prāṇa* can be made, and they do not even try to give a synonym for *juhvati* (offer oblation) used in this connection. It seems to me, however, that there is probably a reference to the mystical substitution-meditations (*pratīkopāsanā*) which were used as substitutes for sacrifices and are referred to in the Upaniṣads. Thus in the *Maitri Upaniṣad*, vi. 9, we find that Brahman is to be meditated upon as the ego, and in this connection, oblations of the five *vāyus* to fire with such *mantras* as *prāṇāya svāhā*, *apānāya svāhā*, etc. are recommended. It is easy to imagine that, in a later process of development, for the actual offering of oblations to fire was substituted a certain process of breath-control, which still retained the old phraseology of the offering of oblations in a sacrifice. If this interpretation is

accepted, it will indicate how processes of breath-control became in many cases associated with substitution-meditations of the Vedic type¹. The development of processes of breath-control in connection with substitution-meditations does not seem to be unnatural at all, and, as a matter of fact, the practice of *prāṇāyāma* in connection with such substitution-meditations is definitely indicated in the *Maitrī Upaniṣad*, vi. 18. The movement of inhalation and exhalation was known to be the cause of all body-heat, including the heat of digestive processes, and Kṛṣṇa is supposed to say in the *Gītā*, xv. 14, "As fire I remain in the body of living beings and in association with *prāṇa* and *apāna* I digest four kinds of food and drink." The author of the *Gītā*, however, seems to have been well aware that the *prāṇa* and *apāna* breaths passing through the nose could be properly balanced (*samau*), or that the *prāṇa vāyu* could be concentrated between the two eyebrows or in the head (*mūrdhni*)². It is difficult to say what is exactly meant by taking the *prāṇa* in the head or between the eyebrows. There seems to have been a belief in the *Atharva-śiras Upaniṣad* and also in the *Atharva-śikhā Upaniṣad* that the *prāṇa* could be driven upwards, or that such *prāṇa*, being in the head, could protect it³. Manu also speaks of the *prāṇas* of young men rushing upwards when old men approached them. But, whatever may be meant, it is certain that neither the balancing of *prāṇa* and *apāna* nor the concentrating of *prāṇa* in the head or between the eyebrows is a phrase of Patañjali, the Yoga writer.

In describing the course of a *yogin* in the sixth chapter the *Gītā* advises that the *yogin* should lead the austere life of a Brahmacārin, withdraw his mind from all mundane interests and think only of God, dedicate all his actions to Him and try to live in communion with Him (*yukta āsita*). This gives to his soul peace, through which he loses his individuality in God and abides in Him

¹ See *Hindu Mysticism*, by S. N. Dasgupta, Chicago, 1927, pp. 18-20.

² *prāṇāpānau samau kṛtvā nāsābhyantara-cāriṇau*, v. 27. The phrase *samau kṛtvā* is left unexplained here by Śaṅkara. Śrīdhara explains it as "having suspended the movement of *prāṇa* and *apāna*"—*prāṇāpānāv ūrdhwādhō-gatī-nirodhena samau kṛtvā kumbhakam kṛtvā*. It is difficult, however, to say what is exactly meant by concentrating the *prāṇa vāyu* between the two eyebrows, *bhrūvor madhye prāṇam āveśya samyak* (viii. 10). Neither Śaṅkara nor Śrīdhara gives us any assistance here. In *mūrdhny ādhāyātmanah prāṇam āsthito yoga-dhāraṇām* (viii. 12) *mūrdhni* is paraphrased by Śrīdhara as *bhrūvor madhye*, or "between the eyebrows."

³ *Atharva-śiras*, 4 and 6 and *Atharva-śikhā*, 1.

in the bliss of self-effacement¹. A *yogin* can be said to be in union (with God) when he concentrates his mind on his own higher self and is absolutely unattached to all desires. By his efforts towards such a union (*yoga-sevayā*) he restrains his mind from all other objects and, perceiving his self in himself, remains in peace and contentment. At this higher state the *yogin* enjoys absolute bliss (*sukham ātyantikam*), transcending all sense-pleasures by his pure reason, and, being thus fixed in God, he is never shaken away from Him. Such a *yogin* forsakes all his desires and controls all his senses by his mind, and, whenever the mind itself seeks to fly away to different objects, he tries to control it and fix it on his own self. Patiently holding his mind fixed in his self, he tries to desist from all kinds of thought and gradually habituates himself to shaking off attachments to sense-attractions. At this stage of union the *yogin* feels that he has attained his highest, and thus even the greatest mundane sorrows cannot affect him in the least. *Yoga* is thus sometimes defined as the negation of the possibility of all association with sorrows². One can attain such a state only by persistent and self-confident efforts and without being depressed by preliminary failures. When a *yogin* attains this union with himself or with God, he is like the motionless flame of a lamp in a still place, undisturbed by all attractions and unruffled by all passions³. The *yogin* who attains this highest state of union with himself or with God is said to be in touch with Brahman or to attain Brahmahood, and it is emphatically asserted that he is filled with ecstatic joy. Being in

¹ *śāntim nirvāṇa-paramāṃ mat-saṁsthām adhigacchati*, vi. 15. The *Gītā* uses the words *śānti* and *nirvāṇa* to indicate the bliss of the person who abides in God. Both these words, and particularly the word *nirvāṇa*, have a definite significance in Buddhism. But the *Gītā* seems to be quite unacquainted with the Buddhistic sense of the word. I have therefore ventured to translate the word *nirvāṇa* as "bliss of self-effacement." The word is primarily used in the sense of "extinguishing a light," and this directly leads to the Buddhistic sense of the absolute destruction of the *skandhas*. But the word *nirvāṇa* is also used from very early times in the sense of "relief from sufferings" and "satisfaction." Thus the *Mahā-bhārata*, with which the *Gītā* is traditionally associated, uses it in this sense in III. 10438:

*sa pītvā śitalaṃ toyam pipāsārto mahi-patiḥ;
nirvāṇam agamad dhāman susukhī cābhavat tadā.*

Again, in the *Mahā-bhārata*, XII. 7150 and 13014, *nirvāṇa* is described as being highest bliss (*paramaṃ sukham*), and it is also associated with *śānti*, or peace, as it is in the above passage—*śāntim nirvāṇa-paramāṃ*. In *Mahā-bhārata*, vi. 1079, and in another place it is called a "state of the highest Brahman" (*paramaṃ brahma—ibid.* XII. 13239).

² *taṃ vidyād duḥkha-saṃyoga-viyogaṃ yoga-saṃjñitam*, vi. 23.

³ *Yathā dīpo nivāta-stho neigate sopamā smṛtā*, vi. 19.

union with God, he perceives himself in all things, and all things in himself; for, being in union with God, he in one way identifies himself with God, and perceives God in all things and all things in God. Yet it is no mere abstract pantheism that is indicated here; for such a view is directly in opposition to the main tenets of the *Gītā*, so often repeated in diverse contexts. It is a mystical state, in which, on the one hand, the *yogin* finds himself identified with God and in communion with Him, and, on the other hand, does not cease to have relations with the beings of the world, to whom he gives the same consideration as to himself. He does not prefer his own happiness to the happiness of others, nor does he consider his own misery and suffering as greater or more important or more worthy of prevention than those of others. Being in communion with God, he still regards Him as the master whom he adores, as the supreme Lord who pervades all things and holds them in Himself. By his communion with God the *yogin* transcends his lower and smaller self and discovers his greater self in God, not only as the supreme ideal of his highest efforts, but also as the highest of all realities. As soon as the *yogin* can detach himself from his lower self of passions and desires, he uplifts himself to a higher universe, where the distinction of *meum* and *teum*, mine and thine, ceases and the interest of the individual loses its personal limitations and becomes enlarged and universalized and identified with the interests of all living beings. Looked at from this point of view, *yoga* is sometimes defined in the *Gītā* as the outlook of equality (*śamatva*)¹.

In the *Gītā* the word *yoga* has not attained any definite technical sense, as it did in Patañjali's *Yoga-sūtra*, and, in consequence, there is not one definition of *yoga*, but many. Thus *yoga* is used in the sense of *karma-yoga*, or the duty of performance of actions, in v. 1, and it is distinguished from the *sāṃkhya* path, or the path of knowledge, in II. 39. The word *karma-yoga* is mentioned in III. 3 as the path of the *yogins*, and it is referred to in III. 7, v. 2 and XIII. 24. The word *buddhi-yoga* is also used at least three times, in II. 49, x. 10 and XVIII. 57, and the *bhakti-yoga* also is used at least once, in XIV. 26. The one meaning of *yoga* that suits all these different contexts seems to be "association." It has already been said that this primary meaning of the word is the central idea of *yoga* in the *Gītā*. One of the main teachings of

¹ *śamatvaṃ yoga ucyate*, II. 48.

the *Gītā* is that duties should be performed, and it is this obligatoriness of the performance of duties that in the *Gītā* is understood by *karma-yoga*. But, if such duties are performed from motives of self-interest or gain or pleasure, the performance could not lead to any higher end. It is advised, therefore, that they should be performed without any motive of gain or pleasure. So the proper way in which a man should perform his duties, and at the same time keep himself clean and untarnished by the good and bad results, the pleasures and sorrows, the praise and blame proceeding out of his own deeds, is to make himself detached from all desires for the fruits of actions. To keep oneself detached from the desires for the fruits of actions is therefore the real art (*kauśala*) of performing one's duties; for it is only in this way that a man can make himself fit for the higher union with God or his own higher self. Here, then, we have a definition of *yoga* as the art of performing one's duties (*yogaḥ karmasu kauśalam*—II. 50). The art of performing one's duties, e.g. the art of keeping oneself unattached, cannot however be called *yoga* on its own account; it is probably so-called only because it is the indispensable step towards the attainment of the real *yoga*, or union with God. It is clear, therefore, that the word *yoga* has a gradual evolution to a higher and higher meaning, based no doubt on the primary root-meaning of "association."

It is important to note in this connection that the process of *prāṇāyāma*, regarded as indispensable in Patañjali's *Yoga*, is not considered so necessary either for *karma-yoga*, *buddhi-yoga*, or for the higher kind of *yoga*, e.g. communion with God. It has already been mentioned that the reference to *prāṇāyāma* is found only in connection with some kinds of substitution-meditations which have nothing to do with the main concept of *yoga* in the *Gītā*. The expression *samādhi* is used thrice in the noun form in the *Gītā*, in II. 44, 53 and 54, and three times in the verb form, in VI. 7, XII. 9 and XVII. 11; but the verb forms are not used in the technical sense of Patañjali, but in the simple root-meaning of *sam* + *ā* + $\sqrt{\text{dhā}}$, "to give" or "to place" (*arpaṇa* or *sthāpana*). In two cases (II. 44 and 53) where the word *samādhi* is used as a noun it has been interpreted by both Śaṅkara and Śrīdhara as meaning the object in which the mind is placed or to which it is directed for communion, viz. God¹. The author of the *Gītā* is well aware of

¹ In II. 44, however, Śaṅkara considers this object of mind to be *antaḥkaraṇa*

the moral conflict in man and thinks that it is only by our efforts to come into touch with our higher self that the littleness of passions and desires for fruits of actions and the preference of our smaller self-interests can be transcended. For, once man is in touch with his highest, he is in touch with God. He has then a broader and higher vision of man and his place in nature, and so he identifies himself with God and finds that he has no special interest of his own to serve. The low and the high, the sinful and the virtuous, are the same in his eyes; he perceives God in all things and all things in God, and it is this state of communion that is the real *yoga* of the *Gītā*; and it is because in this state all inequalities of race, creed, position, virtue and vice, high and low vanish, that this superior realization of universal equality is also called *yoga*. Not only is this union with God called *yoga*, but God Himself is called *Yogeśvara*, or the Lord of communion. As a result of this union, the *yogin* enjoys supreme bliss and ecstatic joy, and is free from the least touch of sorrow or pain; and this absolute freedom from pain or the state of bliss, being itself a result of *yoga*, is also called *yoga*. From the above survey it is clear that the *yoga* of the *Gītā* is quite different from the *yoga* of Patañjali, and it does not seem at all probable that the *Gītā* was aware of Patañjali's *yoga* or the technical terms used by him¹.

The treatment of *yoga* in the *Gītā* is also entirely different from its treatment in almost all the Upaniṣads. The *Kaṭha Upaniṣad* speaks of sense-control as being *yoga*; but sense-control in the *Gītā* is only a preliminary to *yoga* and not itself *yoga*. Most of the *yoga* processes described in the other Upaniṣads either speak of *yoga* with six accessories (*ṣaḍ-aṅga yoga*) or of *yoga* with eight accessories (*aṣṭāṅga-yoga*), more or less after the manner of Patañjali. They introduce elaborate details not only of breath-control or *prāṇāyāma*, but also of the nervous system of the body, *iḍā*, *piṅgulā* and *suṣumṇā*, the nerve plexus, *mūlādhāra* and other similar objects, after the manner of the later works on the *Śaṭ-*

or *buddhi*. But Śrīdhara considers this object to be God, and in II. 53 Śāṅkara and Śrīdhara are unanimous that the object, or the support of the union or communion of the mind, is God.

¹ *paśya me yogam aiśvaram*, IX. 5, *etām vibhūtim yogam ca*, X. 7. In the above two passages the word *yoga* seems to have a different meaning, as it is used there in the sense of miraculous powers; but even there the commentators Śāṅkara and Śrīdhara take it to mean "association" (*yukti*) and interpret *aiśvaram yogam* as "association of miraculous powers."

cakra system. Thus the *Amṛta-nāda* enumerates after the manner of Patañjali the six accessories of *yoga* as restraint (*pratyāhāra*), concentration (*dhyāna*), breath-control (*prāṇāyāma*), fixation (*dhāraṇā*), reasoning (*tarka*) and meditative absorption (*samādhi*), and describes the final object of *yoga* as ultimate loneliness of the self (*kaivalya*). The *Amṛta-bindu* believes in an all-pervading Brahman as the only reality, and thinks that, since mind is the cause of all bondage and liberation, the best course for a *yogin* to adopt is to deprive the mind of all its objects and thus to stop the activity of the mind, and thereby to destroy it, and bring about Brahmanhood. Brahman is described here as being absolutely indeterminate, uninferable, infinite and beginningless. The *Kṣurika* merely describes *prāṇāyāma*, *dhyāna*, *dhāraṇā* and *samādhi* in association with the nerves, *suṣumnā*, *piṅgalā*, etc. and the nerve plexuses. The *Tejo-bindu* is a Vedāntic Upaniṣad of the ultra-monistic type, and what it calls *yoga* is only the way of realizing the nature of Brahman as one and as pure consciousness and the falsity of everything else. It speaks of this *yoga* as being of fifteen accessories (*pañca-daśāṅga yoga*). These are *yama* (sense-control through the knowledge that all is Brahman), *niyama* (repetition of the same kinds of thoughts and the avoidance of dissimilar ones), *tyāga* (giving up of the world-appearance through the realization of Brahman), silence, a solitary place, the proper posture, steadiness of mind, making the body straight and erect, perceiving the world as Brahman (*dṛk-sthiti*), cessation of all states and breath-control (*prāṇa-samyamana*), perceiving all objects of the mind as Brahman (*pratyāhāra*), fixing the mind always on Brahman (*dhāraṇā*), self-meditation and the realization of oneself as Brahman. This is, however, a scheme of *yoga* quite different from that of Patañjali, as well as from that of the *Gītā*. The *Trīśikha-brāhmaṇa* speaks of a *yoga* with eight accessories (*aṣṭāṅga-yoga*), where the eight accessories, though the same in name as the eight accessories of Patañjali, are in reality different therefrom. Thus *yama* here means want of attachment (*vairāgya*), *niyama* means attachment to the ultimate reality (*anuraktiḥ pare tattve*), *āsana* means indifference to all things, *prāṇa-samyamana* means the realization of the falsity of the world, *pratyāhāra* means the inwardness of the mind, *dhāraṇā* means the motionlessness of the mind, *dhyāna* means thinking of oneself as pure consciousness, and *samādhi* means forgetfulness of *dhyānas*. Yet it again includes

within its *yama* and *niyama* almost all the virtues referred to by Patañjali. It also speaks of a number of postures after the *haṭha-yoga* fashion, and of the movement of *prāṇa* in the nerve plexuses, the ways of purifying the nerves and the processes of breath-control. The object of *yoga* is here also the destruction of mind and the attainment of *kaivalya*. The *Darśana* gives an *aṣṭāṅga-yoga* with *yama*, *niyama*, *āsana*, *prāṇāyāma*, *pratyāhāra*, *dhāraṇā*, *dhyaṇa* and *samādhi* more or less after the fashion of Patañjali, with a supplementary treatment of nerves (*nāḍi*) and the movement of the *prāṇa* and other *vāyus* in them. The final object of *yoga* here is the attainment of Brahmahood and the comprehension of the world as *māyā* and unreal. The *Dhyāna-bindu* describes the self as the essential link of all things, like the fragrance in flowers or the thread in a garland or the oil in sesamum. It describes a *ṣaḍ-aṅga yoga* with *āsana*, *prāṇa-saṃrodha*, *pratyāhāra*, *dhāraṇā*, *dhyaṇa* and *samādhi*. It also describes the four *cakras* or nerve plexuses, and speaks of the awakening of the serpent power (*kuṇḍalinī*) and the practice of the *mudrās*. It speaks further of the balancing or unifying of *prāṇa* and *apāna* as leading to *yoga*¹. The object of this *yoga* is the attainment of the transcendent state of liberation or the realization of the *paramātman*. It is useless to refer to other Upaniṣads; for what has already been said will be enough to show clearly that the idea of *Yoga* in the *Gītā* is entirely different from that in the *Yoga Upaniṣads*, most of which are of comparatively late date and are presumably linked up with traditions different from that of the *Gītā*.

Sāṃkhya and Yoga in the *Gītā*.

In the *Gītā* Sāṃkhya and Yoga are sometimes distinguished from each other as two different paths, and sometimes they are identified. But though the *Gītā* is generally based on the doctrines of the *guṇas*, *prakṛti* and its derivatives, yet the word *sāṃkhya* is used here in the sense of the path of knowledge or of philosophic wisdom. Thus in the *Gītā*, II. 39, the path of knowledge is distinguished from that of performance of duties. Lord Kṛṣṇa says there that he has just described the wisdom of Sāṃkhya and he is going to describe the wisdom of Yoga. This

¹ *Tadā prāṇāpānāyor aikyaṃ kṛtvā*; see *Dhyāna-bindu*, 93-5 (Adyar Library edition, 1920). This seems to be similar to *prāṇāpānau samau kṛtvā* of the *Gītā*.

seems to give us a clue to what is meant by Sāṃkhya wisdom. This wisdom, however, seems to be nothing more than elaboration of the doctrine of the immortality of soul and the associated doctrine of rebirth, and also the doctrine that, howsoever the body might be affected and suffer changes of birth, growth and destruction, the self is absolutely unaffected by all these changes; the self cannot be cut or burned; it is eternal, all-pervasive, unchangeable, indescribable and unthinkable. In another passage of the *Gītā*, XIII. 25, it is said that there are others who perceive the self in accordance with *sāṃkhya-yoga*; and Śaṅkara explains this passage to mean that *sāṃkhya-yoga* means the realization of the self as being absolutely different from the three *guṇas*, *sattva*, *rajas* and *tamas*. If this is Sāṃkhya, the meaning of the word *yoga* in this passage (*anye sāṃkhyena yogena*) is not explained. Śaṅkara does not expound the meaning of the word *yoga*, but explains the word *sāṃkhya* and says that this *sāṃkhya* is *yoga*, which seems to be an evasion. Śrīdhara follows Śaṅkara's interpretation of *sāṃkhya*, but finds it difficult to swallow his identification of *sāṃkhya* with *yoga*, and he interprets *yoga* here as the *yoga* (of Patañjali) with eight accessories, but does not explain how this *aṣṭāṅga-yoga* can be identified with *sāṃkhya*. It is, no doubt, true that in the immediately preceding verse it is said that, howsoever a man may behave, if he knows the proper nature of *puruṣa* and of the *prakṛti* and the *guṇas*, he is never born again; but there is no reason to suppose that the phrase *sāṃkhyena yogena* refers to the wisdom recommended in the preceding verse; for this verse summarizes different paths of self-realization and says that there are some who perceive the self in the self through the self, by meditation, others by *sāṃkhya-yoga* and others by *karma-yoga*. In another passage it is said that the *Sāṃkhyas* follow the path of knowledge (*jñāna-yoga*), while the *Yogins* follow the path of duties (*Gītā*, III. 3). If the word *yoga* means "association," as it does in various contexts, then *sāṃkhya* and *sāṃkhya-yoga* would mean more or less the same thing; for *sāṃkhya-yoga* would only mean association with *sāṃkhya*, and the phrase *sāṃkhyena yogena* might mean either association with *sāṃkhya* or the union of *sāṃkhya*. It has already been said that, following the indications of the *Gītā*, II. 39, *sāṃkhya* should mean the realization of the true nature of the self as immortal, all-pervasive, unchangeable and infinite. It has also been pointed out that it is such a true realization of the

self, with its corresponding moral elevation, that leads to the true communion of the self with the higher self or God. Thus this meaning of *sāṃkhya* on the one hand distinguishes the path of *sāṃkhya* from the path of *yoga* as a path of performance of duties, and at the same time identifies the path of *sāṃkhya* with the path of *yoga* as communion with God. Thus we find that the *Gītā*, v. 4, 5, says that “fools only think Sāṃkhya and Yoga to be different, not so wise men,” since, accepting either of them, one attains the fruit of them both. The goal reached by the followers of Sāṃkhya is also reached by the *Yogins*; he who perceives *Sāṃkhya* and *Yoga* to be the same perceives them in the right perspective. In these passages *sāṃkhya* and *yoga* seem from the context to refer respectively to *karma-sannyāsa* and *karma-yoga*. *Sāṃkhya* here can only in a secondary way mean the renunciation of the fruits of one’s actions (*karma-sannyāsa*). The person who realizes the true nature of his self, and knows that the self is unchangeable and infinite, cannot feel himself attached to the fruits of his actions and cannot be affected by ordinary mundane desires and cravings. As in the case of the different uses of the word *yoga*, so here also the word *sāṃkhya*, which primarily means “true knowledge,” is also used to mean “renunciation”; and since *karma-yoga* means the performance of one’s duties in a spirit of renunciation, *sāṃkhya* and *yoga* mean practically the same thing and are therefore identified here; and they are both regarded as leading to the same results. This would be so, even if *yoga* were used to denote “communion”; for the idea of performance of one’s duties has almost always communion with God as its indispensable correlate. Thus in the two passages immediately following the identification of *sāṃkhya* and *yoga* we find the *Gītā* (v. 6, 7) saying that without *karma-yoga* it is hard to renounce *karma*; and the person who takes the path of *karma-yoga* speedily attains Brahman. The person who thus through *karma-yoga* comes into union (with Brahman) is pure in spirit and self-controlled, and, having identified himself with the universal spirit in all beings, he is not affected by his deeds.

One thing that emerges from the above discussion is that there is no proof that the word *sāṃkhya* in the *Gītā* means the discernment of the difference of *prakṛti* and the *guṇas* from *puruṣa*, as Śaṅkara in one place suggests (*Gītā*, XIII. 25), or that it refers to the cosmology and ontology of *prakṛti*, the *guṇas* and their

evolutes of the traditional Kapila-Sāṃkhya. The philosophy of the *guṇas* and the doctrine of *puruṣa* were, no doubt, known to the *Gītā*; but nowhere is this philosophy called *sāṃkhya*. *Sāṃkhya* in the *Gītā* means true knowledge (*tattva-jñāna*) or self-knowledge (*ātma-bodha*). Śāṅkara, commenting on the *Gītā*, XVIII. 13, interprets *sāṃkhya* to mean *vedānta*, though in verse XIII. 25 he interprets the word as meaning the discernment of the difference between the *guṇas* and the *puruṣa*, which would decidedly identify the *sāṃkhya* of the *Gītā* with the Kapila-Sāṃkhya.

The *Mahā-bhārata* also refers to *sāṃkhya* and *yoga* in several places. But in almost all places *sāṃkhya* means either the traditional school of Kapila-Sāṃkhya or some other school of Sāṃkhya, more or less similar to it: *yoga* also most often refers either to the *yoga* of Patañjali or some earlier forms of it. In one place are found passages identifying *sāṃkhya* and *yoga*, which agree almost word for word with similar passages of the *Gītā*¹. But it does not seem that the *sāṃkhya* or the *yoga* referred to in the *Mahā-bhārata* has anything to do with the idea of *Sāṃkhya* or *yoga* in the *Gītā*. As has already been pointed out, the *yoga* in the *Gītā* means the dedication to God and renunciation of the fruits of one's *karma* and being in communion with Him as the supreme Lord pervading the universe. The chapter of the *Mahā-bhārata* just referred to speaks of turning back the senses into the *manas* and of turning the *manas* into *ahaṃkāra* and *ahaṃkāra* into *buddhi* and *buddhi* into *prakṛti*, thus finishing with *prakṛti* and its evolutes and meditating upon pure *puruṣa*. It is clear that this system of *yoga* is definitely associated with the Kapila school of Sāṃkhya. In the *Mahā-bhārata*, XII. 306, the predominant feature of *yoga* is said to be *dhyāna*, and the latter is said to consist of concentration of mind (*ekāgratā ca manasaḥ*) and breath-control (*prāṇāyāma*). It is said that the *yogin* should stop the functions of his senses by his mind, and the movement of his mind by his reason (*buddhi*), and in this stage he is said to be linked up (*yukta*) and is like a motionless flame in a still place². This passage naturally reminds one of the description of *dhyāna-yoga* in the *Gītā*, VI. 11-13, 16-19 and 25, 26; but the fundamental idea of *yoga*,

¹ *yad eva yogāḥ paśyanti tat sāṃkhyair api drśyate ekaṃ sāṃkhyāṇ ca yogāṇ ca yaḥ paśyati sa tattva-vit. Mahā-bhārata*, VII. 316. 4. Compare the *Gītā*, v. 5.

² Cf. the *Gītā*, VI. 19, *yathā dīpo nivāta-sitah*, etc.

as the dedication of the fruits of actions to God and communion with Him, is absent here.

It is needless to point out here that the *yoga* of the *Gītā* is in no way connected with the *yoga* of Buddhism. In Buddhism the sage first practises *śīla*, or sense-control and mind-control, and thus prepares himself for a course of stabilization or fixation of the mind (*samādhāna*, *upadhāraṇa*, *paṭiṭṭhā*). This *samādhi* means the concentration of the mind on right endeavours and of its states upon one particular object (*ekārammaṇa*), so that they may completely cease to shift and change (*sammā ca avikkhippamānā*). The sage has first to train his mind to view with disgust the appetitive desires for food and drink and their ultimate loathsome transformations as various nauseating bodily elements. When a man habituates himself to emphasizing the disgusting associations of food and drink, he ceases to have any attachment to them and simply takes them as an unavoidable evil, only awaiting the day when the final dissolution of all sorrows will come. Secondly, the sage has to habituate his mind to the idea that all his members are made up of the four elements, earth, water, fire and wind, like the carcass of a cow at the butcher's shop. Thirdly, he has to habituate his mind to thinking again and again (*anussati*) about the virtues or greatness of the Buddha, the Saṅgha, the gods and the law of the Buddha, about the good effects of *śīla* and the making of gifts (*cāgānussati*), about the nature of death (*marañānussati*) and about the deep nature and qualities of the final extinction of all phenomena (*upāsamānussati*). He has also to pass through various purificatory processes. He has to go to the cremation grounds and notice the diverse horrifying changes of human carcasses and think how nauseating, loathsome, unsightly and impure they are; from this he will turn his mind to living human bodies and convince himself that they, being in essence the same as dead carcasses, are as loathsome as the latter. He should think of the anatomical parts and constituents of the body as well as of their processes, and this will help him to enter into the first *jhāna*, or meditation, by leading his mind away from his body. As an aid to concentration the sage should sit in a quiet place and fix his mind on the inhaling (*passāsa*) and the exhaling (*assāsa*) of his breath, so that, instead of breathing in a more or less unconscious manner, he may be aware whether he is breathing quickly or slowly; he ought to mark this definitely by counting numbers, so that by

fixing his mind on the numbers counted he may realize the whole process of inhalation and exhalation in all stages of its course. Next to this we come to *brahma-vihāra*, the fourfold meditation of *mettā* (universal friendship), *karuṇā* (universal pity), *muditā* (happiness in the prosperity and happiness of all) and *upekkhā* (indifference to any kind of preferment of oneself, one's friend, enemy or a third party). In order to habituate himself to meditation on universal friendship, a man should start with thinking how he would himself like to root out all misery and become happy, how he would himself like to avoid death and live cheerfully, and then pass over to the idea that other beings would also have the same desires. He should thus habituate himself to thinking that his friends, his enemies and all those with whom he is not connected might all live and become happy. He should fix himself to such an extent in this meditation that he should not find any difference between the happiness or safety of himself and that of others. Coming to *jhānas*, we find that the objects of concentration may be earth, water, fire, wind, colours, etc. In the first stage of concentration on an object there is comprehension of the name and form of the object; at the next stage the relational movement ceases, and the mind penetrates into the object without any quivering. In the next two stages there is a buoyant exaltation and a steady inward bliss, and, as a result of the one-pointedness which is the culminating effect of the progressive meditation, there is the final release of the mind (*ceto-vimutti*)—the *Nibbāna*.

It is easy to see that, though Patañjali's *yoga* is under a deep debt of obligation to this Buddhist *yoga*, the *yoga* of the *Gītā* is unacquainted therewith. The pessimism which fills the Buddhist *yoga* is seen to affect not only the outlook of Patañjali's *yoga*, but also most of the later Hindu modes of thought, in the form of the advisability of reflecting on the repulsive sides of things (*pratipakṣa-bhāvanā*) which are seemingly attractive¹. The ideas of universal friendship, etc. were also taken over by Patañjali and later on passed into Hindu works. The methods of concentration on various ordinary objects also seem to be quite unlike what we find in the *Gītā*. The *Gītā* is devoid of any tinge of pessimism such as we find in the Buddhist *yoga*. It does not anywhere recommend the habit of brooding over the repulsive

¹ See *Nyāya-mañjarī*, *Vairāgya-śataka*, *Śānti-śataka*.

aspects of all things, so as to fill our minds with a feeling of disgust for all worldly things. It does not rise to the ideal of regarding all beings as friends or to that of universal compassion. Its sole aim is to teach the way of reaching the state of equanimity, in which the saint has no preferences, likes and dislikes—where the difference between the sinner and the virtuous, the self and the not-self has vanished. The idea of *yoga* as self-surrendering union with God and self-surrendering performance of one's duties is the special feature which is absent in Buddhism. This self-surrender in God, however, occurs in Patañjali's *yoga*, but it is hardly in keeping with the technical meaning of the word *yoga*, as the suspension of all mental states. The idea appears only once in Patañjali's *sūtras*, and the entire method of *yoga* practices, as described in the later chapters, seems to take no notice of it. It seems highly probable, therefore, that in Patañjali's *sūtras* the idea was borrowed from the *Gītā*, where this self-surrender to God and union with Him is defined as *yoga* and is the central idea which the *Gītā* is not tired of repeating again and again.

We have thus completely failed to trace the idea of the *Gītā* to any of the different sources where the subject of *yoga* is dealt with, such as the Yoga Upaniṣads, Patañjali's *Yoga-sūtras*, Buddhist Yoga, or the *Mahā-bhārata*. It is only in the *Pañca-rātra* works that the *Gītā* meaning of *yoga* as self-surrender to God is found. Thus *Ahīrbudhnya-saṃhitā* describes *yoga* as the worship of the heart (*hṛdayārādhana*), the offering of an oblation (*haviḥ*) of oneself to God or self-surrender to God (*bhagavate ātma-samarpaṇam*), and *yoga* is defined as the linking up (*saṃyoga*) of the lower self (*jīvātman*) with the higher self (*paramātman*)¹. It seems, therefore, safe to suggest that the idea of *yoga* in the *Gītā* has the same traditional source as in the *Pañca-rātra* works.

Sāṃkhya Philosophy in the Gītā.

It has been said before that there is no proof that the word *sāṃkhya* in the *Gītā* means the traditional Sāṃkhya philosophy; yet the old philosophy of *prakṛti* and *puruṣa* forms the basis of the philosophy of the *Gītā*. This philosophy may be summarized as follows:

¹ The *Ahīrbudhnya-saṃhitā*, of course, introduces many observations about the nerves (*nāḍī*) and the *vāyus*, which probably became associated with the *Pañca-rātra* tradition in later times.

Prakṛti is called *mahad brahma* (the great Brahma or the great multiplier as procreatress) in the *Gītā*, xiv. 3¹. It is said there that this *prakṛti* is described as being like the female part, which God charges with His energy for the creation of the universe. Wherever any living beings may be born, the great Brahman or *prakṛti* is to be considered as the female part and God as the father and fertilizer. Three types of qualities are supposed to be produced from *prakṛti* (*guṇāḥ prakṛti-sambhavāḥ*)². These are *sattva*, *rajas* and *tamas*, which bind the immortal self in its corporeal body. Of these, *sattva*, on account of its purity, is illuminating and untroubling (*anāmayam*, which Śrīdhara explains as *nirupadravam* or *śāntam*), and consequently, on account of these two qualities, binds the self with the attachment for knowledge (*jñāna-saṅgena*) and the attachment for pleasure (*sukha-saṅgena*). It is said that there are no living beings on earth, or gods in the heavens, who are not pervaded by the three *guṇas* produced from the *prakṛti*³. Since the *guṇas* are produced from the *prakṛti* through the fertilization of God's energy in *prakṛti*, they may be said to be produced by God, though God always transcends them. The quality of *sattva*, as has been said above, associates the self with the attachments for pleasure and knowledge. The quality of *rajas* moves to action and arises from desire and attachment (*trṣṇā-saṅga-samudbhavam*), through which it binds the self with egoistic attachments for action. The quality of *tamas* overcomes the illumination of knowledge and leads to many errors. *Tamas*, being a product of ignorance, blinds all living beings and binds them down with carelessness, idleness and sleep. These three qualities predominate differently at different times. Thus, sometimes the quality of *sattva* predominates over *rajas* and *tamas*, and such a time is characterized by the rise of knowledge in the mind through all the different sense-gates; when *rajas* dominates *sattva* and *tamas*, the mind is characterized by greed, efforts and endeavours for different kinds of action and the rise of passions, emotions and desires; when *tamas* predominates over *sattva* and *rajas*, there is ignorance, lethargy, errors, delusions and false beliefs.

The different categories are *avyakta*, or the undifferentiated

¹ *mama yonir mahad brahma tasmin garbhaṁ dadhāmy aham*. xiv. 3. I have interpreted *mahad brahma* as *prakṛti*, following Śrīdhara and other commentators. Śaṅkara surreptitiously introduces the word *māyā* between *mama* and *yonir* and changes the whole meaning.

² *Gītā*, xiv. 5.

³ *Ibid.* xviii. 40.

prakṛti, *buddhi* (intellect), *ahaṃkāra* (egohood), *manas* (mind-organ) and the ten senses, cognitive and conative. *Manas* is higher and subtler than the senses, and *buddhi* is higher than the *manas*, and there is that (probably self) which transcends *buddhi*. *Manas* is regarded as the superintendent of the different senses; it dominates them and through them enjoys the sense-objects. The relation between the *buddhi* and *ahaṃkāra* is nowhere definitely stated. In addition to these, there is the category of the five elements (*mahābhūta*)¹. It is difficult to say whether these categories were regarded in the *Gītā* as being the products of *prakṛti* or as separately existing categories. It is curious that they are nowhere mentioned in the *Gītā* as being products of *prakṛti*, which they are in Sāṃkhya, but on the other hand, the five elements, *manas*, *ahaṃkāra* and *buddhi* are regarded as being the eightfold nature (*prakṛti*) of God². It is also said that God has two different kinds of nature, a lower and a higher; the eightfold nature just referred to represents the lower nature of God, whereas His higher nature consists of the collective universe of life and spirit³. The *guṇas* are noticed in relation to *prakṛti* in III. 5, 27, 29, XIII. 21, XIV. 5, XVIII. 40, and in all these places the *guṇas* are described as being produced from *prakṛti*, though the categories are never said to be produced from *prakṛti*. In the *Gītā*, IX. 10, however, it is said that *prakṛti* produces all that is moving and all that is static through the superintendence of God. The word *prakṛti* is used in at least two different senses, as a primary and ultimate category and as a nature of God's being. It is quite possible that the primary meaning of *prakṛti* in the *Gītā* is God's nature; the other meaning of *prakṛti*, as an ultimate principle from which the *guṇas* are produced, is simply the hypostatization of God's nature. The whole group consisting of pleasure, pain, aversion, volition, consciousness, the eleven senses, the mind-organ, the five elements, egohood, intellect (*buddhi*), the undifferentiated (*avyakta*, meaning *prakṛti* existing, probably, as the sub-conscious mind) power of holding the senses and the power of holding together the diverse mental functions (*saṃghāta*) with their modifications and changes, is called *kṣetra*. In another place the body alone is called *kṣetra*⁴. It seems, therefore, that the word *kṣetra* signifies in its broader sense not only the body, but also the entire mental plane, involving

¹ *Gītā*, III. 42, XIII. 6 and 7, xv. 9.

³ *Ibid.* VII. 5.

² *Ibid.* VII. 4.

⁴ *Ibid.* XIII. 2.

the diverse mental functions, powers, capabilities, and also the undifferentiated sub-conscious element. In this connection it may be pointed out that *kṣetra* is a term which is specially reserved to denote the complex of body and mind, exclusive of the living principle of the self, which is called *kṣetra-jñā*, or the knower of the *kṣetra*, or *kṣetrin*, the possessor of the *kṣetra* or the body-mind complex. It is said that, just as the sun illuminates this whole world, so does the *kṣetrin* illuminate the whole *kṣetra*¹.

It will be remembered that it is said in the *Gītā* that God has two different natures, one the complex whole of the five elements, *ahamkāra*, *buddhi*, etc., and the other the collective whole of life and spirit (*jīva-bhūta*). It will also be remembered that, by the fertilization of God's power in *prakṛti*, the *guṇas*, or the characteristic qualities, which pervade all that is living, come into being. The *guṇas*, therefore, as diverse dynamic tendencies or characteristic qualities, pervade the entire psychosis-complex of *ahamkāra*, *buddhi*, the senses, consciousness, etc., which represents the mental side of the *kṣetra*. *Kṣetra-jñā*, or the *kṣetrin*, is in all probability the same as *puruṣa*, an all-pervading principle as subtle as *ākāśa* (space), which, though it is omnipresent, remains untouched by any of the qualities of the body, in which it manifests itself. It is difficult to say what, according to the *Gītā*, *prakṛti* is in itself, before the fertilization of God's energy. It does not seem that *prakṛti* can be regarded as being identical with God. It appears more to be like an ultimate principle coexistent with God and intimately connected with Him. There is, however, no passage in the *Gītā* by which the lower *prakṛti* of God, consisting of the categories, etc., can be identified with *prakṛti*; for *prakṛti* is always associated with the *guṇas* and their production. Again, it is nowhere said in the *Gītā* that the categories *ahamkāra*, senses, etc., are in any way the products of the *guṇas*; the word *guṇa* seems to imply only the enjoyable, emotional and moral or immoral qualities. It is these *guṇas* which move us to all kinds of action, produce attachments and desires, make us enjoy or suffer, and associate us with virtues and vices. *Prakṛti* is regarded as the mother-source from which all the knowable, enjoyable, and dynamic qualities of experience, referred to as being generated by the successive preponderance of the *guṇas*, are produced. The categories of the psychosis and the five elements, which form the

¹ *Gītā*, XIII. 34.

mental ground, do not, therefore, seem to be products of the *guṇas* or the *prakṛti*. They seem to constitute a group by themselves, which is referred to as being a lower nature of God, side by side with His higher nature as life and spirit. *Kṣetra* is a complex of both the *guṇa* elements of experience and the complex categories of body and mind. There seem, therefore, to be three different principles, the *aparā prakṛti* (the lower nature), *parā prakṛti* or *puruṣa*, and *prakṛti*. *Prakṛti* produces the *guṇas*, which constitute experience-stuff; the *aparā prakṛti* holds within itself the material world of the five elements and their modifications as our bodies, the senses and the mind-categories. It seems very probable, therefore, that a later development of Sāṃkhya combined these two *prakṛtis* as one, and held that the *guṇas* produced not only the stuff of our experience, but also all the mind-categories, the senses, etc., and the five gross elements and their modifications. The *guṇas*, therefore, are not the products of *prakṛti*, but they themselves constitute *prakṛti*, when in a state of equilibrium. In the *Gītā* *prakṛti* can only produce the *guṇas* through the fertilizing energy of God; they do not constitute the *prakṛti*, when in a state of equilibrium. It is hard to realize the connection between the *aparā prakṛti* and the *prakṛti* and the *guṇas*. The connection, however, can be imagined to take place through the medium of God, who is the fertilizer and upholder of them both. There seems to be but one *puruṣa*, as the all-pervading fundamental life-principle which animates all bodies and enjoys and suffers by its association with its experiences, remaining at the same time unaffected and untouched by the effects of the *guṇas*. This naturally presumes that there is also a higher and a lower *puruṣa*, of which the former is always unattached to and unaffected by the *guṇas*, whereas the lower *puruṣa*, which is different in different bodies, is always associated with the *prakṛti* and its *guṇas* and is continually affected by their operations. Thus it is said that the *puruṣa*, being in *prakṛti*, enjoys the *guṇas* of *prakṛti* and this is the cause of its rebirth in good or bad bodies¹. There is also in this body the higher *puruṣa* (*puruṣaḥ paraḥ*), which is also called *paramātmān*, being the passive perceiver, thinker, upholder, enjoyer and the great lord². The word *puruṣa* is used in the *Gītā* in four distinct senses, firstly, in the

¹ *Gītā*, XIII. 21.

² *upadraṣṭānumantā ca bhartā bhoktā maheśvaraḥ paramātmēti cāpy ukto dehe 'smin puruṣaḥ paraḥ*. *Ibid.* XIII. :3.

sense of *puruṣottama*, or God¹; secondly, in the sense of a person²; and the *Gītā* distinctly speaks of the two other *puruṣas* as *kṣara* (changeable) and *akṣara* (unchangeable). The *kṣara* is all living beings, whereas the *akṣara* is changeless. It is this higher self (*uttamaḥ puruṣaḥ*), different from the other *puruṣa* and called also *paramātmān*, that pervades the three worlds and upholds them as their deathless God³. God, however, transcends both the *kṣara puruṣa* and the *akṣara puruṣa* and is therefore called *puruṣottama*⁴. Both *prakṛti* and the *paramātmān puruṣa* are beginningless. The *paramātmān puruṣa*, being changeless and beyond the sphere of the *guṇas*, is neither the agent of anything nor affected by the *guṇas*, though it resides in the body. *Prakṛti* is regarded as the ground through which all causes, effects, and their agents are determined. It is the fundamental principle of all dynamic operations, motivations and actions, whereas *puruṣa* is regarded as the principle which makes all experiences of joys and sorrows possible⁵. The *paramātmān puruṣa*, therefore, though all-pervasive, yet exists in each individual, being untouched by its experiences of joy, sorrow and attachment, as its higher self. It is only the lower self that goes through the experiences and is always under the influence of the *guṇas*. Any attempts that may be made to rise above the sphere of the *guṇas*, above attachments and desires, above pleasures and pains, mean the subordination of the lower self to the pure and deathless higher self. Every attempt in this direction implies a temporary communion (*yoga*) with the higher self. It has already been pointed out that the *Gītā* recognizes a conflict between the higher and the lower selves and advises us to raise the lower self by the higher self. In all our moral efforts there is always an upward and a downward pull by the higher *puruṣa* on the one side, and the *guṇas* on the other; yet the higher *puruṣa* does not itself make the pulls. The energy of the downward pull is derived from the *guṇas* and exerted by the lower self. In all these efforts the higher self stands as the unperturbed ideal of equanimity, steadiness, unchangeableness in good or evil, joys or sorrows. The presence of this superior self is sometimes intuited by self-meditation, sometimes through philosophic knowledge, and sometimes by our moral

¹ *sanātanas tvam puruṣo mato me. Gītā, XI. 18.*

tvam ādi-devaḥ puruṣaḥ purāṇaḥ. Ibid. XI. 38.

For *puruṣottama* see *ibid.* VIII. 1, X. 15, XI. 3, XV. 18 and XV. 19.

² *Ibid.* II. 15, II. 21, III. 60, III. 4, etc.

³ *Ibid.* XV. 16 and 17.

⁴ *Ibid.* XV. 15 and 18.

⁵ *Ibid.* XIII. 20.

efforts to perform our duties without attachment and without desires¹. Each moral effort to perform our allotted duties without attachment means also a temporary communion (*yoga*) with the higher self or with God. A true philosophic knowledge, by which all actions are known to be due to the operations of the *prakṛti* and its *guṇas* and which realizes the unattached nature of the true self, the philosophic analysis of action and the relation between God, the higher self, the lower self, and the *prakṛti*, and any devotional realization of the nature of God and dedication of all action to Him, and the experience of the supreme bliss of living in communion with Him, mean a communion with the higher self or God, and are therefore *yoga*.

It is easy to notice here the beginnings of a system of thought which in the hands of other thinkers might well be developed into the traditional school of Sāṃkhya philosophy. It has already been pointed out that the two *prakṛtis* naturally suggested the idea of unifying them into the one *prakṛti* of the Sāṃkhya. The higher and the lower *puruṣas*, where the latter enjoys and suffers, while the former remains unchanged and unperturbed amidst all the experiences of joy and sorrow on the part of the latter, naturally remind one of the Upaniṣadic simile of the two birds in the same tree, of whom the one eats tasteful fruits while the other remains contented without them². The *Gītā* does not seem to explain clearly the nature of the exact relation between the higher *puruṣa* and the lower *puruṣa*. It does not definitely state whether the lower *puruṣa* is one or many, or describe its exact ontological states. It is easy to see how any attempt that would aim at harmonizing these two apparently loosely-connected *puruṣas* into one self-consistent and intelligible concept might naturally end in the theory of infinite, pure, all-pervasive *puruṣas* and make the lower *puruṣa* the product of a false and illusory mutual reflection of *prakṛti* and *puruṣa*. The *Gītā* uses the word *māyā* in three passages (VII. 14 and 15, XVIII. 61); but it seems to be used there in the sense of an inscrutable power or ignorance, and not in that of illusory or magical creation. The idea that the world or any of the mental or spiritual categories could be merely an illusory appearance seems never to have been

¹ *dhyānenātmani paśyanti kecid ātmānam ātmānā
anye sāmṛkhyena yogena karma-yogena cāpare. Gītā, XIII. 25.*

² *Muṇḍaka, III. 1. 1 and Śvetāśvatara, 4. 6.*

contemplated in the *Gītā*. It is not, therefore, conceivable that the lower, or the *kṣara, puruṣa* might be mere illusory creation, accepted as a necessary postulate to explain the facts of our undeniable daily experience. But it is difficult to say how this *kṣetra-jña puruṣa* can have a separate existence from the *para puruṣa* (which is absolutely free from the *guṇas*), as enjoying the *guṇas* of *prakṛti*, unless the former be somehow regarded as the result of the functioning of the latter. Such a view would naturally support a theory that would regard the lower *puruṣa* as being only the *para puruṣa* as imaged or reflected in the *guṇas*. The *para puruṣa*, existing by itself, free from the influence of the *guṇas*, is in its purity. But even without losing its unattached character and its lonely purity it may somehow be imaged in the *guṇas* and play the part of the phenomenal self, the *jīva* or the lower *puruṣa*, enjoying the *guṇas* of *prakṛti* and having the superior *puruṣa* as its ultimate ground. It cannot be denied that the *Gītā* theory of *puruṣa* is much looser than the later Sāṃkhya theory; but it has the advantage of being more elastic, as it serves better to explain the contact of the lower *puruṣa* with the higher and thereby charges the former with the spirit of a higher ideal.

The qualities of *sattva*, *rajas* and *tamas* were regarded as the universal characteristics of all kinds of mental tendencies, and all actions were held to be prompted by specific kinds of *sattva*, *rajas* or *tamas*. Mental tendencies were also designated accordingly as *sāttvika*, *rājasa* or *tāmasa*. Thus religious inclinations (*śraddhā*) are also described as being of a threefold nature. Those who are of *sāttvika* nature worship the gods, those who are of *rājasa* nature worship the *yakṣas* and the *rakṣas* and those who are of *tāmasa* nature worship ghosts and demons. Those who, prompted by vanity, desires and attachments, perform violent ascetic penances unauthorized by the scriptures and thereby starve and trouble their body and spirit, are really demoniac in their temperament. Again, *sāttvika* sacrifices are those performed solely out of reverence for the scriptural injunctions and from a pure sense of duty, without any desire or motive for any other kind of worldly or heavenly good. Again, *rājasa* sacrifices are those which are performed for the realization of some benefits or good results or for the satisfaction of some vanity or pride. *Tāmasa* sacrifices are those which are performed without proper faith, with improper ceremonials, transgressing Vedic injunctions. Again, *tapas* also is described as

being threefold, as of body (*śārīra*), of speech (*vāṇmāya*) and of mind (*mānasa*). Adoration of gods, Brahmins, teachers and wise men, sincerity and purity, sex-continence and non-injury are known as physical or bodily *tapas*. To speak in a manner that would be truthful, attractive, and conducive to good and would not be harmful in any way, and to study in the regular and proper way are regarded as the *tapas* of speech (*vāṇ-māya tapas*). Mental (*mānasa*) *tapas* consists of sincerity of mind, friendliness of spirit, thoughtfulness and mental control, self-control and purity of mind. The above threefold *tapas* performed without any attachment for a reward is called *sāttvika tapas*. But *tapas* performed out of vanity, or for the sake of higher position, respectability in society, or appreciation from people, is called *rājasa*—such a *tapas* can lead only to unsteady and transient results. Again, the *tapas* which is performed for the destruction of others by ignorant self-mortification is called *tāmasa tapas*. Gifts, again, are called *sāttvika* when they are made to proper persons (holy Brahmins) on auspicious occasions, and in holy places, merely out of sense of duty. Gifts are called *rājasa* when they are made as a return for the good done to the performer, for gaining future rewards, or made unwillingly. Again, gifts are called *tāmasa* when they are made slightly, to improper persons, in unholy places, and in ordinary places. Those who desire liberation perform sacrifices and *tapas* and make gifts without aiming at the attainment of any mundane or heavenly benefits. Knowledge also is regarded as *sāttvika*, *rājasa* and *tāmasa*. *Sāttvika* wisdom consists in looking for unity and diversity and in realizing one unchangeable reality in the apparent diversity of living beings. *Rājasa* knowledge consists in the scientific apprehension of things or living beings as diverse in kind, character and number. *Tāmasa* knowledge consists in narrow and untrue beliefs which are satisfied to consider a little thing as the whole and entire truth through sheer dogmatism, and unreasonable delusion or attachment. An action is called *sāttvika* when it is performed without any desire for a reward, without attachment and without aversion. It is called *rājasa* when it is performed with elaborate endeavours and efforts, out of pride and vanity, for the satisfaction of one's desires. It is called *tāmasa* when it is undertaken out of ignorance and without proper judgment of one's own capacities, and when it leads to waste of energy, harm and injury. An agent (*kartr*) is called *sāttvika* when he is free from attachment

and vanity and absolutely unruffled in success and failure, persevering and energetic. Again, an agent is called *rājasa* if he acts out of motives of self-interest, is impure, is filled with sorrow or joy in failure or success, and injures others. An agent is called *tāmasa* if he is careless, haughty, thoughtless, deceptive, arrogant, idle, procrastinating and melancholic. Understanding (*buddhi*) is said to be *sāttvika* when it grasps how a man has to set himself in the path of virtue, how to refrain from vice, what ought and what ought not to be done, of what one has to be afraid and how to be fearless, what is bondage, and what is liberation. *Rājasa* understanding is that by which one wrongly grasps the nature of virtue and vice, and of right and wrong conduct. *Tāmasa* understanding is that which takes vice as virtue and out of ignorance perceives all things wrongly. That mental hold (*dhṛti*) is called *sāttvika* which by unfailing communion holds together the sense-functions and bio-motor and mind activities. That happiness which in the beginning appears to be painful, but which is in the end as sweet as nectar, and which is the direct result of gaiety of mind, is called *sāttvika sukha*. The happiness arising out of sense-object contact, which in the beginning is as attractive as nectar, but in the end is as painful as poison, is *rājasa*. That happiness which arises out of sleep, idleness and errors, and blinds one in the beginning and in the end, is called *tāmasa*. So also the food which increases life, facilitates mind-function, increases powers of enjoyment, makes one healthy and strong, and is sweet, resistible and delightful is liked by the *sāttvika* people. That food is liked by *rājasa* people which is hot, sour, salt, dry and causes pain and brings on diseases. The food which is impure, tasteless, old and rotten is liked by *tāmasa* people. All this goes to show that the *guṇas*, *sattva*, *rajas* and *tamas*, are determinants of the tendencies of, or rather the stuff of, the moral and immoral, pleasurable and painful planes or characteristics of our experience. *Sattva* represents the moral and supermoral planes, *rajas* the ordinary mixed and normal plane, and *tamas* the inferior and immoral characteristics of our experience.

Avyakta and Brahman.

The word *avyakta* is primarily used in the *Gītā* in the sense of “the unmanifested.” Etymologically the word consists of two parts, the negative particle *a* meaning “negation,” and *vyakta* meaning “manifested,” “differentiated” or “revealed.” In this

sense the word is used as an adjective. There is another use of the word in the neuter gender (*avyaktam*), in the sense of a category. As an illustration of the first sense, one may refer to the *Gītā*, II. 25 or VIII. 21. Thus in II. 25 the self is described as the unmanifested; unthinkable and unchangeable. In the Upaniṣads, however, it is very unusual to characterize the self as *avyakta* or unmanifested; for the self there is pure consciousness and self-manifested. In all later Vedāntic works the self is described as *anubhūti-svabhāva*, or as being always immediately intuited. But in the *Gītā* the most prominent characteristic of the self is that it is changeless and deathless; next to this, it is unmanifested and unthinkable. But it does not seem that the *Gītā* describes the self as pure consciousness. Not only does it characterize the self as *avyakta* or unmanifested, but it does not seem anywhere to refer to it as a self-conscious principle. The word *cetanā*, which probably means consciousness, is described in the *Gītā* as being a part of the changeable *kṣetra*, and not the *kṣetra-jña*¹. It may naturally be asked how, if the self was not a conscious principle, could it be described as *kṣetra-jña* (that which knows the *kṣetra*)? But it may well be replied that the self here is called *kṣetra-jña* only in relation to its *kṣetra*, and the implication would be that the self becomes a conscious principle not by virtue of its own inherent principle of consciousness, but by virtue of the principle of consciousness reflected or offered to it by the complex entity of the *kṣetra*. The *kṣetra* contains within it the conscious principle known as *cetanā*, and it is by virtue of its association with the self that the self appears as *kṣetra-jña* or the knower.

It may not be out of place here to mention that the term *kṣetra* is never found in the Upaniṣads in the technical sense in which it is used in the *Gītā*. The term *kṣetra-jña*, however, appears in *Śvetāśvatara*, VI. 16 and *Maitrāyaṇa*, II. 5 in the sense of *puruṣa*, as in the *Gītā*. The term *kṣetra*, however, as used in the *Gītā*, has more or less the same sense that it has in Caraka's account of Sāṃkhya in the *Caraka-saṃhitā*, III. 1. 61-63. In Caraka, however, *avyakta* is excluded from the complex constituent *kṣetra*, though in the *Gītā* it is included within the constituents of *kṣetra*. Caraka again considers *avyakta* (by which term he means both the Sāṃkhya *prakṛti* and the *puruṣa*) as *kṣetra-jña*, whereas the *Gītā* takes only the *puruṣa* as *kṣetra-jña*. The *puruṣa* of the *Gītā* is further

¹ *Gītā*, XIII. 7.

characterized as the life-principle (*jīva-bhūta*, vii. 5 and xv. 7) by which the whole world is upheld. The *Gītā* does not, however, describe in what particular way the life-principle upholds the world. In Caraka's account also the *ātman* is referred to as the life-principle, and it is held there that it is the principle which holds together the *buddhi*, the senses, the mind and the objects—it is also the principle for which good, bad, pleasure, pain, bondage, liberation, and in fact the whole world-process happens. In the *Caraka-saṃhitā* *puruṣa* is regarded as *cetanā-dhātu*, or the upholder of consciousness; yet it is not regarded as conscious by itself. Consciousness only comes to it as a result of the joint operation of *manas*, the senses, the objects, etc. In the *Gītā* *puruṣa* is not regarded as the *cetanā-dhātu*, but *cetanā* or consciousness is regarded as being a constituent of the *kṣetra* over which the *puruṣa* presides. Thus knowledge can accrue to *puruṣa* as *kṣetra-jñā*, only in association with its *kṣetra*. It may well be supposed that *puruṣa* as *kṣetra-jñā* and as a life-principle upholds the constituents of the *kṣetra*, and it is probable that the *puruṣa*'s position as a cognizer or knower depends upon this intimate association between itself and the *kṣetra*.

Another relevant point is suggested along with the considerations of the nature of the *puruṣa* as the cognizer, namely, the consideration of the nature of *puruṣa* as an agent (*kartr*). It will be pointed out in another section that the fruition of actions is rendered possible by the combined operations of *adhiṣṭhāna*, *kartr*, *kāraṇa*, *ceṣṭā* and *daiva*, and this doctrine has been regarded as being a Sāṃkhya doctrine, though it has been interpreted by Śaṅkara as being a Vedāntic view. But both Sāṃkhya and the Vedānta theories are explicitly of the *sat-kārya-vāda* type. According to the *sat-kārya-vāda* of the traditional Sāṃkhya philosophy the fruition of actions is the natural result of a course of unfolding evolution, consisting in the actualization of what was already potentially present. On the Vedāntic *sat-kārya-vāda* view all operations are but mere appearances, and the cause alone is true. Neither of these doctrines would seem to approve of a theory of causation which would imply that anything could be the result of the joint operation of a number of factors. That which is not cannot be produced by the joint operation of a collocation of causes. It may be remembered, however, that the *Gītā* explicitly formulates the basic principle of *sat-kārya-vāda*, that what exists cannot be destroyed and that what does not exist cannot come into being.

This principle was applied for proving the deathless character of the self. It is bound to strike anyone as very surprising that the *Gītā* should accept the *sat-kārya-vāda* doctrine in establishing the immortality of the self and should assume the *a-sat-kārya-vāda* doctrine regarding the production of action. It is curious, however, to note that a similar view regarding the production of action is to be found in Caraka's account of Sāṃkhya, where it is said that all actions are produced as a result of a collocation of causes—that actions are the results of the collocation of other entities with the agent (*karṭṛ*)¹.

The word *avyakta* is also used in the sense of “unknowability” or “disappearance” in the *Gītā*, II. 28, where it is said that the beginnings of all beings are invisible and unknown; it is only in the middle that they are known, and in death also they disappear and become unknown. But the word *avyakta* in the neuter gender means a category which is a part of God Himself and from which all the manifested manifold world has come into being. This *avyakta* is also referred to as a *prakṛti* or nature of God, which, under His superintendence, produces the moving and the unmoved—the entire universe². But God Himself is sometimes referred to as being *avyakta* (probably because He cannot be grasped by any of our senses), as an existence superior to the *avyakta*, which is described as a part of His nature, and as a category from which all things have come into being³. This *avyakta* which is identical with God is also called *akṣara*, or the immortal, and is regarded as the last resort of all beings who attain their highest and most perfect realization. Thus there is a superior *avyakta*, which represents the highest essence of God, and an inferior *avyakta*, from which the world is produced. Side by side with these two *avyaktas* there is also the *prakṛti*, which is sometimes described as a coexistent principle and as the *māyā* or the blinding power of God, from which the *guṇas* are produced.

The word “Brahman” is used in at least two or three different senses. Thus in one sense it means *prakṛti*, from which the *guṇas* are produced. In another sense it is used as an essential nature of God. In another sense it means the Vedas. Thus in the *Gītā*,

¹ *Caraka-saṃhitā*, IV. 1. 54.

² *Gītā*, IX. 10, *mayādhyakṣeṇa prakṛtiḥ sūyate sacarācaram*.

³ *Ibid.* VIII. 20 and VIII. 21; also IX. 4, where it is said, “All the world is pervaded over by me in my form as *avyakta*; all things and all living beings are in me, but I am not exhausted in them.”

III. 15, it is said that the sacrificial duties are derived from Brahman (Vedas). Brahman is derived from the eternal; therefore the omnipresent Brahman is always established in the sacrifices¹. The idea here is that, since the Vedas have sprung from the eternal Brahman, its eternal and omnipresent character is transmitted to the sacrifices also. The word "omnipresent" (*sarva-gata*) is probably used in reference to the sacrifices on account of the diverse and manifold ways in which the sacrifices are supposed to benefit those who perform them. In the *Gītā*, iv. 32, also the word "Brahman" in *Brahmaṇo mukhe* is used to denote the Vedas. But in iv. 24 and 25, where it is said that all sacrifices are to be made with the Brahman as the object and that the sacrificial materials, sacrificial fire, etc. are to be looked upon as being Brahman, the word "Brahman" is in all probability used in the sense of God². In v. 6, 10, 19 also the word "Brahman" is used in the sense of God or Īśvara; and in most of the other cases the word is used in the sense of God. But according to the *Gītā* the personal God as Īśvara is the supreme principle, and Brahman, in the sense of a qualityless, undifferentiated ultimate principle as taught in the Upaniṣads, is a principle which, though great in itself and representing the ultimate essence of God, is nevertheless upheld by the personal God or Īśvara. Thus, though in viii. 3 and x. 12 Brahman is referred to as the differenceless ultimate principle, yet in xiv. 27 it is said that God is the support of even this ultimate principle, Brahman. In many places we also hear of the attainment of Brahmahood (*brahma-bhūta*, v. 24, vi. 27, xviii. 54, or *brahma-bhūya*, xiv. 26), and also of the attainment of the ultimate bliss of Brahman (*Brahma-nirvāṇa*, ii. 72, v. 24, 25, 26). The word *brahma-bhūta* does not in the *Gītā* mean the differenceless merging into oneness, as in the Vedānta of Śaṅkara. It is wrong to think that the term "Brahman" is always used in the same sense in which Śaṅkara used it. The word "Brahman" is used in the sense of an ultimate differenceless principle in the Upaniṣads, and the Upaniṣads were apprized by all systems of Hindu thought as the repository of all sacred knowledge. Most systems regarded the attainment of a changeless eternal state as the final goal of realization. As an illustration, I may refer to the account of

¹ *Gītā*, iii. 15.

² Śrīdhara, in interpreting this verse (iv. 24), explains it by saying, *tad evam paramēśvarārādhaṇa-lakṣaṇam karṇa jñāna-hetutvena bandhakatvābhāvād akarmaiva*.

Sāṃkhya given by Caraka, in which it is said that, when a man gives up all attachment and mental and physical actions, all feelings and knowledge ultimately and absolutely cease. At this stage he is reduced to Brahmahood (*brahma-bhūta*), and the self is no longer manifested. It is a stage which is beyond all existence and which has no connotation, characteristic or mark¹. This state is almost like a state of annihilation, and yet it is described as a state of Brahmahood. The word "Brahman" was appropriated from the Upaniṣads and was used to denote an ultimate superior state of realization, the exact nature of which differed with the different systems. In the *Gītā* also we find the word "Brahman" signifying a high state of self-realization in which, through a complete detachment from all passions, a man is self-contented within himself and his mind is in a perfect state of equilibrium. In the *Gītā*, v. 19, Brahman is defined as the faultless state of equilibrium (*nir-doṣam hi samam brahma*), and in all the verses of that context the sage who is in a state of equanimity and equilibrium through detachment and passionlessness is said to be by virtue thereof in Brahman; for Brahman means a state of equanimity. In the *Gītā*, XIII. 13, Brahman is described as the ultimate object of knowledge, which is beginningless, and cannot be said to be either existent or non-existent (*na sat tan nāsad ucyate*). It is said that this Brahman has His hands and feet, eyes, head, mouth and ears everywhere in the world, and that He envelopes all. He is without senses, but He illuminates all sense-qualities; Himself unattached and the upholder of all, beyond the *guṇas*, He is also the enjoyer of the *guṇas*. He is both inside and outside of all living beings, of all that is moving and that is unmoved. He is both near and far, but unknowable on account of His subtle nature. Being one in many, yet appearing as many, the upholder of all living beings, the devourer and overpowerer of all, He is the light of all light, beyond all darkness, He is both knowledge and the object of knowledge, residing in the heart of all. It is easy to see that the whole concept of Brahman, as herein stated, is directly borrowed from the Upaniṣads. Towards the end of this chapter it is said that he who perceives the many living beings as being in one, and realizes everything as an emanation or elaboration from that, becomes Brahman. But in the next chapter Kṛṣṇa as God says,

¹ *niḥśṛtaḥ sarva-bhāvebhyaś cihnam yasya na vidyate.*

Caraka-saṃhitā, IV. 1. 153.

“I am the upholder of the immortal and imperishable Brahman of absolute bliss and of the eternal *dharma*.” In the *Gītā*, xiv. 26, it is said that “he who worships me unflinchingly through devotion, transcends all *guṇas* and becomes Brahman.” It has just been remarked that the *Gītā* recognizes two different kinds of *avyaktas*. It is the lower *avyakta* nature of God which has manifested itself as the universe; but there is a higher *avyakta*, which is beyond it as the eternal and unchangeable basis of all. It seems very probable, therefore, that Brahman is identical with this higher *avyakta*. But, though this higher *avyakta* is regarded as the highest essence of God, yet, together with the lower *avyakta* and the selves, it is upheld in the super-personality of God.

The question whether the *Gītā* is a Sāṃkhya or a Vedānta work, or originally a Sāṃkhya work which was later on revised, changed, or enlarged from a Vedānta point of view, need not be elaborately discussed here. For, if the interpretation of the *Gītā*, as given herein, be accepted, then it will be evident that the *Gītā* is neither a Sāṃkhya work nor a Vedānta work. It has been pointed out that the word *sāṃkhya*, in the *Gītā*, does not mean the traditional Sāṃkhya philosophy, as found in Īśvarakṛṣṇa's *Kārikā*. But there are, no doubt, here the scattered elements of an older philosophy, from which not only the Sāṃkhya of Īśvarakṛṣṇa or the *Ṣaṣṭi-tantra* (of which Īśvarakṛṣṇa's work was a summary) developed, but even its earlier version, as found in Caraka's account, could be considered to have developed. There is no doubt that the *Gītā*'s account of Sāṃkhya differs materially from the Sāṃkhya of the *Ṣaṣṭi-tantra* or of Īśvarakṛṣṇa, from the Sāṃkhya of Caraka, from the Sāṃkhya of Pañcaśikha in the *Mahā-bhārata* and from the Sāṃkhya of Patañjali and the *Vyāsa-bhāṣya*. Ordinarily the Sāṃkhya of Patañjali is described as a theistic Sāṃkhya (*seśvara-sāṃkhya*); but the Īśvara of Patañjali is but loosely attached to the system of Sāṃkhya thought as expounded in Yoga. The Īśvara there appears only as a supernormal, perfect being, who by his permanent will removes the barriers in the path of the evolution of *prakṛti* in accordance with the law of *karma*. He thus merely helps the fulfilment of the teleology of the blind *prakṛti*. But in the *Gītā* both the *puruṣas* and the root of the cosmic nature are but parts of God, the super-person (*puruṣottama*). The *prakṛti*, from which the *guṇas* which have only subjectivistic characteristics are derived, is described as the *māyā* power of God, or like a

consort to Him, who, being fertilized by His energies, produces the *guṇas*. The difference of the philosophy of the *Gītā* from the various schools of Sāṃkhya is very evident. Instead of the one *prakṛti* of Sāṃkhya we have here the three *prakṛtis* of God. The *guṇas* here are subjectivistic or psychical, and not cosmical. It is because the *Gītā* admits a *prakṛti* which produces the subjectivistic *guṇas* by which the *puruṣas* are bound with ties of attachment to their experiences, that such a *prakṛti* could fitly be described as *guṇamayī māyā* (*māyā* consisting of *guṇas*). The *puruṣas*, again, though they are many, are on the whole but emanations from a specific *prakṛti* (divine nature) of God. The *puruṣas* are not stated in the *Gītā* to be of the nature of pure intelligence, as in the Sāṃkhya; but the cognizing element of consciousness (*cetanā*) is derived from another *prakṛti* of God, which is associated with the *puruṣa*. It has also been pointed out that the *Gītā* admits the *sat-kārya-vāda* doctrine with reference to immortality of the self, but not with reference to the fruition of actions or the rise of consciousness. The Sāṃkhya category of *tan-mātra* is missing in the *Gītā*, and the general teleology of the *prakṛti* of the Sāṃkhya is replaced by the super-person of God, who by his will gives a unity and a purpose to all the different elements that are upheld within Him. Both the Sāṃkhya of Kapila and that of Patañjali aim at securing, either through knowledge or through Yoga practices, the final loneliness of the translucent *puruṣas*. The *Gītā*, however, is anxious to secure the saintly equanimity and a perfect, unperturbed nature by the practice of detachment of the mind from passions and desires. When such a saintly equanimity and self-contentedness is achieved, the sage is said to be in a state of liberation from the bondage of *guṇa*-attachments, or to be in a state of Brahmahood in God. The philosophy of the *Gītā* thus differs materially from the traditional Sāṃkhya philosophy on almost every point. On some minor points (e.g. the absence of *tan-mātras*, the nature of the production of knowledge and action, etc.) the *Gītā* philosophy has some similarities with the account of the Sāṃkhya given in the *Caraka-saṃhitā*, iv. 1, as already described in the first volume of this work¹.

The question whether the *Gītā* was written under a Vedāntic influence cannot be answered, unless one understands what is exactly meant by this Vedāntic influence; if by Vedāntic influence

¹ *A History of Indian Philosophy*, vol. I, 1922, pp. 213-222.

one means the influence of the Upaniṣads, then the *Gītā* must plainly be admitted to have borrowed very freely from the Upaniṣads, which from the earliest times had been revered for their wisdom. If, however, by Vedāntic influence one means the philosophy of Vedānta as taught by Śaṅkara and his followers, then it must be said that the *Gītā* philosophy is largely different therefrom. It has already been pointed out that, though Brahman is often described in Upaniṣadic language as the highest essence of God, it is in reality a part of the super-personality of God. The *Gītā*, moreover, does not assert anywhere that Brahman is the only reality and all else that appears is false and unreal. The word *māyā* is, no doubt, used in the *Gītā* in three passages; but its meaning is not what Śaṅkara ascribes to it in his famous interpretation of Vedāntic thought. Thus in the *Gītā*, VII. 14, *māyā* is described as being of the nature of *guṇas*, and it is said that he who clings to God escapes the grip of the *māyā* or of the *guṇas*. In the *Gītā*, VII. 15, the word *māyā* is also probably used in the same sense, since it is said that it is ignorant and sinful men who, through demoniac ideas, lose their right wisdom under the influence of *māyā* and do not cling to God. In all probability, here also *māyā* means the influence of *rajas* and *tamas*; for it has been repeatedly said in the *Gītā* that demoniac tendencies are generated under the preponderating influence of *rajas* and *tamas*. In the *Gītā*, XVIII. 61, it is said that God resides in the heart of all living beings and moves them by *māyā*, like dolls on a machine. It has been pointed out that the psychical tendencies and moral or immoral propensities which move all men to action are produced under the influence of the *guṇas*, and that God is the ultimate generator of the *guṇas* from the *prakṛti*. The *māyā*, therefore, may well be taken here to mean *guṇas*, as in the *Gītā*, VII. 14. Śrīdhara takes it to mean the power of God. The *guṇas* are, no doubt, in a remote sense, powers of God. But Śaṅkara's paraphrasing of it as deception (*chadmanā*) is quite inappropriate. Thus it is evident that the *Gītā* does not know the view that the world may be regarded as a manifestation of *māyā* or illusion. It has also been pointed out that the word "Brahman" is used in the *Gītā* in the sense of the Vedas, of faultless equanimity, of supreme essence and of *prakṛti*, which shows that it had no such crystallized technical sense as in the philosophy of Śaṅkara. The word had in the *Gītā* all the looseness of Upaniṣadic

usage. In the *Gītā* the word *avidyā*, so famous in Śaṅkara's philosophy of the Vedānta, is nowhere used. The word *ajñāna* is used several times (v. 15, 16; x. 11; xiii. 11; xiv. 8, 16, 17; xvi. 4); but it has no special technical sense in any of these passages. It has the sense of "ignorance" or "misconception," which is produced by *tamas* (*ajñānam tamasaḥ phalam*, xiv. 16) and which in its turn produces *tamas* (*tamas tv ajñāna-jaṃ viddhi*, xiv. 8).

Conception of Sacrificial Duties in the Gītā.

The Vedic view of the obligatoriness of certain kinds of sacrifices or substitution-meditations permeated almost all forms of Hindu thought, excepting the Vedānta philosophy as interpreted by Śaṅkara. The conception of the obligatoriness of duties finds its best expression in the analysis of *vidhi* in the Mīmāṃsā philosophy. *Vidhi* means the injunctions of the Vedas, such as, "Thou should'st perform such and such sacrifices"; sometimes these are conditional, such as, "Those who wish to attain Heaven should perform such and such sacrifices"; sometimes they are unconditional, such as, "Thou should'st say the three prayers." The force of this *vidhi*, or injunction, is differently interpreted in the different schools of Mīmāṃsā. Kumārila, the celebrated commentator, in interpreting Jaimini's definition of *dharma*, or virtue, as a desirable end (*artha*) or good which is enjoined by the Vedic commands (*codanā-lakṣaṇo 'rtho dharmah*, *Mīmāṃsā-sūtra*, i. 1), says that it is the performance of the Vedic injunctions, sacrifices, etc. (*yāgādih*) that should be called our duty. The definition of virtue, then, involves the notion that only such a desired end (on account of the pain associated with it not exceeding the associated pleasure) as is enjoined by Vedic commands is called *dharma*. The sacrifices enjoined by the Vedas are called *dharma*, because these would in future produce pleasurable experiences. So one's abstention from actions prohibited by Vedic commands is also called *dharma*, as by this means one can avoid the undesirable effects and sufferings of punishments as a result of transgressing those commands. Such sacrifices, however, are ultimately regarded as *artha*, or desired ends, because they produce pleasurable experiences. The imperative of Vedic commands is supposed to operate in a twofold manner, firstly, as initiating a volitional tendency in obedience to the verbal command (*śābdi bhāvanā*), and, secondly, in releasing

the will to the actual performance of the act enjoined by the command (*ārthī bhāvanā*). The propulsion of verbal commands is not like any physical propulsion; such a propulsion only arises as a result of one's comprehension of the fact that the performance of the acts enjoined will lead to beneficial results, and it naturally moves one to perform those acts out of self-interest¹. So of the twofold propulsion (*bhāvanā*) implied in a Vedic imperative the propulsion to act, as communicated by the verbal command, is called *śabdi bhāvanā*; and this is followed by the actual efforts of the person for the performance of the act². The prescriptive of the command (*vidhi*) is comprehended directly from the imperative suffix (*lin*) of the verb, even before the meaning of the verb is realized. If this is so, it is contended that the imperative, as it is communicated by the command, is a pure contentless form of command. This contention is admitted by the Bhaṭṭa school, which thinks that, though in the first stage we have communication of the contentless pure form of the imperative, yet at the successive stages the contentless form of duty is naturally supplemented by a more direct reference to the concrete context, as denoted by the verb with which the suffix is associated. So the process of the propulsion of *bhāvanā*, though it starts at the first instance with the communication of a pure contentless form, passes, by reason of its own necessity and the incapacity of a contentless form of duty to stand by itself, gradually through more and more concrete stages to the actual comprehension of the duty implied by the concrete meaning of the associated verb³. So the communication of the contentless duty and its association with the concrete verbal meaning are not two different meanings, but are

Ibid. p. 344.

rather the prolongation of one process of communication, just as cooking includes all the different associated acts of putting the pan on the fire, lighting the fire, and the like¹. These two *bhāvanās*, therefore, mean nothing more than the reasoning of the will and its translation into definite channels of activity, as the performance of the sacrifice, etc., and *vidhi* here means simply the prompting or the propulsion (*vyāpārah preranā-rūpah*); and it is such prompting that initiates in the performer the will, which is later on translated into concrete action.

Another Mimāṃsā view objects to this theory of dual *bhāvanā* and asserts that the suffix *līn* involves the notion of an order to work (*prerana*), as if the relation of the Vedas to us were one of master and servant, and that the Vedic *vidhi* as expressed in the *līn* suffix conveys the command (*praiśya-praiśayoḥ sambandhaḥ*). The *vidhi* goads us to work, and, being goaded by it, we turn to work. It does not physically compel us to act; but the feeling we have from it that we have been ordered to act constitutes the driving power. The knowledge of *vidhi* thus drives us to our Vedic duties. When a man hears the command, he feels that he has been commanded and then he sets to work. This setting to work is quite a different operation from the relation of the command and the commanded, and comes after it. The essence of a Vedic sentence is this command or *niyoga*. A man who has formerly tasted the benefits of certain things or the pleasures they produced naturally intends to have them again; here also there is a peculiar mental experience of eagerness, desire or intention (*ākūta*), which goads him on to obey the Vedic commands. This *ākūta* is a purely subjective experience and cannot, therefore, be experienced by others, though one can always infer its existence from the very fact that, unless it were felt in the mind, no one would feel himself goaded to work². *Niyoga*, or a prompting to work (*prerana*), is the sense of all *vidhis*, and this rouses in us the intention of working in accordance with the command. The actual performance of an action is a mere counterpart of the intention (*ākūta*), that is subjectively felt as roused by the *niyoga* or the

¹ *Yathā hi sthāly-adhiśrayaṇāt prabhṛtyā nirākāṅkṣaudana-niṣpatter ekaiveyaṃ pāka-kriyā salilāvaseka-taṇḍulāvapana-darvī-vighaṭṭanāsrāvaṇādy-aneka-kṣaṇa-samudāya-svabhāvā tathā prathama-pada-jñānāt prabhṛti ā nirākāṅkṣa-vākyārtha-paricchedād ekaiveyaṃ śābdi pramitiḥ. Nyāya-mañjarī, p. 345.*

² *Ayam api bhautika-vyāpāra-hetur ātmākūta-viśeṣo na pramāṇāntara-vedyo bhavati na ca na vedyate tat-samvedane sati ceṣṭā yadvantaṃ dṛṣtvā tasyāpi tādrk-preranaḥ vāgamo 'numīyate. Ibid. p. 348.*

driving power of the *vidhi*. This view differs from the view of Kumārila in this, that it does not suppose that the propulsion of the Vedic command takes effect in a twofold *bhāvanā*, through the whole process of the conception and the materialization of the action in accordance with the Vedic commands. The force of the command is exhausted in prompting us to action and arousing in us the inward resolution (*ākūta*) to obey the command. The actual performance of the action comes as a natural consequence (*artha*). The force of the *vidhi* has a field of application only when our ordinary inclinations do not naturally lead us to the performance of action. *Vidhi*, therefore, operates merely as a law of command which has to be obeyed for the sake of the law alone, and it is this psychological factor of inward resolution to obey the law that leads to the performance of action.

Maṇḍana, in his *Vidhi-viveka*, discusses the diverse views on the significance of *vidhi*. He interprets *vidhi* as a specific kind of prompting (*pravartanā*). He distinguishes the inner volitional intention of attaining an end and its translation into active effort leading to muscular movements of the body. *Pravartanā* here means the inner volitional direction of the mind towards the performance of the action, as well as actual nervous changes which are associated with it¹. The command of the Vedas naturally brings with it a sense of duty or of "oughtness" (*kartavyatā*), and it is this sense of *kartavyatā* that impels people to action without any reference to the advantages and benefits that may be reaped by such actions. The psychological state associated with such a feeling of "oughtness" is said to be of the nature of instincts (*pratibhā*). It is through an instinctive stimulus to work, proceeding from the sense of "oughtness," that the action is performed.

The Nyāya doctrine differs from the above view of *vidhi* as a categorically imperative order and holds that the prompting of the Vedic commands derives its force from our desire for the attainment of the benefits that we might reap if we acted in accordance with them. So the ultimate motive of the action is the attainment of pleasure or the avoidance of pain, and it is only with a view to attaining the desired ends that one is prompted to follow the Vedic

¹ *Bhāva-dharma eva kaścit samīhita-sādhana-nugūṇo vyāpāra-padārthaḥ; tad yathā ātmano buddhy-ādi-janana-pravṛttasya manaḥ-samyoga evā'yaṁ bhāva-dharmāḥ tadadv atrāpi spandas tad-itaro vā bhāva-dharmāḥ pravṛtti-janana'-nukūlatayā vyāpāra-viśeṣaḥ pravartanā*. Vācaspati's *Nyāya-kāṇikā* on *Vidhi-viveka*, pp. 243, 244.

commands and perform the sacrifices. In this view, therefore, the prompting, or *preraṇā*, has not in it that self-evident call of the pure imperative or the rousing of the volitional tendency through the influence of the imperative; the prompting felt is due only to the rise of desires for the end.

Most of the above interpretations of *vidhi* are of much later date than the *Gītā*. No systematic discussion of the nature of *vidhi* which can be regarded as contemporaneous with or prior to the date of the *Gītā* is now available. But even these latter-day explanations are useful in understanding the significance of the force of the notion of the imperative in the *Gītā*. It is clear from the above discussion that the notion of the imperative of *vidhi* cannot be called moral in our sense of the term, as has been done in a recent work on Hindu Ethics¹. For the imperative of *vidhi* is limited to the injunctions of the Vedas, which are by no means coextensive with our general notion of morality. According to the Mīmāṃsā schools just described virtue (*dharma*) consists in obedience to Vedic injunctions. Whatever may be enjoined by the Vedas is to be considered as virtue, whatever is prohibited by the Vedas is evil and sin, and all other things which are neither enjoined by the Vedas nor prohibited by them are neutral, i.e. neither virtuous nor vicious². The term *dharma* is therefore limited to actions enjoined by the Vedas, even though such actions may in some cases be associated with evil consequences leading to punishments due to the transgression of some other Vedic commands. The categorical imperative here implied is scriptural and therefore wholly external. The virtuous character of actions does not depend on their intrinsic nature, but on the external qualification of being enjoined by the Vedas.

¹ S. K. Maitra's *Hindu Ethics*, written under Dr Seal's close personal supervision and guidance.

² Kumārila holds that even those sacrifices which are performed for the killing of one's enemies are right, because they are also enjoined by the Vedas. Prabhākara, however, contends that, since these are performed only out of the natural evil propensities of men, their performance cannot be regarded as being due to a sense of duty associated with obedience to the injunctions of the Vedas. Kumārila thus contends that, though the Śyena sacrifice is attended with evil consequences, yet, since the performer is only concerned with his duty in connection with the Vedic commands, he is not concerned with the evil consequences; and it is on account of one's obedience to the Vedic injunctions that it is called right, though the injury to living beings that it may involve will bring about its punishment all the same. Sāṃkhya and some Nyāya writers, however, would condemn the Śyena sacrifice on account of the injury to living beings that it involves.

Whatever is not enjoined in the Vedas or not prohibited in them is simply neutral. It is clear, therefore, that the term *dharma* can be translated as “virtue” only in a technical sense, and the words “moral” and “immoral” in our sense have nothing to do with the concept of *dharma* or *adharma*.

The *Gītā* distinguishes between two kinds of motives for the performance of sacrifices. The first motive is that of greed and self-interest, and the second is a sense of duty. The *Gītā* is aware of that kind of motive for the performance which corresponds to the Nyāya interpretation of Vedic *vidhis* and also to the general Mīmāṃsā interpretation of *vidhi* as engendering a sense of duty. Thus it denounces those fools who follow the Vedic doctrines and do not believe in anything else; they are full of desires and eager to attain Heaven, they take to those actions which lead to rebirth and the enjoyment of mundane pleasures. People who are thus filled with greed and desires, and perform sacrifices for the attainment of earthly goods, move in an inferior plane and are not qualified for the higher scheme of life of devotion to God with right resolution¹. The Vedas are said to be under the influence of mundane hankerings and desires, and it is through passions and antipathies, through desires and aversions, that people perform the Vedic sacrifices and think that there is nothing greater than these. One should therefore transcend the sphere of Vedic sacrifices performed out of motives of self-interest. But the *Gītā* is not against the performance of Vedic sacrifices, if inspired by a sheer regard for the duty of performing sacrifices. Anyone who looks to his own personal gain and advantages in performing the sacrifices, and is only eager to attain his pleasurable ends, is an inferior type of man; the sacrifices should therefore be performed without any personal attachment, out of regard for the sacred duty of the performance. Prajāpati created sacrifices along with the creation of men and said, “The sacrifices will be for your good—you should help the gods by your sacrifices, and the gods will in their

¹ *Vyavasāyātmikā buddhiḥ samādhau na vidhiyate. Gītā, II. 44.* The word *samādhau* is explained by Śrīdhara as follows: *samādhiḥ cittaikāgryam, para-meśvarābhīmukhatvam iti yāvat; tasmīn niścayātmikā buddhiḥ tu na vidhiyate. Samādhi* is thus used here to mean one-pointedness of mind to God. But Śaṅkara gives a very curious interpretation of the word *samādhi*, as meaning mind (*antaḥkaraṇa* or *buddhi*), which is hardly justifiable. Thus he says, *samādhīyate 'smin puruṣopabhogāya sarvam iti samādhir antaḥkaraṇam buddhiḥ*. The word *vyavasāyātmikā* is interpreted by commentators on II. 41 and II. 44 as meaning *niścayātmikā* (involving correct decision through proper *pramāṇas* or proof). I prefer, however, to take the word to mean “right resolution.”

turn help you to grow and prosper. He who lives for himself without offering oblations to the gods and supporting them thereby is misappropriating the share that belongs to the gods."

This view of the *Gītā* is different from that of the later Mīmāṃsā, which probably had a much earlier tradition. Thus Kumārila held that the final justification of Vedic sacrifices or of *dharma* was that it satisfied our needs and produced happiness—it was *artha*. The sacrifices were, no doubt, performed out of regard for the law of Vedic commands; but that represented only the psychological side of the question. The external ground for the performance of Vedic sacrifices was that it produced happiness for the performer and satisfied his desires by securing for him the objects of desire. It was in dependence on such a view that the Nyāya sought to settle the motive of all Vedic sacrifices. The Naiyāyikas believed that the Vedic observances not only secured for us all desired objects, but that this was also the motive for which the sacrifices were performed. The *Gītā* was well aware of this view, which it denounces. The *Gītā* admitted that the sacrifices produced the good of the world, but its whole outlook was different; for the *Gītā* looked upon the sacrifices as being bonds of union between gods and men. The sacrifices improved the mutual good-will, and it was by the sacrifices that the gods were helped, and they in their turn helped men, and so both men and the gods prospered. Through sacrifices there was rain, and by rain the food-grains grew and men lived on the food-grains. So the sacrifices were looked upon as being sources not so much of individual good as of public good. He who looks to the sacrifices as leading to the satisfaction of his selfish interests is surely an inferior person. But those who do not perform the sacrifices are equally wicked. The Vedas have sprung forth from the deathless eternal, and sacrifices spring from the Vedas, and it is thus that the deathless, all-pervading Brahman is established in the sacrifices¹. The implied belief of the *Gītā* was that the prosperity of the people depended on the fertility of the soil, and that this again depended upon the falling of rains, and that the rains depended on the grace of gods, and that the gods could live prosperously only if the sacrifices were performed; the sacrifices were derived from the Vedas, the Vedas from the all-pervading Brahman, and the Brahman again forms the main content of the

¹ *Gītā*, III. 15.

Vedas. Thus there was a complete cycle from Brahman to sacrifices, from sacrifices to the good of the gods and from the good of the gods to the good and prosperity of the people. Everyone is bound to continue the process of this cycle, and he who breaks it is a sinful and selfish man, who is not worth the life he leads¹. Thus the ideal of the *Gītā* is to be distinguished from the ideal of the *Mīmāṃsā* in this, that, while the latter aimed at individual good, the former aimed at common good, and, while the latter conceived the Vedic commands to be the motives of their action, the former valued the ideal of performing the sacrifices in obedience to the law of continuing the process of the cycle of sacrifices, by which the world of gods and of men was maintained in its proper state of prosperity. When a man works for the sacrifices, such works cannot bind him to their fruits; it is only when works are performed from motives of self-interest that they can bind people to their good and bad fruits².

The word *dharma* in the *Gītā* does not mean what Jaimini understood by the term, viz. a desirable end or good enjoined by the sacrifices (*codanā-lakṣaṇo 'rtho dharmah*). The word seems to be used in the *Gītā* primarily in the sense of an unalterable customary order of class-duties or caste-duties and the general approved course of conduct for the people, and also in the sense of prescribed schemes of conduct. This meaning of *dharma* as "old customary order" is probably the oldest meaning of the word, as it is also found in the *Atharva-Veda*, 18. 3. 1 (*dharmam purāṇam anupālayanti*)³. Macdonell, in referring to *Maitrāyaṇa*, IV. 1 9, *Kāṭhaka*, xxxi. 7 and *Taittiriya*, III. 2. 8. 11, points out that bodily defects (bad nails and discoloured teeth) and marrying a younger daughter while her elder sister is unmarried are coupled with murder, though not treated as equal to it, and that there is no distinction in principle between real crimes and what are now regarded as fanciful bodily defects or infringements of merely conventional practices. In the *Śatapatha-brāhmaṇa*, XIV. 4. 2. 26, also we find *dharma* for a Kṣatriya⁴ is illustrated as being the characteristic duties of a Kṣatriya. The central meaning of the word *dharma* in the *Gītā* is therefore the oldest Vedic meaning of the word, which is

¹ *Gītā*, III. 16.

² *Ibid.* III. 9.

³ *dharma*, *dharmān* are the regular words, the latter in the *R̥g-veda* and both later, for "law" or "custom." See Macdonell's *Vedic Index*, p. 390.

⁴ *tad etat kṣatrasya kṣatram yad dharmah tasmād dharmāt param nāsti*. Dr Albrecht Weber's edition, Leipzig, 1924.

a much earlier meaning than the latter-day technical meaning of the word as it is found in Mīmāṃsā. *Dharma* does not in the *Gītā* mean sacrifices (*yajña*) or external advantages, as it does in Mīmāṃsā, but the order of conventional practices involving specific caste-divisions and caste-duties. Accordingly, the performance of sacrifices is *dharma* for those whose allotted duties are sacrifices. Adultery is in the Vedas a vice, as being transgression of *dharma*, and this is also referred to as such (*dharme naṣṭe*, I. 39) in the *Gītā*. In the *Gītā*, II. 7, Arjuna is said to be puzzled and confused regarding his duty as a Kṣātriya and the sinful course of injuring the lives of his relations (*dharmasamūḍha-cetāḥ*). The confusion of *dharma* and *adharma* is also referred to in XVIII. 31 and 32. In the *Gītā*, IV. 7 and 8, the word *dharma* is used in the sense of the established order of things and conventionally accepted customs and practices. In II. 40 the way of performing one's duties without regard to pleasures or sorrows is described as a particular and specific kind of *dharma* (*asya dharmasya*), distinguished from *dharma* in general.

The *yajña* (sacrifice) is said to be of various kinds, e.g. that in which oblations are offered to the gods is called *daiva-yajña*; this is distinguished from *brahma-yajña*, in which one dedicates oneself to Brahman, where Brahman is the offerer, offering and the fire of oblations, and in which, by dedicating oneself to Brahman, one is lost in Brahman¹. Then sense-control, again, is described as a kind of *yajña*, and it is said that in the fire of the senses the sense-objects are offered as libations and the senses themselves are offered as libations in the fire of sense-control; all the sense-functions and vital functions are also offered as libations in the fire of sense-control lighted up by reason. Five kinds of sacrifices (*yajña*) are distinguished, viz. the *yajña* with actual materials of libation, called *dravya-yajña*, the *yajña* of asceticism or self-control, called *tapo-yajña*, the *yajña* of union or communion, called *yoga-yajña*, the *yajña* of scriptural studies, called *svādhyāya-yajña*, and the *yajña* of knowledge or wisdom, called *jñāna-yajña*². It is easy to see that the extension of the application of the term *yajña* from the actual material sacrifice to other widely divergent methods of self-advancement is a natural result of the extension of the concept of sacrifice to whatever tended towards self-advancement. The term *yajña* had high and holy associations, and the

¹ *Gītā*, IV. 24 and 25.

² *Ibid.* IV. 26-28; see also 29 and 30.

newly discovered systems of religious endeavours and endeavours for self-advancement came to be regarded as but a new kind of *yajña*, just as the substitution-meditations (*pratīkōpāsānā*) were also regarded as being but new forms of *yajña*. Thus, while thought advanced and newer modes of self-realization began to develop, the older term of *yajña* came to be extended to these new types of religious discipline on account of the high veneration in which the older institution was held.

But, whatever may be the different senses in which the term *yajña* is used in the *Gītā*, the word *dharma* has not here the technical sense of the Mīmāṃsā. The *Gītā* recommends the performance of sacrifices to the Brahmins and fighting to the Kṣatriyas, and thus aims at continuity of conventional practices which it regards as *dharma*. But at the same time it denounces the performance of actions from desire, or passions or any kind of selfish interest. A man should regard his customary duties as his *dharma* and should perform them without any idea of the fulfilment of any of his own desires. When a man performs *karma* from a sense of disinterested duty, his *karma* is no longer a bondage to him. The *Gītā* does not, on the one hand, follow the old *karma*-ideal, that one should perform sacrifices in order to secure earthly and heavenly advantages, nor does it follow, on the other hand, the ideal of the Vedānta or of other systems of philosophy that require us to abandon our desires and control our passions with a view to cleansing the mind entirely of impurities, so as to transcend the sphere of duties and realize the wisdom of the oneness of the spirit. The *Gītā* holds that a man should attain the true wisdom, purge his mind of all its desires, but at the same time perform his customary duties and be faithful to his own *dharma*. There should be no impelling force other than regard and reverence for his own inner law of duty with reference to his own *dharma* of conventional and customary practices or the duties prescribed by the *śāstra*.

Sense-control in the *Gītā*.

The uncontrollability of the senses was realized in the *Kaṭha Upaniṣad*, where the senses are compared with horses. The *Gītā* says that, when the mind is led on by fleeting sense-attractions, the man loses all his wisdom, just as a boat swings to and fro in deep waters in a strong gale. Even in the case of the wise

man, in spite of his efforts to keep himself steady, the troubled senses might lead the mind astray. By continually brooding over sense-objects one becomes attached to them; out of such attachments there arise desires, out of desires there arises anger, out of anger blindness of passions, through such blindness there is lapse of memory, by such lapse of memory a man's intelligence is destroyed, and as a result of that he himself is destroyed¹. Man is naturally inclined towards the path of evil, and in spite of his efforts to restrain himself he tends towards the downward path. Each particular sense has its own specific attachments and antipathies, and attachment (*rāga*) and antipathy are the two enemies. The *Gītā* again and again proclaims the evil effects of desires and attachments (*kāma*), anger (*krodha*) and greed (*lobha*) as the three gates of Hell, being that which veils wisdom as smoke veils fire, as impurities sully a mirror or as the foetus is covered by the womb². Arjuna is made to refer to Kṛṣṇa the difficulty of controlling the senses. Thus he says, "My mind, O Kṛṣṇa, is violent, troubled and changeful; it is as difficult to control it as it is to control the winds³." True *yoga* can never be attained unless and until the senses are controlled.

The Pāli work *Dhamma-pada* is also filled with similar ideas regarding the control of attachments and anger. Thus it says, "He has abused me, beaten me, worsted me, robbed me—those who dwell not upon such thoughts are freed from hate. Never does hatred cease by hating, but hatred ceases by love; this is the ancient law....As the wind brings down a weak tree, so Māra overwhelms him who lives looking for pleasures, has his senses uncontrolled, or is immoderate in his food, slothful and effeminate. ...As rain breaks through an ill-thatched house, so passion will break through an undisciplined mind⁴." Again, speaking of mind, it says, "As an arrow-maker levels his arrow, so a wise man levels his trembling, unsteady mind, which it is difficult to guard and hold back....Let the wise man guard his mind, incomprehensible, subtle, capricious though it is. Blessed is the guarded mind⁵." Again, "Not nakedness, nor matted hair, not dirt, nor fastings, not lying on earth, nor ashes, nor ascetic postures, none of these things purify a man who is not free from desires⁶." Again, "From

¹ *Gītā*, II. 60, 62, 63.² *Ibid.* III. 34, 37-39; XVI. 21.³ VI. 34.⁴ *Dhamma-pada* (Poona, 1923), I. 4, 5, 7, 13.⁵ *Ibid.* III. 36, 38.⁶ *Ibid.* X. 141.

attachment (*piyato*) comes grief, from attachment comes fear; he who is free from attachment knows neither grief nor fear. From affection (*pemato*) come grief and fear. He who is free from affection knows neither grief nor fear. From lust (*rati*) come grief and fear. He who is free from affection knows neither grief nor fear. From lust (*kāma*) come grief and fear. He who is free from lust knows neither grief nor fear. From desire (*tanhā*) come grief and fear. He who is free from desire knows neither grief nor fear¹.”

It is clear from the above that both the *Gītā* and the *Dhamma-pada* praise sense-control and consider desires, attachments, anger and grief as great enemies. But the treatment of the *Gītā* differs from that of the *Dhamma-pada* in this, that, while in the *Dhamma-pada* there is a course of separate lessons or moral instructions on diverse subjects, the *Gītā* deals with sense-control as a means to the attainment of peace, contentment and desirelessness, which enables a man to dedicate all his actions to God and follow the conventional courses of duties without looking for anything in them for himself. The *Gītā* knows that the senses, mind and intellect are the seats of all attachments and antipathies, and that it is through the senses and the mind that these can stupefy a man and make his knowledge blind². All the sense-affections of cold and heat, pleasure and sorrow, are mere changes of our sensibility, are mere touches of feeling which are transitory and should therefore be quietly borne³. It is only by controlling the senses that the demon of desire, which distorts all ordinary and philosophic knowledge, can be destroyed. But it is very hard to stifle this demon of desire, which always appears in new forms. It is only when a man can realize within himself the great being which transcends our intellect that he can control his lower self with his higher self and uproot his desires. The self is its own friend as well as its own foe, and one should always try to uplift oneself and not allow oneself to sink down. The chief aim of all sense-control is to make a man's thoughts steady, so that he can link himself up in communion with God⁴.

The senses in the *Gītā* are regarded as drawing the mind along with them. The senses are continually changing and fleeting, and they make the mind also changeful and fleeting; and, as a result of

¹ *Dhamma-pada*, xvi. 212–216.

² *Gītā*, III. 40.

³ *Ibid.* II. 14.

⁴ *Ibid.* II. 61; III. 41, 43; VI. 5, 6.

that, the mind, like a boat at sea before a strong wind, is driven to and fro, and steadiness of thought and wisdom (*prajñā*) are destroyed. The word *prajñā* is used in the *Gītā* in the sense of thought or wisdom or mental inclinations in general. It is used in a more or less similar sense in the *Bṛhad-āranyaka Upaniṣad*, iv. 4. 21, and in a somewhat different sense in the *Māṇḍūkya Upaniṣad*, 7. But the sense in which Patañjali uses the word is entirely different from that in which it is used in the *Gītā* or the Upaniṣads. Patañjali uses the word in the technical sense of a specific type of mystical cognition arising out of the steady fixing of the mind on an object, and speaks of seven stages of such *prajñā* corresponding to the stages of *yoga* ascension. *Prajñā* in the *Gītā* means, as has just been said, thought or mental inclination. It does not mean *jñāna*, or ordinary cognition, or *vijñāna* as higher wisdom; it means knowledge in its volitional aspect. It is not the *kriyākhyajñāna*, as moral discipline of *yama*, *niyama*, etc., of the *Pañca-rātra* work *Āyākhyā-saṃhitā*. It means an intellectual outlook, as integrally connected with, and determining, the mental bent or inclination. When the mind follows the mad dance of the senses after their objects, the intellectual background of the mind determining its direction, the *prajñā* is also upset. Unless the *prajñā* is fixed, the mind cannot proceed undisturbed in its prescribed fixed course. So the central object of controlling the senses is the securing of the steadiness of this *prajñā* (*vaśe hi yasyendriyāṇi tasya prajñā pratiṣṭhitā*—II. 57). *Prajñā* and *dhī* are two words which seem to be in the *Gītā* synonymous, and they both mean mental inclination. This mental inclination probably involves both an intellectual outlook, and a corresponding volitional tendency. Sense-control makes this *prajñā* steady, and the *Gītā* abounds in praise of the *sthita-prajñā* and *sthita-dhī*, i.e. of one who has mental inclination or thoughts fixed and steady¹. Sense-attachments are formed by continual association with sense-objects, and attachment begets desire, desire begets anger, and so on. Thus all the vices spring from sense-attachments. And the person who indulges in sense-gratifications is rushed along by the passions. So, just as a tortoise collects within itself all its limbs, so the person who restrains his senses from the sense-objects has his mind steady and fixed. The direct result of sense-control is thus steadiness of will, and of mental inclinations or mind (*prajñā*).

¹ II. 54-56.

The person who has his *prajñā* fixed is not troubled in sorrows and is not eager to gain pleasures, he has no attachment, no fear and no anger¹. He is indifferent in prosperity and in adversity and neither desires anything nor shuns anything². He alone can obtain peace who, like the sea receiving all the rivers in it, absorbs all his desires within himself; not so the man who is always busy in satisfying his desires. The man who has given up all his desires and is unattached to anything is not bound to anything, has no vanity and attains true peace. When a man can purge his mind of attachments and antipathies and can take to sense-objects after purifying his senses and keeping them in full control, he attains contentment (*prasāda*). When such contentment is attained, all sorrows vanish and his mind becomes fixed (*buddhiḥ paryavatiṣṭhate*)³. Thus sense-control, on the one hand, makes the mind unruffled, fixed, at peace with itself and filled with contentment, and on the other hand, by making the mind steady and fixed, it makes communion with God possible. Sense-control is the indispensable precondition of communion with God; when once this has been attained, it is possible to link oneself with God by continued efforts⁴. Thus sense-control, by producing steadiness of the will and thought, results in contentment and peace on the one hand, and on the other makes the mind fit for entering into communion with God.

One thing that strikes us in reading the *Gītā* is that the object of sense-control in the *Gītā* is not the attainment of a state of emancipated oneness or the absolute cessation of all mental processes, but the more intelligible and common-sense ideal of the attainment of steadiness of mind, contentment and the power of entering into touch with God. This view of the object of self-control is therefore entirely different from that praised in the philosophic systems of Patañjali and others. The *Gītā* wants us to control our senses and mind and to approach sense-objects with such a controlled mind and senses, because it is by this means alone that we can perform our duties with a peaceful and contented mind and turn to God with a clean and unruffled heart⁵. The main emphasis of this sense-control is not on the mere external control of volitional activities and the control of motor propensities

¹ *Gītā*, II. 56.

² *Ibid.* II. 57.

³ *Ibid.* II. 65; see also II. 58, 64, 68, 70, 71.

⁴ *Ibid.* VI. 36.

⁵ *rāga-dveṣa-vimuktais tu viṣayān indriyaiś caran
ātma-vaśyair vidheyātmā prasādam adhigacchati. Ibid.* II. 64.

in accordance with the direction of passions and appetites, but on the inner control of the mind behind these active senses. When a person controls only his physical activities, and yet continues to brood over the attractions of sense, he is in reality false in his conduct (*mithyācāra*). Real self-control does not mean only the cessation of the external operations of the senses, but also the control of the mind. Not only should a man cease from committing actions out of greed and desire for sense-gratification, but his mind should be absolutely clean, absolutely clear of all impurities of sense-desires. Mere suspension of physical action without a corresponding control of mind and cessation from harbouring passions and desires is a vicious course¹.

The Ethics of the Gītā and the Buddhist Ethics.

The subject of sense-control naturally reminds one of Buddhism. In the Vedic religion performance of sacrifices was considered as the primary duty. Virtue and vice consisted in obedience or disobedience to Vedic injunctions. It has been pointed out that these injunctions implied a sort of categorical imperative and communicated a sense of *vidhi* as law, a command which must be obeyed. But this law was no inner law of the spirit within, but a mere external law, which ought not to be confused with morality in the modern sense of the term. Its sphere was almost wholly ritualistic, and, though it occasionally included such commands as "One should not injure anyone" (*mā himsyāt*), yet in certain sacrifices which were aimed at injuring one's enemies operations which would lead to such results would have the imperative of a Vedic command, though the injury to human beings would be attended with its necessary punishment. Again, though in later Sāṃkhya commentaries and compendiums it is said that all kinds of injuries to living beings bring their punishment, yet it is doubtful if the Vedic injunction "Thou shouldst not injure" really applied to all living beings, as there would be but few sacrifices where animals were not killed. The Upaniṣads, however, start an absolutely new line by the substitution of meditations and self-knowledge for sacrificial actions. In the

¹ Cf. *Dhamma-pada*, 1. 2. All phenomena have mind as their precursor, are dependent upon mind and are made up of mind. If a man speaks or acts with a pure mind, happiness accompanies him, just as a shadow follows a man incessantly.

primary stage of Upaniṣadic thoughts a conviction was growing that instead of the sacrificial performances one could go through a set form of meditations, identifying in thought certain objects with certain other objects (e.g. the dawn as the horse of horse-sacrifice) or even with symbolic syllables, OM and the like. In the more developed stage of Upaniṣadic culture a new conviction arose in the search after the highest and the ultimate truth, and the knowledge of Brahman as the highest essence in man and nature is put forward as the greatest wisdom and the final realization of truth and reality, than which nothing higher could be conceived. There are but few moral precepts in the Upaniṣads, and the whole subject of moral conflict and moral efforts is almost silently dropped or passes unemphasized. In the *Taittiriya Upaniṣad*, I. 11, the teacher is supposed to give a course of moral instruction to his pupil after teaching him the Vedas—Tell the truth, be virtuous, do not give up the study of the Vedas; after presenting the teacher with the stipulated honorarium (at the conclusion of his studies) the pupil should (marry and) continue the line of his family. He should not deviate from truth or from virtue (*dharma*) or from good. He should not cease doing good to others, from study and teaching. He should be respectful to his parents and teachers and perform such actions as are unimpeachable. He should follow only good conduct and not bad. He should make gifts with faith (*śraddhā*), not with indifference, with dignity, from a sense of shame, through fear and through knowledge. If there should be any doubt regarding his course of duty or conduct, then he should proceed to act in the way in which the wisest Brahmins behaved. But few Upaniṣads give such moral precepts, and there is very little in the Upaniṣads in the way of describing a course of moral behaviour or of emphasizing the fact that man can attain his best only by trying to become great through moral efforts. The Upaniṣads occupy themselves almost wholly with mystic meditations and with the philosophic wisdom of self-knowledge. Yet the ideas of self-control, peace and cessation of desires, endurance and concentration are referred to in *Bṛhad-āraṇyaka*, IV. 4. 23, as a necessary condition for the realization of the self within us¹. In *Kaṭha*, VI. 11, the control of the senses (*indriya-dhāraṇa*) is referred to as *yoga*, and in *Muṇḍaka*, III. 2. 2,

¹ *śānto dānta uparatas titikṣuḥ samāhito bhūtvātmany eva ātmānam paśyati.* *Bṛh.* IV. 4. 23.

it is said that he who consciously desires the objects of desire is again and again born through desires; but even in this world all desires vanish for him who is self-realized in himself and is self-satisfied¹. The idea that the path of wisdom is different from the path of desires was also known, and it was felt that he who sought wisdom (*vidyābhīṣita*) was not drawn by many desires².

The point to be discussed in this connection is whether the central idea of the *Gītā*, namely, sense-control and more particularly the control of desires and attachments, is derived from the Upaniṣads or from Buddhism. It has been pointed out that the Upaniṣads do not emphasize the subject of moral conflict and moral endeavours so much as the nature of truth and reality as Brahman, the ultimate essence of man and the manifold appearance of the world. Yet the idea of the necessity of sense-control and the control of desires, the settling of the mind in peace and contentment, is the necessary precondition for fitness for Vedic knowledge. Thus Śaṅkara, the celebrated commentator on the Upaniṣads, in commenting on *Brahma-sūtra*, I. 1. 1, says that a man is fit for an enquiry after Brahman only when he knows how to distinguish what is permanent from what is transitory (*nityānitya-vastu-viveka*), and when he has no attachment to the enjoyment of the fruits of his actions either as mundane pleasures or as heavenly joys (*ihāmutra-phala-bhoga-virāga*). The necessary qualifications which entitle a man to make such an enquiry are disinclination of the mind for worldly joys (*śama*), possession of proper control and command over the mind, by which it may be turned to philosophy (*dama*), power of endurance (*viśaya-titikṣā*), cessation of all kinds of duties (*uparati*), and faith in the philosophical conception of truth and reality (*tattva-śraddhā*). It may be supposed, therefore, that the Upaniṣads presuppose a high degree of moral development in the way of self-control and disinclination to worldly and heavenly joys. Detachment from sense-affections is one of the most dominant ideas of the *Gītā*, and the idea of *Muṇḍaka*, III. 2. 2, referred to above, is re-echoed in the *Gītā*, II. 70, where it is said that, just as the waters are absorbed in the calm sea (though poured in continually by the rivers), so the person in whom all desires are absorbed attains peace, and

¹ *kāmān yāḥ kāmāyate manyamānaḥ sa kāmabhir jāyate tatra tatra paryāpta-kāmasya kṛtātmanas tu ihaiva sarve pravṛtīyanti kāmāḥ. Muṇḍaka, III. 2. 2.*

² *Kaṣha, II. 4.*

not the man who indulges in desires. The *Gītā*, of course, again and again emphasizes the necessity of uprooting attachments to pleasures and antipathy to pains and of controlling desires (*kāma*); but, though the Upaniṣads do not emphasize this idea so frequently, yet the idea is there, and it seems very probable that the *Gītā* drew it from the Upaniṣads. Hindu tradition also refers to the Upaniṣads as the source of the *Gītā*. Thus the *Gītā-māhātmya* describes the Upaniṣads as the cows from which Kṛṣṇa, the cowherd boy, drew the *Gītā* as milk¹.

But the similarity of Buddhist ethical ideas to those of the *Gītā* is also immense, and, had it not been for the fact that ideas which may be regarded as peculiarly Buddhistic are almost entirely absent from the *Gītā*, it might well have been contended that the *Gītā* derived its ideas of controlling desires and uprooting attachment from Buddhism. Tachibana collects a long list of Buddhist vices as follows²:

aṅganam, impurity, lust, *Sn.* 517.
ahaṅkāro, selfishness, egoism, *A.* I. 132; *M.* III. 18, 32.
mamaṅkaro, desire, *A.* I. 132; *M.* III. 18, 32.
mamāyitam, selfishness, *S.N.* 466.
mamattam, grasping, egoism, *S.N.* 872, 951.
apekhā, desire, longing, affection, *S.N.* 38; *Dh.* 345.
icchā, wish, desire, covetousness.
ejā, desire, lust, greed, craving, *S.N.* 751; *It.* 92.
āsā, desire, longing, *S.N.* 634, 794, 864; *Dh.* 397.
pīpāsā, thirst.
esā, *esanā*, wish, desire, thirst, *Dh.* 335.

aññāṇam, ignorance, *It.* 62.

moho, fainting, ignorance, folly, *passim*.

mohanam, ignorance, *S.N.* 399, 772.

avijjā, ignorance, error, passion.

It is interesting to note that three vices, covetousness, hatred and ignorance, and covetousness particularly, appear under different names and their extirpation is again and again emphasized in diverse ways. These three, ignorance, covetousness and hatred or antipathy, are the roots of all evils. There are, of course, simpler commandments, such as not to take life, not to steal, not to commit adultery, not to tell a lie, and not to take intoxicating drinks, and of these stealing gold, drinking liquors, dishonouring one's teacher's bed, and killing a Brahmin are also prohibited in the *Chāndogya Upaniṣad*, v. 10. 9–10¹. But, while the *Chāndogya* only prohibits killing Brahmins, the Buddha prohibited taking the life of any living being. But all these vices, and others opposed to the *aṭṭhaṅga-sīla* and *dasa-kusala-kamma*, are included within covetousness, ignorance and hatred. The *Gītā* bases its ethics mainly on the necessity of getting rid of attachment and desires from which proceeds greed and frustration of which produces anger. But, while in Buddhism ignorance (*avidyā*) is considered as the source of all evil, the *Gītā* does not even mention the word. In the twelvefold chain of causality in Buddhism it is held that out of ignorance (*avijjā*) come the conformations (*saṅkhāra*), out of the conformations consciousness (*viññāna*), out of consciousness mind and body (*nāma-rūpa*), out of mind and body come the six fields of contact (*āyatana*), out of the six fields of contact comes sense-contact, out of sense-contact comes feeling, out of feeling come desires (*tanhā*), out of desires comes the holding fast to things (*upādāna*), out of the holding fast to things comes existence (*bhava*), out of existence comes birth (*jāti*), and from birth come old age, decay and death. If ignorance, or *avijjā*, is stopped,

¹ There is another list of eightfold prohibitions called *aṭṭhaṅga-sīla*; these are not to take life, not to take what is not given, to abstain from sex-relations, to abstain from falsehood, from drinking liquors, from eating at forbidden times, from dancing and music and from beautifying one's body by perfumes, garlands, etc. There is also another list called *dasa-kusala-kamma*, such as not to take life, not to take what is not given, not to commit adultery, not to tell a lie, not to slander, not to abuse or talk foolishly, not to be covetous, malicious and sceptical.

then the whole cycle stops. But, though in this causal cycle ignorance and desires are far apart, yet psychologically desires proceed immediately from ignorance, and a frustration of desires produces anger, hatred, etc. In the *Gītā* the start is taken directly from attachment and desires (*kāma*). The Buddhist word *trṣṇā* (*tanhā*) is seldom mentioned in the *Gītā*; whereas the Upaniṣadic word *kāma* takes its place as signifying desires. The *Gītā* is not a philosophical work which endeavours to search deeply into the causes of attachments, nor does it seek to give any practical course of advice as to how one should get rid of attachment. The Vedānta system of thought, as interpreted by Śaṅkara, traces the origin of the world with all its evils to ignorance or nescience (*avidyā*), as an indefinable principle; the Yoga traces all our phenomenal experience to five afflictions, ignorance, attachment, antipathy, egoism and self-love, and the last four to the first, which is the fountain-head of all evil afflictions. In the *Gītā* there is no such attempt to trace attachment, etc. to some other higher principle. The word *ajñāna* (ignorance) is used in the *Gītā* about six or eight times in the sense of ignorance; but this "ignorance" does not mean any metaphysical principle or the ultimate starting-point of a causal chain, and is used simply in the sense of false knowledge or ignorance, as opposed to true knowledge of things as they are. Thus in one place it is said that true knowledge of things is obscured by ignorance, and that this is the cause of all delusion¹. Again, it is said that to those who by true knowledge (of God) destroy their own ignorance (*ajñāna*) true knowledge reveals the highest reality (*tat param*), like the sun². In another place *jñāna* and *ajñāna* are both defined. *Jñāna* is defined as unvacillating and abiding self-knowledge and true knowledge by which truth and reality are apprehended, and all that is different from this is called *ajñāna*³. *Ajñāna* is stated elsewhere to be the result of *tamas*, and in two other places *tamas* is said to be the product of *ajñāna*⁴. In another place it is said that people are blinded by ignorance (*ajñāna*), thinking, "I am rich, I am an aristocrat, who else is there like me? I shall perform sacrifices make gifts and enjoy⁵." In another place ignorance is said to

¹ *ajñānenāvyatam jñānam tena muhyanti jantavaḥ*. v. 15.

⁵ *Ibid.* v. 16.

produce doubts (*saṁśaya*), and the *Gītā* lecture of Kṛṣṇa is supposed to dispel the delusion of Arjuna, produced by ignorance¹. This shows that, though the word *ajñāna* is used in a variety of contexts, either as ordinary ignorance or ignorance of true and absolute philosophic knowledge, it is never referred to as being the source of attachment or desires. This need not be interpreted to mean that the *Gītā* was opposed to the view that attachments and desires were produced from ignorance; but it seems at least to imply that the *Gītā* was not interested to trace the origin of attachments and desires and was satisfied to take their existence for granted and urged the necessity of their extirpation for peace and equanimity of mind. Buddhist Hinayāna ethics and practical discipline are constituted of moral discipline (*śīla*), concentration (*saṁādhi*) and wisdom (*paññā*). The *śīla* consisted in the performance of good conduct (*caritta*) and desisting (*vāritta*) from certain other kinds of prohibited action. *Śīla* means those particular volitions and mental states, etc. by which a man who desists from committing sinful actions maintains himself on the right path. *Śīla* thus means (1) right volition (*cetanā*), (2) the associated mental states (*cetasika*), (3) mental control (*saṁvara*), and (4) the actual non-transgression (in body and speech) of the course of conduct already in the mind by way of the preceding three *śīlas*, called *avittikkama*. *Samvara* is spoken of as being of five kinds, viz. (1) *pātimokkha-saṁvara* (the control which saves him who abides by it), (2) *sati-saṁvara* (the control of mindfulness), (3) *ñāna-saṁvara* (the control of knowledge), (4) *khanti-saṁvara* (the control of patience) and (5) *virīya-saṁvara* (the control of active restraint). *Pātimokkha-saṁvara* means all self-control in general. *Sati-saṁvara* means the mindfulness by which one can bring in the right and good associations, when using one's cognitive senses. Even when looking at any tempting object, a man will, by virtue of his mindfulness (*sati*), control himself from being tempted by not thinking of its tempting side and by thinking on such aspects of it as may lead in the right direction. *Khanti-saṁvara* is that by which one can remain unperturbed in heat and cold. By the proper adherence to *śīla* all our bodily, mental and vocal activities (*kamma*) are duly systematized, organized and stabilized (*saṁādhānam, upadhāraṇam, paṭiṭṭhā*). The practice of *śīla* is for the practice of *jhāna* (meditation). As a preparatory measure thereto, a man must train himself

¹ *Gītā*, IV. 42; XVIII. 72.

continually to view with disgust the appetitive desires for eating and drinking (*āhāre paṭikūla-saññā*) by emphasizing in the mind the various troubles that are associated with seeking food and drink and their ultimate loathsome transformations as various nauseating bodily elements. He must habituate his mind to the idea that all the parts of our body are made up of the four elements, viz. *kṣiti* (earth), *ap* (water), etc. He should also think of the good effects of *śīla*, the making of gifts, of the nature of death and of the deep nature and qualities of the final extinction of all phenomena, and should practise *brahma-vihāra*, as the fourfold meditation of universal friendship, universal pity, happiness in the prosperity and happiness of all, and indifference to any kind of preferment for himself, his friend, his enemy or a third party¹.

The *Gītā* does not enter into any of these disciplinary measures. It does not make a programme of universal altruism or hold that one should live only for others, as is done in Mahāyāna ethics, or of the virtues of patience, energy for all that is good (*vīrya* as *kuśalotsāha*), meditation and true knowledge of the essencelessness of all things. The person who takes the vow of saintly life takes the vow of living for the good of others, for which he should be prepared to sacrifice all that is good for him. His vow does not limit him to doing good to his co-religionists or to any particular sects, but applies to all human beings, irrespective of caste, creed or race, and not only to human beings, but to all living beings. Mahāyāna ethical works like the *Bodhi-caryāvatāra-pañjikā* or *Śikṣā-samuccaya* do not deal merely with doctrines or theories, but largely with practical instructions for becoming a Buddhist saint. They treat of the practical difficulties in the path of a saint's career and give practical advice regarding the way in which he may avoid temptations, keep himself in the straight path of duty, and gradually elevate himself to higher and higher states.

The *Gītā* is neither a practical guide-book of moral efforts nor a philosophical treatise discussing the origin of immoral tendencies and tracing them to certain metaphysical principles as their sources; but, starting from the ordinary frailties of attachment and desires, it tries to show how one can lead a normal life of duties and responsibilities and yet be in peace and contentment in a state of equanimity and in communion with God. The *Gītā*

¹ See *A History of Indian Philosophy*, by S. N. Dasgupta, vol. 1, p. 103.

has its setting in the great battle of the *Mahā-bhārata*. Kṛṣṇa is represented as being an incarnation of God, and he is also the charioteer of his friend and relation, Arjuna, the great Pāṇḍava hero. The Pāṇḍava hero was a Kṣātriya by birth, and he had come to the great battle-field of Kurukṣetra to fight his cousin and opponent King Duryodhana, who had assembled great warriors, all of whom were relations of Arjuna, leading mighty armies. In the first chapter of the *Gītā* a description is given of the two armies which faced each other in the holy field (*dharma-kṣetra*) of Kurukṣetra. In the second chapter Arjuna is represented as feeling dejected at the idea of having to fight with his relations and of eventually killing them. He says that it was better to beg from door to door than to kill his respected relations. Kṛṣṇa strongly objects to this attitude of Arjuna and says that the soul is immortal and it is impossible to kill anyone. But, apart from this metaphysical point of view, even from the ordinary point of view a Kṣātriya ought to fight, because it is his duty to do so, and there is nothing nobler for a Kṣātriya than to fight. The fundamental idea of the *Gītā* is that a man should always follow his own caste-duties, which are his own proper duties, or *sva-dharma*. Even if his own proper duties are of an inferior type, it is much better for him to cleave to them than to turn to other people's duties which he could well perform. It is even better to die cleaving to one's caste-duties, than to turn to the duties fixed for other people, which only do him harm¹. The caste-duties of Brahmins, Kṣātriyas, Vaiśyas and Śūdras are fixed in accordance with their natural qualities. Thus sense-control, control over mind, power of endurance, purity, patience, sincerity, knowledge of worldly things and philosophic wisdom are the natural qualities of a Brahmin. Heroism, bravery, patience, skill, not to fly from battle, making of gifts and lordliness are the natural duties of a Kṣātriya. Agriculture, tending of cattle and trade are the natural duties of a Śūdra. A man can attain his highest only by performing the specific duties of his own caste. God pervades this world, and it is He who moves all beings to work. A man can best realize himself by adoring God and by the performance of his own specific caste-duties. No sin can come to a man who performs his own caste-duties. Even if one's caste-duties were sinful or wrong, it would not be wrong

¹ *Gītā*, III. 35.

for a man to perform them; for, as there is smoke in every fire, so there is some wrong thing or other in all our actions¹. Arjuna is thus urged to follow his caste-duty as a Kṣātriya and to fight his enemies in the battle-field. If he killed his enemies, then he would be the master of the kingdom; if he himself was killed, then since he had performed the duties of a Kṣātriya, he would go to Heaven. If he did not engage himself in that fight, which was his duty, he would not only lose his reputation, but would also transgress his own *dharma*.

Such an instruction naturally evokes the objection that war necessarily implies injury to living beings; but in reply to such an objection Kṛṣṇa says that the proper way of performing actions is to dissociate one's mind from attachment; when one can perform an action with a mind free from attachment, greed and selfishness, from a pure sense of duty, the evil effects of such action cannot affect the performer. The evil effects of any action can affect the performer when in performing an action he has a motive of his own to fulfil. But, if he does not seek anything for himself, if he is not overjoyed in pleasures, or miserable in pains, his works cannot affect him. A man should therefore surrender all his desires for selfish ends and dedicate all his actions to God and be in communion with Him, and yet continue to perform the normal duties of his caste and situation of life. So long as we have our bodies, the necessity of our own nature will drive us to work. So it is impossible for us to give up all work. To give up work can be significant only if it means the giving up of all desires for the fruits of such actions. If the fruits of actions are given up, then the actions can no longer bind us to them. That brings us in return peace and contentment, and the saint who has thus attained a perfect equanimity of mind is firm and unshaken in his true wisdom, and nothing can sway him to and fro. One may seek to attain this state either by philosophic wisdom or by devotion to God, and it is the latter path which is easier. God, by His grace, helps the devotee to purge his mind of all impurities, and so by His grace a man can dissociate his mind from all motives of greed and selfishness and be in communion with Him; he can thus perform his duties, as fixed for him by his caste or his custom, without looking forward to any reward or gain.

The *Gītā* ideal of conduct differs from the sacrificial ideal of

¹ *Gītā*, xviii. 44-48.

conduct in this, that sacrifices are not to be performed for any ulterior end of heavenly bliss or any other mundane benefits, but merely from a sense of duty, because sacrifices are enjoined in the scriptures to be performed by Brahmins; and they must therefore be performed from a pure sense of duty. The *Gītā* ideal of ethics differs from that preached in the systems of philosophy like the Vedānta or the Yoga of Patañjali in this, that, while the aim of these systems was to transcend the sphere of actions and duties, to rise to a stage in which one could give up all one's activities, mental or physical, the ideal of the *Gītā* was decidedly an ideal of work. The *Gītā*, as has already been pointed out, does not advocate a course of extremism in anything. However elevated a man may be, he must perform his normal caste-duties and duties of customary morality¹. The *Gītā* is absolutely devoid of the note of pessimism which is associated with early Buddhism. The *śīla*, *samādhi* and *paññā* of Buddhism have, no doubt, in the *Gītā* their counterparts in the training of a man to disinclination for joys and attachments, to concentration on God and the firm and steady fixation of will and intelligence; but the significance of these in the *Gītā* is entirely different from that which they have in Buddhism. The *Gītā* does not expound a course of approved conduct and prohibitions, since, so far as these are concerned, one's actions are to be guided by the code of caste-duties or duties of customary morality. What is required of a man is that he should cleanse his mind from the impurities of attachment, desires and cravings. The *samādhi* of the *Gītā* is not a mere concentration of the mind on some object, but communion with God, and the wisdom, or *prajñā*, of the *Gītā* is no realization of any philosophic truth, but a fixed and unperturbed state of the mind, where the will and intellect remain unshaken in one's course of duty, clear of all consequences and free from all attachments, and in a state of equanimity which cannot be shaken or disturbed by pleasures or sorrows.

It may naturally be asked in this connection, what is the general standpoint of Hindu Ethics? The Hindu social system is based on a system of fourfold division of castes. The *Gītā* says that God Himself created the fourfold division of castes into Brahmins, Kṣātriyas, Vaiśyas and Śūdras, a division based on characteristic

¹ Śaṅkara, of course, is in entire disagreement with this interpretation of the *Gītā*, as will be discussed in a later section.

qualities and specific duties. Over and above this caste division and its corresponding privileges, duties and responsibilities, there is also a division of the stages of life into that of *Brahma-cārin*—student, *grha-stha*—householder, *vāna-prastha*—retired in a forest, and *bhikṣu*—mendicant, and each of these had its own prescribed duties. The duties of Hindu ethical life consisted primarily of the prescribed caste-duties and the specific duties of the different stages of life, and this is known as *varṇāśrama-dharma*. Over and above this there were also certain duties which were common to all, called the *sādhāraṇa-dharmas*. Thus Manu mentions steadiness (*dhairya*), forgiveness (*kṣamā*), self-control (*dama*), non-stealing (*cauryābhāva*), purity (*śauca*), sense-control (*indriya-nigraha*), wisdom (*dhī*), learning (*vidyā*), truthfulness (*satya*) and control of anger (*akrodha*) as examples of *sādhāraṇa-dharma*. Prastāpāda mentions faith in religious duties (*dharma-śraddhā*), non-injury (*ahiṃsā*), doing good to living beings (*bhūta-hitatva*), truthfulness (*satya-vacana*), non-stealing (*asteya*), sex-continence (*brahmacharya*), sincerity of mind (*anupadhā*), control of anger (*krodha-varjana*), cleanliness and ablutions (*abhiṣecana*), taking of pure food (*śuci-dravya-sevana*), devotion to Vedic gods (*viśiṣṭa-devatā-bhakti*), and watchfulness in avoiding transgressions (*apramāda*). The caste-duties must be distinguished from these common duties. Thus sacrifices, study and gifts are common to all the three higher castes, Brahmins, Kṣātriyas and Vaiśyas. The specific duties of a Brahmin are acceptance of gifts, teaching, sacrifices and so forth; the specific duties of a Kṣātriya are protection of the people, punishing the wicked, not to retreat from battles and other specific tasks; the duties of a Vaiśya are buying, selling, agriculture, breeding and rearing of cattle, and the specific duties of a Vaiśya. The duties of a Śūdra are to serve the three higher castes¹.

Regarding the relation between *varṇa-dharma* and *sādhāraṇa-dharma*, a modern writer says that “the *sādhāraṇa-dharmas* constitute the foundation of the *varṇāśrama-dharmas*, the limits within which the latter are to be observed and obeyed. For

¹ The *Gītā*, however, counts self-control (*sama*), control over the mind (*dama*), purity (*śauca*), forgiving nature (*kṣānti*), sincerity (*ārjava*), knowledge (*jñāna*), wisdom (*vijñāna*) and faith (*āstikya*) as the natural qualities of Brahmins. The duties of Kṣātriyas are heroism (*śaurya*), smartness (*tejas*), power of endurance (*dhṛti*), skill (*dākṣya*), not to fly in battle (*yuddhe cāpy apalāyana*), making of gifts (*dāna*) and power of controlling others (*īśvara-bhāva*). The natural duties of Vaiśyas are agriculture, rearing of cows and trade. *Gītā*, XVIII. 42-44.

example, the Brahmin in performing religious sacrifice must not appropriate another's property, non-appropriation being one of the common and universal duties. In this way he serves his own community as well as subserves (though in a negative way) the common good of the community—and so, in an indirect way, serves the common good of humanity. Thus the individual of a specific community who observes the duties of his class does not serve his own community merely, but also and in the same process all other communities according to their deserts and needs, and in this way the whole of humanity itself. This, it will be seen, is also the view of Plato, whose virtue of justice is the common good which is to be realized by each class through its specific duties; but this is to be distinguished from the common good which constitutes the object of the *sādhāraṇa-dharmas* of the Hindu classification. The end in these common and universal duties is not the common well-being, which is being correctly realized in specific communities, but the common good as the precondition and foundation of the latter; it is not the good which is common-in-the-individual, but common-as-the-prius-of-the-individual. Hence the *sādhāraṇa* duties are obligatory equally for all individuals, irrespective of their social position or individual capacity¹.” The statement that the common good (*sādhāraṇa-dharma*) could be regarded as the precondition of the specific caste-duties implies that, if the latter came into conflict with the former, then the former should prevail. This is, however, inexact; for there is hardly any instance where, in case of a conflict, the *sādhāraṇa-dharma*, or the common duties, had a greater force. Thus, for example, non-injury to living beings was a common duty; but sacrifices implied the killing of animals, and it was the clear duty of the Brahmins to perform sacrifices. War implied the taking of an immense number of human lives; but it was the duty of a Kṣatriya not to turn away from a battle-field, and in pursuance of his obligatory duty as a Kṣatriya he had to fight. Turning to traditional accounts, we find in the *Rāmāyaṇa* that Śambūka was a Śūdra saint (*muni*) who was performing ascetic penances in a forest. This was a transgression of caste-duties; for a Śūdra could not perform *tapas*, which only the higher caste people were allowed to undertake, and hence the performance of *tapas* by the Śūdra saint Śambūka was regarded

¹ *Ethics of the Hindus*, by S. K. Maitra under Dr Seal's close personal supervision and guidance, pp. 3-4.

as *adharma* (vice); and, as a result of this *adharma*, there was a calamity in the kingdom of Rāma in the form of the death of an infant son of a Brahmin. King Rāma went out in his chariot and beheaded Śambūka for transgressing his caste-duties. Instances could be multiplied to show that, when there was a conflict between the caste-duties and the common duties, it was the former that had the greater force. The common duties had their force only when they were not in conflict with the caste-duties. The *Gītā* is itself an example of how the caste-duties had preference over common duties. In spite of the fact that Arjuna was extremely unwilling to take the lives of his near and dear kinsmen in the battle of Kurukṣetra Kṛṣṇa tried his best to dissuade him from his disinclination to fight and pointed out to him that it was his clear duty, as a Kṣātriya, to fight. It seems therefore very proper to hold that the common duties had only a general application, and that the specific caste-duties superseded them, whenever the two were in conflict.

The *Gītā* does not raise the problem of common duties, as its synthesis of *nivṛtti* (cessation from work) and *pravṛtti* (tending to work) makes it unnecessary to introduce the advocacy of the common duties; for its instruction to take to work with a mind completely detached from all feelings and motives of self-seeking, pleasure-seeking and self-interest elevates its scheme of work to a higher sphere, which would not be in need of the practice of any select scheme of virtues.

The theory of the *Gītā* that, if actions are performed with an unattached mind, then their defects cannot touch the performer, distinctly implies that the goodness or badness of an action does not depend upon the external effects of the action, but upon the inner motive of action. If there is no motive of pleasure or self-gain, then the action performed cannot bind the performer; for it is only the bond of desires and self-love that really makes an action one's own and makes one reap its good or bad fruits. Morality from this point of view becomes wholly subjective, and the special feature of the *Gītā* is that it tends to make all actions non-moral by cutting away the bonds that connect an action with its performer. In such circumstances the more logical course would be that of Śāṅkara, who would hold a man who is free from desires and attachment to be above morality, above duties and above responsibilities. The *Gītā*, however, would not advocate

the objective *nivṛtti*, or cessation of work; its whole aim is to effect subjective *nivṛtti*, or detachment from desires. It would not allow anyone to desist from his prescribed objective duties; but, whatever might be the nature of these duties, since they were performed without any motive of gain, pleasure or self-interest, they would be absolutely without fruit for the performer, who, in his perfect equanimity of mind, would transcend all his actions and their effects. If Arjuna fought and killed hundreds of his kinsmen out of a sense of his caste-duty, then, howsoever harmful his actions might be, they would not affect him. Yudhiṣṭhira, however, contemplated an expiation of the sin of killing his kinsmen by repentance, gifts, asceticism, pilgrimage, etc., which shows the other view, which was prevalent in the *Mahā-bhārata* period, that, when the performance of caste-duties led to such an injury to human lives, the sinful effects of such actions could be expiated by such means¹. Yudhiṣṭhira maintained that of asceticism (*tapas*), the giving up of all duties (*tyāga*), and the final knowledge of the ultimate truth (*avadhi*), the second is better than the first and the third is better than the second. He therefore thought that the best course was to take to an ascetic life and give up all duties and responsibilities, whereas Arjuna held that the best course for a king would be to take upon himself the normal responsibilities of a kingly life and at the same time remain unattached to the pleasures of such a life². Regarding also the practice of the virtues of non-injury, etc., Arjuna maintains that it is wrong to carry these virtues to extremes. Howsoever a man may live, whether as an ascetic or as a forester, it is impossible for him to practise non-injury to all living beings in any extreme degree. Even in the water that one drinks and the fruits that one eats, even in breathing and winking many fine and invisible insects are killed. So the virtue of non-injury, or, for the matter of that, all kinds of virtue, can be practised only in moderation, and their injunctions always imply that they can be practised only within the bounds of a commonsense view of things. Non-injury may

¹ *Mahā-bhārata*, XII. 7. 36 and 37.

² Thus Arjuna says:

*aśaktaḥ śaktavad gacchan niḥsaṅgo mukta-bandhanah
samaḥ śatrau ca mitre ca sa vai mukto mahāpate;*

to which Yudhiṣṭhira replies:

*tapas tyāgo 'vadhīr iti niscayas tv eṣa dhāmatām
parasparam jyāya eṣām yeṣām naiḥśreyasī matiḥ.*

Ibid. XII. 18. 31 and XII. 19. 9.

be good; but there are cases where non-injury would mean doing injury. If a tiger enters into a cattle-shed, not to kill the tiger would amount to killing the cows. So all religious injunctions are made from the point of view of a practical and well-ordered maintenance of society and must therefore be obeyed with an eye to the results that may follow in their practical application. Our principal object is to maintain properly the process of the social order and the well-being of the people¹. It seems clear, then, that, when the *Gītā* urges again and again that there is no meaning in giving up our normal duties, vocation and place in life and its responsibilities, and that what is expected of us is that we should make our minds unattached, it refers to the view which Yudhiṣṭhira expresses, that we must give up all our works. The *Gītā* therefore repeatedly urges that *tyāga* does not mean the giving up of all works, but the mental giving up of the fruits of all actions.

Though the practice of detachment of mind from all desires and motives of pleasure and enjoyment would necessarily involve the removal of all vices and a natural elevation of the mind to all that is high and noble, yet the *Gītā* sometimes denounces certain types of conduct in very strong terms. Thus, in the sixteenth chapter, it is said that people who hold a false philosophy and think that the world is false and, without any basis, deny the existence of God and hold that there is no other deeper cause of the origin of life than mere sex-attraction and sex-union, destroy themselves by their foolishness and indulgence in all kinds of cruel deeds, and would by their mischievous actions turn the world to the path of ruin. In their insatiable desires, filled with pride, vanity and ignorance, they take to wrong and impure courses of action. They argue too much and think that there is nothing greater than this world that we live in, and, thinking so, they indulge in all kinds of pleasures and enjoyments. Tied with bonds of desire, urged by passions and anger, they accumulate money in a wrongful manner for the gratification of their sense-desires. "I have got this to-day," they think, "and enjoy myself; I have so much hoarded money and I shall have more later on"; "that enemy has been killed by me, I shall kill other enemies also, I am

*Loka-yātrārtham evedaṃ dharma-pravacanam kṛtam
ahimsā sādhu hiṃseti śreyān dharma-parigrahaḥ
nātyantaṃ guṇavat kiṃcin na cāpy atyanta-nirguṇam
ubhayaṃ sarva-kāryeṣu drśyate sādhu asādhu vā.*

Mahā-bhārati, XII. 15. 49 and 50.

a lord, I enjoy myself, I am successful, powerful and happy, I am rich, I have a noble lineage, there is no one like me, I perform sacrifices, make gifts and enjoy." They get distracted by various kinds of ideas and desires and, surrounded by nets of ignorance and delusion and full of attachment for sense-gratifications, they naturally fall into hell. Proud, arrogant and filled with the vanity of wealth, they perform improperly the so-called sacrifices, as a demonstration of their pomp and pride. In their egoism, power, pride, desires and anger they always ignore God, both in themselves and in others¹. The main vices that one should try to get rid of are thus egoism, too many desires, greed, anger, pride and vanity, and of these desire and anger are again and again mentioned as being like the gates of hell².

Among the principal virtues called the divine equipment (*daivī sampat*) the *Gītā* counts fearlessness (*abhaya*), purity of heart (*sattva-saṁśuddhi*), knowledge of things and proper action in accordance with it, giving, control of mind, sacrifice, study, *tapas*, sincerity (*ārjava*), non-injury (*ahiṁsā*), truthfulness (*satya*), control of anger (*akrodha*), renunciation (*tyāga*), peacefulness of mind (*śānti*), not to backbite (*apāiśuna*), kindness to the suffering (*bhūteṣu dayā*), not to be greedy (*alolupatva*), tenderness (*mārdava*), a feeling of shame before people in general when a wrong action is done (*hri*), steadiness (*acapaḥ*), energy (*tejas*), a forgiving spirit (*kṣānti*), patience (*dhṛti*), purity (*śauca*), not to think ill of others (*adroha*), and not to be vain. It is these virtues which liberate our spirits, whereas vanity, pride, conceit, anger, cruelty and ignorance are vices which bind and enslave us³. The man who loves God should not hurt any living beings, should be friendly and sympathetic towards them, and should yet be unattached to all things, should have no egoism, be the same in sorrows and pleasures and full of forgivingness for all. He should be firm, self-controlled and always contented. He should be pure, unattached, the same to all, should not take to actions from any personal motives, and he has nothing to fear. He is the same to friends and enemies, in appreciation and denunciation; he is the same in heat and cold, pleasure and pain; he is the same in praise and blame, homeless and always satisfied with anything and everything; he is always unperturbed and absolutely unattached to all things⁴. If one carefully goes through

¹ *Gītā*, xvi. 8-18.

² *Ibid.* xvi. 21.

³ *Ibid.* xvi. 1-5.

⁴ *Ibid.* xii. 13-19; see also *ibid.* xiii. 8-11.

the above list of virtues, it appears that the virtues are pre-eminently of a negative character—one should not be angry, hurtful to others, egoistic, proud or vain, should not do anything with selfish motives, should not be ruffled by pleasure and pain, heat and cold and should be absolutely unattached. Of the few positive virtues, sincerity and purity of heart, a forgiving spirit, tenderness, friendliness, kindness, alertness and sympathy seem to be most prominent. The terms *maitra* (friendliness) and *karuṇā* (compassion) might naturally suggest the Buddhist virtues so named, since they do not occur in the Upaniṣads¹. But in the *Gītā* also they are mentioned only once, and the general context of the passage shows that no special emphasis is put on these two virtues. They do not imply any special kind of meditation of universal friendship or universal piety or the active performance of friendly and sympathetic deeds for the good of humanity or for the good of living beings in general. They seem to imply simply the positive friendly state of the mind that must accompany all successful practice of non-injury to fellow-beings. The *Gītā* does not advocate the active performance of friendliness, but encourages a friendly spirit as a means of discouraging the tendency to do harm to others. The life that is most admired in the *Gītā* is a life of unattachedness, a life of peace, contentment and perfect equanimity and unperturbedness in joys and sorrows. The vices that are denounced are generally those that proceed from attachment and desires, such as egoism, pride, vanity, anger, greediness, etc. There is another class of virtues which are often praised, namely those which imply purity, sincerity and alertness of mind and straightness of conduct. The negative virtue of sense-control, with its positive counterpart, the acquirement of the power of directing one's mind in a right direction, forms the bed-rock of the entire superstructure of the *Gītā* code of moral and virtuous conduct.

The virtue of sameness (*samatva*), however, seems to be the great ideal which the *Gītā* is never tired of emphasizing again and again. This sameness can be attained in three different stages: subjective sameness, or equanimity of mind, or the sameness in joys and sorrows, praise and blame and in all situations of life; objective sameness, as regarding all people, good, bad or indifferent, a friend or an enemy, with equal eyes and in the same

¹ The term *maitra* occurs only once in the *Muktikopaniṣat*, II. 34, and the *Muktika* is in all probability one of the later Upaniṣads.

impartial spirit; and the final stage of the achievement of this equanimity is the self-realized state when one is absolutely unperturbed by all worldly things—a state of transcendence called *guṇātīta*. Thus in the *Gītā*, II. 15, it is said that he whom sense-affections and physical troubles cannot affect in any way, who is unperturbable and the same in joys and sorrows, attains immortality. In II. 38 Kṛṣṇa asks Arjuna to think of joys and sorrows, gain and loss, victory and defeat as being the same, and to engage himself in the fight with such a mind; for, if he did so, no sin would touch him. In II. 47 Kṛṣṇa says to Arjuna that his business is only to perform his duties and not to look for the effects of his deeds; it is wrong to look for the fruits of deeds or to desist from performing one's duties. In II. 48 this sameness in joys and sorrows is described as *yoga*, and it is again urged that one should be unperturbed whether in success or in failure. The same idea is repeated in II. 55, 56 and 57, where it is said that a true saint should not be damped in sorrow or elated in joy, and that he should not be attached to anything and should take happiness or misery indifferently, without particularly welcoming the former or regretting the latter. Such a man is absolutely limited to his own self and is self-satisfied. He is not interested in achieving anything or in not achieving anything; there is no personal object for him to attain in the world¹. To such a man gold and stones, desirables and undesirables, praise and blame, appreciation and denunciation, friends and foes are all alike². Such a man makes no distinction whether between a friend and foe, or between a sinner and a virtuous man³. Such a man knows that pleasures and pains are welcomed and hated by all and, thinking so, he desires the good of all and looks upon all as he would upon himself—on a learned Brahmin of an elevated character, on a cow, an elephant, a dog or a *caṇḍāla*; and the wise behave in the same way⁴. He sees God in all beings and knows the indestructible and the immortal in all that is destructible. He who knows that all beings are pervaded by all, and thus regards them all with an equal eye, does not hurt his own spiritual nature and thus attains his highest⁵. As the culmination of this development, there is the state in which a man transcends all the corporeal and mundane characteristics of the threefold *guṇas*, and, being freed from birth, death, old age and

¹ *Gītā*, III. 17, 18.² *Ibid.* XIV. 24, 25.³ *Ibid.* VI. 9.⁴ *Ibid.* VI. 31; also V. 18.⁵ *Ibid.* XIII. 28.

sorrow, attains immortality. He knows that the worldly qualities of things, the *guṇas*, are extraneous to his own spiritual nature, and by such thoughts he transcends the sphere of all worldly qualities and attains Brahmahood¹.

Apart from the caste-duties and other deeds that are to be performed without any attachment, the *Gītā* speaks again and again of sacrifices, *tapas* and gifts, as duties which cannot be ignored at any stage of our spiritual development. It is well worth pointing out that the *Gītā* blames the performance of sacrifices either for the attainment of selfish ends or for making a display of pomp or pride. The sacrifices are to be performed from a sense of duty and of public good, since it is only by the help of the sacrifices that the gods may be expected to bring down heavy showers, through which crops may grow in plenty. Physical *tapas* is described as the adoration of gods, Brahmins, teachers and wise men, as purity, sincerity, sex-continence and non-injury; *tapas* in speech is described as truthful and unoffending speech, which is both sweet to hear and for the good of all, and also study; mental *tapas* is described as serenity of mind (*manah-prasāda*), happy temper (*saumyatva*), thoughtfulness (*mauna*), self-control (*ātma-vinigraha*) and sincerity of mind; and the higher kind of *tapas* is to be performed without any idea of gain or the fulfilment of any ulterior end². Gifts are to be made to good Brahmins in a holy place and at an auspicious time, merely from a sense of duty. This idea that gifts are properly made only when they are made to good Brahmins at a holy time or place is very much more limited and restricted than the Mahāyāna idea of making gifts for the good of all, without the slightest restriction of any kind. Thus it is said in the *Śikṣā-samuccaya* that a Bodhisattva need not be afraid among tigers and other wild animals in a wild forest, since the Bodhisattva has given his all for the good of all beings. He has therefore to think that, if the wild animals should eat him, this would only mean the giving his body to them, which would be the fulfilment of his virtue of universal charity. The Bodhisattvas take the vow of giving away their all in universal charity³.

Thus the fundamental teaching of the *Gītā* is to follow caste-duties without any motive of self-interest or the gratification of sense-desires. The other general duties of sacrifices, *tapas* and

¹ *Gītā*, xiv. 20, 23, 26.

² *Ibid.* xvi. 11-17.

³ *Śikṣā-samuccaya*, ch. xix, p. 349.

gifts are also to be practised by all and may hence be regarded in some sense as being equivalent to the *sādhāraṇa-dharmas* of the Vaiśeṣika and Smṛti literature. But, if caste-duties or customary duties come into conflict with the special duties of non-injury (*ahiṃsā*), then the caste-duties are to be followed in preference. It does not seem that any of the other special duties or virtues which are enjoined can come into conflict with the general caste-duties; for most of these are for the inner moral development, with which probably no caste-duties can come into conflict. But, though there is no express mandate of the *Gītā* on the point, yet it may be presumed that, should a Śūdra think of performing sacrifices, *tapas* or gifts or the study of the Vedas, this would most certainly be opposed by the *Gītā*, as it would be against the prescribed caste-duties. So, though non-injury is one of the special virtues enjoined by the *Gītā*, yet, when a Kṣātriya kills his enemies in open and free fight, that fight is itself to be regarded as virtuous (*dharmya*) and there is for the Kṣātriya no sin in the killing of his enemies. If a person dedicates all his actions to Brahman and performs his duties without attachment, then sinfulness in his actions cannot cleave to him, just as water cannot cleave to the leaves of a lotus plant¹. On the one hand the *Gītā* keeps clear of the ethics of the absolutist and metaphysical systems by urging the necessity of the performance of caste and customary duties, and yet enjoins the cultivation of the great virtues of renunciation, purity, sincerity, non-injury, self-control, sense-control and want of attachment as much as the absolutist systems would desire to do; on the other hand, it does not adopt any of the extreme and rigorous forms of self-discipline, as the Yoga does, or the practice of the virtues on an unlimited and universalist scale, as the Buddhists did. It follows the middle course, strongly emphasizing the necessity of self-control, sense-control and detachment from all selfish ends and desires along with the performance of the normal duties. This detachment from sense-pleasures is to be attained either through wisdom or, preferably, through devotion to God.

¹ *Gītā*, v. 10.

Analysis of Action.

The consideration of the *Gītā* ethics naturally brings in the problem of the analysis of the nature of action, volition and agent. The principal analysis of volition in Hindu Philosophy is to be found in the Nyāya-Vaiśeṣika works. Praśastapāda divides animal activities into two classes, firstly, those that are of a reflex nature and originate automatically from life-functions (*jīvana-pūrvaka*) and subserve useful ends (*kām api artha-kriyām*) for the organism, and, secondly, those conscious and voluntary actions that proceed out of desire or aversion, for the attainment of desirable ends and the avoidance of undesirable ones. Prabhākara holds that volitional actions depend on several factors, firstly, a general notion that something has to be done (*kāryatā-jñāna*), which Gaṅgabhaṭṭa in his *Bhāṭṭa-cintāmaṇi* explains as meaning not merely a general notion that a particular work can be done by the agent, but also the specific notion that an action must be done by him—a sense which can proceed only from a belief that the action would be useful to him and would not be sufficiently harmful to him to dissuade him from it. Secondly, there must be the belief that the agent has the power or capacity of performing the action (*kṛti-sādhyatā-jñāna*). This belief of *kṛti-sādhyatā-jñāna* leads to desire (*cikīrṣā*). The Prabhākaras do not introduce here the important factor that an action can be desired only if it is conducive to the good of the agent. Instead of this element they suppose that actions are desired when the agent identifies himself with the action as one to be accomplished by him—an action is desired only as a kind of self-realization. The Nyāya, however, thinks that the fact that an action is conducive to good and not productive of serious mischief is an essential condition of its performance.

The *Gītā* seems to hold that everywhere actions are always being performed by the *guṇas* or characteristic qualities of *prakṛti*, the primal matter. It is through ignorance and false pride that one thinks himself to be the agent¹. In another place it is said that for the occurrence of an action there are five causes, viz. the body, the agent, the various sense-organs, the various life-functions and biomotor activities, and the unknown objective causal elements or the all-controlling power of God (*daiva*)². All actions

¹ *Gītā*, III. 27; XIII. 29.

² *adhīṣṭhānam tathā kartā karam ca prthag-vidham
vivīdhās ca prthag ceṣṭā daivam caivātra pañcamam. Ibid. XVIII. 14.*

being due to the combined operation of these five elements, it would be wrong to think the self or the agent to be the only performer of actions. Thus it is said that, this being so, he who thinks the self alone to be the agent of actions, this wicked-minded person through his misapplied intelligence does not see things properly¹. Whatever actions are performed, right or wrong, whether in body, speech or mind, have these five factors as their causes². The philosophy that underlies the ethical position of the *Gītā* consists in the fact that, in reality, actions are made to happen primarily through the movement of the characteristic qualities of *prakṛti*, and secondarily, through the collocation of the five factors mentioned, among which the self is but one factor only. It is, therefore, sheer egoism to think that one can, at his own sweet will, undertake a work or cease from doing works. For the *prakṛti*, or primal matter, through its later evolutes, the collocation of causes, would of itself move us to act, and even in spite of the opposition of our will we are led to perform the very action which we did not want to perform. So Kṛṣṇa says to Arjuna that the egoism through which you would say that you would not fight is mere false vanity, since the *prakṛti* is bound to lead you to action³. A man is bound by the active tendencies or actions which necessarily follow directly from his own nature, and there is no escape. He has to work in spite of the opposition of his will. *Prakṛti*, or the collocation of the five factors, moves us to work. That being so, no one can renounce all actions. If renouncing actions is an impossibility, and if one is bound to act, it is but proper that one should perform one's normal duties. There are no duties and no actions which are absolutely faultless, absolutely above all criticism; so the proper way in which a man should purify his actions is by purging his mind of all imperfections and impurities of desires and attachment. But a question may arise how, if all actions follow necessarily as the product of the five-fold collocation, a person can determine his actions? The general implication of the *Gītā* seems to be that, though the action follows necessarily as the product of the fivefold collocation, yet the self can give a direction to these actions; if a man wishes to dissociate himself from all attachments and desires by dedicating the fruits of all his actions to God and clings to God with such a purpose, God helps him to attain his noble aim.

¹ *Gītā*, XVIII. 16.² *Ibid.* XVIII. 15.³ *Ibid.* XVIII. 59.

Eschatology.

The *Gītā* is probably the earliest document where a definite statement is made regarding the imperishable nature of existent things and the impossibility of that which is non-existent coming into being. It says that what is non-existent cannot come into being, and that what exists cannot cease to be. In modern times we hear of the principle of the conservation of energy and also of the principle of the conservation of mass. The principle of the conservation of energy is distinctly referred to in the *Vyāsa-bhāṣya* on *Patañjali-sūtra*, iv. 3, but the idea of the conservation of mass does not seem to have been mentioned definitely anywhere. Both the Vedāntist and the Sāṃkhyist seem to base their philosophies on an ontological principle known as *sat-kārya-vāda*, which holds that the effect is already existent in the cause. The Vedānta holds that the effect as such is a mere appearance and has no true existence; the cause alone is truly existent. The Sāṃkhya, on the other hand, holds that the effect is but a modification of the causal substance, and, as such, is not non-existent, but has no existence separate from the cause; the effect may therefore be said to exist in the cause before the starting of the causal operation (*kāraṇa-vyāpāra*). Both these systems strongly object to the Buddhist and Nyāya view that the effect came into being out of non-existence, a doctrine known as *a-sat-kārya-vāda*. Both the Sāṃkhya and the Vedānta tried to prove their theses, but neither of them seems to have realized that their doctrines are based upon an *a priori* proposition which is the basic principle underlying the principle of the conservation of energy and the conservation of mass, but which is difficult to be proved by reference to a *posteriori* illustration. Thus, the Sāṃkhya says that the effect exists in the cause, since, had it not been so, there would be no reason why certain kinds of effects, e.g. oil, can be produced only from certain kinds of causes, e.g. sesamum. That certain kinds of effects are produced only from certain kinds of causes does not really prove the doctrine of *sat-kārya-vāda*, but only implies it; for the doctrine of *sat-kārya-vāda* rests on an *a priori* principle such as that formulated in the *Gītā*—that what exists cannot perish, and that what does not exist cannot come into being¹. The *Gītā* does not try to prove this proposition, but takes it as a self-evident principle which no one could

¹ *nāsato vidyate bhāvo nābhavo vidyate sataḥ. Gītā*, II. 16.

challenge. It does not, however, think of applying this principle, which underlies the ontological position of the Sāṃkhya and the Vedānta, in a general way. It seems to apply the principle only to the nature of self (*ātman*). Thus it says, "O Arjuna, that principle by which everything is pervaded is to be regarded as deathless; no one can destroy this imperishable one. The bodies that perish belong to the deathless eternal and unknowable self; therefore thou shouldst fight. He who thinks the self to be destructible, and he who thinks it to be the destroyer, do not know that it can neither destroy nor be destroyed. It is neither born nor does it die, nor, being once what it is, would it ever be again.... Weapons cannot cut it, fire cannot burn it, water cannot dissolve it and air cannot dry it." The immortality of self preached in the *Gītā* seems to have been directly borrowed from the Upaniṣads, and the passages that describe it seem to breathe the spirit of the Upaniṣads not only in idea, but also in the modes and expressions. The ontological principle that what exists cannot die and that what is not cannot come into being does not seem to have been formulated in the Upaniṣads. Its formulation in the *Gītā* in support of the principle of immortality seems, therefore, to be a distinct advance on the Upaniṣadic philosophy in this direction.

The first argument urged by Kṛṣṇa to persuade Arjuna to fight was that the self was immortal and that it was the body only that could be injured or killed, and that therefore Arjuna need not feel troubled because he was going to kill his kinsmen in the battle of Kurukṣetra. Upon the death of one body the self only changed to another, in which it was reborn, just as a man changed his old clothes for new ones. The body is always changing, and even in youth, middle age and old age, does not remain the same. The change at death is also a change of body, and so there is no intrinsic difference between the changes of the body at different stages of life and the ultimate change that is effected at death, when the old body is forsaken by the spirit and a new body is accepted. Our bodies are always changing, and, though the different stages in this growth in childhood, youth and old age represent comparatively small degrees of change, yet these ought to prepare our minds to realize the fact that death is also a similar change of body only and cannot, therefore, affect the unperturbed nature of the self, which, in spite of all changes of body at successive

births and rebirths, remains unchanged in itself. When one is born one must die, and when one dies one must be reborn. Birth necessarily implies death, and death necessarily implies rebirth. There is no escape from this continually revolving cycle of birth and death. From Brahmā down to all living creatures there is a continuous rotation of birth, death and rebirth. In reply to Arjuna's questions as to what becomes of the man who, after proceeding a long way on the path of *yoga*, is somehow through his failings dislodged from it and dies, Kṛṣṇa replies that no good work can be lost and a man who has been once on the path of right cannot suffer; so, when a man who was proceeding on the path of *yoga* is snatched away by the hand of death, he is born again in a family of pure and prosperous people or in a family of wise *yogins*; and in this new birth he is associated with his achievements in his last birth and begins anew his onward course of advancement, and the old practice of the previous birth carries him onward, without any effort on his part, in his new line of progress. By his continual efforts through many lives and the cumulative effects of the right endeavours of each life the *yogin* attains his final realization. Ordinarily the life of a man in each new birth depends upon the desires and ideas that he fixes upon at the time of his death. But those that think of God, the oldest instructor, the seer, the smallest of the small, the upholder of all, shining like the sun beyond all darkness, and fix their life-forces between their eyebrows, and control all the gates of their senses and their mind in their hearts, ultimately attain their highest realization in God. From the great Lord, the great unmanifested and incomprehensible Lord, proceeds the unmanifested (*avyakta*), from which come out all manifested things (*vyaktayaḥ sarvāḥ*), and in time again return to it and again evolve out of it. Thus there are two forms of the unmanifested (*avyakta*), the unmanifested out of which all the manifested things come, and the unmanifested which is the nature of the eternal Lord from whom the former come¹. The ideas of *deva-yāna* and *pitr-yāna*, *dakṣiṇāyana* and *uttarāyana*, the black and the white courses as mentioned in the Upaniṣads, are also referred to in the *Gītā*. Those who go through smoke in the new-moon fortnight and the later six months (when the sun is on the south of the equator), and thus take the black course, return again; but those who take the white course of fire

¹ *Gītā*, VIII. 16-23.

in the full-moon fortnight and the former six months (when the sun is on the north of the equator) do not return again¹. No very significant meaning can be made out of these doctrines. They seem to be but the perpetuation of the traditional faiths regarding the future courses of the dead, as referred to in the *Chāndogya Upaniṣad*. The *Gītā*, again, speaking of others, says that those who follow the sacrificial duties of the Vedas enjoy heavenly pleasures in heaven, and, when their merits are exhausted by the enjoyments of the good fruits of their actions, they come back to earth. Those who follow the path of desires and take to religious duties for the attainment of pleasures must always go to heaven and come back again—they cannot escape this cycle of going and coming. Again, in the *Gītā*, xvi. 19, Kṛṣṇa says, “I make cruel vicious persons again and again take birth as ferocious animals.”

The above summary of the eschatological views of the *Gītā* shows that it collects together the various traditionally accepted views regarding life after death without trying to harmonize them properly. Firstly, it may be noted that the *Gītā* believes in the doctrine of *karma*. Thus in xv. 2 and in iv. 9 it is said that the world has grown on the basis of *karma*, and the *Gītā* believes that it is the bondage of *karma* that binds us to this world. The bondage of *karma* is due to the existence of attachment, passions and desires. But what does the bondage of *karma* lead to? The reply to such a question, as given by the *Gītā*, is that it leads to rebirth. When one performs actions in accordance with the Vedic injunctions for the attainment of beneficial fruits, desire for such fruits and attachment to these desirable fruits is the bondage of *karma*, which naturally leads to rebirth. The proposition definitely pronounced in the *Gītā*, that birth necessarily means death and death necessarily means birth, reminds us of the first part of the twelvefold causal chain of the Buddha—“What being, is there death? Birth being, there is death.” It has already been noticed that the attitude of the *Gītā* towards Vedic performances is merely one of toleration and not one of encouragement. These are actions which are prompted by desires and, like all other actions similarly prompted, they entail with them the bonds of *karma*; and, as soon as the happy effects produced by the merits of these actions are enjoyed and lived through, the performers of these actions come down from heaven to the earth and

¹ *Gītā*, viii. 24–26.

are reborn and have to pass through the old ordeal of life. The idea that, there being birth, there is death, and that, if there is death there is also rebirth, is the same in the *Gītā* as in Buddhism; but the *Gītā* form seems to be very much earlier than the Buddhistic form; for the Buddhistic form relates birth and death through a number of other causal links intimately connected together in an interdependent cycle, of which the *Gītā* seems to be entirely ignorant. The *Gītā* does not speak of any causal chain, such as could be conceived to be borrowed from Buddhism. It, of course, knows that attachment is the root of all vice; but it is only by implication that we can know that attachment leads to the bondage of *karma* and the bondage of *karma* to rebirth. The main purpose of the *Gītā* is not to find out how one can tear asunder the bonds of *karma* and stop rebirth, but to prescribe the true rule of the performance of one's duties. It speaks sometimes, no doubt, about cutting asunder the bonds of *karma* and attaining one's highest; but instruction as regards the attainment of liberation or a description of the evils of this worldly life does not form any part of the content of the *Gītā*. The *Gītā* has no pessimistic tendency. It speaks of the necessary connection of birth and death not in order to show that life is sorrowful and not worth living, but to show that there is no cause of regret in such universal happenings as birth and death. The principal ideas are, no doubt, those of attachment, *karma*, birth, death and rebirth; but the idea of Buddhism is more complex and more systematized, and is therefore probably a later development at a time when the *Gītā* discussions on the subject were known. The Buddhist doctrine that there is no self and no individual anywhere is just the opposite of the *Gītā* doctrine of the immortality of the self.

But the *Gītā* speaks not only of rebirth, but also of the two courses, the path of smoke and the path of light, which are referred to in the *Chāndogya Upaniṣad*¹. The only difference between the Upaniṣad account and that of the *Gītā* is that there are more details in the Upaniṣad than in the *Gītā*. But the ideas of *deva-yāna* and *pitr-yāna* do not seem to fit in quite consistently with the idea of rebirth on earth. The *Gītā*, however, combines the idea of rebirth on earth with the *deva-yāna-pitr-yāna* idea and also with the idea of ascent to heaven as an effect of the merits

¹ *Chāndogya Upaniṣad*, v. 10.

accruing from sacrificial performances. Thus the *Gītā* combines the different trains of ideas just as it finds them traditionally accepted, without trying to harmonize them properly. It does not attempt to discuss the point regarding the power of *karma* in determining the nature of rebirths, enjoyments and sufferings. From some passages (IV. 9 or VI. 40-45) it might appear that the bonds of *karma* produced their effects independently by their own powers, and that the arrangement of the world is due to the effect of *karma*. But there are other passages (XVI. 19) which indicate that *karma* does not produce its effects by itself, but that God rewards or punishes good and bad deeds by arranging good and bad births associated with joys and sorrows. In the *Gītā*, v. 15, it is said that the idea of sins and virtues is due to ignorance, whereas, if we judge rightly, God does not take cognizance either of vices or of virtues. Here again there are two contradictory views of *karma*: one view in which *karma* is regarded as the cause which brings about all inequalities in life, and another view which does not attribute any value to good or bad actions. The only way in which the two views can be reconciled in accordance with the spirit of the *Gītā* is by holding that the *Gītā* does not believe in the objective truth of virtue or vice (*punya* or *pāpa*). There is nothing good or bad in the actions themselves. It is only ignorance and foolishness that regards them as good or bad; it is only our desires and attachments which make the actions produce their bad effects with reference to us, and which render them sinful for us. Since the actions themselves are neither good nor bad, the performance of even apparently sinful actions, such as the killing of one's kinsmen on the battle-field, cannot be regarded as sinful, if they are done from a sense of duty; but the same actions would be regarded as sinful, if they were performed through attachments or desires. Looked at from this point of view, the idea of morality in the *Gītā* is essentially of a subjective character. But though morality, virtue and vice, can be regarded from this point of view as subjective, it is not wholly subjective. For morality does not depend upon mere subjective conscience or the subjective notions of good and bad. The caste-duties and other duties of customary morality are definitely fixed, and no one should transgress them. The subjectivity of virtue and vice consists in the fact that they depend entirely on our good or bad actions. If actions are performed from a sense of obedience to scriptural commands, caste-

duties or duties of customary morality, then such actions, in spite of their bad consequences, would not be regarded as bad.

Apart from these courses of rebirth and ascent to heaven, the last and best and ultimate course is described as being liberation, which transcends all that can be achieved by all kinds of merits attained by sacrifices, gifts or *tapas*. He who attains this highest achievement lives in God and is never born again¹. The highest realization thus consists in being one with God, by which one escapes all sorrows. In the *Gītā* liberation (*mokṣa*) means liberation from old age and death. This liberation can be attained by true philosophic knowledge of the nature of *kṣetra*, or the mind-body whole, and the *kṣetra-jñā*, the perceiving selves, or the nature of what is truly spiritual and what is non-spiritual, and by clinging to God as one's nearest and dearest². This liberation from old age and death also means liberation from the ties of *karma* associated with us through the bonds of attachment, desires, etc. It does not come of itself, as the natural result of philosophic knowledge or of devotion to God; but God, as the liberator, grants it to the wise and to those who cling to Him through devotion³. But whether it be achieved as the result of philosophic knowledge or as the result of devotion to God, the moral elevation, consisting of dissociation from attachment and the right performance of duties in an unattached manner, is indispensable.

God and Man.

The earliest and most recondite treatment regarding the nature and existence of God and His relation to man is to be found in the *Gītā*. The starting-point of the *Gītā* theism may be traced as far back as the *Puruṣa-sūkta*, where it is said that the one quarter of the *puruṣa* has spread out as the cosmic universe and its living beings, while its other three-quarters are in the immortal heavens⁴. This passage is repeated in *Chāndogya*, III. 12. 6 and in *Maitrāyaṇī*, VI. 4, where it is said that the three-quarter Brahman sits root upward above (*ūrdhva-mūlaṃ tripād Brahma*). This idea, in a slightly modified form, appears in the *Kaṭha Upaniṣad*, VI. 1, where it is said that this universe is the eternal Aśvattha

¹ *Gītā*, VIII. 28; IX. 4.

² *Ibid.* VII. 29; XIII. 34.

³ *Ibid.* XVIII. 66.

⁴

*pādo 'sya viśvā bhūtāṃ
tripād asyāmṛtaṃ divi. Puruṣa-sūkta.*

tree which has its root high up and its branches downwards (*ūrdhva-mūlo 'vāk-śākhaḥ*). The *Gītā* borrows this idea and says, "This is called the eternal *Aśvattha* (*pipul* tree) with its roots high up and branches downwards, the leaves of which are the Vedas; and he who knows this, he knows the Vedas" (xv. 1). Again it is said, "Its branches spread high and low, its leaves of sense-objects are nourished by the *guṇas*, its roots are spread downwards, tied with the knots of *karma*, the human world" (xv. 2); and in the next verse, it is said, "In this world its true nature is not perceived; its beginning, its end, and the nature of its subsistence, remain unknown; it is only by cutting this firmly rooted *Aśvattha* tree with the strong axe of unattachment (*asaṅga-śastreṇa*) that one has to seek that state from which, when once achieved, no one returns." It is clear from the above three passages that the *Gītā* has elaborated here the simile of the *Aśvattha* tree of the *Kaṭha Upaniṣad*. The *Gītā* accepts this simile of God, but elaborates it by supposing that these branches have further leaves and other roots, which take their sap from the ground of human beings, to which they are attached by the knots of *karma*. This means a duplication of the *Aśvattha* tree, the main and the subsidiary. The subsidiary one is an overgrowth, which has proceeded out of the main one and has to be cut into pieces before one can reach that. The principal idea underlying this simile throws a flood of light on the *Gītā* conception of God, which is an elaboration of the idea of the *Puruṣa-sūkta* passage already referred to. God is not only immanent, but transcendent as well. The immanent part, which forms the cosmic universe, is no illusion or *māyā*: it is an emanation, a development, from God. The good and the evil, the moral and the immoral of this world, are all from Him and in Him. The stuff of this world and its manifestations have their basis, an essence, in Him, and are upheld by Him. The transcendent part, which may be said to be the root high up, and the basis of all that has grown in this lower world, is itself the differenceless reality—the Brahman. But, though the Brahman is again and again referred to as the highest abode and the ultimate realization, the absolute essence, yet God in His super-personality transcends even Brahman, in the sense that Brahman, however great it may be, is only a constitutive essence in the complex personality of God. The cosmic universe, the *guṇas*, the *puruṣas*, the mind-structure composed of *buddhi*, *ahaṁkāra*, etc., and the Brahman,

are all constituents of God, having their separate functions and mental relations; but God in His super-personality transcends them all and upholds them all. There is, however, one important point in which the *Gītā* differs from the Upaniṣads—this is, its introduction of the idea that God takes birth on earth as man. Thus in the *Gītā*, iv. 6 and iv. 7, it is said that “whenever there is a disturbance of *dharma* and the rise of *adharma*, I create myself; though I am unborn, of immortal self and the lord of all beings, yet by virtue of my own nature (*prakṛti*) I take birth through my own *māyā* (blinding power of the *guṇas*).” This doctrine of the incarnation of God, though not dealt with in any of the purely speculative systems, yet forms the corner-stone of most systems of religious philosophy and religion, and the *Gītā* is probably the earliest work available to us in which this doctrine is found. The effect of its introduction and of the dialogue form of the *Gītā*, in which the man-god Kṛṣṇa instructs Arjuna in the philosophy of life and conduct, is that the instruction regarding the personality of God becomes concrete and living. As will be evident in the course of this section, the *Gītā* is not a treatise of systematic philosophy, but a practical course of introduction to life and conduct, conveyed by God Himself in the form of Kṛṣṇa to His devotee, Arjuna. In the *Gītā* abstract philosophy melts down to an insight into the nature of practical life and conduct, as discussed with all the intimacy of the personal relation between Kṛṣṇa and Arjuna, which suggests a similar personal relation between God and man. For the God in the *Gītā* is not a God of abstract philosophy or theology, but a God who could be a man and be capable of all personal relations.

The all-pervasive nature of God and the fact that He is the essence and upholder of all things in the world is again and again in various ways emphasized in the *Gītā*. Thus Kṛṣṇa says, “There is nothing greater than I, all things are held in me, like pearls in the thread of a pearl garland; I am the liquidity in water, the light of the sun and the moon, manhood (*pauruṣa*) in man; good smell in earth, the heat of the sun, intelligence in the intelligent, heroism in the heroes, strength in the strong, and I am also the desires which do not transgress the path of virtue¹.” Again, it is said that “in my unmanifested (*avyakta*) form I pervade the whole world; all beings exist completely in me, but

¹ *Gītā*, vii. 7-11.

I am not exhausted in them; yet so do I transcend them that none of the beings exist in me—I am the upholder of all beings, I do not exist in them and yet I am their procreator¹.” In both these passages the riddle of God’s relation with man, by which He exists in us and yet does not exist in us and is not limited by us, is explained by the fact of the threefold nature of God; there is a part of Him which has been manifested as inanimate nature and also as the animate world of living beings. It is with reference to this all-pervasive nature of God that it is said that “as the air in the sky pervades the whole world, so are all beings in ‘me’ (God). At the end of each cycle (*kalpa*) all beings enter into my nature (*prakṛtiṃ yānti māmikām*), and again at the beginning of a cycle I create them. I create again and again through my nature (*prakṛti*); the totality of all living beings is helplessly dependent on *prakṛti*².” The three *prakṛtis* have already been referred to in the previous sections—*prakṛti* of God as cosmic matter, *prakṛti* as the nature of God from which all life and spirit have emanated, and *prakṛti* as *māyā*, or the power of God from which the three *guṇas* have emanated. It is with reference to the operation of these *prakṛtis* that the cosmic world and the world of life and spirit may be said to be existent in God. But there is the other form of God, as the transcendent Brahman, and, so far as this form is concerned, God transcends the sphere of the universe of matter and life. But in another aspect of God, in His totality and super-personality, He remains unexhausted in all, and the creator and upholder of all, though it is out of a part of Him that the world has come into being. The aspect of God’s identity with, and the aspect of His transcendence and nature as the father, mother and supporter of the universe, are not separated in the *Gītā*, and both the aspects are described often in one and the same passage. Thus it is said, “I am the father, mother, upholder and grandfather of this world, and I am the sacred syllable OM, the three Vedas, Ṛk, Sāman and Yajus; I am the sacrifice, the oblations and the fire, and yet I am the master and the enjoyer of all sacrifices. I am the final destiny, upholder, matter, the passive illuminator, the rest, support, friend, the origin, the final dissolution, the place, the receptacle and the immortal seed. I produce heat and shower, I destroy and create, I am both death and the deathless, the good and the bad³.” With reference to His transcendent part it is

¹ *Gītā*, IX. 3-5.² *Ibid.* IX. 6-8.³ *Ibid.* IX. 16-19, 24.

said, "The sun, the moon and fire do not illuminate it—it is my final abode, from which, when once achieved, no one returns¹." And again, immediately after, it is said, "It is my part that forms the eternal soul-principle (*jīva-bhūta*) in the living, which attracts the five senses and the *manas* which lie buried in *prakṛti*, and which takes the body and goes out of it with the six senses, just as air takes out fragrance from the flowers²." And then God is said to be the controlling agent of all operations in this world. Thus it is said, "By my energy I uphold the world and all living beings and fill all crops with their specific juices; as fire in the bodies of living beings, and aided by the biomotor *prāṇa* functions, I digest the four kinds of food; I am the light in the sun, the moon and fire." Again it is said, "I reside in the hearts of all; knowledge, forgetfulness and memory all come from me; I alone am to be known by the Vedas; I alone know the Vedas, and I alone am the author of the Vedānta³." From these examples it is evident that the *Gītā* does not know that pantheism and deism and theism cannot well be jumbled up into one as a consistent philosophic creed. And it does not attempt to answer any objections that may be made against the combination of such opposite views. The *Gītā* not only asserts that all is God, but it also again and again repeats that God transcends all and is simultaneously transcendent and immanent in the world. The answer apparently implied in the *Gītā* to all objections to the apparently different views of the nature of God is that transcendentalism, immanentism and pantheism lose their distinctive and opposite characters in the melting whole of the super-personality of God. Sometimes in the same passage, and sometimes in passages of the same context, the *Gītā* talks in a pantheistic, a transcendental or a theistic vein, and this seems to imply that there is no contradiction in the different aspects of God as preserver and controller of the world, as the substance of the world, life and soul, and as the transcendent substratum underlying them all. In order to emphasize the fact that all that exists and all that is worthy of existence or all that has a superlative existence in good or bad are God's manifestation, the *Gītā* is never tired of repeating that whatever is highest, best or even worst in things is God or

¹ *Gītā*, xv. 6.

² *Ibid.* xv. 7 and 8. It is curious that here the word *Īśvara* is used as an epithet of *jīva*.

³ *Ibid.* xv. 8, 12, 13, 14, 15.

God's manifestation. Thus it is said, 'I am the gambling of dice in all deceptive operations, I am victory in all endeavours, heroism of the heroes and the moral qualities (*sattva*) of all moral men (*sattvavatām*)'; and after enumerating a number of such instances Kṛṣṇa says that, wherever there are special gifts or powers or excellence of any kind, they are to be regarded as the special manifestation of God¹. The idea that God holds within Himself the entire manifold universe is graphically emphasized in a fabulous form, when Kṛṣṇa gives Arjuna the divine eye of wisdom and Arjuna sees Kṛṣṇa in his resplendent divine form, shining as thousands of suns burning together, with thousands of eyes, faces and ornaments, pervading the heavens and the earth, with neither beginning nor end, as the great cosmic person into whose mouths all the great heroes of Kurukṣetra field had entered, like rivers into the ocean. Kṛṣṇa, after showing Arjuna his universal form, says, "I am time (*kāla*), the great destroyer of the world, and I am engaged in collecting the harvest of human lives, and all that will die in this great battle of Kurukṣetra have already been killed by me; you will be merely an instrument in this great destruction of the mighty battle of Kurukṣetra. So you can fight, destroy your enemies, attain fame and enjoy the sovereignty without any compunction that you have destroyed the lives of your kinsmen."

The main purport of the *Gītā* view of God seems to be that ultimately there is no responsibility for good or evil and that good and evil, high and low, great and small have all emerged from God and are upheld in Him. When a man understands the nature and reality of his own self and its agency, and his relation with God, both in his transcendent and cosmic nature, and the universe around him and the *guṇas* of attachment, etc., which bind him to his worldly desires, he is said to have the true knowledge. There is no opposition between the path of this true knowledge (*jñāna-yoga*) and the path of duties; for true knowledge supports and is supported by right performance of duties. The path of knowledge is praised in the *Gītā* in several passages. Thus it is said, that just as fire burns up the wood, so does knowledge reduce all actions to ashes. There is nothing so pure as knowledge. He who has true faith is attached to God, and he who has controlled his senses, attains knowledge, and having attained it, secures peace. He who

¹ *Gītā*, x. 36-41.

is foolish, an unbeliever, and full of doubts, is destroyed. He who is always doubting has neither this world, nor the other, nor does he enjoy any happiness. Even the worst sinner can hope to cross the sea of sins in the boat of knowledge¹. In the *Gītā*, iv. 42, Kṛṣṇa says to Arjuna, "Therefore, having destroyed the ignorance of your heart by the sword of knowledge, and having cut asunder all doubts, raise yourself up." But what is this knowledge? In the *Gītā*, iv. 36, in the same context, this knowledge is defined to be that view of things by which all beings are perceived in this self or God. The true knowledge of God destroys all *karma* in the sense that he who has perceived and realized the true nature of all things in God cannot be attached to his passions and desires as an ignorant man would be. In another passage, already referred to, it is said that the roots of the worldly *Aśvattha* tree are to be cut by the sword of unattachment. The confusion into which Arjuna falls in the *Gītā*, III. 1 and 2, regarding the relative excellence of the path of *karma* and the path of knowledge is wholly unfounded. Kṛṣṇa points out in the *Gītā*, III. 3, that there are two paths, the path of knowledge and the path of duties (*jñāna-yoga* and *karma-yoga*). The confusion had arisen from the fact that Kṛṣṇa had described the immortality of soul and the undesirability of Vedic actions done with a motive, and had also asked Arjuna to fight and yet remain unattached and perform his duty for the sake of duty. The purpose of the *Gītā* was to bring about a reconciliation between these two paths, and to show that the path of knowledge leads to the path of duties by liberating it from the bonds of attachment; for all attachment is due to ignorance, and ignorance is removed by true knowledge. But the true knowledge of God may be of a twofold nature. One may attain a knowledge of God in His transcendence as Brahman, and attain the philosophic wisdom of the foundation of all things in Brahman as the ultimate substance and source of all manifestation and appearance. There is another way of clinging to God as a super-person, in a personal relation of intimacy, friendship and dependence. The *Gītā* admits that both these ways may lead us to the attainment of our highest realization. But it is the latter which the *Gītā* prefers and considers easier. Thus the *Gītā* says (xii. 3-5) that those who adore the indefinable, unchangeable, omnipresent, unthinkable, and the unmanifested, controlling all their senses, with equal eyes for all

¹ *Gītā*, iv. 37-41.

and engaged in the good of all, by this course attain Him. Those who fix their mind on the unmanifested (*avyakta*) find this course very hard. But those who dedicate all their actions to God and, clinging to Him as their only support, are devoted to Him in constant communion, then He saves soon from the sea of death and rebirth¹.

The most important point in which the *Gītā* differs from the Upaniṣads is that the *Gītā* very strongly emphasizes the fact that the best course for attaining our highest realization is to dedicate all our actions to God, to cling to Him as our nearest and dearest, and always to be in communion with Him. The *Gītā* draws many of its ideas from the Upaniṣads and looks to them with respect. It accepts the idea of Brahman as a part of the essence of God, and agrees that those who fix their mind on Brahman as their ideal also attain the high ideal of realizing God. But this is only a compromise; for the *Gītā* emphasizes the necessity of a personal relation with God, whom we can love and adore. The beginning of our association with God must be made by dedicating the fruits of all our actions to God, by being a friend of all and sympathetic to all, by being self-controlled, the same in sorrow or happiness, self-contented, and in a state of perfect equanimity and equilibrium. It is through such a moral elevation that a man becomes apt in steadying his mind on God and ultimately in fixing his mind on God. In the *Gītā* Kṛṣṇa as God asks Arjuna to give up all ceremonials or religious courses and to cling to God as the only protector, and He promises that because of that God will liberate him². Again, it is said that it is by devotion that a man knows what God is in reality and, thus knowing Him truly as He is, enters into Him. It is by seeking entire protection in God that one can attain his eternal state³.

But, though in order to attain the height at which it is possible to fix one's mind on God, one should first acquire the preliminary qualification of detaching oneself from the bonds of passions and desires, yet it is sometimes possible to reverse the situation. The *Gītā* thus holds that those whose minds and souls are full of God's love, who delight in constantly talking and thinking of God and always adore God with love, are dear to Him, and God, through His great mercy and kindness, grants them the proper wisdom and destroys the darkness of their ignorance by the light of knowledge⁴.

¹ *Gītā*, XII. 6, 7.² *Ibid.* XVIII. 66.³ *Ibid.* XVIII. 55, 62.⁴ *Ibid.* X. 9-11.

In the *Gītā*, xviii. 57-58, Kṛṣṇa as God asks Arjuna to leave all fruits of actions to God and to fill his mind with God, and He assures him that He will then, by His divine grace, save him from all sorrows, troubles or difficulties. Again, in ix. 30-32 it is said that, even if a man is extremely wicked, if he adores God devotedly, he becomes a saint; for he has adopted the right course, and he soon becomes religious and attains eternal peace of mind. Even sinners, women, Vaiśyas and Śūdras who cling to God for support, are emancipated. Kṛṣṇa as God assures Arjuna that a devotee (*bhakta*) of God can never be lost¹. If a man clings to God, no matter whether he has understood Him rightly or not, no matter whether he has taken the right course of approaching Him or not, God accepts him in whichever way he clings to Him. No one can be lost. In whichever way one may be seeking God, one is always in God's path². If a man, prompted by diverse desires, takes to wrong gods, then even unto those gods God grants him true devotion, with which he follows his worship of those gods, and, even through such worship, grants him his desires³. God is the Lord of all and the friend of all beings. It is only great-souled men who with complete constancy of mind worship God, and with firm devotion repeat the name of God, and, being always in communion with Him, adore Him with devotion. God is easily accessible to those who always think of God with inalienable attachment⁴. In another passage (vii. 16, 17) it is said that there are four classes of people who adore God: those who are enquiring, those who are in trouble, those who wish to attain some desired things, and those who are wise. Of these the wise (*jñānin*), who are always in communion with Him and who are devoted to Him alone, are superior; the wise are dear to Him and He is dear to them. In this passage it has been suggested that true wisdom consists in the habit of living in communion with God and in being in constant devotion to God. The path of *bhakti*, or devotion, is thus praised in the *Gītā* as being the best. For the *Gītā* holds that, even if a man cannot proceed in the normal path of self-elevation and detach himself from passions and desires and establish himself in equanimity, he may still, simply by clinging to God and by firm devotion to Him, bring himself within the sphere of His grace, and by grace alone acquire true wisdom and

¹ *Gītā*, ix. 30-32.

³ *Ibid.* vii. 20-22.

² *Ibid.* iv. 11.

⁴ *Ibid.* iv. 13-15; v. 29; vii. 14.

achieve that moral elevation, with little or no struggle, which is attained with so much difficulty by others. The path of *bhakti* is thus introduced in the *Gītā*, for the first time, as an independent path side by side with the path of wisdom and knowledge of the Upaniṣads and with the path of austere self-discipline. Moral elevation, self-control, etc. are indeed regarded as an indispensable preliminary to any kind of true self-realization. But the advantage of the path of devotion (*bhakti*) consists in this, that, while some seekers have to work hard on the path of self-control and austere self-discipline, either by constant practice or by the aid of philosophic wisdom, the devotee makes an easy ascent to a high elevation—not because he is more energetic and better equipped than his fellow-workers in other paths, but because he has resigned himself completely to God; and God, being pleased with his devotees who cling fast to Him and know nothing else, grants them wisdom and raises them up through higher and higher stages of self-elevation, self-realization and bliss. Arjuna treated Kṛṣṇa, the incarnation of God on earth, as his friend, and Kṛṣṇa in the rôle of God exhorted him to depend entirely on Him and assured him that He would liberate him—He was asking him to give up everything else and cling to Him as his only support. The *Gītā* lays down for the first time the corner-stone of the teachings of the *Bhāgavata-purāṇa* and of the later systems of Vaiṣṇava thought, which elaborated the theory of *bhakti* and described it as the principal method of self-elevation and self-realization.

Another important feature of the *Gītā* doctrine of devotion consists in the fact that, as, on the one hand, God is contemplated by His devotees in the intimate personal relation of a father, teacher, master and friend, with a full consciousness of His divinity and His nature as the substratum and the upholder of the entire animate and inanimate cosmic universe, so, on the other hand, the transcendent personality of God is realized not only as the culmination of spiritual greatness and the ultimate reconciliation of all relative differences, of high and low, good and bad, but as the great deity, with a physical, adorable form, whom the devotee can worship not only mentally and spiritually, but also externally, with holy offerings of flowers and leaves. The transcendent God is not only immanent in the universe, but also present before the devotee in the form of a great deity resplendent with brightness, or in the personal form of the man-god Kṛṣṇa, in whom

God incarnated Himself. The *Gītā* combines together different conceptions of God without feeling the necessity of reconciling the oppositions or contradictions involved in them. It does not seem to be aware of the philosophical difficulty of combining the concept of God as the unmanifested, differenceless entity with the notion of Him as the super-person Who incarnates Himself on earth in the human form and behaves in the human manner. It is not aware of the difficulty that, if all good and evil should have emanated from God, and if there be ultimately no moral responsibility, and if everything in the world should have the same place in God, there is no reason why God should trouble to incarnate Himself as man, when there is a disturbance of the Vedic *dharma*. If God is impartial to all, and if He is absolutely unperturbed, why should He favour the man who clings to Him, and why, for his sake, overrule the world-order of events and in his favour suspend the law of *karma*? It is only by constant endeavours and practice that one can cut asunder the bonds of *karma*. Why should it be made so easy for even a wicked man who clings to God to release himself from the bonds of attachment and *karma*, without any effort on his part? Again, the *Gītā* does not attempt to reconcile the disparate parts which constitute the complex super-personality of God. How are the unmanifested or *avyakta* part as Brahman, the *avyakta* part as the cosmic substratum of the universe, the *prakṛti* part as the producer of the *guṇas*, and the *prakṛti* part as the *jīvas* or individual selves, to be combined and melted together to form a complex personality? If the unmanifested nature is the ultimate abode (*param dhāma*) of God, how can God as a person, who cannot be regarded as a manifestation of this ultimate reality, be considered to be transcendent? How can there be a relation between God as a person and His diverse nature as the cosmic universe, *jīva* and the *guṇas*? In a system like that of Śaṅkara Brahman and Īśvara, one and the many could be combined together in one scheme, by holding Brahman as real and Īśvara and the many as unreal and illusory, produced by reflection of Brahman in the *māyā*, the principle of illusoriness. But, howsoever Śaṅkara might interpret the *Gītā*, it does not seem that it considered Īśvara or the world as in the least degree illusory. In the Upaniṣads also the notion of Īśvara and the notion of Brahman are sometimes found side by side. As regards God as Īśvara, the *Gītā* not only does not think him to be

illusory, but considers him the highest truth and reality. Thus there is no way of escaping from any of the categories of reality—the two *avyaktas*, *prakṛti*, *jīva* and the super-personality of Īśvara comprehending and transcending them all. The concepts of Brahman, *jīva*, the unmanifested category from which the world proceeds, and the *guṇas* are all found in the Upaniṣads in passages which are probably mostly unrelated. But the *Gītā* seems to take them all together, and to consider them as constituents of Īśvara, which are also upheld by Him in His superior form, in which He transcends and controls them all. In the Upaniṣads the doctrine of *bhakti* can hardly be found, though here and there faint traces of it may be perceived. If the Upaniṣads ever speak of Īśvara, it is only to show His great majesty, power and glory, as the controller and upholder of all. But the *Gītā* is steeped in the mystic consciousness of an intimate personal relation with God, not only as the majestic super-person, but as a friend who incarnates Himself for the good of man and shares his joys and sorrows with him, and to whom a man could cling for support in troubles and difficulties and even appeal for earthly goods. He is the great teacher, with whom one can associate oneself for acquisition of wisdom and the light of knowledge. But He could be more than all this. He could be the dearest of the dear and the nearest of the near, and could be felt as being so intimate, that a man could live simply for the joy of his love for Him; he could cling to Him as the one dear friend, his highest goal, and leave everything else for Him; he could consider, in his deep love for Him, all his other religious duties and works of life as being relatively unimportant; he could thus constantly talk of Him, think of Him, and live in Him. This is the path of *bhakti* or devotion, and the *Gītā* assures us that, whatever may be the hindrances and whatever may be the difficulties, the *bhakta* (devotee) of God cannot be lost. It is from the point of view of this mystic consciousness that the *Gītā* seems to reconcile the apparently philosophically irreconcilable elements. The *Gītā* was probably written at a time when philosophical views had not definitely crystallized into hard-and-fast systems of thought, and when the distinguishing philosophical niceties, scholarly disputations, the dictates of argument, had not come into fashion. The *Gītā*, therefore, is not to be looked upon as a properly schemed system of philosophy, but as a manual of right conduct and right perspective of things in the light of a mystical approach to God in self-resignation, devotion, friendship and humility.

Viṣṇu, Vāsudeva and Kṛṣṇa.

Viṣṇu, Bhagavat, Nārāyaṇa, Hari and Kṛṣṇa are often used in a large section of Indian religious literature as synonymous names of the supreme lord. Of these Viṣṇu is an important god of the *R̥g-Veda*, who is one of the *āḍityas* and who makes three strides in the sky, probably as he manifests himself in the eastern horizon, as he rises to the zenith and as he sets in the west. He is also represented in the *R̥g-Veda* as a great fighter and an ally of Indra. It is further said that he has two earthly steps and another higher step which is known only to himself. But in the *R̥g-Veda* Viṣṇu is certainly inferior to Indra, with whom he was often associated, as is evident from such names as *Indrā-viṣṇu* (R.V. iv. 55. 4; vii. 99. 5; viii. 10. 2, etc.). According to later tradition Viṣṇu was the youngest, the twelfth of the *āḍityas*, though he was superior to them all in good qualities¹. His three steps in the R̥g-Vedic allusion have been explained in the *Nirukta* as referring to the three stages of the sun's progress in the morning, at midday and at evening. One of the names of Viṣṇu in the *R̥g-Veda* is Śipiviṣṭa, which Durgācārya explains as "surrounded with the early rays" (*śīpi-saṃjñāir bāla-raśmibhir āviṣṭa*)². Again, the sage praises Viṣṇu in the *R̥g-Veda* in the following terms: "I, a master of hymns and knowing the sacred customs, to-day praise that name of thine, Śipiviṣṭa. I, who am weak, glorify thee, who art mighty and dwellest beyond this world³." All this shows that Viṣṇu was regarded as the sun, or endowed with the qualities of the sun. The fact that Viṣṇu was regarded as dwelling beyond this world is probably one of the earliest signs of his gradually increasing superiority. For the next stage one must turn to the *Śatapatha-brāhmaṇa*. In I. 2. 4 of that work it is said that the demons (*asura*) and the gods were vying with one another; the gods were falling behind, and the demons were trying to distribute the world among themselves; the gods followed them, making Viṣṇu the sacrifice as their leader (*te yajñam eva Viṣṇum puraskṛtyeyuh*), and desired their own shares; the demons felt jealous and said that they could give only so much ground as would

³ *R̥g-Veda*, vii. 100. 5, translated by Dr L. Sarup, quoted in *Nirukta*, v. 8.

be occupied by Viṣṇu when he lay down, Viṣṇu being a dwarf (*vāmano ha Viṣṇur āsa*). The gods felt dissatisfied at this, and they approached him with various *mantras* and in consequence attained the whole world. Again, in XIV. 1 of the same work, Kurukṣetra is referred to as being the place of the sacrificial performances of the gods, and it is said there that in industry, rigorism (*tapas*), faith, etc. Viṣṇu was the best of all gods and was regarded as being superior to them all (*tasmād āhur Viṣṇur devānāṃ śreṣṭhaḥ*), and was himself the sacrifice. Again, in *Taittirīya-saṃhitā*, I. 7. 5. 4, in *Vājasaneyi-saṃhitā*, I. 30; II. 6. 8; V. 21, in *Atharva-Veda*, v. 26. 7; VIII. 5. 10, etc., Viṣṇu is referred to as the chief of the gods (*Viṣṇu-mukhā devā*). Again, Viṣṇu as sacrifice attained unlimited fame. Once he was resting his head on the end of his bow; and, when some ants, perceiving that, said, "How should we be rewarded, if we could gnaw the strings of the bow," the gods said that they would then be rewarded with food; and so the ants gnawed away the strings, and, as the two ends of the bow sprang apart, Viṣṇu's head was torn from his body and became the sun¹. This story not only shows the connection of Viṣṇu with the sun, but also suggests that the later story of Kṛṣṇa's being shot with an arrow by an archer originated from the legend of Viṣṇu's being killed by the flying ends of his bow. The place of Viṣṇu (*Viṣṇu-pada*) means the zenith, as the highest place of the sun, and it is probable that the idea of the zenith being the place of Viṣṇu led also to the idea that Viṣṇu had a superior place transcending everything, which was, however, clearly perceived by the wise. Thus, at the beginning of the daily prayer-hymns of the Brahmans, known as *sandhyā*, it is said that the wise see always that superior place of Viṣṇu, like an open eye in the sky². The word *vaiṣṇava* is used in the literal sense of "belonging to Viṣṇu" in the *Vājasaneyi-saṃhitā*, v. 21, 23, 25, *Taittirīya-saṃhitā*, v. 6. 9. 2. 3, *Aitareya-brāhmaṇa*, III. 38, *Śatapatha-brāhmaṇa*, I. 1. 4. 9; III. 5. 3. 2, etc.; but the use of the word in the sense of a sect of religion is not to be found anywhere in the earlier literature. Even the *Gītā* does not use the word, and it is not found in any of the earlier Upaniṣads; it can be traced only in the later parts of the *Mahā-bhārata*.

¹ *Śatapatha-brāhmaṇa*, XIV. 1.

² *tad Viṣṇoḥ paramaṃ padaṃ sadā paśyanti sūrayaḥ divṛva cakṣur ātatam.*
Ācamana-mantra of the daily *sandhyā* prayer-hymn.

Again, it is well known that the supreme man, or *puruṣa*, is praised in very high terms in the man-hymn (*Puruṣa-sūkta*) of the *Rg-Veda*, x. 90, where it is said that *puruṣa* is all that we see, what is past and what is future, and that everything has come out of him; the gods performed sacrifice with him with the oblations of the seasons, and out of this sacrifice *puruṣa* was first born, and then the gods and all living beings; the various castes were born out of him; the sky, the heavens and the earth have all come out of him; he is the creator and upholder of all; it is by knowing him that one attains immortality; there is no other way of salvation. It is curious that there should be a word *nārāyaṇa*, similar in meaning (etymologically *nara* + *phak*, born in 'the race or lineage of man) to *puruṣa*, which was also used to mean the supreme being and identified with *puruṣa* and Viṣṇu. In *Śatapatha-brāhmaṇa*, xiv. 3. 4, *puruṣa* is identified with *nārāyaṇa* (*purusaṃ ha nārāyaṇaṃ Prajāpatir uvāca*). Again, in *Śatapatha-brāhmaṇa*, xiii. 6. 1, the idea of the *puruṣa-sūkta* is further extended, and the *puruṣa nārāyaṇa* is said to have performed the *pañca-rātra* sacrifice (*pañcarātraṃ yajña-krātum*) and thereby transcended everything and become everything. This *pañca-rātra* sacrifice involves the (spiritual) sacrifice of *puruṣa* (*puruṣa-medho yajña-kratur bhavati*, xiii. 6. 7). The five kinds of sacrifice, five kinds of animals, the year with the five kinds of seasons, the five kinds of indwelling entities (*pañca-vidham adhyātman*) can all be attained by the *pañca-rātra* sacrifices. The sacrifice was continued for five days, and the Vedic habit of figurative thinking associated each of the days of the sacrifice with various kinds of desirable things, so that the five-day sacrifice was considered to lead to many things which are fivefold in their nature. The reference to the five kinds of indwelling entities soon produced the *pañca-rātra* doctrine of the manifestation of God in various modes as the external deity of worship (*arcā*), inner controller (*antar-yāmin*), as various manifestations of His lordly power (*vibhava*), as successive deity-forms in intimate association as *vyūha* and as the highest God (*para*). This idea is also found in the later *Pāṇca-rātra* scriptures, such as *Ahīrbudhnyasamhitā* (I. 1) and the like, where God is described as having his highest form along with the *vyūha* forms. *Puruṣa* is thus identified with *nārāyaṇa*, who, by sacrifice of *puruṣa* (*puruṣa-medha*), became all this world. The etymological definition of *nārāyaṇa* as "one who has descended from man (*nara*)," as herein suggested in accordance

with Pāṇini, IV. 1. 99, is not, however, accepted everywhere. Thus Manu, I. 10, derives *nārāyaṇa* from *nāra*, meaning “water,” and *ayana*, meaning “abode,” and *nāra* (water), again, is explained as “that which has descended from *nara*,” or supreme man¹. The *Mahā-bhārata*, III. 12,952 and 15,819 and XII. 13,168, accepts Manu’s derivation; but in V. 2568 it says that the supreme God is called *nārāyaṇa* because he is also the refuge of men². The *Taittirīya-Āraṇyaka*, X. 1. 6, identifies *nārāyaṇa* with Vāsudeva and Viṣṇu³. It may be suggested in this connection that even the Upaniṣad doctrine of the self as the supreme reality is probably a development of this type of ideas which regarded man as supreme God. The word *puruṣa* is very frequently used in the Upaniṣads in the sense of man, as well as in that of the highest being or supreme reality. In the *Mahā-bhārata* *nara* and *nārāyaṇa* are referred to as being the forms of the supreme lord. Thus it is said, “The four-faced Brahmā, capable of being understood only with the aid of the *niruktas*, joined his hands and, addressing Rudra, said, “Let good happen to the three worlds. Throw down thy weapons, O lord of the universe, from desire of benefiting the universe. That which is indestructible, immutable, supreme, the origin of the universe, uniform and the supreme actor, that which transcends all pairs of opposites and is inactive, has, choosing to be displayed, been pleased to assume this one blessed form (for, though double, the two represent but one and the same form). This *nara* and *nārāyaṇa* (the displayed forms of supreme Brahman) have taken birth in the race of *dharma*. The foremost of all deities, these two are observers of the highest vows and endued with the severest penances. Through some reason best known to Him I myself have sprung from the attribute of His Grace Eternal, as thou hast; for, though thou hast ever existed since all the pure creations, thou too hast sprung from His Wrath. With myself then, these deities and all the great Ṛṣis, do thou adore this displayed form of Brahman and let there be peace unto all

³ *Nārāyaṇāya vidmahe vāsudevāya dhīmahi tan no Viṣṇuḥ pracodayāt.* *Taittirīya Āraṇyaka*, p. 700. Ānandāśrama Press, Poona, 1898.

the worlds without any delay¹." In the succeeding chapter (i.e. *Mahā-bhārata*, *Śānti-parva*, 343) *nara* and *nārāyaṇa* are described as being two foremost of sages (*ṛṣi*) and two ancient deities engaged in the practice of penances, observing high vows and depending upon their own selves and transcending the very sun in energy.

The word *bhagavat* in the sense of blissful and happy is a very old one and is used in the *R̥g-Veda*, I. 164. 40; VII. 41. 4; X. 60. 12 and in the *Atharva-Veda*, II. 10. 2; V. 31. 11, etc. But in the *Mahā-bhārata* and other such early literature it came to denote Viṣṇu or Vāsudeva, and the word *bhāgavata* denoted the religious sect which regarded Viṣṇu as Nārāyaṇa or Vāsudeva as their supreme god. The Pali canonical work *Niddesa* refers to various superstitious religious sects, among which it mentions the followers of Vāsudeva, Baladeva, Puṇṇabhadda, Maṇibhadda, Aggi, Nāga, Suparṇa, Yakkha, Asura, Gandhabba, Mahārāja, Canda, Suriya, Inda, Brahmā, dog, crow, cow, etc. It is easy to understand why a Buddhist work should regard the worship of Vāsudeva as being of a very low type; but at any rate it proves that the worship of Vāsudeva was prevalent during the period when the *Niddesa* was codified. Again, in commenting upon Pāṇini, IV. 3. 98 (*Vāsudevār-junābhyaṃ vun*), Patañjali points out that the word Vāsudeva here does not denote the Vāsudeva who was the son of Vasudeva of the Kṣattriya race of Vṛṣṇis, since, had it been so, the suffix *vuñ*, which is absolutely equivalent to *vun*, could well be by Pāṇini, IV. 3. 99 (*gotra-kṣattriyākhyaebhyo bahulaṃ vuñ*), by which *vuñ* is suffixed to names of Kṣattriya race. Patañjali thus holds that the word *Vāsudeva* is in this rule not used to refer to any Kṣattriya race, but is a name of the Lord (*saṃjñaiṣā tatra bhagavataḥ*). If Patañjali's interpretation is to be trusted, for which there is every reason, Vāsudeva as God is to be distinguished from the Kṣattriya Vāsudeva, the son of Vasudeva of the race of Vṛṣṇis. It was well established in Pāṇini's time that Vāsudeva was God, and that His followers were called *Vāsudevaka*, for the formation of which word by the *vun* suffix Pāṇini had to make the rule (IV. 3. 98). Again, the Ghosunḍī inscription in Rajputana, which is written in Brāhmī, an early form of about 200–150 B.C., contains a reference to the building of a wall round the temple of Vāsudeva and Saṃkarṣaṇa. In the Besnagar inscription of about 100 B.C.

¹ *Mahā-bhārata*, *Śānti-parva*, 342. 124–129. P. C. Roy's translation, *Mokṣa-dharma-parva*, p. 817. Calcutta.

Heliodorus, son of Diya, describes himself as a great devotee of Bhagavat (*parama-bhāgavata*), who had erected a pillar bearing an image of Garuḍa. In the Nānāghaṭ inscription of 100 B.C. Vāsudeva and Saṃkarṣaṇa appear together as deities to whom adorations are addressed along with other gods. If the testimony of Patañjali is accepted, the religious sect of Vāsudevas existed before Pāṇini. It is generally believed that Patañjali lived in 150 B.C., since in course of interpreting a grammatical rule which allowed the use of the past tense in reference to famous contemporary events not witnessed by the speaker he illustrates it by using a past tense in referring to the Greek invasion of the city of Sāketa (*aruṇad Yavanaḥ Sāketam*); as this event took place in 150 B.C., it is regarded as a famous contemporary event not witnessed by Patañjali. Patañjali was the second commentator of Pāṇini, the first being Kātyāyana. Sir R. G. Bhandarkar points out that Patañjali notices variant readings in Kātyāyana's *Vārttikas*, as found in the texts used by the schools of Bhāradvājīyas, Saunāgas and others, some of which might be considered as emendations of the *Vārttikas*, though Patañjali's introduction of them by the verb *paṭhanti*, "they read," is an indication that he regarded them as different readings¹. From this Sir R. G. Bhandarkar argues that between Kātyāyana and Patañjali a considerable time must have elapsed, which alone can explain the existence of the variant readings of Kātyāyana's text in Patañjali's time. He therefore agrees with the popular tradition in regarding Pāṇini as a contemporary of the Nandas, who preceded the Mauryas. Kātyāyana thus flourished in the first half of the 5th century B.C. But, as both Goldstücker and Sir R. G. Bhandarkar have pointed out, the *Vārttika* of Kātyāyana notices many grammatical forms which are not noticed by Pāṇini, and this, considering the great accuracy of Pāṇini as a grammarian, naturally leads to the supposition that those forms did not exist in his time. Goldstücker gives a list of words admitted into Pāṇini's *sūtras* which had gone out of use by Kātyāyana's time, and he also shows that some words which probably did not exist in Pāṇini's time had come to be used later and are referred to by Kātyāyana. All this implies that Pāṇini must have flourished at least two or three hundred years before Kātyāyana. The reference to the Vāsudeva sect in Pāṇini's *sūtras* naturally suggests its existence before his time. The allusions

¹ Sir R. G. Bhandarkar's *Early History of the Deccan*, p. 7.

to Vāsudeva in the inscriptions referred to above can be regarded as corroborative evidence pointing to the early existence of the Vāsudeva sect, who worshipped Vāsudeva or Bhagavat as the supreme Lord.

Turning to literary references to Vāsudeva and Kṛṣṇa, we find the story of Vāsudeva, who is also called by his family name Kanha and Keśava (probably on account of his bunch of hair), in the *Ghaṭa-jātaka*. The story agrees in some important details with the usual accounts of Kṛṣṇa, though there are some new deviations. A reference to the Vṛṣṇi race of Kṣattriyas is found in Pāṇini, IV. 1. 114 (*rṣy-andhaka-vṛṣṇi-kurubhyaś ca*). The word is formed by an *uṇādi* suffix, and it literally means "powerful" or "a great leader¹." It also means "heretic" (*pāṣaṇḍa*) and one who is passionately angry (*caṇḍa*). It is further used to denote the Yādava race, and Kṛṣṇa is often addressed as Vārṣṇeya, and in the *Gītā*, x. 37, Kṛṣṇa says, "Of the Vṛṣṇis I am Vāsudeva." The Vṛṣṇis are referred to in Kauṭilya's *Artha-śāstra*, where the group of Vṛṣṇis (*vṛṣṇi-saṅgha*) is said to have attacked Dvaipāyana. The *Ghaṭa-jātaka* also has the story of the curse of Kanha Dvaipāyana as the cause of the destruction of the Vṛṣṇis. But the *Mahā-bhārata* (xvi. 1) holds that the curse was pronounced by Viśvāmitra, Kaṇva and Nārada upon Śāmba, the son of Kṛṣṇa. Two Vāsudevas are mentioned in the *Mahā-bhārata*: Vāsudeva, the king of the Pauṇḍras, and Vāsudeva or Kṛṣṇa, the brother of Saṃkarṣaṇa, and both of them are mentioned as being present in the great assemblage of kings at the house of King Drupada for the marriage of Draupadī; it is the latter Vāsudeva who is regarded as God. It is very probable that Vāsudeva originally was a name of the sun and thus became associated with Viṣṇu, who with his three steps traversed the heavens; and a similarity of Kṛṣṇa or Vāsudeva to the sun is actually suggested in the *Mahā-bhārata*, xii. 341. 41, where Nārāyaṇa says, "Being like the sun, I cover the whole world with my rays, and I am also the sustainer of all beings and am hence called Vāsudeva."

Again, the word *Sātvata* also is used as a synonym of Vāsudeva or Bhāgavata. The word *Sātvata* in the plural form is a name of a tribe of the Yādavas, and in the *Mahā-bhārata*, vii. 7662, the phrase *Satvatām varaḥ* is used to denote Sātyaki, a member of the Yādava race, though this appellation is applied to Kṛṣṇa in a

¹ *Yūthena vṛṣṇir ejati, Rg-Veda*, I. 10. 2.

large number of places in the *Mahā-bhārata*¹. In the later *Bhāgavata-purāṇa* (IX. 9. 50) it is said that the Sātvatas worship Brahman as Bhagavān and as Vāsudeva. In the *Mahā-bhārata*, VI. 66. 41, Saṃkarṣaṇa is said to have introduced the *sātvata* rites in worshipping Vāsudeva. If Sātvata was the name of a race, it is easy to imagine that the persons may have had special rites in worshipping Vāsudeva. Yāmuna-cārya, the great teacher of Rāmānuja in the tenth century A.D., says that those who adore God (*bhagavat*), the supreme person, with purity (*sattva*), are called *bhāgavata* and *sātvata*². Yāmuna strongly urges that Sātvatas are Brāhmaṇas by caste, but are attached to Bhagavat as the supreme lord. Yāmuna, however, seems to urge this in strong opposition to the current view that Sātvatas were a low-caste people, who had not the initiation with the holy thread and were an outcast people originated from the Vaiśyas³. The Sātvatas are said to be the fifth low-caste people, who worship in the temples of Viṣṇu by the orders of the king, and are also called Bhāgavatas⁴. The Sātvatas and Bhāgavatas are those who make their living by worshipping images and are hence low and disreputable. Yāmuna urges that this popular view about the Bhāgavatas and the Sātvatas is all incorrect; for, though there are many Sātvatas who make a living by worshipping images, not all Sātvatas and Bhāgavatas do so; and there are many among them who worship Bhagavat, as the supreme person, solely by personal devotion and attachment.

From Patañjali's remarks in commenting on Pāṇini, IV. 3. 98, it is seen that he believed in the existence of two Vāsudevas, one a leader of the Vṛṣṇi race and the other God as Bhagavat. It has already been pointed out that the name Vāsudeva occurs also in the *Ghaṭa-jātaka*. It may therefore be argued that the name Vāsudeva was an old name, and the evidence of the passage of the *Niddesa*, as well as that of Patañjali, shows that it was a name of God or Bhagavat. The later explanation of Vāsudeva as "the son of Vasudeva" may therefore be regarded as an

Ibid. p. 8.

unauthorized surmise. It is very probable that Vāsudeva was worshipped by the race of Yādavas as a tribal hero according to their own tribal rites and that he was believed to be an incarnation of Viṣṇu, who was in his turn associated with the sun. Megasthenes, in his account of India as he saw it, speaks of the Sourasenoī—an Indian nation in whose land are two great cities, Methora and Kleisobora, through which flows the navigable river Jobares—as worshipping Heracles. “Methora” in all probability means Mathura and “Jobares” Jumna. It is probable that Heracles is Hari, which again is a name of Vāsudeva. Again in the *Mahā-bhārata*, vi. 65, Bhīṣma says that he was told by the ancient sages that formerly the great supreme person appeared before the assembly of gods and sages, and Brahmā began to adore Him with folded hands. This great Being, who is there adored as Vāsudeva, had first created out of Himself Saṃkarṣaṇa, and then Pradyumna, and from Pradyumna Aniruddha, and it was from Aniruddha that Brahmā was created. This great Being, Vāsudeva, incarnated Himself as the two sages, Nara and Nārāyaṇa. He Himself says in the *Mahā-bhārata*, vi. 66, that “as Vāsudeva I should be adored by all and no one should ignore me in my human body”; in both these chapters Kṛṣṇa and Vāsudeva are identical, and in the *Gītā* Kṛṣṇa says that “of the Vṛṣṇis I am Vāsudeva.” It has also been pointed out that Vāsudeva belonged to the Kanhāyana *gotra*. As Sir R. G. Bhandarkar says, “It is very probable that the identification of Kṛṣṇa with Vāsudeva was due to the similarity of the *gotra* name with the name of Kṛṣṇa¹.” From the frequent allusions to Vāsudeva in Patañjali’s commentary and in the *Mahā-bhārata*, where he is referred to as the supreme person, it is very reasonable to suppose that the word is a proper noun, as the name of a person worshipped as God, and not a mere patronymic name indicating an origin from a father Vasudeva. Kṛṣṇa, Janārdana, Keśava, Hari, etc. are not Vṛṣṇi names, but were used as personal appellations of Vāsudeva. Patañjali in his commentary on Pāṇini, iv. 3. 98, notes that Vāsudeva, as the name of a Kṣattriya king of the race of Vṛṣṇis, is to be distinguished from Vāsudeva as the name of God. This God, worshipped by the Sātvatas according to their family rites, probably came to be identified with a Vṛṣṇi king Vāsudeva, and some of the personal characteristics of this king became also personal

¹ Sir R. G. Bhandarkar’s *Vaiṣṇavism and Śaivism*, pp. 11–12.

characteristics of the god Vāsudeva. The word Kṛṣṇa occurs several times in the older literature. Thus Kṛṣṇa appears as a Vedic ṛṣi, as the composer of *R̥g-Veda*, VIII. 74. In the *Mahā-bhārata Anukramaṇī* Kṛṣṇa is said to have descended from Aṅgiras. Kṛṣṇa appears in the *Chāndogya Upaniṣad* (III. 17) as the son of Devakī, as in the *Ghaṭa-jātaka*. It is therefore probable that Vāsudeva came to be identified with Kṛṣṇa, the son of Devakī. The older conception of Kṛṣṇa's being a *ṛtvij* is found in the *Mahā-bhārata*, and Bhīṣma in the *Sabhā-parva* speaks of him as being a *ṛtvij* and well-versed in the accessory literature of the Vedas (*vedāṅga*). It is very probable, as Dr Ray Chaudhury points out, that Kṛṣṇa, the son of Devakī, was the same as Vāsudeva, the founder of the Bhāgavata system; for he is referred to in the *Ghaṭa-jātaka* as being Kanhāyana, or Kanha, which is the same as Kṛṣṇa, and as Devakī-putra, and in the *Chāndogya Upaniṣad*, III. 17. 6, also he is referred to as being Devakī-putra. In the *Ghaṭa-jātaka* Kṛṣṇa is spoken of as being a warrior, whereas in the *Chāndogya Upaniṣad* he is a pupil of Ghora Aṅgirasa, who taught him a symbolic sacrifice, in which penances (*tapas*), gifts (*dāna*), sincerity (*ārjava*), non-injury (*ahimsā*) and truthfulness (*satya-vacana*) may be regarded as sacrificial fees (*dakṣiṇā*). The *Mahā-bhārata*, II. 317, describes Kṛṣṇa both as a sage who performed long courses of asceticism in Gandhamādana, Puṣkara and Badarī, and as a great warrior. He is also described in the *Mahā-bhārata* as Vāsudeva, Devakī-putra and as the chief of the Sātvatas, and his divinity is everywhere acknowledged there.. But it is not possible to assert definitely that Vāsudeva, Kṛṣṇa the warrior and Kṛṣṇa the sage were not three different persons, who in the *Mahā-bhārata* were unified and identified, though it is quite probable that all the different strands of legends refer to one identical person.

If the three Kṛṣṇas refer to one individual Kṛṣṇa, he must have lived long before Buddha, as he is alluded to in the *Chāndogya*, and his *guru* Ghora Aṅgirasa is also alluded to in the *Kauṣītaki-brāhmaṇa*, xxx. 6 and the *Kāṭhaka-saṃhitā*, I. 1, which are pre-Buddhistic works. Jaina tradition refers to Kṛṣṇa as being anterior to Pārśvanātha (817 B.C.), and on this evidence Dr Ray Chaudhury thinks that he must have lived long before the closing years of the ninth century B.C.¹

¹ *Early History of the Vaiṣṇava Sect*, p. 39.

Bhāgavata and the Bhagavad-gītā.

The *Mahā-bhārata* (xii. 348) associates the *Bhagavad-gītā* with the doctrines of the Ekānti-Vaiṣṇavas. It is said there that the God Hari (*bhagavān Hari*) always blesses those that are devoted to God without any idea of gain (*ekāntin*) and accepts their adorations, offered in accordance with proper rites (*vidhi-prayukta*)¹. This *ekānta* religion (*ekānta-dharma*) is dear to Nārāyaṇa, and those who adhere to it attain to Hari, as Nilakaṇṭha, the commentator on the *Mahā-bhārata*, points out, without passing through the three stages of Aniruddha, Pradyumna and Saṁkarṣaṇa. The *ekāntin* faith leads to much higher goals than the paths of those that know the Vedas and lead the lives of ascetics. The principles of this *ekāntin* faith were enunciated by the Bhagavat himself in the battle of the Pāṇḍavas and the Kurus, when Arjuna felt disinclined to fight. This faith can be traced originally to the *Sāma-veda*. It is said that, when Nārāyaṇa created Brahmā, he gave him this *sātvata* faith, and from that time forth, as the *Mahā-bhārata* states, there has been a host of persons who were instructed in this faith and followed it. It was at a much later stage briefly described in the *Hari-gītā*². This faith is very obscure and very difficult to be practised, and its chief feature is cessation from all kinds of injury. In some places it is said to recognize one *vyūha*: in other places two, and in others three, *vyūhas* are mentioned. Hari, however, is the final and absolute reality; he is both the agent, the action and the cause, as well as the absolute beyond action (*akartā*). There are, however, but few *ekāntins* in the world: had the world been filled with *ekāntins*, who never injured anyone, were always engaged in doing good to others and attained self-know-

¹ *Ekāntino niṣkāma-bhaktāḥ*, Nilakaṇṭha's commentary on the *Mahā-bhārata*, xii. 348. 3.

² *kathito hari-gītāsu samāsa-vidhi-kalpitaḥ, Hari-gītā*. 53. The traditional teaching of the *Gītā* doctrines is represented as ancient in the *Gītā* itself (iv. 1-3), where it is said that Bhagavān declared it to Vivasvān, and he related it to Manu, and Manu to Ikṣvāku, and so on, until after a long time it was lost; it was again revived by Kṛṣṇa in the form of the *Bhagavad-gītā*. In the *Mahā-bhārata*, xii. 348, it is said that Sanat Kumāra learned this doctrine from Nārāyaṇa, from him Prajāpati, from him Raibhya and from him Kuṁkṣi. It was then lost. Then again Brahmā learned it from Nārāyaṇa, and from him the Barhiṣada sages learned it, and from them Jyeṣṭha. Then again it was lost; then again Brahmā learned it from Nārāyaṇa, and from him Dakṣa learned it, and from him Vivasvān, and from Vivasvān Manu, and from Manu Ikṣvāku. Thus the tradition of the *Bhagavad-gītā*, as given in the poem itself, tallies with the *Mahā-bhārata* account.

ledge, then the golden age, *kṛta yuga*, would have come again. This *ekānta* religion is a faith parallel to that of the Sāṃkhya-yoga, and the devotee who follows it attains Nārāyaṇa as his ultimate state of liberation. From this description in the *Mahā-bhārata* it seems that the doctrine of the *Gītā* was believed to be the *ekāntin* doctrine originally taught by Nārāyaṇa to Brahmā, Nārada and others long before the recital of the *Gītā* by Kṛṣṇa in the *Mahā-bhārata* battle. It is further known that it had at least four or five different schools or variant forms, viz. *eka-vyūha*, *dvi-vyūha*, *tri-vyūha*, *catur-vyūha* and *ekānta*, and that it was known as the Sātvata religion.

Yāmūnācārya in his *Āgama-prāmāṇya* tries to combat a number of views in which the Bhāgavatas were regarded as being inferior to Brahmins, not being allowed to sit and dine with them. The Sātvatas, again, are counted by Manu as a low-caste people, born from outcast Vaiśyas and not entitled to the holy thread¹. The Sātvatas were, of course, regarded as the same as Bhāgavatas, and their chief duties consisted in worshipping for their living in Viṣṇu temples by the order of the king². They also repaired or constructed temples and images for their living, and were therefore regarded as outcasts. That the Bhāgavatas did in later times worship images and build images and temples is also evident from the fact that most of the available *Pañca-rātra* works are full of details about image-building and image-worship. The *Gītā* (IX. 26) also speaks of adoration with water, flowers and leaves, which undoubtedly refers to image-worship. Saṃkarṣaṇa, as the brother or companion of Kṛṣṇa, is mentioned in Patañjali's *Mahā-bhāṣya* (II. 2. 24) in a verse quoted by him, and in II. 2. 34 he seems to quote another passage, in which it is related that different kinds of musical instruments were played in the temple of Dhana-pati, Rāma and Keśava, meaning Balarāma, Saṃkarṣaṇa and Kṛṣṇa³.

As Yāmuna points out, the opponents of the Bhāgavata school urge that, since the ordinary Brahminic initiation is not deemed

mṛdaṅga-śaṅkha-pañavāḥ pṛthañ nadanti saṃsadi prāsāde dhana-pati-rāma-keśavānām.

Ibid. II. 2. 34.

a sufficient qualification for undertaking the worship of Viṣṇu, and since special and peculiar forms of initiation and ceremonial performances are necessary, it is clear that the Bhāgavata forms of worship are not Vedic in their origin. The fourteen Hindu sciences, viz. the six *vedāṅgas* on Vedic pronunciation (*śikṣā*), ritual (*kalpa*), grammar (*vyākaraṇa*), metre (*chandas*), astronomy (*jyotiṣa*), lexicography (*nirukta*), the four Vedas, Mīmāṃsā, argumentative works or philosophy (*nyāya-vistara*), the mythologies (*purāṇa*) and rules of conduct (*dharma-śāstra*), do not refer to the *Pañca-rātra* scriptures as being counted in their number. So the Bhāgavata or the *Pañca-rātra* scriptures are of non-Vedic origin. But Yāmuna contends that, since Nārāyaṇa is the supreme god, the Bhāgavata literature, which deals with his worship, must be regarded as having the same sources as the Vedas; the Bhāgavatas also have the same kind of outer dress as the Brahmins and the same kinds of lineage. He further contends that, though *sātvata* means an outcast, yet *sātvata* is a different word from *sātvata*, which means a devotee of Viṣṇu. Moreover, not all Bhāgavatas take to professional priestly duties and the worshipping of images for their livelihood; for there are many who worship the images through pure devotion. It is very easy to see that the above defence of the Bhāgavatas, as put forward by one of their best advocates, Yāmunācārya, is very tame and tends to suggest very strongly that the Bhāgavata sect was non-Vedic in its origin and that image-worship, image-making, image-repairing and temple-building had their origin in that particular sect. Yet throughout the entire scriptures of the *Pañca-rātra* school there is the universal and uncontested tradition that it is based on the Vedas. But its difference from the Vedic path is well known. Yāmuna himself refers to a passage (*Āgama-prāmāṇya*, p. 51) where it is said that Śaṇḍilya, not being able to find his desired end (*puruṣārtha*) in all the four Vedas, produced this scripture. The *Gītā* itself often describes the selfish aims of sacrifices, and Kṛṣṇa urges Arjuna to rise above the level of the Vedas. It seems, therefore, that the real connection of the *Pañca-rātra* literature is to be found in the fact that it originated from Vāsudeva or Viṣṇu, who is the supreme God from whom the Vedas themselves were produced. Thus the *Īśvara-saṃhitā* (I. 24-26) explains the matter, and states that the Bhāgavata literature is the great root of the Veda tree, and the Vedas themselves are but trunks of it, and the followers of Yoga are but its branches. Its

main purpose is to propound the superiority of Vāsudeva, who is the root of the universe and identical with the Vedas¹.

The affinity of this school of thought to the Upaniṣad school becomes apparent when it is considered that Vāsudeva was regarded in this system as the highest Brahman². The three other *vyūhas* were but subordinate manifestations of him, after the analogy of *prajñā*, *virāṭ*, *viśva* and *taijasa* in monistic Vedānta. Patañjali's *Mahā-bhāṣya* does not seem to know of the four *vyūhas*, as it mentions only Vāsudeva and Saṃkarṣaṇa; and the *Gītā* knows only Vāsudeva. It seems, therefore, that the *vyūha* doctrine did not exist at the time of the *Gītā* and that it evolved gradually in later times. It is seen from a passage of the *Mahā-bhārata*, already referred to, that there were different variations of the doctrine and that some accepted one *vyūha*, others two, others three and others four. It is very improbable that, if the *vyūha* doctrine was known at the time of the *Gītā*, it should not have been mentioned therein. For the *Gītā* was in all probability the earliest work of the *ekāntin* school of the Bhāgavatas³. It is also interesting in this connection to note that the name Nārāyaṇa is never mentioned in the *Gītā*, and Vāsudeva is only identified with Viṣṇu, the chief of the *ādityas*. Thus Sir R. G. Bhandarkar says, "It will be seen that the date of the *Bhagavad-gītā*, which contains

¹ *mahato veda-vyākṣasya mūla-bhūto mahān ayaṃ skandha-bhūtā ṛg-ādyaś te śākhā-bhūtāś ca yoginaḥ jagat-mūlasya vedasya Vāsudevasya mukhyataḥ pratipādakatā siddhā mūla-vedākhyatā devajāḥ.*

Īśvara-saṃhitā, 1. 24-26.

² *yasmāt samyak paraṃ brahma Vāsudevākhyam avyayam asmād avāpyate śāstrāṃ jñāna-pūrveṇa karmaṇā.*

Paṇḍikāgama, as quoted in *Rāmānuja-bhāṣya*, 11. 2. 42.

The *Chāndogya Upaniṣad* (VII. 1. 2) refers also to the study of *ekāyana*, as in the passage *vāko-vākyam ekāyanam*; *ekāyana* is also described as being itself a Veda in *Śrīpraśna-saṃhitā*, 11. 38, 39:

vedam ekāyanam nāma vedānām śirasi sthitam tad-arthakam pañca-rātram mokṣa-daṃ tat-kriyāvatām yasminn eko mokṣa-mārgo vede proktaḥ sanātanaḥ mad-ārādhana-rūpeṇa tasmād ekāyanam bhavet.

See also the article "The Pañca-rātras or Bhāgavata-śāstra," by Govindācārya Svāmin, *J.R.A.S.* 1911.

³ That the *ekāntin* faith is the same as the Sātvata or the *Pañca-rātra* faith is evident from the following quotation from the *Pādma-tantra*, IV. 2. 88:

sūris suhyd bhāgavatas sātvataḥ pañca-kāla-vit ekāntikas tan-mayaś ca pañca-rātriḥ ity api.

This faith is also called *ekāyana*, or the path of the One, as is seen from the following passage from the *Īśvara-saṃhitā*, 1. 18:

mokṣāyanāya vai panthā etad-anyo na vidyate tasmād ekāyanam nāma pravādanti manīṣiṇaḥ.

no mention of the *vyūhas* or personified forms, is much earlier than those of the inscriptions, the *Niddesa* and *Patañjali*, i.e. it was composed not later than the beginning of the fourth century before the Christian era; how much earlier it is difficult to say. At the time when the *Gītā* was conceived and composed the identification of Vāsudeva with Nārāyaṇa had not yet taken place, nor had the fact of his being an incarnation of Viṣṇu come to be acknowledged, as appears from the work itself.... Viṣṇu is alluded to as the chief of the Ādityas and not as the supreme being, and Vāsudeva was Viṣṇu in this sense, as mentioned in chapter x, because the best thing of a group or class is represented to be his *vibhūti* or special manifestation¹."

The date of the *Gītā* has been the subject of long discussions among scholars, and it is inconvenient for our present purposes to enter into an elaborate controversy. One of the most extreme views on the subject is that of Dr Lorinser, who holds that it was composed after Buddha, and several centuries after the commencement of the Christian era, under the influence of the *New Testament*. Mr Telang in the introduction to his translation of the *Bhagavad-gītā* points out—as has been shown above—that the *Bhagavad-gītā* does not know anything that is peculiarly Buddhistic. Attempt has also been made to prove that the *Gītā* not only does not know anything Buddhistic, but that it also knows neither the accepted Sāṃkhya philosophy nor the Yoga of Patañjali's *Yoga-sūtra*. This, together with some other secondary considerations noted above, such as the non-identification of Vāsudeva with Nārāyaṇa and the non-appearance of the *vyūha* doctrine, seems to be a very strong reason for holding the *Gītā* to be in its general structure pre-Buddhistic. The looseness of its composition, however, always made it easy to interpolate occasional verses. Since there is no other consideration which might lead us to think that the *Gītā* was written after the *Brahma-sūtras*, the verse *Brahma-sūtra-padais caiva hetumadbhir viniścitaḥ* has to be either treated as an interpolation or interpreted differently. Śaṅkara also thought that the *Brahma-sūtra* referred to the *Gītā* as an old sacred writing (*smṛti*), and this tallies with our other considerations regarding the antiquity of the *Gītā*. The view of Dr Lorinser, that the *Bhagavad-gītā* must have borrowed at least some of its materials from Christianity, has been pretty successfully refuted by

¹ *Vaiṣṇavism and Śaivism*, p. 13.

Mr Telang in the introduction to his translation, and it therefore need not be here again combated. Dr Ray Chaudhury also has discussed the problem of the relation of Bhāgavatism to Christianity, and in the discussion nothing has come out which can definitely make it seem probable that the Bhāgavata cult was indebted to Christianity at any stage of its development; the possibility of the *Gītā* being indebted to Christianity may be held to be a mere fancy. It is not necessary here to enter into any long discussion in refuting Garbe's view that the *Gītā* was originally a work on Sāṃkhya lines (written in the first half of the second century B.C.), which was revised on Vedāntic lines and brought to its present form in the second century A.D.; for I suppose it has been amply proved that, in the light of the uncontradicted tradition of the *Mahā-bhārata* and the *Pañca-rātra* literature, the *Gītā* is to be regarded as a work of the Bhāgavata school, and an internal analysis of the work also shows that the *Gītā* is neither an ordinary Sāṃkhya nor a Vedānta work, but represents some older system wherein the views of an earlier school of Sāṃkhya are mixed up with Vedāntic ideas different from the Vedānta as interpreted by Śaṅkara. The arbitrary and dogmatic assertion of Garbe, that he could clearly separate the original part of the *Gītā* from the later additions, need not, to my mind, be taken seriously. The antiquity of the Bhāgavata religion is, as pointed out by Tilak, acknowledged by Senart (*The Indian Interpreter*, October 1909 and January 1910) and Bühler (*Indian Antiquary*, 1894), and the latter says, "The ancient Bhāgavata, Sātvata or *Pañca-rātra* sect, devoted to the worship of Nārāyaṇa and his deified teacher Kṛṣṇa Devakī-putra, dates from a period long anterior to the rise of the Jainas in the eighth century B.C." And assuredly the *Gītā* is the earliest available literature of this school. As regards external evidence, it may be pointed out that the *Gītā* is alluded to not only by Kālidāsa and Bāṇa, but also by Bhāsa in his play *Karṇa-bhāra*¹. Tilak also refers to an article by T. G. Kale in the *Vedic Magazine*, VII. pp. 528-532, where he points out that the *Bodhāyana-Gṛhya-śeṣa-sūtra*, II. 22. 9, quotes the *Gītā*, IX. 26,

¹ Tilak quotes this passage on page 574 of his *Bhagavad-gītā-rahasya* (Bengali translation of his Marathi work) as follows:

*hato 'pi labhate svargaṃ jītvā tu labhate yaśaḥ
ubhe bahumate loke nāsti niṣphalatā raṇe,*

which repeats the first two lines of the *Gītā*, II. 37.

and the *Bodhāyana-Pitr-medha-sūtra*, at the beginning of the third *prāśna*, quotes another passage of the *Gītā*¹. Incidentally it may also be mentioned that the style of the *Gītā* is very archaic; it is itself called an Upaniṣad, and there are many passages in it which are found in the *Īśa* (*Īśa*, 5, cf. the *Bhagavad-gītā*, XIII. 15 and VI. 29), *Muṇḍaka* (*Muṇḍ.* II. 1. 2, cf. the *Gītā*, XIII. 15), *Kāṭhaka* (II. 15, II. 18 and 19 and II. 7, cf. the *Gītā*, VIII. 11; II. 20 and 29) and other Upaniṣads. We are thus led to assign to the *Gītā* a very early date, and, since there is no definite evidence to show that it was post-Buddhistic, and since also the *Gītā* does not contain the slightest reference to anything Buddhistic, I venture to suggest that it is pre-Buddhistic, however unfashionable such a view may appear. An examination of the *Gītā* from the point of view of language also shows that it is archaic and largely un-Pāṇinian. Thus from the root *yudh* we have *yudhya* (VIII. 7) for *yudhyasva*; *yat*, which is *ātmane-pada* in Pāṇinian Sanskrit, is used in *parasmai-pada* also, as in VI. 36, VII. 3, IX. 14 and XV. 11; *ram* is also used in *parasmai-pada* in X. 9. The roots *kāṅkṣ*, *vraj*, *viś* and *iṅ* are used in Pāṇinian Sanskrit in *parasmai-pada*, but in the *Gītā* they are all used in *ātmane-pada* as well—*kāṅkṣ* in I. 31, *vraj* in II. 54, *viś* in XXIII. 55 and *iṅ* in VI. 19 and XIV. 23. Again, the verb *ud-vij*, which is generally used in *ātmane-pada*, is used in *parasmai-pada* in V. 20; *nivasiṣyasi* is used in XII. 8 for *nivatsyasi*, *mā śucaḥ* for *mā śociḥ* in XVI. 5; and the usage of *prasaviṣyadhvam* in III. 10 is quite ungrammatical. So *yamaḥ saṃyamatām* in X. 29 should be *yamaḥ saṃyacchatām*, *he sakheti* in XI. 41 is an instance of wrong *sandhi*, *priyāyārhasi* in XI. 44 is used for *priyāyāḥ arhasi*, *senānīnām* in X. 24 is used for *senānyām*². These linguistic irregularities, though they may not themselves be regarded as determining anything definitely, may yet be regarded

¹ *Bodhāyana-Grhya-śeṣa-sūtra*:

*tad āha bhagavān,
patram puṣpam phalam toyam yo me bhaktyā prayacchati
tad aham bhakty-upahṛtam aśnāmi prayatātmanah.*

Also *Bodhāyana-Pitr-medha-sūtra*: *yatasya vai manuṣyasya dhruvam maraṇam
iti vijāntiyāt tasmā jāte na prahr̥ṣyen mr̥te ca na viśideta.*

Compare the *Gītā*, *jātasya hi dhruvo mr̥tyuḥ*, etc.

N.B. These references are all taken from Tilak's *Bhagavad-gītā-rahasya* pp. 574, etc.

² For enumeration of more errors of this character see Mr V. K. Rajwade's article in the Bhandarkar commemoration volume, from which these have been collected.

as contributory evidence in favour of the high antiquity of the *Gītā*. The *Gītā* may have been a work of the Bhāgavata school written long before the composition of the *Mahā-bhārata*, and may have been written on the basis of the Bhārata legend, on which the *Mahā-bhārata* was based. It is not improbable that the *Gītā*, which summarized the older teachings of the Bhāgavata school, was incorporated into the *Mahā-bhārata*, during one of its revisions, by reason of the sacredness that it had attained at the time.

To the

HON. SRI JAWAHARLAL NEHRU

who went through great sufferings and hardships all his life in the cause of the liberation of his countrymen, and who is still labouring with almost superhuman effort for the unification of the subcontinent of India, and who is working with steady devotion and faith for the establishment of peace at home and among the nations of the world, the foremost Indian who is piloting the progress of the country through troubled waters in the most hazardous period of India's history, this work is
most respectfully dedicated as a tribute of
personal gratefulness

PREFACE

The second volume of this work was published as long ago as 1932. Among the many reasons which delayed the publication of this volume, one must count the excessive administrative and teaching work with which the writer is saddled; his continued illness; the regrettable failure of one eye through strenuous work, which often makes him depend on the assistance of others; and the long distance between the place of publication and Calcutta. The manuscript of the fourth volume is happily ready.

In writing the present volume the author has taken great trouble to secure manuscripts which would present a connected account of the development of theistic philosophy in the South. The texts that have been published are but few in number and the entire story cannot be told without constant reference to rare manuscripts from which alone the data can be collected. So far, no work has been written which could throw any light on the discovery and interpretation of a connected history of Vaiṣṇava thought. It would have been well if the Tamil and Telegu works could have been fruitfully utilized in tracing the history of Vaiṣṇavism, not only as it appeared in Sanskrit but also as it appeared in the vernaculars of the South. But the author limited himself as far as possible to Sanskrit data. This limitation was necessary for three reasons: first, the author was not master of the various vernaculars of South India; secondly, the inclusion and utilization of such data would have made the present book greatly exceed its intended scope; and thirdly, the inclusion of the data from the vernacular literature would not have contributed materially to the philosophical problems underlying the theistic speculations dealt with in this work. Looked at from the strictly philosophical point of view, some of the materials of the present book may be regarded as somewhat out of place. But, both in the present volume and the volume that will follow it, it will be impossible to ignore the religious pathology that is associated with the devotional philosophy which is so predominant in the South and which so much influenced the minds of the people not only in the Middle Ages but also in the recent past and is even now the most important element of Indian religions.

Philosophy in India includes not only morality but religion also. The most characteristic feature of religion is emotion or sentiment associated with a system of beliefs, and as such in the treatment of the dominant schools of philosophy that originated in South India one cannot help emphasizing the important pathological developments of the sentiment of devotion. The writer hopes, therefore, that he may be excused both by those who would not look for any emphasis on the aspect of *bhakti* or religious sentiment and also by those who demand an over-emphasis on the emotional aspect which forms the essence of the Vaiṣṇava religion. He has tried to steer a middle course in the interest of philosophy, which, however, in the schools of thought treated herein is so intimately interwoven with religious sentiment.

The writer has probably exceeded the scope of his treatment in dealing with the Āṛvārs, whose writings are in Tamil, but there also he felt that without referring to the nature of the devotional philosophy of the Āṛvārs the treatment of the philosophy of Rāmānuja and his followers would be historically defective. But though the original materials for a study of the Āṛvārs are in Tamil, yet fortunately Sanskrit translations of these writings either in manuscript or in published form are available, on which are almost wholly based the accounts given here of these Tamil writers.

The treatment of the Pañcarātra literature offered some difficulty, as most of these works are still unpublished; but fortunately a large volume of this literature was secured by the present writer in manuscript. Excepting Schrader's work, nothing of any importance has been written on the Pañcarātra School. Though there are translations of the *bhāṣya* of Rāmānuja, there has been no treatment of his philosophy as a whole in relation to other great philosophers of his School. Practically nothing has appeared regarding the philosophy of the great thinkers of the Rāmānuja School, such as Veṅkata, Meghanādāri and others, most of whose works are still unpublished. Nothing has also been written regarding Vijñānabhikṣu's philosophy, and though Nimbārka's *bhāṣya* has been translated, no systematic account has yet appeared of Nimbārka in relation to his followers. The writer had thus to depend almost wholly on a very large mass of published and unpublished manuscript literature in his interpretation and chronological investigations, which are largely based upon internal evidence;

though, of course, he has always tried to utilize whatever articles and papers appeared on the subject. The subjects treated are vast and it is for the scholarly reader to judge whether any success has been attained in spite of the imperfections which may have crept in.

Though the monotheistic speculations and the importance of the doctrine of devotion can be traced even to some of the Ṛg-veda hymns and the earlier religious literature such as the *Gītā* and the *Mahābhārata* and the *Viṣṇupurāṇa*, yet it is in the traditional songs of the Ārvārs and the later South Indian philosophical writers, beginning from Yāmuna and Rāmānuja, that we find a special emphasis on our emotional relation with God. This emotional relation of devotion or *bhakti* differentiated itself in many forms in the experiences and the writings of various Vaiṣṇava authors and saints. It is mainly to the study of these forms as associated with their philosophical perspectives that the present and the succeeding volumes have been devoted. From this point of view, the present and the fourth volumes may be regarded as the philosophy of theism in India, and this will be partly continued in the treatment of Śaiva and Śākta theism of various forms. The fourth volume will deal with the philosophy of Madhva and his followers in their bitter relation with the monistic thought of Śaṅkara and his followers. It will also deal with the theistic philosophy of the *Bhāgavatapurāṇa* and the theistic philosophy of Vallabha and the followers of Śrī Caitanya. Among the theistic philosophers the followers of Madhva, Jayatīrtha and Vyāsātīrtha occupied a great place as subtle thinkers and dialecticians. In the fifth volume, apart from the different schools of Śaiva and Śākta thinkers, the Tantras, the philosophy, of grammar, of Hindu Aesthetics, and of Hindu Law will be dealt with. It is thus expected that with the completion of the fifth volume the writer will have completed his survey of Hindu thought so far as it appeared in the Sanskrit language and thus finish what was begun more than twenty years ago.

A chapter on the *Cārvāka* materialists has been added as an appendix, since their treatment in the first volume was practically neglected.

The writer has a deep debt of gratitude to discharge to Dr F. W. Thomas—the late Boden Professor of Sanskrit at Oxford, and a highly esteemed friend of his who, in spite of his various activities,

pressure of work and old age, has been a true *jñānabandhu* to the author, helping him with the manuscript and the proofs, and offering him valuable suggestions as regards orthography, punctuation and idiomatic usage. Without this continued assistance the imperfections of the present work would have been much more numerous. The author is specially grateful to his wife, Dr Mrs Surama Dasgupta, Śāstri, M.A., Ph.D. (Cal. et Cantab.) for the continued assistance that he received from her in the writing of this book and also in reading a large mass of manuscripts for the preparation of the work. Considering the author's great handicap in having only one sound eye it would have been impossible for him to complete the book without this assistance. He is also grateful to Dr Satindra Kumar Mukherjee, M.A., Ph.D., for the help that he received from him from time to time.

SURENDRANATH DASGUPTA

-----------------	-----

CHAPTER XV

THE BHĀSKARA SCHOOL OF PHILOSOPHY

Date of Bhāskara.

UDAYANA, in his *Nyāya-kusumāñjali*, speaks of Bhāskara as a commentator on the Vedānta in accordance with the traditions of the *tridaṇḍa* school of Vedānta and as holding the view that Brahman suffers evolutionary changes¹. Bhaṭṭojī Dikṣita also, in his *Tattva-viveka-ṭīkā-vivaraṇa*, speaks of Bhaṭṭa Bhāskara as holding the doctrine of difference and non-difference (*bhedābheda*)². It is certain, however, that he flourished after Śaṅkara, for, though he does not mention him by name, yet the way in which he refers to him makes it almost certain that he wrote his commentary with the express purpose of refuting some of the cardinal doctrines of Śaṅkara's commentary on the *Brahma-sūtra*. Thus, at the very beginning of his commentary, he says that it aims at refuting those who, hiding the real sense of the *sūtra*, have only expressed their own opinions, and in other places also he speaks in very strong terms against the commentator who holds the *māyā* doctrine and is a Buddhist in his views³. But, though he was opposed to Śaṅkara, it was only so far as Śaṅkara had introduced the *māyā* doctrine, and only so far as he thought the world had sprung forth not as a real modification of Brahman, but only through *māyā*. For

¹ *Tridaṇḍa* means "three sticks." According to Manu it was customary among some Brahmins to use one stick, and among others, three sticks.

Paṇḍita Vindhyeśvari Prasāda Dvivedin, in his Sanskrit introduction to Bhāskara's commentary on the *Brahma-sūtra*, says that the Vaiṣṇava commentators on the *Brahma-sūtra* prior to Rāmānuja, Tāṇka, Guhadeva, Bhāruci and Yāmunācārya, the teacher of Rāmānuja, were all *tridaṇḍins*. Such a statement is indeed very interesting, but unfortunately he does not give us the authority from which he drew this information.

² "Bhaṭṭabhāskaras tu bhedā-bheda-vedānta-siddhānta-vādī"; Bhaṭṭojī Dikṣita's *Vedānta-tattva-ṭīkā-vivaraṇa*, as quoted by Paṇḍita Vindhyeśvari Prasāda in his Introduction to Bhāskara's commentary.

³ *sūtrā-bhīprāya-samvṛtyā svābhīprāyā-prakāśanāt
vyākhyātāṃ yair idam śāstraṃ vyākhyeyam tan-nivṛttaye.*

Bhāskara's Commentary, p. 1.

Also "ye tu buddha-matāvalambino māyā-vādinā te' pi anena nyāyena sūtra-kāreṇai' va nirastāḥ." *Ibid.* 11. 2. 29.

In another place Śaṅkara is referred to as explaining views which were really propounded by the Mahāyāna Buddhists—*vigītaṃ vicchinna-mūlaṃ mādhyānikā-buddha-gāthitaṃ māyā-vādaṃ vyāvāṇayanto lokān vyāmohayanti.* *Ibid.* 1. 4. 25.

both Śaṅkara and Bhāskara would agree in holding that the Brahman was both the material cause and the instrumental cause (*upādāna* and *nimitta*). Śaṅkara would maintain that this was so only because there was no other real category which existed; but he would strongly urge, as has been explained before, that *māyā*, the category of the indefinite and the unreal, was associated with Brahman in such a transformation, and that, though the Brahman was substantially the same identical entity as the world, yet the world as it appears was a *māyā* transformation with Brahman inside as the kernel of truth. But Bhāskara maintained that there was no *māyā*, and that it was the Brahman which, by its own powers, underwent a real modification; and, as the Pañcarātras also held the same doctrine in so far as they believed that Vāsudeva was both the material and the instrumental cause of the world, he was in agreement with the Bhāgavatas, and he says that he does not find anything to be refuted in the Pañcarātra doctrine¹. But he differs from them in regard to their doctrine of the individual souls having been produced from Brahman².

Again, though one cannot assert anything very positively, it is possible that Bhāskara himself belonged to that particular sect of Brahmins who used three sticks as their Brahminic insignia in preference to one stick, used more generally by other Brahmins; and so his explanation of the *Īedānta-sūtra* may rightly be taken as the view of the *tridaṇḍī* Brahmins. For in discussing the point that fitness for Brahma-knowledge does not mean the giving up of the religious stages of life (*āśrama*), with their customs and rituals, he speaks of the maintenance of three sticks as being enjoined by the Vedas³.

Mādhavācārya, in his *Śaṅkara-vijaya*, speaks of a meeting of Śaṅkara with Bhaṭṭa Bhāskara, but it is difficult to say how far this statement is reliable⁴. From the fact that Bhāskara refuted Śaṅkara and was himself referred to by Udayana, it is certain that he flourished some time between the eighth and the tenth centuries. Paṇḍita Vindhyeśvarī Prasāda refers to a copper-plate found by the

¹ *Vāsudeva eva upādāna-kāraṇaṃ jagato nimitta-kāraṇaṃ ceti te manyante. . . tad etat sarvaṃ śruti-prasiddham eva tasmān nātra nirākaraṇīyaṃ paśyāmaḥ. Bhāskara-bhāṣya*, II. 2. 41.

² *Ibid.*

³ *Ibid.* III. 4. 26, p. 208; see also Paṇḍita Vindhyeśvarī's Introduction.

⁴ *Śaṅkara-vijaya*, xv. 80.

late Dr Bhāwdājī in the Mārāṭhā country, near Nasik, in which it is stated that one Bhāskara Bhaṭṭa of the lineage (*gotra*) of Śāṇḍilya, son of Kavicakravartī Trivikrama, who was given the title of Vidyāpati, was the sixth ancestor of Bhāskarācārya of Śāṇḍilya lineage, the astronomer and writer of the Siddhānta-śiromaṇi; and he maintains that this senior Vidyāpati Bhāskara Bhaṭṭa was the commentator on the *Brahma-sūtra*¹. But, though this may be possible, yet we have no evidence that it is certain; for, apart from the similarity of names², it is not definitely known whether this Vidyāpati Bhāskara Bhaṭṭa ever wrote any commentary on the *Brahma-sūtra*. All that we can say, therefore, with any degree of definiteness, is that Bhāskara flourished at some period between the middle of the eighth century and the middle of the tenth century, and most probably in the ninth century, since he does not know Rāmānuja³.

Bhāskara and Śaṅkara.

There is a text of the *Chāndogya Upaniṣad*, VI. 1. 1, which is treated from two different points of view by Śaṅkara and Bhāskara in connection with the interpretation of *Brahma-sūtra*, II. 1. 14⁴. Śaṅkara's interpretation of this, as Vācaspati explains it, is that, when clay is known, all clay-materials are known, not because the clay-materials are really clay, for they are indeed different. But, if so, how can we, by knowing one, know the other? Because the clay-materials do not really exist; they are all, and so indeed are all that pass as modifications (*vikāra*), but mere expressions of speech (*vācārambhaṇam*), mere names (*nāmadheyam*) having no real

¹ Paṇḍita Vindhyesvarī Prasāda's Introduction.

² We hear of several Bhāskaras in Sanskrit literature, such as Lokabhāskara, Śrāntabhāskara, Haribhāskara, Bhadantabhāskara, Bhāskaramiśra, Bhāskara-śāstri, Bhāskaradikṣita, Bhaṭṭabhāskara, Paṇḍita Bhāskarācārya, Bhaṭṭabhāskaramiśra, Trikaṇḍamaṇḍana, Laugākṣibhāskara, Śāṇḍilyabhāskara, Vatsabhāskara, Bhāskaradeva, Bhāskaraṇṣimha, Bhāskarāraṇya, Bhāskarānandanātha, Bhāskarasena.

³ He makes very scanty references to other writers. He speaks of Śāṇḍilya as a great author of the Bhāgavata school. He refers to the four classes of Māheśvaras, Pāsupata, Śaiva, Kāpālika and Kāthaka-siddhāntin, and their principal work *Pañcādhyāyi-śāstra*; he also refers to the *Pāñcarātrikas*, with whom he is often largely in agreement.

⁴ *tad-ananyatvaṃ ārambhaṇa-śabdādibhyaḥ. Brahma-sūtra*, II. 1. 14. *yathā saumya ekena mṛt-piṇḍen asarvaṃ mṛtmayam vijñātaṃ syādvācārambhaṇam vikāro nāmadheyam mṛttike'ty'eva satyaṃ* (Ch. VI. 1. 1).

entities or objects to which they refer, having in fact no existence at all¹.

Bhāskara says that the passage means that clay alone is real, and the purport of speech depends on two things, the objects and the facts implied and the names which imply them. The effects (*kārya*) are indeed the basis of all our practical behaviour and conduct, involving the objects and facts implied and the expressions and names which imply them. How can the cause and effect be identical? The answer to this is that it is true that it is to the effects that our speech applies and that these make all practical behaviour possible, but the effects are in reality but stages of manifestation, modification and existence of the cause itself. So, from the point of view that the effects come and go, appear and disappear, whereas the cause remains permanently the same, as the ground of all its real manifestations, it is said that the cause alone is true—the clay alone is true. The effect, therefore, is only a state of the cause, and is hence both identical with it and different from it². The effect, the name (*nāma-dheya*), is real, and the scriptures also assert this³.

Bhāskara argues against Śaṅkara as follows: the arguments that the upholder of *māyā* (*māyāvādin*) could adduce against those who believed in the reality of the many, the world, might be adduced against him also, in so far as he believes in monism (*advaita*). A person who hears the scriptures and philosophizes is at first under the veil of ignorance (*avidyā*); and, if on account of this ignorance his knowledge of duality was false, his knowledge of monism might equally for the same reason be considered as false. All Brahma-knowledge is false, because it is knowledge, like the knowledge of the world. It is argued that, just as from the false knowledge of a dream and of letters there can be true acquisition

¹ *Bhāmati*, *Brahma-sūtra*, II. 1. 14. Rāhu is a demon which is merely a living head with no body, its sole body being its head; but still we use, for convenience of language, the expression "Rāhu's head" (*Rāhoḥ śīraḥ*); similarly clay alone is real, and what we call clay-materials, jugs, plates, etc., are mere expressions of speech having no real objects or entities to which they can apply—they simply do not exist at all—but are mere *vikalpa*; *vācā kevalam ārabhyate vikāra-jātam na tu tattvato'sti yato nāmadheya-mātram etat; . . . yathā rāhoḥ śīraḥ . . . śabda-jñānā-nupāti vastu-śūnyo vikalpa iti; tathā cā'vastutayā anṛtam vikāra-jātam.*

² *vāg-indriyasya ubhayam ārambhaṇam vikāro nāmadheyam . . . ubhayam ālambya vāg-vyavahārah pravartate ghaṭeṇa udakam āhare' ti mṛṇmayam ity asya idaṃ vyākhyānam . . . kāraṇam eva kāryā-tmanā ghaṭavad avatiṣṭhate . . . kāraṇasya'vasthā-mātram kāryaṃ vyatiriktā'vyatiriktam śukti-rajatavadvagāmapāyadharmitvāc ca anṛtam anityam iti ca vyapadiśyate. Bhāskara-bhāṣya, II. 1. 14.*

³ *atha nāma-dheyaṃ satyasya satyamiti, etc. Ibid.*

of good and evil or of certain meanings, so from the false knowledge of words and their meanings, as involved in the knowledge of monistic texts of the Upaniṣads, there may arise right knowledge. But such an argument is based on false analogy. When from certain kinds of dreams someone judges that good or evil will come to him, it is not from nothing that he judges, since he judges from particular dream experiences; and these dream experiences are facts having particular characters and features; they are not mere nothing, like the hare's horn; no one can judge of anything from the hare's horn. The letters also have certain shapes and forms and are definitely by common consent and agreement associated with particular sounds; it is well known that different letters in different countries may be used to denote one kind of sound. Again, if from a mistake someone experiences fear and dies, it is not from nothing or from something false that he dies; for he had a real fear, and the fear was the cause of death and was roused by the memory of a real thing, and the only unreality about it was that the thing was not present there at that time. So no example could be given to show that from false knowledge, or falsehood as such, there could come right knowledge or the truth. Again, how can the scriptures demonstrate the falsehood of the world? If all auditory knowledge were false, all language would be false, and even the scriptural texts would be non-existent.

Further, what is this "*avidyā*," if it cannot be described? How can one make anyone understand it? What nonsense it is to say that that which manifests itself as all the visible and tangible world of practical conduct and behaviour cannot itself be described¹. If it is beginningless, it must be eternal, and there can be no liberation. It cannot be both existent and non-existent; for that would be contradictory. It cannot be mere negation; for, being non-existent, it could not bring bondage. If it brings bondage, it must be an entity, and that means a dual existence with Brahman. So the proposition of the upholder of *māyā* is false.

What is true, however, is that, just as milk gets curdled, so it is God Himself who by His own will and knowledge and omnipotence transforms Himself into this world. There is no inconsistency in God's transforming Himself into the world, though He is partless;

¹ *yasyāḥ kāryam idaṃ kṛtsnam vyavahārāya kalpate
nirvaktum sā na śakye' ti vacanam vacanār-thakam. Bhāskara-bhāṣya.*

for He can do so by various kinds of powers, modifying them according to His own will. He possesses two powers; by one He has become the world of enjoyables (*bhogyā-śakti*), and by the other the individual souls, the enjoyers (*bhoktr*); but in spite of this modification of Himself He remains unchanged in His own purity; for it is by the manifestation and modification of His powers that the modification of the world as the enjoyable and the enjoyer takes place. It is just as the sun sends out his rays and collects them back into himself, but yet remains in himself the same¹.

The Philosophy of Bhāskara's Bhāṣya.

From what has been said above it is clear that according to Bhāskara the world of matter and the selves consists only in real modifications or transformations (*pariṇāma*) of Brahman's own nature through His diverse powers. This naturally brings in the question whether the world and the souls are different from Brahman or identical with him. Bhāskara's answer to such a question is that "difference" (*bheda*) has in it the characteristic of identity (*abheda-dharmaś ca*)—the waves are different from the sea, but are also identical with it. The waves are manifestations of the sea's own powers, and so the same identical sea appears to be different when viewed with reference to the manifestations of its powers, though it is in reality identical with its powers. So the same identical fire is different in its powers as it burns or illuminates. So all that is one is also many, and the one is neither absolute identity nor absolute difference².

The individual souls are in reality not different from God; they are but His parts, as the sparks of fire are the parts of fire; but it is the peculiarity of these parts of God, the souls, that though one with Him, they have been under the influence of ignorance, desires and deeds from beginningless time³. Just as the *ākāśa*, which is all the same everywhere; and yet the *ākāśa* inside a vessel or a house is not just the same *ākāśa* as the boundless space, but may in some

¹ *Bhāskara-bhāṣya*, II. 1. 27, also I. 4. 25.

² *abheda-dharmaś ca bheda yathā mahodadher abhedah sa eva taraṅgādy-ātmanā vartamāno bheda ity ucyate, na hi taraṅgā-dayaḥ pāṣāṇā-diṣu dṛśyante tasyaiva tāḥ śaktayaḥ śakti-śaktimatoś ca ananyatvaṃ anyatvaṃ co-palakṣyate yathā'gner dahana-prakāśanā-di-śaktayaḥ... tasmāt sarvaṃ ekā-nekā-tmakam nā'tyantam abhinnaṃ bhinnaṃ vā. Ibid.* II. 1. 18.

³ *Ibid.* I. 4. 21.

sense be regarded as a part of it; or just as the same air is seen to serve different life-functions, as the five *prāṇas*, so the individual souls also may in some sense be regarded as parts of God. It is just and proper that the scriptures should command the individual souls to seek knowledge so as to attain liberation; for it is the desire for the highest soul (*paramātmān*) or God or Brahman that is the cause of liberation, and it is the desire for objects of the world that is the cause of bondage¹. This soul, in so far as it exists in association with ignorance, desires and deeds, is atomic in nature; and, just as a drop of sandal paste may perfume all the place about it, so does the atomic soul, remaining in one place, animate the whole body. It is by nature endowed with consciousness, and it is only with reference to the knowledge of other objects that it has to depend on the presence of those objects². Its seat is in the heart, and through the skin of the heart it is in touch with the whole body. But, though in a state of bondage, under the influence of ignorance, etc., it is atomic, yet it is not ultimately atomic in nature; for it is one with Brahman. Under the influence of *buddhi*, *ahamkāra*, the five senses and the five *vāyus* it undergoes the cycle of rebirths. But though this atomic form and the association with the *buddhi*, etc., is not essential to the nature of the soul, yet so long as such a relation exists, the agency of the soul is in every sense real; but the ultimate source of this agency is God Himself; for it is God who makes us perform all actions, and He makes us perform good actions, and it is He who, remaining within us, controls all our actions.

In all stages of life a man must perform the deeds enjoined by the scriptures, and he cannot rise at any stage so high that he is beyond the sphere of the duties of work imposed on him by the scriptures³. It is not true, as Śaṅkara says, that those who are fit to

¹ *rāgo hi paramātmā-viṣayo yaḥ sa mukti-hetuḥ viṣaya-viṣayo yaḥ sa bandha-hetuḥ. Bhāskara-bhāṣya.*

² *Ibid.* II. 3. 18, 22, 23.

³ *Bhāskara-bhāṣya*, I. 1. 1. In holding the view that the *Brahma-sūtra* is in a sense continuous with the *Mīmāṃsā-sūtra*, which the former must follow—for it is after the performance of the ritualistic duties that the knowledge of Brahman can arise, and the latter therefore cannot in any stage dispense with the need for the former—and that the *Brahma-sūtras* are not intended for any superior and different class of persons, Bhāskara seems to have followed Upa-varṣa or Upavarṣācārya, to whose commentary on the *Mīmāṃsā-sūtra* he refers and whom he calls the founder of the school (*śāstra-sampradāya-pravartaka*). *Ibid.* I. 1. 1, and II. 2. 27. See also I. 1. 4: *ātma-jñāna-dhikṛtasya karmabhīr vinā apavargā-nūpāpatter jñānena karma samuccīyate.*

have the highest knowledge are beyond the duties of life and courses of ritualistic and other actions enjoined by the scriptures, or that those for whom these are intended are not fit to have the highest knowledge; in other words, the statement of Śaṅkara that there cannot be any combination (*samuccaya*) of knowledge (*jñāna*) and necessary ritualistic duties of life (*karma*) is false. Bhāskara admits that pure *karma* (ritualistic duties) cannot lead us to the highest perception of the truth, the Brahman; yet knowledge (*jñāna*) combined with the regular duties, i.e. *jñāna-samuccita-karma*, can lead us to our highest good, the realization of Brahman. That it is our duty to attain the knowledge of Brahman is also to be accepted, by reason of the injunction of the scriptures; for that also is one of the imperative duties imposed on us by the scriptures—a *vidhi*—the self is to be known (*ātmā vā are draṣṭavyah*, etc.). It is therefore not true, as Śaṅkara asserted, that what the ritualistic and other duties imposed on us by the scriptures can do for us is only to make us fit for the study of Vedānta by purifying us and making us as far as possible sinless; Bhāskara urges that performance of the duties imposed on us by the scriptures is as necessary as the attainment of knowledge for our final liberation.

Bhāskara draws a distinction between cognition (*jñāna*) and consciousness (*caitanya*), more particularly, self-consciousness (*ātma-caitanya*). Cognition with him means the knowledge of objective things, and this is a direct experience (*anubhava*) arising out of the contact of the sense organ, *manas*, and the object, the presence of light and the internal action of the memory and the sub-conscious impressions (*saṃskāra*). Cognition is not an active operation by itself, but is rather the result of the active operation of the senses in association with other accessories, such that whenever there is a collocation of those accessories involving the operation of the senses there is cognition¹. Bhāskara is therefore positively against the contention of Kumārila that knowledge is an entity which is not directly perceived but only inferred as the agent which induces the intellectual operation, but which is not directly known by itself. If an unperceived entity is to be inferred to explain the cause of the per-

¹ *jñāna-kriyā-kalpanāyām pramāṇā-bhāvāt . . . ālokaendriya-manah-saṃskāreṣu hi satsu samvedanam utpadyate iti tad-abhāve notpadyate, yadi punar aparam jñānam kalpyate tasyāpy anyat tasyāpy anyad ity anavasthā; na ca jñāna-kriyānumāne liṅgam asti, samvedanam iti cen na, agrhita-sambandhatvāt. Bhāskara-bhāṣya, 1.1.1.*

ceived intellectual operation, then another entity might be inferred as the cause of that unperceived entity, and another to explain that and so on, and we have a vicious infinite (*anavasthā*). Moreover, no unperceived entity can be inferred as the cause of the perceived intellectual operation; for, if it is unperceived, then its relation with intellectual operation is also unperceived, and how can there be any inference at all? Thus, cognition is what we directly experience (*anubhava*) and there is no unperceived entity which causes it, but it is the direct result of the joint operation of many accessories. This objective cognition is entirely different from the subjective consciousness or self-consciousness; for the latter is eternal and always present, whereas the former is only occasioned by the collocating circumstances. It is easy to see that Bhāskara has a very distinct epistemological position, which, though similar to Nyāya so far as the objective cognition is concerned, is yet different therefrom on account of his admission of the ever-present self-consciousness of the soul. It is at the same time different from the Śāṅkarite epistemology, for objective cognition is considered by him not as mere limitation of self-consciousness, but as entirely different therefrom¹. It may also be noted that, unlike Dharmarājadhvarindra, the writer of the Sanskrit epistemological work, *Vedānta-paribhāṣā*, Bhāskara considers *manas* as a sense-organ². On the subject of the self-validity of knowledge Bhāskara thinks that the knowledge of truth is always self-valid (*svataḥ-pramāṇa*), whereas the knowledge of the false is always attested from outside (*parataḥ pramāṇa*)³.

As has already been said, Bhāskara does not think that liberation can be attained through knowledge alone; the duties imposed by the scriptures must always be done along with our attempts to know Brahman; for there is no contradiction or opposition between knowledge and performance of the duties enjoined by the scriptures. There will be no liberation if the duties are forsaken⁴. The state of salvation is one in which there is a continuous and unbroken consciousness of happiness⁵. A liberated soul may associate or not associate itself with any body or sense as it likes⁶. It is as omniscient,

¹ *kecid āhuḥ ātmā pramāyām indriya-dvāropādhi-nirgama-viṣayeṣu vartate... tad idam asamyag darśanam;... ālokendriyādibhyo jñānam utpadyamānam... cānyad iti yuktaṁ. Bhāskara-bhāṣya.*

² *Ibid.* I. 4. 21.

³ *Ibid.* IV. 4. 8.

⁴ *Ibid.* II. 4. 17.

⁵ *Ibid.* III. 4. 26.

⁶ *Ibid.* IV. 4. 12.

omnipotent and as one with all souls as God Himself¹. The attachment (*rāga*) to Brahman, which is said to be an essential condition for attaining liberation, is further defined to be worship (*samārādhana*) or devotion (*bhakti*), while *bhakti* is said to be attendance on God by meditation (*dhyānādīnā paricaryā*). *Bhakti* is conceived, not as any feeling, affection or love of God, as in later Vaiṣṇava literature, but as *dhyāna* or meditation². A question may arise as to what, if Brahman has transformed Himself into the world, is meant by meditation on Brahman? Does it mean that we are to meditate on the world? To this Bhāskara's answer is that Brahman is not exhausted by His transformation into the world, and that what is really meant by Brahman's being transformed into the world is that the nature of the world is spiritual. The world is a spiritual manifestation and a spiritual transformation, and what passes as matter is in reality spiritual. Apart from Brahman as manifested in the world, the Brahman with diverse forms, there is also the formless Brahman (*niṣprapañca brahman*), the Brahman which is transcendent and beyond its own immanent forms, and it is this Brahman which is to be worshipped. The world with its diverse forms also will, in the end, return to its spiritual source, the formless Brahman, and nothing of it will be left as the remainder. The material world is dissolved in the spirit and lost therein, just as a lump of salt is lost in water³. This transcendent Brahman that is to be worshipped is of the nature of pure being and intelligence (*sal-lakṣaṇa* and *bodha-lakṣaṇa*)⁴. He is also infinite and unlimited. But, though He is thus characterized as being, intelligence, and infinite, yet these terms do not refer to three distinct entities; they are the qualities of Brahman, the substance, and, like all qualities, they cannot remain different from their substance; for neither can any substance remain without its qualities, nor can any qualities remain without their substance. A substance does not become different by virtue of its qualities⁵.

Bhāskara denies the possibility of liberation during lifetime (*jīvan-mukti*); for so long as the body remains as a result of the

¹ *muktaḥ kāraṇā-tmānam prāptaḥ tad vadeva sarva-jñāḥ sarva-śaktiḥ*. Bhāskara-bhāṣya, IV. 4. 7.

² *Ibid.* III. 2. 24.

⁴ *Ibid.* III. 2. 23.

⁵ *na dharmā-dharmī-bhedaṇa svārūpa-bheda iti; na hi guṇa-rahitaṁ dravyam asti na dravya-rahito guṇaḥ*. *Ibid.* III. 2. 23.

previous *karmas*, the duties assigned to the particular stage of life (*āśrama*) to which the man belongs have to be performed; but his difference from the ordinary man is that, while the ordinary man thinks himself to be the agent or the doer of all actions, the wise man never thinks himself to be so. If a man could attain liberation during lifetime, then he might even know the minds of other people. Whether in *mukti* one becomes absolutely relationless (*niḥsam-bandhaḥ*), or whether one becomes omniscient and omnipotent (as Bhāskara himself urges), it is not possible for one to attain *mukti* during one's lifetime, so it is certain that so long as a man lives he must perform his duties and try to comprehend the nature of God and attend on Him through meditation, since these only can lead to liberation after death¹.

¹ *Bhāskara-bhāṣya*, III. 4. 26.

CHAPTER XVI

THE PAÑCARĀTRA.

Antiquity of the Pañcarātra.

THE Pañcarātra doctrines are indeed very old and are associated with the *puruṣa-sūkta* of the Ṛg-veda, which is, as it were, the foundation stone of all future Vaiṣṇava philosophy. It is said in the *Śata-patha Brāhmaṇa* that Nārāyaṇa, the great being, wishing to transcend all other beings and becoming one with them all, saw the form of sacrifice known as pañcarātra, and by performing that sacrifice attained his purpose¹. It is probable that the epithets “*puruṣo ha nārāyaṇaḥ*” became transformed in later times into the two ṛṣis Nara and Nārāyaṇa. The passage also implies that Nārāyaṇa was probably a human being who became a transcending divinity by performing the Pañcarātra sacrifice. In the later literature *Nārāyaṇa* became the highest divinity. Thus Veṅkaṭa Sudhī wrote a *Siddhānta-ratnāvalī* in about 19,000 lines to prove by a reference to scriptural texts that Nārāyaṇa is the highest god and that all other gods, Śiva, Brahmā, Viṣṇu, etc., are subordinate to him². The word *Brahman* in the Upaniṣads is also supposed in the fourth or the last chapter of the *Siddhānta-ratnāvalī* to refer to Nārāyaṇa. In the *Mahābhārata* (*Śānti-parvan*, 334th chapter) we hear of Nara and Nārāyaṇa themselves worshipping the unchanging Brahman which is the self in all beings; and yet Nārāyaṇa is there spoken of as being the greatest of all. In the succeeding chapter it is said that there was a king who was entirely devoted to Nārāyaṇa, and who worshipped him according to the *sātvata* rites³. He was so devoted to Nārāyaṇa that he considered all that belonged to him, riches, kingdom, etc., as belonging to Nārāyaṇa. He harboured in his house great saints versed in the Pañcarātra system. When under the patronage of this king great saints performed sacrifices, they were unable to have a vision of the great Lord Nārāyaṇa, and Bṛhaspati became angry.

¹ *Śata-patha Brāhmaṇa* XIII. 6. 1.

² The *Siddhānta-ratnāvalī* exists only as a MS. which has not yet been published.

³ We have an old *Pañcarātra-saṃhitā* called the *Sātvata-saṃhitā*, the contents of which will presently be described.

Other sages then related the story that, though after long penance they could not perceive God, there was a message from Heaven that the great Nārāyaṇa was visible only to the inhabitants of Śveta-dvīpa, who were devoid of sense-organs, did not require any food, and were infused with a monotheistic devotion. The saints were dazzled by the radiant beauty of these beings, and could not see them. They then began to practise asceticism and, as a result, these holy beings became perceivable to them. These beings adored the ultimate deity by mental *japa* (muttering God's name in mind) and made offerings to God. Then there was again a message from Heaven that, since the saints had perceived the beings of Śveta-dvīpa, they should feel satisfied with that and return home because the great God could not be perceived except through all-absorbing devotion. Nārada also is said to have seen from a great distance Śveta-dvīpa and its extraordinary inhabitants. Nārada then went to Śveta-dvīpa and had a vision of Nārāyaṇa, whom he adored. Nārāyaṇa said to him that Vāsudeva was the highest changeless God, from whom came out Saṅkarṣaṇa, the lord of all life; from him came Pradyumna, called *manas*, and from Pradyumna came Aniruddha, the Ego. From Aniruddha came Brahmā, who created the universe. After the *pralaya*, Saṅkarṣaṇa, Pradyumna and Aniruddha are successively created from Vāsudeva.

There are some Upaniṣads which are generally known as Vaiṣṇava Upaniṣads, and of much later origin than the older Pañcarātra texts. To this group of Upaniṣads belong the *Avyakto-paniṣad* or *Avyakta-nṛsiṃho-paniṣad*, with a commentary of Upaniṣad-brahmayogin, the pupil of Vāsudevendra, *Kali-santaraṇo-paniṣad*, *Kṛṣṇo-paniṣad*, *Garudō-paniṣad*, *Gopālatāpini Upaniṣad*, *Gopālottara-tāpini Upaniṣad*, *Tārāsaro-paniṣad*, *Tripād-vibhūti-mahānārāyaṇa Upaniṣad*, *Dattātreyo-paniṣad*, *Nārāyaṇo-paniṣad*, *Nṛsiṃha-tāpini Upaniṣad*, *Nṛsiṃhottara-tāpini Upaniṣad*, *Rāmatāpini Upaniṣad*, *Rāmottarottara-tāpini Upaniṣad*, *Rāma-rahasya Upaniṣad*, *Vāsudevō-paniṣad*, with the commentaries of Upaniṣad-brahmayogin. But these Upaniṣads are mostly full of inessential descriptions, ritualistic practices and the muttering of particular *mantras*. They have very little connection with the Pañcarātra texts and their contents. Some of them—like the *Nṛsiṃha-tāpini*, *Gopālatāpini*, etc.—have been utilized in the Gauḍiṇya school of Vaiṣṇavism.

The Position of the Pañcarātra Literature.

Yāmuna, in his *Āgama-prāmānya*, discusses the position of the Pañcarātras as follows. It is said that any instruction conveyed through language can be valid either by itself or through the strength of the validity of some other proofs. No instruction of any ordinary person can be valid by itself. The special ritualistic processes associated with the Pañcarātra cannot be known by perception or by inference. Only God, whose powers of perception extend to all objects of the world and which are without any limitation, can instil the special injunctions of the Pañcarātra. The opponents, however, hold that a perception which has all things within its sphere can hardly be called perception. Moreover, the fact that some things may be bigger than other things does not prove that anything which is liable to be greater and less could necessarily be conceived to extend to a limitless extent¹. Even if it be conceived that there is a person whose perception is limitless, there is nothing to suggest that he should be able to instruct infallibly about the rituals, such as those enjoined in the Pañcarātra. There are also no *āgamas* which prescribe the Pañcarātra rites. It cannot be ascertained whether the authors of the Pañcarātra works based them on the teachings of the Vedas or gave their own views and passed them on as being founded on the Vedas. If it is argued that the fact that the Pañcarātra, like other texts of *Smṛti* of Manu, etc., exist proves that they must have a common origin in the Vedas, that is contradicted by the fact that the Pañcarātra doctrines are repudiated in the *smṛti* texts founded on the Vedas. If it is said that those who follow the Pañcarātra rites are as good Brahmins as other Brahmins, and follow the Vedic rites, the opponents assert that this is not so, since the Pañcarātrins may have all the external marks and appearance of Brahmins, but yet they are not so regarded in society. At a social dinner the Brahmins do not sit in the same line with the *Bhāgavatas* or the followers of the Pañcarātra.

¹ *atha ekasmin sātīṣaṣṭ kenāpyanyena niratīṣaṣṭa bhavīṭavyam iti āhoṣit samāna-jāṭīyenaṇyena nir-atīṣaṣṭa-dasām adhirūḍha na bhavīṭavyam iti :*

*na tāvad agrimaḥ kalpaḥ kalpyate nupalambhataḥ
na hi dṛṣṭam śārāvādi vyomeva prāpta-vaibhavam.*

Āgama-prāmānya, p. 3.

The very word *sātvata* indicates a lower caste¹, and the words *bhāgavata* and *sātvata* are interchangeable. It is said that a *sātvata* of the *pañcama* caste who by the king's order worships in temples is called a *bhāgavata*. As a means of livelihood the *sātvatas* worship images and live upon offerings for initiation and those made to temple gods; they do not perform the Vedic duties, and have no relationship with the Brahmins, and so they cannot be regarded as Brahmins. It is also said that even by the sight of a man who takes to worship as a means of livelihood one is polluted and should be purified by proper purificatory ceremonies. The Pañcarātra texts are adopted by the degraded *sātvatas* or the *bhāgavatas*, and these must therefore be regarded as invalid and non-Vedic. Moreover, if this literature were founded on the Vedas, there would be no meaning in their recommendation of special kinds of rituals. It is for this reason that Bādarāyaṇa also refutes the philosophical theory of the Pañcarātra in the *Brahma-sūtra*.

It may, however, be urged that, though the Pañcarātra injunctions may not tally with the injunctions of Brahminic *Smṛti* literature, yet such contradictions are not important, as both are based upon the Vedic texts. Since the validity of the Brahminic *Smṛti* also is based upon the Vedas, the Pañcarātra has no more necessity to reconcile its injunctions with that than they have to reconcile themselves with the Pañcarātra.

The question arises as to whether the Vedas are the utterances of a person or not. The argument in favour of production by a person is that, since the Vedas are a piece of literary composition, they must have been uttered by a person. The divine person who directly perceives the sources of merit or demerit enjoins the same through his grace by composing the Vedas for the benefit of human beings. It is admitted, even by the Mīmāṃsakas, that all worldly affairs are consequent upon the influence of merit and demerit. So the divine being who has created the world knows directly the sources of merit and demerit. The world cannot be produced directly through the effects of our deeds, and it has to be admitted that there must be some being who utilizes the effects of our deeds, producing the world in consonance with them. All the scriptural

¹ Thus Manu says:

*vaiś'yāt tu jāyate vrātyāt sudhanvācārya eva ca
bhāruṣaś ca nijaṅghaś ca maitra-sātvata eva ca.*

Āgama-prāmāṇya, p. 8.

texts also support the admission of such an omnipotent and omniscient God. It is this God who, on the one hand, created the Vedas, directing the people to the performance of such actions as lead them to mundane and heavenly happiness, and on the other hand created the Pañcarātra literature for the attainment of the highest bliss by the worship of God and the realization of His nature. There are some who deny the legitimate inference of a creator from the creation, and regard the Vedas as an eternally existent composition, uncreated by any divine being. Even in such a view the reason why the Vedas and the consonant *Smṛtis* are regarded as valid attests also the validity of the Pañcarātra literature. But, as a matter of fact, from the Vedas themselves we can know the supreme being as their composer. The supreme God referred to in the Upaniṣads is none other than *Vāsudeva*, and it is He who is the composer of the Pañcarātra. Further, arguments are adduced to show that the object of the Vedas is not only to command us to do certain actions or to prohibit us from doing certain other actions, but also to describe the nature of the ultimate reality as the divine person. The validity of the Pañcarātra has therefore to be admitted, as it claims for its source the divine person Nārāyaṇa or Vāsudeva. Yāmuna then refers to many texts from the *Varāha*, *Līṅga* and *Matsya Purāṇas* and from the *Manu-saṁhitā* and other *smṛti* texts. In his *Puruṣa-ninṇaya* also, Yāmuna elaborately discusses the scriptural arguments by which he tries to show that the highest divine person referred to in the Upaniṣads and the Purāṇas is Nārāyaṇa. This divine being cannot be the Śiva of the Śaivas, because the three classes of the Śaivas, the Kāpālikas, Kālamukhas and Pāśupatas, all prescribe courses of conduct contradictory to one another, and it is impossible that they should be recommended by the scriptural texts. Their ritualistic rites also are manifestly non-Vedic. The view that they are all derived from Rudra does not prove that it is the same Rudra who is referred to in the Vedic texts. The Rudra referred to by them may be an entirely different person. He refers also to the various Purāṇas which decry the Śaivas. Against the argument that, if the Pañcarātra doctrines were in consonance with the Vedas, then one would certainly have discovered the relevant Vedic texts from which they were derived, Yāmuna says that the Pañcarātra texts were produced by God for the benefit of devotees who were impatient of following elaborate details described in the

Vedic literature. It is therefore quite intelligible that the relevant Vedic texts supporting the *Pañcarātra* texts should not be discovered. Again, when it is said that Śāṇḍilya turned to the doctrine of *bhakti* because he found nothing in the four Vedas suitable for the attainment of his desired end, this should not be interpreted as implying a lowering of the Vedas; for it simply means that the desired end as recommended in the *Pañcarātras* is different from that prescribed in the Vedas. The fact that *Pañcarātras* recommend special ritual ceremonies in addition to the Vedic ones does not imply that they are non-Vedic; for, unless it is proved that the *Pañcarātras* are non-Vedic, it cannot be proved that the additional ceremonies are non-Vedic without implying argument in a circle. It is also wrong to suppose that the *Pañcarātra* ceremonies are really antagonistic to all Vedic ceremonies. It is also wrong to suppose that Bādarāyaṇa refuted the *Pañcarātra* doctrines; for, had he done so, he would not have recommended them in the *Mahābhārata*. The view of the *Pañcarātras* admitting the four *vyūhas* should not be interpreted as the admission of many gods; for these are manifestations of Vāsudeva, the one divine person. A proper interpretation of Bādarāyaṇa's *Brahma-sūtras* would also show that they are in support of the *Pañcarātras* and not against them.

Even the most respected persons of society follow all the *Pañcarātra* instructions in connection with all rituals relating to image-worship. The arguments of the opponents that the Bhāgavatas are not Brahmins are all fallacious, since the Bhāgavatas have the same marks of Brahmahood as all Brahmins. The fact that Manu describes the *pañcama* caste as *sātvata* does not prove that all *sātvatas* are *pañcamas*. Moreover, the interpretation of the word *sātvata* as *pañcama* by the opponents would be contradictory to many scriptural texts, where *sātvatas* are praised. That some *sātvatas* live by image-building or temple-building and such other works relating to the temple does not imply that this is the duty of all the Bhāgavatas. Thus Yāmuna, in his *Āgama-prāmāṇya* and *Kāśmīrāgama-prāmāṇya*, tried to prove that the *Pañcarātras* are as valid as the Vedas, since they are derived from the same source, viz. the divine Person, *Nārāyaṇa*¹.

¹ The *Kāśmīrāgama* is referred to in the *Āgama-prāmāṇya*, p. 85, as another work of Yāmuna dealing more or less with the same subject as the *Āgama-prāmāṇya*, of which no MS. has been available to the present writer.

From the tenth to the seventeenth century the Śaivas and the Śrīvaiṣṇavas lived together in the south, where kings professing Śaivism harassed the Śrīvaiṣṇavas and maltreated their temple-gods, and kings professing Śrīvaiṣṇavism did the same to the Śaivas and their temple-gods. It is therefore easy to imagine how the sectarian authors of the two schools were often anxious to repudiate one another. One of the most important and comprehensive of such works is the *Siddhānta-ratnāvalī*, written by Veṅkaṭa Sudhī. Veṅkaṭa Sudhī was the disciple of Veṅkaṭanātha. He was the son of Śrīśaila Tātayārya, and was the brother of Śrī Śaila Śrīnivāsa. The *Siddhānta-ratnāvalī* is a work of four chapters, containing over 300,000 letters. He lived in the fourteenth and the fifteenth centuries, and wrote at least two other works, *Rahasya traya-sāra* and *Siddhānta-vaijayantī*.

Many treatises were written in which the Pañcarātra doctrines were summarized. Of these Gopālasūri's *Pañcarātra-rakṣā-saṃgraha* seems to be the most important. Gopālasūri was the son of Kṛṣṇadeśika and pupil of Vedāntarāmānuja, who was himself the pupil of Kṛṣṇadeśika. His *Pañcarātra-rakṣā* deals with the various kinds of rituals described in some of the most important Pañcarātra works.

It thus seems that the Pañcarātra literature was by many writers not actually regarded as of Vedic origin, though among the Śrīvaiṣṇavas it was regarded as being as authoritative as the Vedas. It was regarded, along with the Sāṃkhya and Yoga, as an accessory literature to the Vedas¹. Yāmuna also speaks of it as containing a brief summary of the teachings of the Vedas for the easy and immediate use of those devotees who cannot afford to study the vast Vedic literature. The main subjects of the Pañcarātra literature are directions regarding the constructions of temples and images,

¹ Thus Veṅkaṭanātha, quoting Vyāsa, says:

*idaṃmaho-paniṣadam catur-veda-saṃ-anvitaṃ
sāṃkhya-yoga-kṛtāntena pañca-rātrā-nu-śabditaṃ.*

Seṣvara-Mīmāṃsā, p. 19.

Sometimes the Pañcarātra is regarded as the root of the Vedas, and sometimes the Vedas are regarded as the root of the Pañcarātras. Thus Veṅkaṭanātha in the above context quotes a passage from Vyāsa in which Pañcarātra is regarded as the root of the Vedas—"mahato veda-rkṣasya mula-bhūto mahān ayam." He quotes also another passage in which the Vedas are regarded as the root of the Pañcarātras—"śrutimūlam idaṃ tantraṃ pramāṇa-kalpa-sūtravat." In another passage he speaks of the Pañcarātras as the alternative to the Vedas—"alābhe veda-mantrāṇāṃ pañca-rātro-dītena vā."

descriptions of the various rituals associated with image-worship, and the rituals, dealing elaborately with the duties of the Śrī-vaiṣṇavas and their religious practices, such as initiation, baptism, and the holding of religious marks. The practice of image-worship is manifestly non-Vedic, though there is ample evidence to show that it was current even in the sixth century B.C. It is difficult for us to say how this practice originated and which section of Indians was responsible for it. The conflict between the Vedic people and the image-worshippers seems to have been a long one; yet we know that even in the second century B.C. the Bhāgavata cult was in a very living state, not only in South India, but also in Upper India. The testimony of the Besnagar Column shows how even Greeks were converted to the Bhāgavata religion. The *Mahābhārata* also speaks of the *sātvata* rites, according to which Viṣṇu was worshipped, and it also makes references to the *Vyūha* doctrine of the Pañcarātras. In the *Nārāyaṇīya* section it is suggested that the home of the Pañcarātra worship is Śveta-dvīpa, from which it may have migrated to India; but efforts of scholars to determine the geographical position of Śveta-dvīpa have so far failed.

In the *Purāṇas* and the *smṛti* literature also the conflict with the various Brahminic authorities is manifest. Thus, in the *Kūrma purāṇa*, chapter fifteen, it is said that the great sinners, the Pañcarātrins, were produced as a result of killing cows in some other birth, that they are absolutely non-Vedic, and that the literatures of the Śāktas, Śaivas and the Pañcarātras are for the delusion of mankind¹. That Pañcarātrins were a cursed people is also noticed in the *Parāśara purāṇa*². They are also strongly denounced in the *Vaśiṣṭha-saṃhitā*, the *Śāmba-purāṇa* and the *Sūta-saṃhitā* as great sinners and as absolutely non-Vedic. Another cause of denouncement was that the Pañcarātrins initiated and admitted within their

¹ *kāpōlum gāruḍam śāktam, bhairavam pūrva-pāścimam,
pañca-rātram, pāsupatam tathānyāni sahasraśaḥ.*

Kūrma-purāṇa, Ch. 15.

(As quoted in the *Tattva-kaustubha* of Dikṣita but in the printed edition of the B.J. series it occurs in the sixteenth chapter with slight variations.)

The *Skanda-purāṇa* also says:

*pañcarātre ca kāpāle, tathā kālamukeḥ'pi ca.
śakte ca dikṣitā yūyam bhaveta brāhmaṇādhamāḥ.*

² *dvitīyam pañcarātre ca tantre bhāgavate tathā
dikṣitāś ca dvijā nityam bhaveyur garhitā hareḥ.*

(As quoted by Bhaṭṭojī Dikṣita in his *Tattva-kaustubha*, MS. p. 4.)

sect even women and Śūdras. According to the *Aśvalāyana-smṛti*, no one but an outcast would therefore accept the marks recommended by the Pañcarātras. In the fourth chapter of the *Vṛhan-nāradya-purāṇa* it is said that even for conversing with the Pañcarātrins one would have to go to the Raurava hell. The same prohibition of conversing with the Pañcarātrins is found in the *Kūrma-purāṇa*, and it is there held that they should not be invited on occasions of funeral ceremonies. Hemādri, quoting from the *Vāyu purāṇa*, says that, if a Brahman is converted into the Pañcarātra religion, he thereby loses all his Vedic rites. The *Linga-purāṇa* also regards them as being excommunicated from all religion (*sarva-dharma-vahiṣkṛta*). The *Āditya* and the *Agni-purāṇas* are also extremely strong against those who associate themselves in any way with the Pañcarātrins. The *Viṣṇu*, *Śātātapa*, *Hārīta*, *Bodhāyana* and the *Yama saṃhitās* also are equally strong against the Pañcarātrins and those who associate with them in any way. The Pañcarātrins, however, seem to be more conciliatory to the members of the orthodox Vedic sects. They therefore appear to be a minority sect, which had always to be on the defensive and did not dare revile the orthodox Vedic people. There are some Purāṇas, however, like the *Mahābhārata*, *Bhāgavata* and the *Viṣṇu-purāṇa*, which are strongly in favour of the Pañcarātrins. It is curious, however, to notice that, while some sections of the Purāṇas approve of them, others are fanatically against them. The Purāṇas that are specially favourable to the Pañcarātrins are the *Viṣṇu*, *Nāradya*, *Bhāgavata*, *Gāruḍa*, *Padma* and *Varāha*, which are called the *Sāttvika purāṇas*¹. So among the *smṛtis*, the *Vāsiṣṭha*, *Hārīta*, *Vyāsa*, *Pārāśara* and *Kāśyapa* are regarded as the best². The *Pramāṇa-saṃgraha* takes up some of the most important doctrines of the Pañcarātrins and tries to prove their authoritativeness by a reference to the above *Purāṇas* and *smṛtis*, and also to the *Mahābhārata*, the *Gītā*, *Viṣṇudharmottara*, *Prajāpatya-smṛti*, *Itihāsasamuccaya*, *Harivaṃśa*, *Vṛddha-manu*, *Śāṇḍilya-smṛti*, and the *Brahmāṇḍa-purāṇa*.

¹ Thus the *Pramāṇa-saṃgraha* says:

*vaiṣṇavaṃ nāradyaṃ ca tathā bhāgavatam śubhaṃ
gāruḍaṃ ca tathā pādmaṃ varāhaṃ śubha-darśane
sāttvikāni purāṇāni vijñeyāni ca śatprthak.*

² *Ibid.* p. 14.

Tattva-kaustubha, MS. p. 13.

The Pañcarātra Literature.

The Pañcarātra literature is somewhat large and only a few works have been printed. The present writer, however, had the opportunity of collecting a large number of manuscripts, and an attempt will here be made to give a brief account of this literature, which, however, has no philosophical importance. One of the most important of these *saṃhitās* is the *Sātvata-saṃhitā*. The *Sātvata* is referred to in the *Mahābhārata*, the *Ahīrbudhnya-saṃhitā*, the *Īśvara-saṃhitā* and other *saṃhitās*. In the *Sātvata-saṃhitā* we find that the Lord (*Bhagavān*) promulgates the *Pañcarātra-Śāstra* at the request of Saṃkarṣaṇa on behalf of the sages¹. It consists of twenty-five chapters which describe the forms of worshipping Nārāyaṇa in all His four *Vyūha* manifestations (*vibhava-devatā*), dress and ornaments, other special kinds of worship, the installation of images and the like. The *Īśvara-saṃhitā* says that the *Ekāyana Veda*, the source of all Vedas, originated with *Vāsudeva* and existed in the earliest age as the root of all the other Vedas, which were introduced at a later age and are therefore called the *Vikāra-veda*. When these *Vikāra-vedas* sprang up and people became more and more worldly-minded, Vāsudeva withdrew the *Ekāyana Veda* and revealed it only to some selected persons, such as Sana, Sanatsujāti, Sanaka, Sanandana, Sanatkumāra, Kapila and Sanātana, who were all called *ekāntins*. Other sages, Marīci, Atri, Āṅgīrasa, Pulastya, Pulaha, Kratu, Vasiṣṭha and Svayambhuva, learnt this *Ekāyana* from Nārāyaṇa, and on the basis of it the Pañcarātra literature on the one hand was written, in verse, and the various *Dharma-śāstras* on the other hand were written by Manu and other *ṛṣis*. The Pañcarātra works, such as *Sātvata*, *Pauṣkara*, and *Jayākhya* and other similar texts, were written at the instance of Saṃkarṣaṇa in accordance with the fundamental tenets of the *Ekāyana Veda*, which was almost lost in the later stage. Śaṇḍilya also learnt the principles of the *Ekāyana Veda* from Saṃkarṣaṇa and taught them to the *ṛṣis*. The contents of the *Ekāyana Veda*, as taught by Nārāyaṇa, are called the *Sātvika-śāstra*; those *Śāstras* which are partly based on the *Ekāyana Veda* and partly due to the contribution of the sages themselves are called the *Rājasa-Śāstra*; those which are merely the contribution of

¹ Published at Conjeeveram, 1902.

human beings are called the *Tāmasa Śāstra*. The *Rājasa Śāstra* is of two kinds, the *Pañcarātra* and the *Vaikhānasa*. *Sātvata*, *Pauṣkara* and *Jayākhyā* were probably the earliest Pañcarātra works written by the sages, and of these again the *Sātvata* is considered the best, as it consists of a dialogue between the Lord and Saṃkarṣaṇa.

The *Īśvara-saṃhitā* consists of twenty-four chapters, of which sixteen are devoted to ritualistic worship, one to the description of images, one to initiation, one to meditation, one to *mantras*, one to expiation, one to methods of self-control, and one to a description of the holiness of the Yādava hill¹. The chapter on worship is interspersed with philosophical doctrines which form the basis of the Śrīvaiṣṇava philosophy and religion.

The *Hayasīrṣa-saṃhitā* consists of four parts; the first part, called the *Pratiṣṭhā-kāṇḍa*, consists of forty-two chapters; the second, the Saṃkarṣaṇa, of thirty-seven chapters; the third, the *Līṅga*, of twenty chapters; and the fourth, the *Saura-kāṇḍa*, of forty-five chapters². All the chapters deal with rituals concerning the installation of images of various minor gods, the methods of making images and various other kinds of rituals. The *Viṣṇu-tattva-saṃhitā* consists of thirty-nine chapters, and deals entirely with rituals of image-worship, ablutions, the holding of Vaiṣṇava marks, purificatory rites, etc.³ The *Parama-saṃhitā* consists of thirty-one chapters, dealing mainly with a description of the process of creation, rituals of initiation, and other kinds of worship³. In the tenth chapter, however, it deals with *yoga*. In this chapter we hear of *jñāna-yoga* and *karma-yoga*. *Jñāna-yoga* is regarded as superior to *karma-yoga*, though it may co-exist therewith. *Jñāna-yoga* means partly practical philosophy and the effort to control all sense-inclinations by that means. It also includes *samādhi*, or deep concentration, and the practice of *prāṇāyāma*. The word *yoga* is here used in the sense of "joining or attaching oneself to." The man who practises *yoga* fixes his mind on God and by deep meditation detaches himself from all worldly bonds. The idea of *karma-yoga* does not appear to be very clear; but in all probability it means worship of Viṣṇu. The *Parāśara saṃhitā*, which was also available

¹ Published at Conjeeveram, 1921.

² It has been available to the present writer only in MS.

³ This *saṃhitā* has also been available to the present writer only in MS.

only in manuscript, consists of eight chapters dealing with the methods of muttering the name of God.

The *Padma-saṃhitā*, consisting of thirty-one chapters, deals with various kinds of rituals and the chanting of *mantras*, offerings, religious festivities and the like¹. The *Parameśvara-saṃhitā*, consisting of fifteen chapters, deals with the meditation on *mantras*, sacrifices and methods of ritual and expiation². The *Pauṣkara-saṃhitā*, which is one of the earliest, consists of forty-three chapters, and deals with various kinds of image-worship, funeral sacrifices and also with some philosophical topics². It contains also a special chapter called *Tattva-saṃkhyāna*, in which certain philosophical views are discussed. These, however, are not of any special importance and may well be passed over. The *Prakāśa-saṃhitā* consists of two parts. The first part is called *Parama-tattva-nirṇaya*, and consists of fifteen chapters; the second, called *Para-tattva-prakāśa*, consists of twelve chapters only². The *Mahā-sanatkumāra-saṃhitā*, consisting of four chapters and forty sections in all, deals entirely with rituals of worship². It is a big work, containing ten thousand verses. Its four chapters are called *Brahma-rātra*, *Śiva-rātra*, *Indra-rātra* and *Ṛṣi-rātra*. The *Aniruddha-saṃhitā-mahopaniṣad* contains thirty-four chapters and deals entirely with descriptions of various rituals, methods of initiation, expiation, installation of images, the rules regarding the construction of images, etc.² The *Kāśyapa-saṃhitā*, consisting of twelve chapters, deals mainly with poisons and methods of remedy by incantations². The *Vihagendra-saṃhitā* deals largely with meditation on *mantras* and sacrificial oblations and consists of twenty-four chapters. In the twelfth chapter it deals extensively with *prāṇāyāma*, or breath-control, as a part of the process of worship². The *Sudarśana-saṃhitā* consists of forty-one chapters and deals with meditation on *mantras* and expiation of sins. *Agastya-saṃhitā* consists of thirty-two chapters. The *Vasiṣṭha* contains twenty-four chapters, the *Viśvāmitra* twenty-six chapters and the *Viṣṇu-saṃhitā* thirty chapters. They are all in manuscripts and deal more or less with the same subject, namely, ritualistic worship. The *Viṣṇu-saṃhitā* is, however, very much under the influence of Sāṃkhya and holds *Puruṣa* to be all-pervasive. It also invests *Puruṣa* with dynamic

¹ It has been available to the present writer only in MS.

² These works also were available to the present writer only in MS.

activity by reason of which the *prakṛti* passes through evolutionary changes. The five powers of the five senses are regarded as the power of Viṣṇu. The power of Viṣṇu has both a gross and a transcendental form. In its transcendental form it is power as consciousness, power as world-force, power as cause, power by which consciousness grasps its objects and power as omniscience and omnipotence. These five powers in their transcendental forms constitute the subtle body of God. In the thirtieth chapter the *Viṣṇu-saṃhitā* deals with *yoga* and its six accessories (*ṣaḍ-aṅga-yoga*), and shows how the *yoga* method can be applied for the attainment of devotion, and calls it *Bhāgavata-yoga*. It may be noticed that the description of human souls as all-pervasive is against the Śrīvaiṣṇava position. The *aṣṭāṅga yoga* (*yoga* with eight accessories) is often recommended and was often practised by the early adherents of the Śrīvaiṣṇava faith, as has already been explained. The *Mārkaṇḍeya-saṃhitā* consists of thirty-two chapters, speaks of 108 *saṃhitās*, and gives a list of ninety-one *saṃhitās*¹. The *Viṣvakṣena-saṃhitā* consists of thirty-one chapters. It is a very old work and has often been utilized by Rāmānuja, Saumya Jāmātṛ muni and others. The *Hiranya-garbha-saṃhitā* consists of four chapters.

Philosophy of the Jayākhyā and other Saṃhitās.

The Pañcarātra literature is, indeed, vast, but it has been shown that most of this literature is full of ritualistic details and that there is very little of philosophy in it. The only *saṃhitās* (so far as they are available to us) which have some philosophical elements in them are the *Jayākhyā-saṃhitā*, *Ahīrbudhnyā-saṃhitā*, *Viṣṇu-saṃhitā*, *Vihagendra-saṃhitā*, *Parama-saṃhitā* and *Pauṣkara-saṃhitā*; of these the *Ahīrbudhnyā* and the *Jayākhyā* are the most important.

The *Jaya* starts with the view that merely by performance of the sacrifices, making of gifts, study of the Vedas, and expiatory penances, one cannot attain eternal Heaven or liberation from bondage. Until we can know the ultimate reality (*para-tattva*) which is all-pervasive, eternal, self-realized, pure consciousness, but which through its own will can take forms, there is no hope of salvation. This ultimate reality resides in our hearts and is in itself

¹ These are also in MS. Schrader enumerates them in his *Introduction to Pañcarātra*.

devoid of any qualities (*nir-guṇa*), though it lies hidden by the qualities (*guṇa-guhyā*) and is without any name (*a-nāmaka*).

A number of sages approached Śāṇḍilya in the mountain of Gandhamādana with inquiry concerning the manner in which this ultimate reality may be known. Śāṇḍilya in reply said that this science was very secret and very ancient, and that it could be given only to true believers who were ardently devoted to their preceptors. It was originally given to Nārada by Viṣṇu. The Lord Viṣṇu is the object of our approach, but He can be approached only through the scriptures (*Śāstra*); the *Śāstra* can be taught only by a teacher. The teacher therefore is the first and primary means to the attainment of the ultimate reality through the instructions of the scriptures.

The *Jayākhya-saṃhitā* then describes the three kinds of creation, of which the first is called *Brahma-sarga*, which is of a mythological character; it is stated that in the beginning Brahmā was created by Viṣṇu and that he, by his own egoism, polluted the creation which he made and that two demons, Madhu and Kaiṭabha, produced from two drops of sweat, stole away the Vedas and thus created great confusion. Viṣṇu fought with them by His physical energies, but was unsuccessful. He then fought with them by His “*mantra*” energy and thus ultimately destroyed them.

The second creation is that of the evolution of the Sāṃkhya categories. It is said in the *Jayākhya-saṃhitā* that in the *pradhāna* the three *guṇas* exist together in mutual unity. Just as in a lamp the wick, the oil and the fire act together to form the unity of the lamp, so the three *guṇas* also exist together and form the *pradhāna*. Though these *guṇas* are separate, yet in the *pradhāna* they form an inseparable unity (*bhīnam ekātma-lakṣaṇam*). These *guṇas*, however, are separated out from this state of union, and in this order of separation *sattva* comes first, then *rajas* and then *tamas*. From the threefold unity of the *guṇas* the *buddhi-tattva* is evolved, and from this are produced the three kinds of *ahaṃkāra*, *prakāśātmā*, *vikṛtyātmā* and *bhūtātmā*. From the first kind of *ahaṃkāra*, as *taijasa* or as *prakāśātmā*, the five cognitive senses and the *manas* are produced. From the second kind of *ahaṃkāra* the five conative senses are evolved. From the *ahaṃkāra* as *bhūtātmā* the five *bhūta-yoni* or sources of elements (otherwise called the five *tan-mātra*) are produced, and from these are derived the five gross elements. The *prakṛti* is unintelligent and material in nature, and

so, as may well be expected, the evolution from *prakṛti* is also material in nature. The natural question in this connection is: how can matter begin to produce other material entities? The answer given to this question is that, though both a paddy seed and a piece of rice are material by nature, yet there is productivity in the former, but not in the latter; so, though the *prakṛti* and its evolutes are both material in nature, yet one is produced out of the other. The products of the unintelligent *prakṛti*, being suffused with the glow of the self as pure consciousness, one with Brahman, appear as being endowed with consciousness¹. Just as a piece of iron becomes endowed with magnetic powers, so the *prakṛti* also becomes endowed with intelligence through its association with the intelligent self in unity with Brahman. The question, however, arises how, since matter and intelligence are as different from each other as light from darkness, there can be any association between the unconscious *prakṛti* and the pure intelligence. To this the reply is that the individual soul (*jīva*) is a product of a beginningless association of *vāsanā* with pure consciousness. For the removal of this *vāsanā* a certain power emanates from Brahman and, impelled by His will, so works within the inner microcosm of man that the pure consciousness in the *jīva* is ultimately freed from the *vāsanā* through the destruction of his *karma*, and he becomes ultimately one with Brahman. The *karma* can bear fruits only when they are associated with their receptacle, the *vāsanā*. The self, or the soul, is brought into association with the *guṇas* by the energy of God, and it can thereby come to know its own *vāsanā*, which are non-intelligent by nature and a product of the *guṇa*². So long as the self is in association with the covering of *māyā* it experiences good and evil. The association of consciousness with matter is thus effected through the manifestation of a special energy of God by which the self is made to undergo the various experiences through its association with *māyā*. As soon as the bond is broken, the self as pure consciousness becomes one with Brahman.

Jayākhya-saṃhitā (MS.), III. 14.

When this section was written the *Jayākhya-saṃhitā* was not published. It has since been published in the Gaekwad's oriental series.

² *māyāmāye devīā-dhāre guṇā-dhāre tato jaḍe
śaktyā saṃyojito hy ātmā vetty ātmīyās ca vāsanāḥ.* *Ibid.* III. 24.

The third creation is the pure creation (*śuddha-sarga*), in which God, otherwise called Vāsudeva, evolved from out of Himself three subsidiary agents, Acyuta, Satya and Puruṣa, which are in reality but one with Him and have no different existence. In His form as Puruṣa God behaves as the inner controller of all ordinary gods, whom He goads and leads to work. And it is in this form that God works in all human beings bound with the ties of *vāsanā*, and directs them to such courses as may ultimately lead them to the cessation of their bondage.

God is pure bliss and self-conscious in Himself. He is the highest and the ultimate reality beyond all, which is, however, self-existent and the support of all other things. He is beginningless and infinite and cannot be designated either as existent or as non-existent (*na sat tan nāsad ucyate*). He is devoid of all *guṇas*, but enjoys the various products of the *guṇas*, and exists both inside and outside us. He is omniscient, all-perceiving, the Lord of all and all are in Him. He combines in Him all energies, and is spontaneous in Himself with all His activities. He pervades all things, but is yet called non-existent because He cannot be perceived by the senses. But, just as the fragrance of flowers can be intuited directly, so God also can be intuited directly¹. All things are included in His existence and He is not limited either in time or in space. Just as fire exists in a red-hot iron-ball as if it were one therewith, so does God pervade the whole world. Just as things that are imaged on a mirror may in one sense be said to be in it and in another sense to be outside it, so God is in one sense associated with all sensible qualities and in another sense is unassociated therewith. God pervades all the conscious and the unconscious entities, just as the watery juice pervades the whole of the plant². God cannot be known by arguments or proof. His all-pervading existence is as unspeakable and undemonstrable as the existence of fire in wood and butter in milk. He is perceivable only through direct intuition. Just as logs of wood enter into the fire and are lost in it, just as rivers lose themselves in the ocean, so do the Yogins enter into the essence of God. In such circumstances there is difference between the rivers and the ocean into which they fall, yet the dif-

¹ *sva-saṃvedyaṃ tu tad viddhi gandhaḥ puṣpādiko yathā.*

Jayākhya-saṃhitā, iv. 76.

² *cetanā-cetanāḥ sarve bhūtāḥ sthāvara-jaṅgamāḥ
pūritāḥ paramēśena rasenaṣadhayo yathā.*

Ibid. iv. 93.

ference cannot be perceived¹. There is thus both a difference between the waters of the rivers and the ocean and an absence of difference, even as between the devotees of God and God. The doctrine here preached is thus a theory of *bhedābheda* or unity-in-difference.

Brahman is here described as being identical with consciousness, and all objects of knowledge (*jñeya*) are regarded as existing inside the mind². The true knowledge is unassociated with any qualifications, and it can rise only through the process of Yogic practice by those who have learnt to be in union with God³.

When through the grace of God one begins to realize that all the fruits of actions and all that one does are of the nature of the *guṇas* of *prakṛti*, there dawns the spiritual inquiry within one, as to one's own nature, and as to the nature of the essence of sorrow, and one approaches the true preceptor. When the devotee continues to think of the never-ending cycle of rebirths and the consequent miseries of such transitoriness and other afflictions associated with it, and also undergoes the various bodily disciplines as dictated by his Gurus, and is initiated into the "*mantras*," his mind becomes disinclined to worldly joys and pure like the water in the autumn, or the sea without any ripple, or like a steady lamp unfluttered by the wind. When the pure consciousness dawns in the mind, all possible objects of knowledge, including the ultimate object of knowledge, arise in the mind, and the thought and the object become held together as one, and gradually the Supreme knowledge and cessation that brings "*Nirvāṇa*" are secured. All that is known is in reality one with the thought itself, though it may appear different therefrom. This ultimate state is indescribable through language. It can only be felt and realized intuitively without the application of logical faculty or of the sense-organs. It can be referred to only by means of images. It is transcendental by nature, ultimate and absolutely without any support. It is the mere being which reveals itself in the joy of the soul. Of the two ways of

Samādhi which proceed through absorptive emotions (*bhāva-jā*) and the way of the practice of *mantras* it is the latter that is the more efficacious. The practice of *mantras* removes all obstacles to self-realization produced by *māyā* and its products.

In describing the emanation of Acyuta, Satya and Puruṣa from Vāsudeva, the *Jayākhya-saṃhitā* holds that such an emanation occurs only naturally and not as a result of a purposive will; and the three entities, Acyuta, Satya and Puruṣa, which evolve out of Vāsudeva, behave as one through mutual reflections, and in this subtle form they exist in the heart of men as the operative energy of God, gradually leading them to their ultimate destination of emancipation and also to the enjoyment of experiences.

The *Jayākhya-saṃhitā* describes knowledge as two-fold, as *sattākhya* (static) and as *kriyākhya* (dynamic). The *kriyākhya-jñāna* involves the moral disciplines of *yama* and *niyama*, and it is by the continual habit and practice of the *kriyākhya-jñāna* of *yama* and *niyama* that the *sattākhya-jñāna*, or wisdom, may attain its final fulfilment. The *yama* and the *niyama* here consist of the following virtues: purity, sacrifice, penance, study of the Vedas, absence of cruelty, and ever-present forgiveness, truthfulness, doing good to all creatures including one's enemies, respect for the property of others, control of mind, disinclination of mind to all things of sensual enjoyment, bestowing gifts upon others according to one's own power, speaking true and kind words, constancy of mind to friends and enemies, straightforwardness, sincerity and mercifulness to all creatures. The equilibrium of the three *guṇas* is called *Avidyā*, which may be regarded as the cause of attachment, antipathy and other defects. *Ātman* is the term used to denote the pure consciousness, as tinged with *guṇas*, *avidyā* and *māyā*.

The position described above leads to the view that God emanates from Himself as His tripartite energy, which forms the inner microcosm of man. It is by virtue of this energy that the pure consciousness in man comes into association with his root-instincts and psychosis in general, by virtue of which the psychical elements, which are themselves unconscious and material, begin to behave as intelligent. It is by virtue of such an association that experience becomes possible. Ultimately, however, the same indwelling energy separates the conscious principle from the unconscious elements and thereby produces emancipation, in which the conscious element

of the individual becomes merged in Brahman. The association of the conscious element with the unconscious psychosis, which has evolved from *prakṛti*, is not due to a false imaging of the one or the other, or to an illusion, but to the operative power of the indwelling energy of God, which exists in us. The individual, called also the *Ātman*, is the product of this forced association. When the complex element is disassociated from the psychosis and the root-instincts, it becomes merged in Brahman, of which it is a part and with which it exists in a state of unity-in-difference. The difference between this view and that of the *Sāṃkhya* is that, though it admits in general the *Sāṃkhya* view of evolution of the categories from *prakṛti*, yet it does not admit the theory of *Puruṣa* and the transcendental illusion of *Puruṣa* and *prakṛti*, which is to be found in the classical *Sāṃkhya* of Īśvara kṛṣṇa. There is no reference here to the teleology in *prakṛti* which causes its evolution, or to the view that the *prakṛti* is roused to activity by God or by *Puruṣa*. *Prakṛti* is supposed here to possess a natural productive power of evolving the categories from out of itself.

The *Jayākhya-saṃhitā* speaks of the devotee as a *yogin* and holds that there are two ways of arriving at the ultimate goal, one through absorptive trance, and the other through the practice of concentration on the *mantras*. In describing the process of *Yoga*, it holds that the *yogin* must be a man who has his senses within his absolute control and who is devoid of antipathy to all beings. Full of humility, he should take his seat in a lonely place and continue the practice of *prāṇāyāma* for the control of mind. The three processes of *prāṇāyāma*, viz. *pratyāhāra*, *dhyāna*, and *dhāraṇā*, are described. Then, *Yoga* is stated to be of three kinds, *prākṛta*, *pañcāyama* and *aiśvarya*, the meaning of which is not very clear. It may, however, be the meditation on *prakṛti*'s ultimate principle, or on *Puruṣa*, or the *Yoga* which is intended for the attainment of miraculous power. Four kinds of *āsana*s are described, namely, that of *Paryāṅka*, *Kamala*, *Bhadra* and *Svastika*. The *Yogic* posture is also described. The control of the mind, which again is regarded as the chief aim of *yoga*, may be of two kinds, namely, of those tendencies of mind which are due to environments and of those that are constitutional to the mind. It is by increasing the *sattva* quality of the mind that it can be made to fix itself upon an object. In another classification we hear of three kinds of *yoga*, *sakala*

niṣkala and *Viṣṇu*, or *sabda*, *vyoma* and *sa-vigraha*. In the *sakala* or the *sa-vigraha* type of *yoga* the *yogin* concentrates his mind on the gross idol of the deity; and then gradually, as he becomes habituated, he concentrates his mind on the notion of a glowing circular disc; then on the dimension of a pea; then on the dimension of a horse-hair; then on a human hair of the head; then on the human hair of the body; and as a consequence of the perfection of this practice the path of the *brahma-randhra* opens up for him. In the *niṣkala* type of *yoga* the *yogin* meditates upon the ultimate reality, with the result that his own essence as Brahman is revealed to him. The third form consists in the meditation on the *mantras*, by which course also the ultimate reality is revealed to the *yogin*. Through the process of the *yoga* the *yogin* ultimately passes out by the channel of his *brahma-randhra* and leaves his body, after which he attains unity with the ultimate reality, Vāsudeva¹.

In the fourth chapter of the *Viṣṇu-Saṃhitā* (Manuscript) the three *guṇas* are supposed to belong to *Prakṛti*, which, with its evolutes, is called *Kṣetra*, God being called *Kṣetrajña*². The *prakṛti* and God exist together as it were in union³. The *prakṛti* produces all existences and withdraws them within it in accordance with the direction or the superintendence of the *Puruṣa*⁴, though it seems to behave as an independent agent. *Puruṣa* is described as an all-pervading conscious principle.

The *Viṣṇu-saṃhitā*, after describing the three kinds of egoism as *sāttvika*, *rājasa* and *tāmasa*, speaks of the *rājasa ahaṃkāra* not only as evolving the conative senses but also as being the active principle directing all our cognitive and conative energies. As the cognitive energy, it behaves both as attention directed to sense-perception and also to reflection involving synthetic and analytic activities. The *Viṣṇu-saṃhitā* speaks further of the five powers of God, by which the Lord, though absolutely qualityless in Himself, reveals Himself through all the sensible qualities. It is probably in this way that all the powers of *prakṛti* exist in God, and it is in this

¹ *Jayākhya-saṃhitā*, Ch. 33. In Ch. 34 the process of *yoga* by which the *yogin* gradually approaches the stage of the final destruction of his body is described.

² *kṣetrākhyā prakṛtir jñeyā tad-vit kṣetra-jña īśvaraḥ.*

Viṣṇu-saṃhitā, iv.

³ *ubhayaṃ cedam atyantam abhinnaṃ iva tiṣṭhati.* *Ibid.*

⁴ *tan-niyogāt svatantreṇa sūte bhāvān haraty api.* *Ibid.*

sense that the *kṣetra* or the *prakṛti* is supposed to be *abhinna*, or one with God. These powers are (1) *cic-chakti*¹, that is, power of consciousness, which is the unchangeable ground of all works. Second is His power as the enjoyer, or *puruṣa*. The third power is the causal power, manifested as the manifold universe. The fourth power is the power by which sense-objects are grasped and comprehended in knowledge. The fifth power is that which resolves knowledge into action. The sixth power is the power that reveals itself as the activity of thought and action². It seems, therefore, that what has been described above as *puruṣa*, or enjoyer, is not a separate principle, but the power of God; just as *prakṛti* itself is not a separate principle, but a manifestation of the power of God.

The process of *Bhāgavata-yoga* described in *Viṣṇu-saṁhitā* consists primarily of a system of bodily and moral control, involving control of the passions of greed, anger, etc., the habit of meditation in solitary places, the development of a spirit of dependence on God, and self-criticism. When, as a result of this, the mind becomes pure and disinclined to worldly things, there arises an intellectual and moral apprehension of the distinction of what is bad and impure from what is good and pure, whence attachment, or *bhakti*, is produced. Through this attachment one becomes self-contented and loyal to one's highest goal and ultimately attains true knowledge. The process of *prāṇāyāma*, in which various kinds of meditations are prescribed, is also recommended for attainment of the ultimate union with God, which is a state of emancipation. The view here taken of *bhakti*, or devotion, shows that *bhakti* is used here in the simple sense of inclination to worship, and the means to the fruition of this worship is *yoga*. The so-called *bhakti*-school of the *Bhāgavatas* was so much under the influence of the *yoga*-system that a *bhakta* was required to be a *yogin*, since *bhakti* by itself was not regarded as a sufficient means to the attainment of salvation. In the tenth chapter of the *Parama-saṁhitā* the process of *yoga* is described in a conversation between *Brahmā* and *Parama*. It is said there that the knowledge attained by *yoga* is better than any other

³ *tasmāt sarva-prayatnena bhākto yogī bhavet sadā. Ibid. Ch. 30.*

kind of knowledge. When deeds are performed without *yoga* wisdom, they can hardly bring about the desired fruition. *Yoga* means the peaceful union of the mind with any particular object¹. When the mind is firmly fixed on the performance of the deed, it is called *karma-yoga*². When the mind is unflinchingly fixed on knowledge, it is called *jñāna-yoga*³. He, however, who clings to the Lord Viṣṇu in both these ways attains ultimately supreme union with the highest Lord. Both the *jñāna-yoga* and the *karma-yoga*, as the moral discipline of *yama* and *niyama* on the one hand and *vairāgya* (disinclination) and *saṃādhi* on the other, are ultimately supported in Brahman. It may be remembered that in the *Gītā*, *karma-yoga* means the performance of the scriptural caste-duties without any desire for their fruits. Here, however, the *karma-yoga* means *yama* and *niyama*, involving *vrata*, fasting (*upavāsa*) and gifts (*dāna*), and probably also some of the virtues of diverse kinds of self-control. The term *vairāgya* means the wisdom by which the senses are made to desist from their respective objects; and the term *saṃādhi* means the wisdom by which the mind stays unflinchingly in the Supreme Lord. When the senses are through *vairāgya* restrained from their respective objects, the mind has to be fixed firmly on the Supreme Lord, and this is called *yoga*. Through continual practice, as the *vairāgya* grows firm, the *vāsanās*, or the root-instincts and desires, gradually fall off. It is advised that the *yogin* should not make any violent attempt at self-control, but should proceed slowly and gently, so that he may, through a long course of time, be able to bring his mind under complete control. He should take proper hygienic care of himself as regards food and other necessities for keeping the body sound and should choose a lonely place, free from all kinds of distractions, for his *yoga* practice. He should not on any account indulge in any kind of practice which may be painful to his body. He should further continue to think that he is dependent on God and that birth, existence and destruction are things which do not belong to him. In this way the pure *bhakti* will rise in his mind,

³ *yadi tu jñāna evārthe cittam badhnāti nirvyathāḥ
jñāna-yogaḥ sa vijñeyāḥ sarva-siddhi-karaḥ śubhaḥ.* *Ibid.*

through which he will gradually be able to extract the root of attachment. He should also train himself to think of the evils of alluring experiences which have not yet been enjoyed, and he should thus desist from attaching himself to such experiences.

As regards the preference of *karma-yoga* to *jñāna-yoga* and *vice versa*, the view maintained here is that there can be no rule as regards the preference. There are some who are temperamentally fitted for *karma-yoga* and others for *jñāna-yoga*. Those who are of a special calibre should unite both courses, *karma-yoga* and *jñāna-yoga*.

Philosophy of the Ahirbudhnya-saṃhitā.

In the *Ahirbudhnya-saṃhitā* Ahirbudhnya says that after undergoing a long course of penance he received from Saṃkarṣaṇa true knowledge and that this true knowledge was the science of Sudarśana, which is the support of all things in the world¹. The ultimate reality is the beginningless, endless and eternal reality, which is devoid of all names and forms, beyond all speech and mind, the omnipotent whole which is absolutely changeless. From this eternal and unchangeable reality there springs a spontaneous idea or desire (*saṃkalpa*). This Idea is not limited by time, space or substance. Brahman is of the nature of intuition, of pure and infinite bliss (*niḥśīma-sukhānubhava-lakṣaṇa*), and He resides everywhere and in all beings. He is like the waveless sea. He has none of the worldly qualities which we find in mundane things. He is absolutely self-realized and complete in Himself, and cannot be defined by any expressions such as "this" or "such." He is devoid of all that is evil or bad and the abode of all that is blissful and good. The Brahman is known by many names, such as "*paramātmān*," "*ātman*," "*bhagavān*," "*vāsudeva*," "*avyakta*," "*prakṛti*," "*pradhāna*," etc. When by true knowledge the virtues and sins accumulated during many lives are destroyed, when the root-instincts or tendencies called *ṛāsanā* are torn asunder and the three *guṇas* and their products cease to bind a person, he directly realizes the nature of Brahman or the absolute reality, which can neither be described

¹ *sudarśana-svarūpaṃ tat procyamānaṃ mayā śṛṇu
śrute yatrā khilādhāre saṃśayās te na santi vai.*

Ahirbudhnya-saṃhitā, III. 2. 5.

nor defined by language as “this” or as “such.” The Brahman intuitively perceives all things and is the soul of all, and therefore, the past, present and the future have all vanished away from Him. Brahman does not exist therefore in time, as He is beyond time. Similarly He is beyond all primary and secondary qualities, and yet he possesses the six qualities. Of the qualities knowledge is regarded as the first and the foremost. It is spiritual and self-illuminating; it enters into all things and reflects them, and is eternal. The essence of Brahman is pure consciousness, and yet He is regarded as possessing knowledge as a quality¹. The power (*śakti*) of Brahman is regarded as that by which He has originated the world². The spontaneous agency (*karṭṛtva*) of God is called His majesty (*aiśvarya*). His strength (*bala*) is that by virtue of which He is never fatigued in His untiring exertion. His energy (*vīrya*) is that by virtue of which, being the material cause of the world, He yet remains unchanged in Himself. His self-sufficiency (*tejas*) is that by virtue of which He creates the world by His own unaided efforts. These five qualities are, however, all regarded as qualities of knowledge, and knowledge alone is regarded as the essence of God. When such a Brahman, which is of the nature of knowledge and is endowed with all qualities, resolves Himself into the idea of splitting Himself into the many, it is called Sudarśana.

The powers of all things are in themselves of an unspeakable nature and cannot exist separately (*a-prthak-sthita*) from the substances in which they inhere. They are the potential or subtle states of the substance itself, which are not perceived separately in themselves and cannot be defined as “this” or “not this” in any way, but can only be known from their effects³. So God has in Him the power (*śakti*) which exists as undifferentiated from Him, as the moonbeam from the moon. It is spontaneous, and the universe is but a manifestation of this power. It is called bliss (*ānanda*), be-

¹ *ajaḍaṃ svā-tma-saṃbodhi nityaṃ sarvā-vagāhanam

cause it does not depend on anything (*nirapekṣatayānanda*); it is eternal (*nitya*), because it is not limited in time; it is complete (*pūrṇa*), because it is not limited by any form; it manifests itself as the world and is therefore called *Lakṣmī*¹. It contracts itself into the form of the world and is therefore called *Kuṇḍalinī*; and it is called *Viṣṇu-śakti* because it is the supreme power of God. The power is in reality different from Brahman; but yet it appears as one therewith. With this power He is always engaged in an eternal act of creation, untired, unfatigued, and unaided by any other agent (*satataṃ kurvato jagat*)². The power of God manifests itself in two ways, as static entities such as *avyakta*, *kāla* and *puruṣa* and as activity. *Śakti*, or power of God as activity (*kriyā*), is spontaneous and of the nature of will and thought resulting in action³. This is also called *saṃkalpa*, or the Idea, which is irresistible in its movement whereby it produces all material objects and spiritual entities, such as *avyakta*, *kāla* and *puruṣa*⁴. It is this power, which is otherwise designated as *lakṣmī* or *viṣṇu-śakti*, that impels the *avyakta* into the course of evolution, and the *puruṣa* to confront the products of *prakṛti* and run through the experiences. When it withdraws these functions from these entities, there is *pralaya* or dissolution. It is by the force of this power that at the time of creation the *prakṛti* as the composite of the three *guṇas* is urged into creative evolution. The association of the *puruṣa* with the *prakṛti* also is brought about by the same power. This Idea is vibratory by nature and assumes diverse forms, and thus by its various transformations produces various categories⁵.

In the original state all the manifold world of creation was asleep, as it were, in an equilibrium in which all the qualities of God were completely suspended, like the sea when there are no waves ruffling its breast. This power, which exists in an absolutely static or suspended state, is pure vacuity or nothingness (*śūnyatva-rūpiṇī*); for it has no manifestation of any kind. It is self-dependent

and no reason can be assigned as to why it suddenly changes itself from a potential to an actual state¹. It is one and exists in identity with the Brahman, or the ultimate reality. It is this power which creates as its own transformation all categories pure and impure and all material forms as emanations from out of itself. It manifests itself as the *kriyā*, the *vīrya*, *tejas* and the *bala* of God, mere forms of its own expression and in all forms of duality as subject and object, as matter and consciousness, pure and impure, the enjoyer and the enjoyed, the experiencer and the experienced, and so on. When it moves in the progressive order, there is the evolutionary creation; and, when it moves in the inverse order, there is involution.

From a pair of two different functions of this power the different forms of pure creation come into being. Thus from knowledge (*jñāna*) and the capacity for unceasing work of never-ending creation (*bala*) we have the spiritual form of Saṃkarṣaṇa. From the function of spontaneous agency (*aiśvarya*) and the unaffectedness in spite of change (*vīrya*) is generated the spiritual form of Pradyumna; and from the power that transforms itself into the world-forms (*śakti*) and the non-dependence on accessories (*tejas*) is produced the form as Aniruddha. These three spiritual forms are called *vyūha* (conglomeration) because each of them is the resultant of the conglomeration of a pair of *guṇas*. Though the two *guṇas* predominate in each *vyūha*, yet each *vyūha* possesses the six qualities (*ṣaḍ-guṇa*) of the Lord; for these are all but manifestations of Viṣṇu². Each of these forms existed for 1600 years before the next form emanated from it, and at the time of the involution also it took 1600 years for each lower form to pass into the higher form. Schrader, alluding to the *Mahā-Sanatkumāra-Saṃhitā*, says: "Vāsudeva creates from His mind the white goddess Śānti and together with her Saṃkarṣaṇa or Śiva; then from the left side of the latter is born the red goddess Śrī, whose son is Pradyumna or Brahman; the latter, again, creates the yellow Sarasvatī and to-

gether with her Aniruddha or Puruṣottama, whose Śakti becomes the black Rati, who is the threefold *Māyā-kośa*.”¹ Schrader further draws attention to the fact that these couples are all outside the *brahmāṇḍa* and are therefore different in nature from the mundane gods, such as Śiva, etc. The *vyūhas* are regarded as fulfilling three different functions, (1) the creation, maintenance and destruction of the world; (2) the protection of the mundane beings; and (3) lending assistance to those devotees who seek to attain the ultimate emancipation. Saṃkarṣaṇa exists as the deity superintending all the individual souls and separates them from the *prakṛti*². The second spiritual form superintends the minds (*manas*) of all beings and gives specific instruction regarding all kinds of religious performances. He is also responsible for the creation of all human beings and from among them such beings as have from the beginning dedicated their all to God and become absolutely attached to Him³. As Aniruddha, he protects the world and leads men to the ultimate attainment of wisdom. He is also responsible for the creation of the world, which is an admixture of good and evil (*miśra-varga-sṛṣṭim ca karoti*)⁴. These three forms are in reality but one with Vāsudeva. These *avatāras* are thus the pure *avatāras* of Viṣṇu.

In addition to these there are two other forms of manifestation, called *āveśāvatāra* and *sākṣād-avatāra*. The former is of two kinds, *svarūpāveśa* (as in the case of *avatāras* like Paraśurāma, Rāma, etc.) and *śakty-āveśa* (as the influx of certain special functions or powers of God, e.g. in the case of Brahmā or Śiva, who are on special occasions endowed with certain special powers of God). These secondary *āveśāvatāras* are by the will of God produced in the form of human beings, as Rāma, Kṛṣṇa, in the form of animals, as the Boar, the Fish and the Man-lion, or even as a tree (the crooked mango tree in the Daṇḍaka forest). These forms are not the original transcendental forms of God, but manifest divine functions

⁴ *Ibid.* p. 128.

through the will of God¹. The primary forms (*sākṣād-avatāra*) of incarnation are derived directly from the part of the Lord just as a lamp is lighted from another, and they are thus of a transcendent and non-mundane nature. Those who seek to attain liberation should worship these transcendent forms, but not the others². The *Viṣvaksena-saṃhitā* quoted in the *Tattva-traya* considers Brahman, Śiva, Buddha, Vyāsa, Arjuna, Pāvaka and Kuvera as inspired persons or *āveśāvatāras* who should not be worshipped by those who seek liberation. Another *saṃhitā* quoted there includes Rāma, Ātreya and Kapila in the list.

Again, from each *vyūha* three subsidiary *vyūhas* are said to appear. Thus from Vāsudeva we have, Keśava, Nārāyaṇa, and Mādhava; from Saṃkarṣaṇa arise Govinda, Viṣṇu and Madhusūdana; from Pradyumna arise Trivikrama, Vāmana and Śrīdhara, and from Aniruddha arise Hṛṣīkeśa, Padmanābha and Dāmodara. These are regarded as the deities superintending each month, representing the twelve suns in each of the *rāśis*. These gods are conceived for purposes of meditation. In addition to these, thirty-nine *vibhava* (manifesting) *avatāras* (incarnations) also are counted in the *Ahīrbudhnyā-saṃhitā*³. The objects for which these incarnations are made are described by Varavara as, firstly, for giving com-

Ibid. p. 131.

³ *Ahīrbudhnyā-saṃhitā, p. 46.* According to the *Viṣvaksena-saṃhitā* all the *avatāras* have come straight from Aniruddha or through other *avatāras*. Thus Brahman comes from Aniruddha and from him Maheśvara; Hayaśirṣa comes from Matsya, a manifestation of Kṛṣṇa. According to the *Padma-tantra*, Matsya, Kūrma and Varāha come from Vāsudeva, Nṛsiṃha, Vāmana, Śrīrāma, and Paraśurāma from Saṃkarṣaṇa, Balarāma from Pradyumna and Kṛṣṇa and Kalki from Aniruddha (*Padma-tantra*, 1. 2. 31, etc.). But according to the *Lakṣmī-tantra* (11. 55) all the *vibhavas* come from Aniruddha. There is another kind of *avatāra*, called *arcāvatāra*. The image of Kṛṣṇa, Nṛsiṃha, etc., when duly consecrated according to the *Vaiṣṇava* rites, becomes possessed with the power of Viṣṇu and attains powers and influences which can be experienced by the devotee (*Viṣvaksena-saṃhitā*, quoted in *Tattva-traya*). In the aspect in which Aniruddha controls all beings as their inner controller, he is regarded as the *antaryāmy-avatāra*. There are thus four kinds of *avatāras*, *vibhava*, *āveśa*, *arcā* and *antaryāmin*. The thirty-nine *vibhava avatāras* are Padmanābha, Dhruva, Ananta,

panionship in mundane forms to those saints who cannot live without it, and this is the interpretation of the word *paritrāṇa* (protection) in the *Gītā*; secondly, for destroying those who are opposed to the saints; thirdly, for establishing the Vedic religion, the essence of which is devotion to God¹.

In the form as *antaryāmin*, or the inner controller, the Lord resides in us as the inner controller of the self, and it is through His impulsion that we commit evil deeds and go to Hell or perform good deeds and go to Heaven. Thus we cannot in any way escape

Śaktyātman, Madhusūdana, Vidyāhideva, Kapila, Viśvarūpa, Vihaṅgama, Kroḍātman, Vaḍavāvakra, Dharma, Vāgiśvara, Ekārṇavaśāyin, Kamaṭheśvara, Varāha, Narasiṃha, Piyūṣaharaṇa, Śrīpati, Kāntātman, Rāhuji, Kālanemighna, Pārijāhara, Lokanātha, Śāntātman, Dattātreyā, Nyagrodhaśāyin, Ekaśṛṅgatanu, Vāmanadeva, Trivikrama, Nara, Nārāyaṇa, Hari, Kṛṣṇa, Paraśurāma, Rāma, Vedavid, Kalkin, Pātālaśayana. They are of the nature of *tejas* and are objects of worship and meditation in their specific forms, as described in the *Sātvata-saṃhitā* (xii), or in the *Ahīrbudhya-saṃhitā* (lxvi). In the Nārāyaṇīya section of the *Mahābhārata* Vihaṅgama or Haṃsa, Kamaṭheśvara or Kūrma, Ekaśṛṅgatanu or Matsya, Varāha, Nṛsiṃha, Vāmana, Paraśurāma, Rāma, Vedavid and Kalkin are mentioned as the ten *avatāras*. The *avatāra* Kroḍātman, Lokanātha and Kāntātman are sometimes spoken of as Yajña Varāha, Manu Vaivasvata and Kāma respectively. The latter is sometimes spoken of probably as Dhanvantari (see Schrader's *Pañcarātra*, p. 45). The twenty-three *avatāras* spoken of in the *Bhāgavata-purāṇa* (1. 3) are all included in the above list. It is, however, doubtful whether Vāgiśvara is the same as Hayaśīrṣa, and Śāntātman as Sanaka or Nārada, as Schrader says. The *vibhava-avatāras* mentioned in Rūpa's *Laghu-bhāgavatāmṛta* are mostly included in the above list, though some names appear in slightly different form. Following the *Brahma-saṃhitā*, Rūpa, however, regards Kṛṣṇa as the real form (*svayam-rūpa*) of God. According to him, being one with God, He may have His manifestations in diverse forms. This is called *avatāra* as *ekātma-rūpa*. This *ekātma-rūpa-avatāra* may again be of two kinds, *sva-vilāsa* and *svā-ṁśa*. When the *avatāra* is of the same nature as the Lord in powers and other qualities, He is called a *svāṁśa-avatāra*. Thus, Vāsudeva is called a *sva-vilāsa-avatāra*. But when the *avatāra* has inferior powers, He is called a *svā-ṁśa-avatāra*. Saṃkarṣaṇa, Pradyumna, Aniruddha, Matsya, Kūrma, etc., are thus called *svā-ṁśa-avatāra*. When God, however, infuses one only with parts of His qualities, he is called an *āveśa-avatāra*. Nārada, Sanaka, etc., are called *āveśa-avatāras*. The manifestation of the Lord in the above forms for the good of the world is called *avatāra*.

*pūrho-cta-viśva-kāryā-rthām a-pūrvā iva cet svayam
dvārā-ntareṇa vā' viḥ-syur avatārās tadā smyātā*

Laghu-bhāgavatāmṛta, p. 22.

The *aṁśavatāra* is sometimes called *puruṣavatāra*, while the manifestation of special qualities as in Brahmā, Viṣṇu, Śiva, etc., is called *guṇavatāras*. The *vibhāvavatāras* are generally regarded as *līlavatāras*; vide also *Sātvata-saṃhitā*, Ch. ix (77-84) and Ch. xii.

¹ *Tattva-traya*, p. 138. The word *sādhū* is here defined as “*nirmatsarāḥ mat-samāśrayaṇe pravṛttāḥ man-nāma-karma-svarūpāṇāṃ vān-manasā-gocaratayā mad-darśanena vinā ātma-dhāraṇa-poṣanādikam alabhamānāḥ kṣaṇa-mātra-kālām kalpa-sahasraṃ manvānāḥ praśīthīla-sarva-gātrā bhaveyuh.*”

from this inner controller. In another of His forms He stays within our heart as the object of our meditation¹. Again, when certain images are made of earth, stone, or metals, and they are properly installed with proper ceremonials, these are inspired with the presence of God and with His special powers. These are called *arcāvatāras*, or image-incarnations, for purposes of worship by which all desirable ends may be achieved. There are thus five kinds of existence for the Lord: firstly as his absolute state (*para*), secondly as *vyūha*, thirdly as *vibhavāvatāra* (primary and secondary), fourthly as *antaryāmin*, and fifthly as *arcāvatāra*².

In the *Ahīrbudhnyā-saṃhitā* we hear also that by the power of *sudarśana*, or the divine Idea (by the activity of which the *vyūha* forms are produced), a divine location is produced which is of the nature of knowledge and bliss radiant with its (*sudarśana*'s) glow. All the experiences that are enjoyed here are blissful in their nature, and the denizens of this transcendent spiritual world who experience them are also blissful in their nature, and their bodies are constituted of knowledge and bliss³. The denizens of this world are souls emancipated in the last cycle. They remain attached, however, to the form of the deity to which they were attached in the mundane life⁴.

The Lord in the highest form is always associated with His power (*Śakti*) Lakṣmī or Śrī⁵. In the *Tattva-traya* and its commentary by Varavara we hear of three consort deities, Lakṣmī, Bhūmī and Nīlā. Schrader points out that these deities are identified (in the *Vihagendra-saṃhitā* and in the *Sītā-upaniṣad*) with will (*icchā*), action (*Kriyā*), and the direct manifesting power (*sākṣāt-śakti*). In the *Sītā-upaniṣad*, to which Schrader refers, *Sītā* is described as the Mahālakṣmī which exists in the three forms, *icchā*, *jñāna* and *kriyā*. *Sītā* is there regarded as the power which exists different from, and as one with, the supreme Lord, constituting within herself all the conscious and unconscious entities of the universe. It exists also in three forms as Lakṣmī, Bhūmī and

⁴ *Ibid.* vi. 29.

⁵ *Ibid.* vi. 25.

Nilā, as benediction, power, and as the Sun, the Moon and Fire. The third form is responsible for the development of all kinds of vegetation and all temporal determinations¹.

In the sixth chapter of the *Ahīrbudhnya-saṃhitā* the intermediate creation is described. It is said there that the power of God as the supreme ego is at once one and different from Him. The Lord cannot exist without His power nor can the power exist without Him. These two are regarded as the ultimate cause of the world. The manifestations that are revealed as the *vyūhas* and the *vibhavas* are regarded as pure, for through their meditations the *yogins* attain their desired end². From the *vyūha* and the *vibhava* proceed the impure creation (*śuddhetarā-sṛṣṭi*)². Power is of two kinds, i.e. power as activity, and power as determinants of being or existence (*bhūti-śakti*). This *bhūti-śakti* may be regarded as a moving Idea (*saṃkalpamayī mūrti*). The process of activity inherent in it may be regarded as manifesting itself in the form of ideas or concepts actualizing themselves as modes of reality. The impure creation is of a threefold nature as *puruṣa*, *guṇa* and *kāla* (time). *Puruṣa* is regarded as a unity or colony of pairs of males and females of the four castes, and these four pairs emanate from the mouth, breast, thighs and legs of Pradyumna. From the forehead, eyebrows, and ears of Pradyumna also emanate the subtle causal state of time and the *guṇas* (*sūkṣma-kāla-guṇā-vasthā*). After the emanation of these entities the work of their growth and development was left to Aniruddha, who by the fervour of his Yoga evolved the original element of time in its twofold form as *kāla* and *niyati*. He also evolved the original energy as *guṇa* into the three forms of *sattva*,

¹ Certain peculiar interpretations of the *icchā-śakti*, *kriyā-śakti* and *sākṣāt-śakti* are to be found in the *Sitā-upaniṣad*. The *Sātvata-saṃhitā* (IX. 85) describes twelve other energies such as

*lakṣmīḥ, puṣṭir, dayā nidrā, kṣamā, kāntiḥ sarasvatī,
dhṛtīr maitrī ratiḥ tuṣṭir matir dvādaśānāṃ smṛtā.*

See also Schrader's Introduction to Pañcarātra, p. 55. The theory of these energies is associated with the *avatāra* theory.

² Schrader, on the evidence of *Padma-tantra*, says that god as *para* or ultimate is sometimes identified with and sometimes distinguished from the *vyūha* Vāsudeva. The *para* Vāsudeva becomes *vyūha* Vāsudeva with His one half and remains as Nārāyaṇa, the creator of the primeval water (*māyā*). Pañcarātra, p. 53.

³ *bhūtiḥ śuddhetarā viṣṇoḥ puruṣo dvi-caturmayah
sa manūnām samāhāro brahma-kṣattrādi-bhedinām.*

Ahīrbudhnya-saṃhitā, VI. 8-9.

rajas and *tamas* in succession, i.e. the original primeval energy as *guṇa* (called sometimes *prakṛti* in cognate literature) was first evolved into *sattva guṇa*; from it evolved the *rajas*, and from the *rajas* evolved the *tamas*. This original undeveloped *guṇa* produced from Pradyumna (which, in other words, may be termed *prakṛti*) receives impregnation from the fervour of Aniruddha, and thereby evolves itself first into *sattva*, then into *rajas*, and then into *tamas*. This doctrine can therefore be regarded as *sat-kārya-vāda* only in a limited sense; for without this further impregnation from the fervour of Aniruddha, it could not by itself have produced the different *guṇas* of *sattva*, *rajas* and *tamas*¹.

Aniruddha, however, was directed by Pradyumna not only to develop the unconscious power (*śakti*) but also the *puruṣa* which exists as it were inside that power, which shows itself as *niyati* (destiny) and *kāla* (time). From the unconscious power as destiny and time evolves first the *sattva* and from it the *rajas* and from the *rajas* the *tamas*. According to the *Viṣvaksena-saṃhitā*, Aniruddha created Brahmā and Brahmā created all the men and women of the four castes².

Buddhi evolves from *tamas* and from that *ahaṃkāra* and from that evolve the five *tan-mātras*, and also the eleven senses. From the five *tan-mātras* the five gross elements are produced, and from these, all things, which are the modifications of the gross elements.

The word *puruṣa* is used here in a special sense, and not in the ordinary Sāṃkhya sense. *Puruṣa* here signifies a colony of selves, like cells in a honeycomb³. These selves are associated with the beginningless *vāsanās* or root-impressions. They are but the special

¹ *antaḥstha-puruṣaṃ śaktiṃ tām ādāya sva-mūrti-gaṇ
samvardhayati yogena hy anirudhaḥ sva-tejasā.*

Ahīrbudhnya-saṃhitā, vi. 14.

² The *Viṣvaksena-saṃhitā* criticizes in this connection the Vedic people, who did not believe in the monotheistic God but depended on the Vedic sacrificial rituals and work for the attainment of Heaven and ultimately fell down to the course of mundane life (*saṃsāra*):

*trayī-mārgeṣu niṣṭātāḥ phala-vāde ramanti te
devādīn eva marvānā na ca mām menire param
tamaḥ-prāyās tv ime kecīn mama nindāṃ prakurvate
saṃlāpoṃ kurvate vyagraṃ veda-vādeṣu niṣṭhitāḥ
mām na jānanti mohena mayi bhakti-parāṇmukhāḥ

Tattva-traya, p. 128.

sarvātmanāṃ samaṣṭir yā kośo madhu-kṛtūm iva.

Ahīrbudhnya-saṃhitā, vi. 33.

manifestations (*bhūti-bhedāḥ*) of God and are in themselves omniscient; but they are permeated by *avidyā* (ignorance) and the afflictions which are involved in its very nature, through the power of God acting in consonance with His thought-movement¹. These selves thus rendered impure and finite are called *jīvas*, and it is they who thus suffer bondage and strive for salvation, which they afterwards attain. The *puruṣa*, being made up of these selves (*jīvas*), which are impure, is also partly impure, and is therefore regarded as both pure and impure (*suddhy-aśuddhimaya*, VI. 34). This *puruṣa* contains within it the germs of all human beings, which are called *manus*. They are in themselves untouched by afflictions (*kleśa*) and the root-impression (*āśaya*), and are omniscient and impregnated through and through by God. Their association with *avidyā* through the will of God is therefore external. The germ of the caste-distinction and distinction as male and female is regarded as primordial and transcendent (compare *puruṣa-sūkta*), and the distinction is said to exist even in these *manus* which are said to be divided in four pairs. The *avidyā* imitates the spiritual movement of thought, and through it the individual selves, though pure in themselves, are besmeared with the impurities of root-impressions. These selves remain in the stage of conglomeration or association through the desire of Viṣṇu, the Lord, and this stage is called *puruṣa* (*puruṣa-pada*)². They are made to appear and disappear from the nature of God. Being a manifestation of His own nature, they are uncreated, eternally existing, entities which are the parts of the very existence (*bhūty-aśaḥ*) of God.

Through the impulse or motivation of the thought-activity of God, an energy (*śakti*) is generated from Aniruddha. Moved again by the desire of God, the aforesaid *manus* descend into this energy and remain there as a developing foetus (*tiṣṭhanti kalālībhūtāḥ*, VI. 45). The energy of Viṣṇu is of a twofold nature, as dynamic activity (*kriyākhyā*) and as determining being (*bhūti*), the latter being the result of the former³. This dynamic activity is different

Ahīrbudhnya-saṃhitā, VI. 35, 36.

² *viṣṇoḥ saṃkalpa-rūpeṇa sthītvāsmiṇ pauraṣe pade.* *Ibid.* VI. 41.

³ *kriyākhyo yo'yaṃ unmeṣaḥ sa bhūti-parivartakaḥ.* *Ibid.* VI. 29.

from God, the possessor of this energy. It is designated variously *Lakṣmī* and desire (*saṃkalpa*) or free will (*svātantrya-mūla icchātmā*). This will operates as an intellectual visualization (*prekṣā-rūpaḥ kriyā-phalaḥ*), which again produces the other manifestations of God as *avyakta*, *kāla* and *puruṣa*. At the time of each creation He associates the *avyakta* with the evolutionary tendencies, the *kāla* with its operative movement (*kalana*) and the *puruṣa* with all kinds of experiences. At the time of dissolution these powers are withdrawn.

In the foetus-like condition of the *manus* in the energy (*śakti*) of God there exist the entities of *guṇa* and *kāla*. Through the operation of the supreme energy or will of God (*Viṣṇu-saṃkalpa-coditāḥ*) there springs up from time-energy (*kāla-śakti*) the subtle Destiny (*niyati*), which represents the universal ordering element (*sarva-niyāmakāḥ*). The time and *guṇa* exist in the womb of the *śakti*. The conception of this *śakti* is thus different from that of *prakṛti* of the Sāṃkhya-Pātañjala in that the *guṇas* are the only root-elements, and time is conceived as somehow included in the operation of the *guṇas*. As the *niyati* is produced from the time-energy, the *manus* descend into this category. Later on there springs from *niyati*, time (*kāla*) through the will of God, and then the *manus* descend again into this category¹. It has already been said that the *kāla* energy and *guṇa* are co-existing elements in the primordial *śakti* of God. Now this *guṇa*-potential manifests itself in a course of gradual emergence through time. As the *sattva-guṇa* first manifests itself through time, the *manus* descend into that category and later on, with the emergence of *rajas* from *sattva* and of *tamas* from *rajas*, they descend into the *rajas* and the *tamas*. The emergence of *rajas* from *sattva* and of *tamas* from *rajas* is due to the operation of the will-activity of God (*viṣṇu-saṃkalpa-coditāt*). Though the will-dynamic of Viṣṇu is both immanent and transcendent throughout the process of succeeding emergents, yet Viṣṇu is regarded as specially presiding over *sattva*, Brahmā over *rajas*, and Rudra over *tamas*. *Tamas* is regarded as heavy (*guru*), agglutinative (*viṣṭam-*

¹ In describing the process of dissolution it is said that at one stage the universe exists only as time (*kāla*). The energy manifested in time (*kāla-gata-śaktiḥ*) is called *kāla*, and it is this energy that moves all things or behaves as the transformer of all things (*aśeṣa-prakālīnī*). *Ahīrbudhnyā-saṃhitā*, iv. 48. Time is described also as the agent that breaks up all things, just as the violence of a river breaks its banks: *Kalayaty akhilaṃ kālyāṇaṃ nadī-kūlaṃ yathā rayaḥ*. *Ibid.* vi. 51.

bhāna), delusive (*mohana*) and statical (*apravṛttimat*); *rajas* is always moving and sorrowful; *sattva* is described as light, transparent and devoid of impurities or defects and pleasurable¹. With the development of the three *guṇas* through the will of God, a part of these *guṇas* attains sameness of character, and this part is the unity of the three *guṇas* (*traiguṇya*), the equilibrium of *guṇas* (*guṇa-sāmya*), ignorance (*avidyā*), nature (*svabhāva*), cause (*yoni*), the unchangeable (*akṣara*), the causeless (*ayoni*), and the cause as *guṇa* (*guṇa-yoni*)².

This participation in equal proportions (*anyūnānatirikta*) of the *guṇas* in a state of equilibrium (*guṇa-sāmya*), which is essentially of the nature of *tamas* (*tamomaya*), is called the root (*mūla*) and the *prakṛti* by the Sāṃkhyaists, and the *manus* descending into that category by gradual stages are known by the names conglomeration (*samaṣṭi*), *puruṣa*, the cause (*yoni*), and the unchangeable (*kūṭastha*). The category of time, which is the transforming activity of the world (*jagataḥ samprakalanam*), associates and dissociates the *puruṣa* and the *prakṛti* for the production of the effects. The thought power of God, however, works through the tripartite union of time, *prakṛti* and the *manus*, behaving as the material cause, like a lump of clay, and produces all the categories beginning with *mahat* to the gross elements of earth, water, etc. Like water or clay, the *prakṛti* is the evolutionary or material cause, the *puruṣa* is the unchangeable category that contributes to the causal operation merely by its contiguity³. The category of time is the internal dynamic pervading the *prakṛti* and the *puruṣa*. The trinity of *prakṛti*, *puruṣa* and *kāla* is the basis for the development of all the succeeding categories. In this

¹ *sattvaṃ tatra laghu svaccham guṇa-rūpam anāmayam. Ahirbudhnya-saṃhitā*, vi. 52; *tad etat pracalam duḥkham rajaḥ śaśvat pravṛttimat. Ibid.* vi. 57; *guru viṣṭambhanam śaśvan mohanaṃ cāpravṛttimat. Ibid.* vi. 60.

² *sudarśanamayenai'va saṃkalpenā'tra vai hareḥ
codyamāne'pi sṛṣṭy-arthaṃ pūrṇam guṇa-yugaṃ tadā
amśataḥ sāmyam āyāti viṣṇu-saṃkalpa-coditam. Ibid.* vi. 61-62.

The passage is somewhat obscure, in so far as it is difficult to understand how the *guṇas* become partially (*amśataḥ*) similar. The idea probably is that, when the *guṇas* are moved forward for creative purposes, some parts of these *guṇas* fail to show their distinctive features, and show themselves as similar to one another. In this stage the specific characters of only these evolving *guṇas* are annulled, and they appear as one with *tamas*. The proportion of *sattva* that appears to be similar to *tamas* is also the proportion in which *tamas* becomes similar to *rajas*.

³ *payo-mrd-ādivat tatra prakṛtiḥ pariṇāminī
pumān upariṇāmī san samīdhānena kāraṇam
kālaḥ pacati tattve dve prakṛtiṃ puruṣam ca ha. Ibid.* vii. 5, 6.

trinity *prakṛti* is the evolutionary cause that undergoes the transformation, *puruṣa*, though unmoved in itself, is that which by its very presence gives the occasion for the transformation, and time is the inner dynamic that behaves as the inner synthetic or structural cause. But these causes in themselves are not sufficient to produce the development of the trinity. The trinity is moved to develop on the evolutionary line by the spiritual activity of God. *Puruṣa* is regarded as the *adhiṣṭhāna-kāraṇa*, *kāla* as the principle of inner activity, and the spiritual activity of God as the transcendent and immanent agent in which the causal trinity finds its fundamental active principle. As the first stage of such a development there emerges the category of *mahat*, which is called by different names, e.g. *vidyā*, *gauḥ*, *yavanī*, *brāhmī*, *vadhū*, *vr̥ddhi*, *matī*, *madhu*, *akhyāti*, *īśvara*, and *prajñā*. According to the prominence of *tamas*, *sattva* and *rajas*, the category of *mahat* is known by three different names, *kāla*, *buddhi* and *prāṇa*, in accordance with the moments in which there are special manifestations of *tamas*, *sattva* and *rajas*¹. Gross time as moments, instants or the like, the intelligizing activity of thought (*buddhi*) and the volitional activity (*prāṇa*) may also be regarded as the tripartite distinction of *mahat*². There seems to be a tacit implication here that the activity implied in both thought and volition is schematized, as it were, through time. The unity of thought and volition is effected through the element of time; for time has been regarded as the *kalana-kāraṇa*, or the structural cause. The *sattva* side of the *mahat* manifests itself as virtue (*dharma*), knowledge (*jñāna*), disinclination (*vairāgya*), and all mental powers (*aiśvarya*). The opposite of these is associated with that moment of *mahat* which is associated with the manifestation of *tamas*.

With the evolution of the *mahat* the *manus* descend into it. From the *mahat* and in the *mahat* there spring the senses by which the objects are perceived as existent or non-existent³. Again, from and in the *mahat* there springs the *ahaṃkāra* through the influence

¹ *kālo buddhis tathā prāṇa iti tredhā sa gīyate

of the spiritual energy of God¹. This *ahaṃkāra* is also called by the names of *abhimāna*, *prajāpati*, *abhimantā* and *boddhā*. The *ahaṃkāra* is of three kinds, *vaikārika*, *taijasa* and *bhūtādi*, in accordance with the predominance of *sattva*, *rajas* or *tamas*. The *ahaṃkāra* manifests itself as will, anger, greed, mind (*manas*), and desire (*trṣṇā*). When the *ahaṃkāra* is produced, the *manus* descend into it. From *ahaṃkāra* there is then produced the organ of thinking (*cintanātmakam indriyam*) of the *manus* called *manas*. It is at this stage that the *manus* first become thinking entities. From the *tamas* side of *ahaṃkāra* as *bhūtādi* there is produced the *śabda-tan-mātra*, from which the *ākāśa* is produced. *Ākāśa* is associated with the quality of *śabda* and gives room for all things. *Ākāśa* is thus to be regarded as unoccupied space, which is supposed to be associated with the quality of sound². With the emergence of *ākāśa* the *manus* descend into that category. From the *vaikārika ahaṃkāra* there spring the organs of hearing and of speech³. The *manus* at this stage become associated with these senses. Then from the *bhūtādi*, by the spiritual desire of God, the touch-potential is produced, and from this is produced the air (*vāyu*). By the spiritual desire of God the sense-organ of touch and the active organ of the hand are produced from the *vaikārika ahaṃkāra*. At this stage the *manus* become associated with these two receptive and active senses. From the *bhūtādi* there is then produced the light-heat potential from which is produced the gross light-heat. Again, from the *vaikārika ahaṃkāra* the visual organ and the active organ of the feet are produced, and the *manus* are associated with them. From the *bhūtādi* the taste-potential is produced, and from it is produced water. Further, from the *vaikārika ahaṃkāra* there is produced the taste-organ and the sex-organ, and the *manus* are associated with them. From the *bhūtādi* there is produced the odour-potential and from it the earth. Also, from the *vaikārika ahaṃkāra* there arises the cognitive sense of smelling and the active sense of secretion. The *manus* at this stage descend into this category through the spiritual creative desire of God⁴.

¹ *vidyayā udare tatrāhaṃkṛtir nāma jāyate. Ahirbudhnyā-saṃhitā*, VII. 15.

² *śabdai'-ka-guṇam ākāśam avakāśapradāyī ca. Ibid.* VII. 22.

³ *tadā vaikārikāt punaḥ śrotṛam vāg iti vijñāna-karme-ndriya-yugam mune. Ibid.* VII. 23-24.

⁴ *Ibid.* VII. 39, 40.

The process of development herein sketched shows that one active sense and one cognitive sense arise together with the development of each category of matter, and with the final development of all the categories of matter there develop all the ten senses (cognitive and conative) in pairs. In the chapter on the gradual dissolution of the categories we see that with the dissolution of each category of matter a pair of senses also is dissolved. The implication of this seems to be that there is at each stage a co-operation of the material categories and the cognitive and conative senses. The selves descend into the different categories as they develop in the progressive order of evolution, and the implication of this probability is that the selves, having been associated from the beginning with the evolution of the categories, may easily associate themselves with the senses and the object of the senses. When all the categories of matter and the ten senses are developed, there are produced the function of imagination, energy of will (*saṃrambha*), and the five *prāṇas* from *manas*, *ahaṃkāra* and *buddhi*; and through their development are produced all the elements that may co-operate together to form the concrete personality¹. The order followed in the process of development in evolution was maintained in an inverse manner at the time of dissolution.

The above-mentioned *manus* produce in their wives many children, who are called *mānavas*. They in their turn produce many other children who are called the new *mānavas*, or the new men, in all the four castes. Those among them who perform their work for a hundred years with true discriminative knowledge enter into the supreme person of Hari. Those, however, who perform their *karmas* with motives of reaping their effects pass through rebirths in consonance with their actions. As has been said before, the *manus* may be regarded as the individuated forms of the original *kūṭastha puruṣa*. All the *jīvas* are thus but parts of Viṣṇu's own self-realizing being (*bhūty-aṃśa*). Now the *prakṛti*, which is also called *vidyā*,

¹ *saṃkalpaś caiva saṃrambhaḥ prāṇāḥ pañcavidhās tathā
manaso'haṃkṛter buddher jāyante pūrvam eva tu
evaṃ saṃpūrṇa-sarvaṅgāḥ prāṇāpānādi-saṃyutāḥ
sarve-ndriya-yutās tatra dehino manavo mune.*

Ahīrbudhnya-saṃhitā, VII. 42, 43.

Thus from *bhūtādi*, acting in association with *taijasa ahaṃkāra*, are produced successively the five *tan-mātras* of *śabda*, *spṛśa*, *rūpa*, *rasa* and *gandha*, from each of which in the same order are produced the five *bhūtas* of *ākāśa*, *vāyu*, *tejas*, *ap* and *prthivī*. Again, from the associated work of *taijasa* and *vaikārika ahaṃkāra* there are produced the five cognitive and conative senses.

and which at the time of the creative process showers itself as rain and produces the food-grains, and which at the beginning of the dissolution shows itself as a drying force, begins to manifest itself as showering clouds and produces the food-grains. By consuming the food thus produced by nature men fall from their original state of perfect knowledge (*jñāna-bhramśaṃ prapadyante*). At such a stage the original *manus* produce the scriptures for the guidance of those men who have fallen from their original omniscience. Thence men can only attain their highest goal by following the guidance of the scriptures¹. It thus appears that the power of Viṣṇu as consciousness, bliss and action splits itself into twofold form as the realizing activity and the object, called respectively the *bhāvaka* and the *bhāvya*. The former is the thought-activity of the Lord and the latter is that part of Him which manifests itself as the object of this activity. This leads to the pure and the impure creation. The *kūṭastha puruṣa* of the four *manus* stands intermediate between the pure and the impure creation². There is nothing whatsoever outside the sphere of the *Sudarśana śakti* of the Lord.

On the central question of the relation of God with the *jīvas* the general view of the Pañcarātra, as well as that of the *Ahīrbudhmya*, seems to be that at the time of dissolution they return to God and remain in a potential form in Him, but again separate out at the time of the new creation. At the time of emancipation, however, they enter into God, never to come out of Him. But though they enter into Him, they do not become one with Him, but have an independent existence in Him or enter into the abode of Viṣṇu, the *Vaikunṭha*, which is often regarded as identical with Him. This is probably a state of what is found in many places described as the *sālokya-mukti*. In the fourteenth chapter of the *Ahīrbudhmya-saṃhitā mukti* is described as the attainment of Godhood (*bhagavattā-mayī mukti*, or *vaiṣṇavaṃ tad viśet padam*)³. The means by

¹ *tat tu vaidyaṃ payaḥ prāśya sarve mānava-manavāḥ
jñāna-bhramśaṃ prapadyante sarva-jñāḥ svata eva te.*

Ahīrbudhmya-saṃhitā, VII. 61, 62.

Compare this with the Jewish Christian doctrine of the fall of man, as suggested by Schrader's introduction to the Pañcarātra, p. 78.

² *aṃśayoḥ puruṣo madhye yaḥ sthitaḥ sa catur-yugaḥ
śuddhe-tara-mayaṃ viddhī kūṭasthaṃ taṃ mahā-mune.* *Ibid.* VII. 70.

Compare the view of the Gauḍīya school, which regards the *jīva* as the *taṭasthā śakti* of God, which is between the *antaraṅgā* and the *vahiraṅgā śakti*.

³ *Ibid.* XIV. 3, 4 and 41.

which *mukti* can be attained is said to be a virtuous course of action without seeking any selfish ends¹. The *jīvas* are described as beginningless, infinite, and as pure consciousness and bliss, and as being largely of the nature of God (*bhagavanmaya*); but still they are described as owing their existence to the spiritual energy of God (*bhagavad-bhāvitāḥ sadā*)². This idea is further clarified when it is said that side by side with the *bhāvya* and the *bhāvaka* powers of God we have a third power called the *pum-śakti*, of which we hear in the *Gītā* as *Kṣetrajña-śakti* and in the Gauḍīya school as *taṭastha śakti*³. Apart from the three powers of God as creation, maintenance and destruction, He has a fourth and a fifth power called favour (*anugraha*) and disfavour (*nigraha*). The Lord is, of course, self-realized and has no unachieved end, and has absolutely unimpeachable independence; but still in His playful activity He acts like a king just as He wishes⁴. This idea of *kṛīḍā* is repeated in the Gauḍīya school as *līlā*. All these activities of His are but the different manifestations of His thought-activity called *sudarśana*. In His own playful activity as disfavour He covers up the natural condition of the *jīva*, so that in place of His infinitude, he appears as atomic, in place of His omnipotence, he can do but little, in place of His omniscience, He becomes largely ignorant and possesses but little knowledge. These are the three impurities and the three types of bondage. Through this covering activity the *jīva* is afflicted with ignorance, egoism, attachment, antipathy, etc. Being afflicted by ignorance and the passions, and being goaded by the tendency towards achieving the desirable and avoiding the undesirable, He performs actions leading to beneficial and harmful results. He thus undergoes the cycle of birth and rebirth, and is infested with different kinds of root-instincts (*vāsanā*). It is through the power of this bondage and its requirements that the powers of creation, maintenance and destruction are roused and made active to arrange for rewards and punishments in accordance with the *karmas* of the *jīvas*. As proceeding from the very playful nature of God, which precedes time (*kāla*), and is beginningless, the bondage also is said to be beginningless. The above description of bondage as happening

¹ *sādhanaṃ tasya ca prokto dharmo nirabhisandhikah.*

Ahīrbudhnyā-saṃhitā, XIV, 4.

² *Ibid.* ³ *pum-śaktiḥ kalamāy anyā pumān so'yaṃ udīritah.* *Ibid.* XIV. 10.

⁴ *sarvair an-anuyojyaṃ tat svātantryaṃ divyaṃ īśitūḥ avāpta-viśva-kāmo'pi kṛīḍate rājavad vaśi.* *Ibid.* XIV. 13.

at some time through a process of fall from original nature is by way of analysis of the situation. Through the power of God as *anugraha*, or grace, God stops the course of *karma* for a *jīva* on whose condition of sorrow and suffering He happens to take pity. With the cessation of the good and bad deeds and their beneficent and harmful results through the grace of God the *jīva* looks forward to emancipation and is moved by a feeling of disinclination and begins to have discriminative knowledge. He then turns to scriptures and to teachers, follows the course of action dictated by Sāṃkhya and Yoga, and attains the Vedāntic knowledge, finally to enter the ultimate abode of Viṣṇu.

Lakṣmī is regarded as the ultimate eternal power of Viṣṇu, and she is also called by the names Gaurī, Sarasvatī and Dhenu. It is this supreme power that manifests itself as Saṃkarṣaṇa, Pradyumna and Aniruddha. Thus, these separate powers are observable only when they manifest themselves, but even when they do not manifest themselves they exist in God as His great supreme power Lakṣmī. It is this Lakṣmī that is called Brahmā, Viṣṇu, or Śiva. The *vyakti*, *avyakti*, *puruṣa* and *kāla* or *sāṃkhya* and *yoga* are all represented in the Lakṣmī. Lakṣmī is the ultimate supreme power into which all the others resolve themselves. As distinct from the other manifested powers it is often called the fifth power. The emancipated person enters into this Lakṣmī, which is regarded as the highest abode of Viṣṇu (*paraṃ dhāma* or *paramaṃ padam*), or the highest Brahman. This power (*śakti*) is also regarded as having an inner feeling of bliss; and yet it is of the nature of bliss, and is designated as the *bhāva* form of Viṣṇu and also as the *ujjvala* (shining). This *śakti* is also regarded as discharging the five functions (*pañca-kṛtya-karī*) of creation, maintenance, destruction, grace and disfavour mentioned above. Brahman, as associated with this *śakti*, is called the highest Viṣṇu as distinguished from the lower Viṣṇu, the god of maintenance. This *śakti* is always in a state of internal agitation though it may not be observed as such from outward appearance. This internal agitation and movement are so subtle that they may appear to be in a state of absolute calmness like that of the ocean¹. Thus *śakti* is also called the *māyā* of Viṣṇu².

¹ *sadā pratāyamānā'pi sūkṣmair bhāvairalakṣaṇaiḥ.*
nirvyāpāreva sā bhāti staimityam iva co'dadheh.
tayai vo'pahiṭam Brahma nirvikalpaṃ nirañjanaṃ.

Ahīrbudhnyā-saṃhitā, I. I. 49.

² *māyā'ścarya-karatvena pañca-kṛtya-karī sadā.* *Ibid.* I. I. 58.

It is a part of this power that transforms itself as the *bhāvya* and the *bhāvaka śakti*, of which the latter is also known by the name *sudarśana*. The *bhāvya* shows itself as the world, and its objective import is the world.

The thought-activity by which the concept shows itself in the ideal and in the objective world as thought and its significance, the object, is the epitome of the power of Sudarśana. When all the external movement of the objective is ideally grasped in the word, we have also in it the manifestation of the power of Sudarśana, or the supreme thought-activity of God. All the causality of the objective world is but a mode of the manifestation of the Sudarśana power. Thus not only all the movements of the external world of nature and the movement implied in speech, but the subjective-objective movement by which the world is held together in thought and in speech are the manifestation of the Sudarśana power. All expressions or manifestations are either in the way of qualities or actions, and both are manifestations of the Sudarśana power of God. Our words can signify only these two ways of being. For this reason they refer only to the Sudarśana, which is attributive to God, but cannot express the nature of God. Words, therefore, cannot reveal the nature of God. The word may hold the universe within it as its mystic symbol and may represent within it all its energies, but, in any case, though it may engulf within it the whole universe and secure the merging of the universe in itself and can identify itself with God, such identification can only be with the Sudarśana power of God, and the entrance into God, or the realization of Him through the word or thought, can only be through the Sudarśana power, which is a part of Lakṣmī. Thus unity with God can only mean union with Sudarśana, or entrance into Lakṣmī¹.

Adoration (*namah*) means the spontaneous acceptance of the highest Lord as the master on the part of a man who has achieved it through a wise enlightenment². Superiority (*jyāyān*) consists of greatness of qualities and existence in earlier time³. God alone is superior, and everything else is inferior. The relation between the latter and the former is that the latter exists for the former or is dependent on the former. This relation is called (*śeṣa-śeṣitā*). The

¹ *Ahirbudhnya-saṃhitā*, LI. 69–78.

² *prekṣāvataḥ pravṛttir yā prahvī-bhāvā-tmikā svataḥ ukr̥ṣṭam param uddiśya taṁ namaḥ pariṣṭyate. Ibid.* LII. 2.

³ *kālato guṇaiś caiva prakarṣo yatra tiṣṭhati śabdas taṁ mukhyayā vṛtṭyā jyāyān ity avalambate. Ibid.* LII. 4.

relation between the two is that one should be the adorer and the other the adored (*nanṭṛ-nantaṛya-bhāva*). True adoration is when such an adoration proceeds naturally as a result of such a relation, without any other motive or end of any kind—the only idea being that God is supremely superior to me and I am absolutely inferior to Him¹. This process of adoration not only takes the adorer to God, but also brings God to him. The presence of any motive of any kind spoils the effectuation of the adoration. This adoration is the first part of the process of *prapatti*, or seeking the protection of God². Now on account of the presence of beginningless root-impressions (*vāsanā*), and of natural insignificance of power and association with impurity, man's power of knowledge or wisdom becomes obstructed; and when a man becomes fully conscious of such weakness, he acquires the quality of *kārpanya* or lowliness. A feeling or consciousness of one's independence obstructs this quality of lowliness. The great faith that the supreme God is always merciful is called the quality of *mahā-viśvāsa*. The idea that God is neutral and bestows His gifts only in proportion to one's deeds obstructs this quality. The idea that, since He is all-merciful and all-powerful, He would certainly protect us, produces the quality of faith in God's protective power. The notion that God, being qualityless, is indifferent to any appeal for protection obstructs this quality. Acceptance of the Lord as the supreme master whose commands should on no account be disobeyed produces the quality of docility (*prātikūlya-vivarjana*). Service of God in a manner not prescribed in the scriptures obstructs this quality. The strong resolve of the mind to work in accordance with God's wishes, with the full conviction that the sentient and the non-sentient of the world are but parts of His nature, produces the quality of submission. An inimical disposition towards the beings of the world obstructs this quality. A true adoration (*namah*) to God must be associated with all the aforesaid qualities. True adoration must carry with it the conviction that the sense of possession that we have in all things, due to beginningless instinctive passions and desires, is all false, and the adorer should feel that he has neither independence nor anything that he may call his own. "My body, my

¹ *upādhi-rahitenā' yaṁ yena bhāvena cetanaḥ
namati jñāyase tasmāi tad vā namanam ucyate.*

Ahīrbudhnyā-saṁhitā, LII. 9.

² *phalepsā tad-virodhinī. Ibid.* LII. 15.

riches, my relations do not belong to me, they all belong to God"; such is the conviction that should generate the spirit with which the adoration should be offered. The adorer should feel that the process of adoration is the only way through which he can obtain his highest realization, by offering himself to God and by drawing God to himself at the same time. The purpose of adoration is thus the supreme self-abnegation and self-offering to God, leaving nothing for oneself. The world comes out of God and yet exists in a relation of inherence, so that He is both the agent and the material cause of the world, and the adorer must always be fully conscious of the greatness of God in all its aspects.

The above doctrine of *prapatti*, or *nyāsa*, or *śaraṇā-gati*, as the means of winning God's grace, has also been described in Chapter xxvii and it virtually means the qualities just described¹. *śaraṇā-gati* is here defined as prayer for God's help in association with the conviction of one's being merged in sin and guilt, together with a belief in one's absolute helplessness and a sense of being totally lost without the protecting grace of God². The person who takes to the path of this *prapatti* achieves the fruits of all *tapas*, sacrifices, pilgrimages and gifts, and attains salvation easily without resorting to any other methods³. It is further said that on the part of the devotee following the path of *prapatti* all that is necessary is to stick firmly to the attitude of absolute dependence on God, associated with a sense of absolute helplessness. He has no efforts to make other than to keep himself in the prayerful spirit; all the rest is done by God. *Prapatti* is thus a *upāya-jñāna* and not a *upāya*; for it is a mental attitude and does not presuppose any action. It is like a boat on which the passenger merely sits, while it is the business of the boatman to do the rest⁴.

Ahirbudhnya-saṃhitā.*

Describing the process of pure creation, it is said that at the time of *pralaya* all effects are reduced to a dormant state, and there is no movement of any kind. All the six qualities of the Lord, namely *jñāna*, *śakti*, *bala*, *aiśvarya*, *vīrya* and *tejas* described above, are in a state of absolute calmness like the sky without a puff of air in it¹. This assemblage of powers in a state of calmness is Lakṣmī, which exists as it were like the very void. From its own spontaneity it seems to wish to burst forth and turn itself into active operations. This power of God, though differentiated from Him, may be regarded as being His very nature. It is only when it thus comes out in active forms that it can be recognized as power, or *śakti*. When embedded in the potential form, it is indistinguishable from the Lord Himself. These *guṇas* of God should not, however, be confused with the *guṇas* of *prakṛti*, which evolve at a much lower stage in the course of the process of impure creation.

As regards the *vyūhas*, it is said that Saṃkarṣaṇa carries in him the whole universe, as if it were a spot at the parting of the hairs (*tīlakālaka*). The universe as it exists in Saṃkarṣaṇa is still in an unmanifested form. He is the support of the universe (*aśeṣa-bhuvana-dhara*)². The *manus*, time and *prakṛti* came out of Pradyumna³. It is through the influence of Pradyumna that men are actuated to perform their work in accordance with the *śāstras*⁴. Aniruddha, also called Mahā-viṣṇu, is the god of power and energy, and it is through his efforts that the creation and the maintenance of the world are possible. It is he who makes the world grow⁵. It is through him that the world lives without fear and ultimate salvation is possible. According to Śaṅkara's account Saṃkarṣaṇa stands for the individual soul, Pradyumna for *manas* and Aniruddha for the Ego (*ahaṃkāra*)⁶. Such a view is rather rare in the existing Pañcarātra literature. In the *Viṣvaksena-saṃhitā*, as quoted in the *Tattva-traya*, it is said that Saṃkarṣaṇa acts as the superintendent

¹ *pūrṇa-stimīta-ṣaḍ-guṇyam asaṃtrā-mvaro-pamam.*

Ahīrbudhnya-saṃhitā, v. 3.

² All the *śāstras* are said to have been produced by Saṃkarṣaṇa, and it is in him that they disappear at the time of *pralaya*. *Ahīrbudhnya*, LV. 16.

³ *Ibid.* VI. 9-12.

⁴ *Ibid.* LV. 18. Pradyumna is also called Vira.

⁵ There are, however, many conflicting views about these functions of the different *vyūhas*. See *Lakṣmī-tantra*, IV. 11-20, also *Viṣvaksena-saṃhitā*, as quoted in the *Tattva-traya*.

⁶ *Vedānta-sūtra*, II. 2. 42, Śaṅkara's commentary.

of the souls, and Pradyumna is described as *manomaya* or the mind, but nothing is said about Aniruddha. In the *Lakṣmī-tantra*, vi. 9-14, it is said that Saṃkarṣaṇa was like the soul, *buddhi* and *manas* and Vāsudeva, the playful creative activity. In the *Viṣvaksena-saṃhitā* Aniruddha is regarded as the creator of the *miśra-varga* (pure-impure creation, such as *niyati*), etc., and Saṃkarṣaṇa is regarded as the being who separated the principle of life from nature and became Pradyumna. But in the *Ahīrbudhnyā* the difference between the *puruṣa* and *prakṛti* starts in the Pradyumna stage, and not in the Saṃkarṣaṇa stage, and Aniruddha is regarded in the *Ahīrbudhnyā* as the superintendent of the *sattva* and therethrough of all that come from it and the *manus*¹. According to the *Ahīrbudhnyā* Lakṣmī is described as the power of God, but according to *Uttara-nārāyaṇa* we have Lakṣmī and Bhūmi, and according to the *Tattva-traya* Lakṣmī, Bhūmi and Nīlā. In the *Vihagendra-saṃhitā*, II. 8, these three are regarded as *icchā*, *kriyā* and *sākṣāt-śakti* of the Devī. In the *Sītā-upaniṣad* also we have the same interpretation, and this is also associated there with *Vaiṣṇānasa* tradition. The *Vihagendra* speaks of the eight śaktis of Sudarśana, *kīrti*, *śrī*, *vijayā*, *śraddhā*, *smṛti*, *medhā*, *dhṛti* and *kṣamā*, and in the *Sātrata-saṃhitā* (IX. 85) we hear of the twelve śaktis emanating from the Śrīvatsa of Viṣṇu: these are *lakṣmī*, *puṣṭi*, *dayā*, *nīdrā*, *kṣamā*, *kānti*, *sarasvatī*, *dhṛti*, *maitrī*, *rati*, *tuṣṭi* and *matī*.

The Pañcarātra is based partly on the Vedic and partly on the Tāntric system². It therefore believes in the esoteric nature of the *mantras*. It has already been said that the world has come into being from the Sudarśana power; so all the natural, physical and other kinds of energies and powers of all things in the world are but manifestation of the Sudarśana. The power of the Sudarśana also manifests itself in the form of all living beings and of all that is inanimate, of the course of bondage and also of emancipation. Whatever is able to produce is to be regarded as the manifestation of Sudarśana³. The *mantras* are also regarded as the energy of

Ibid. xvi. 4 and 6.

Viṣṇu as pure consciousness¹. The first manifestation of this power, like a long-drawn sound of a bell, is called *nāda*, and it can only be perceived by the great *yogins*. The next stage, like a bubble on the ocean, is called *bindu*, which is the identity of a name and the objective power denoted by it. The next stage is the evolution of the objective power (*nāmy-udaya*), which is also called *Śabda-brahman*. Thus, with the evolution of every alphabetic sound there is also the evolution of the objective power of which it is the counterpart. *Ahīrbudhnyā* then goes on to explain the evolution of the different vowel and consonant sounds from the *bindu*-power. By fourteen efforts there come the fourteen vowels emanating through the dancing of the serpent power (*Kuṇḍalī-śakti*) of Viṣṇu². By its two-fold subtle power it behaves as the cause of creation and destruction. This power rises in the original locus (*mūlā-dhāra*) and, when it comes to the stage of the navel, it is called *paśyantī* and is perceived by the *yogins*. It then proceeds to the lotus of the heart and then passes through the throat as the audible sound. The energy of the vowel sounds passes through the *suṣumnā nāḍī*. In this way the different consonant sounds are regarded as the prototypes of different manifestations of world-energy, and these again are regarded as the symbols of different kinds of gods or superintendents of energy³. An assemblage of some of these alphabets in different orders and groups, called also the lotus or the wheel (*cakra*), would stand for the assemblage of different types of complex powers. The meditation and worship of these *cakras* would thus be expected to bring the objective powers typified by them under control. The different gods are thus associated with the different *cakras* of *mantras*; and by far the largest portion of the Pañcarātra literature is dedicated to the description of the rituals associated with these, the building of corresponding images, and the temples for these subsidiary deities. The meditation of these *mantras* is also regarded as playing diverse protective functions.

In consonance with the ordinary method of the Tāntric works

¹ *sākṣād viṣṇoḥ kriyā-śaktiḥ suddha-samvīnmyā parā.*

Ahīrbudhnyā-saṃhitā, XVI. 10.

This *kriyā-śakti* is also called *sāmarthyā* or *yoga* or *pārameṣṭhyā* or *mahātejas* or *māyā-yoga*. *Ibid.* XVI. 32.

² *naṭī'va kuṇḍalī-śaktir ādyā viṣṇor vijrmbhate.* *Ibid.* XVI. 55.

³ *viṣṇu-śaktimayā varṇā viṣṇu-saṃkalpa-jrmbhitāḥ adhiṣṭhitā yathā bhāvaḥ tathā tan me nīśamaya.* *Ibid.* XVII. 3.

the *Ahīrbudhnyā* describes the nervous system of the body. The root (*kāṇḍa*) of all the nerves is said to be at about nine inches above the penis. It is an egg-shaped place four inches in length and breadth and made up of fat, flesh, bone and blood. Just two inches below the penis and about two inches from the anus we have a place which is called the middle of the body (*śarīra-madhyā*), or simply the middle (*madhyā*). It is like a quadrilateral figure, which is also called the *āgneya-maṇḍala*. The place of the root of the *nāḍīs* is also called the navel-wheel (*nābhi-cakra*), which has twelve spokes. Round the *nābhi-cakra* there exists the serpent (*kuṇḍalī*) with eight mouths, stopping the aperture called *brahma-randhra* of the *suṣumnā* by its body¹. In the centre of the *cakra* there are the two *nāḍīs* called the *alambuṣa* and *suṣumnā*. On the different sides of the *suṣumnā* there are the following *nāḍīs*: *Kuhu*, *Varuṇa*, *Yasasvinī*, *Piṅgalā*, *Pūṣā*, *Payasvinī*, *Sarasvatī*, *Śaṅkhinī*, *Gāndhārī*, *Idā*, *Hastī-jihvā*, *Viśvodarā*. But there are on the whole 72,000 *nāḍīs* in the body. Of these, *Idā*, *Piṅgalā* and *suṣumnā* are the most important. Of these, again, *suṣumnā*, which goes to the centre of the brain, is the most important. As a spider remains inside the meshes of its thread, so the soul, as associated with *prāṇa* or life-force, exists inside this navel-wheel. The *suṣumnā* has five openings, of which four carry blood, while the central aperture is closed by the body of the *Kuṇḍalī*. Other *nāḍīs* are shorter in size and are connected with the different parts of the body. The *Idā* and the *Piṅgalā* are regarded as being like the sun and the moon of the body.

There are ten *vāyus*, or bio-motor forces of the body, called *prāṇa*, *apāna*, *samāna*, *udāna*, *vyāna*, *nāga*, *kūrma*, *kṛkara*, *deva-datta* and *dhanañjaya*. The *prāṇa vāyu* remains in the navel-wheel, but it manifests itself in the regions of the heart, mouth and the nose. The *apāna vāyu* works in the anus, penis, thighs, the legs, the belly, the testes, the lumbar region, the intestines, and in fact performs the functions of all the lower region. The *vyāna* exists between the eyes and the ears, the toes, nose, throat and the spine. The *udāna* works in the hands and the *samāna* through the body as a whole, probably discharging the general circulation². The func-

¹ *Ahīrbudhnyā-saṃhitā*, xxxii. 11. This is indeed different from the description found in the *Śākta Tantras*, according to which the *Kuṇḍalī* exists in the place down below described as the *śarīra-madhyā*.

² *Ibid.* xxxii. 33-37. These locations and functions are different from what we find in the *Āyur-Veda* or the *Śākta Tantras*.

tion of the *prāṇa* is to discharge the work of respiration; that of the *vyāna*, to discharge the work of turning about towards a thing or away from it. The function of the *udāna* is to raise or lower the body, that of the *samāna*, to feed and develop it. The function of eructation or vomiting is performed by the *nāga vāyu*, and *devadatta* produces sleep and so on. These *nāḍīs* are to be purified by inhaling air by the *idā* for as long as is required to count from 1 to 16. This breath is to be held long enough to count from 1 to 32, and in the interval some forms of meditation are to be carried on. Then the yogin should inhale air in the same manner through the *piṅgalā* and hold that also in the same way. He should then exhale the breath through the *Idā*. He should practise this for three months thrice a day, three times on each occasion, and thus his *nāḍīs* will be purified and he will be able to concentrate his mind on the *vāyus* all over his body. In the process of the *prāṇāyāma* he should inhale air through the *Idā* long enough to count from 1 to 16. Then the breath is to be retained as long as possible, and the specific *mantra* is to be meditated upon; and then the breath is to be exhaled out by the *piṅgalā* for the time necessary to count from 1 to 16. Again, he has to inhale through the *Piṅgalā*, retain the breath and exhale through the *Idā*. Gradually the period of retention of the breath called *kumbhaka* is to be increased. He has to practise the *prāṇāyāma* sixteen times in course of the day. This is called the process of *prāṇāyāma*. As a result of this, he may enter the stage of *samādhi*, by which he may attain all sorts of miraculous powers, just as one may by the meditation of the wheel of *mantras*.

But before one begins the purification of the *nāḍīs* described above one should practise the various postures (*āsanas*) of which *cakra*, *padma*, *kūrma*, *mayūra*, *kukkuṭa*, *vīra*, *śvastika*, *bhadra*, *siṃha*, *mukta* and *gomukha* are described in the *Ahīrbudhnya*. The practice of these postures contributes to the good health of the *yogins*. But these physical practices are of no avail unless one turns to the spiritual side of *yoga*. *Yoga* is defined as the union of the lower and the higher soul¹. Two ways for the attainment of the highest reality are described in the *Ahīrbudhnya*—one is that of self-offering or self-abnegation (*ātma-samarpaṇa* or *hrd-yāga*) through the meditation on the highest in the form of some of His powers, as this

1

*samyogo yoga ity ukto jivātm-paramā-tmanoh.**Ahīrbudhnya-saṃhitā*, xxxi. 15.

and that specific deity, by the practice of the *mantras*; and the other is that of the *yoga*¹. *Ahīrbudhnya*, however, concentrates its teachings on the former, and mentions the latter in only one of its chapters. There are two types of soul, one within the influence of the *prakṛti* and the other beyond it. The union with the highest is possible through *karma* and *yoga*. *Karma* is again of two kinds, that which is prompted by desires (*pravartaka*) and that which is prompted by cessation of desires (*nivartaka*). Of these only the latter can lead to emancipation, while the former leads to the attainment of the fruits of desires. The highest soul is described as the subtle (*sūkṣma*), all-pervading (*sarva-ga*), maintaining all (*sarva-bhṛt*), pure consciousness (*jñāna-rūpa*), without beginning and end (*anādy-ananta*), changeless (*a-vikārin*), devoid of all cognitive or conative senses, devoid of names and class-notions, without colour and quality, yet knowing all and pervading all, self-luminous and yet approachable through intuitive wisdom, and the protector of all². The *yoga* by which a union of our lower souls with this highest reality can be effected has the well-known eight accessories, *yama*, *niyama*, *āsana*, *prāṇāyāma*, *pratyāhāra*, *dhāraṇa*, *dhyāna* and *saṃādhi*.

Of these, *yama* is said to consist of beneficial and yet truthful utterance (*satya*), suffering at the sufferings of all beings (*dayā*), remaining fixed in one's path of duty even in the face of dangers (*dhṛti*), inclination of all the senses to adhere to the path of right conduct (*śauca*), absence of lust (*brahma-carya*), remaining unruffled even when there is a real cause of anger or excitement (*kṣamā*), uniformity of thoughts, deeds and words (*ārjava*), taking of unprohibited food (*mitāhāra*), absence of greed for the property of others (*asteya*), cessation from doing injury to others by word, deed or thought (*ahiṃsā*)³. *Niyama* is described as listening to Vedāntic texts (*siddhānta-śravaṇa*), gifts of things duly earned to proper persons (*dāna*), faith in scriptural duties (*matī*), worship of Viṣṇu through devotion (*īśvara-pūjana*), natural contentment with

¹ *yad vā bhagavate tasmai svakiyātma-samarpaṇam
viśiṣṭa-daivatāyā' smai cakra-rūpāya mantrataḥ
vīryuktaṃ prakṛteḥ śuddhaṃ dadyād ātma-haviḥ svayam.*

Ahīrbudhnya-saṃhitā, xxx. 4, 5.

² *Ibid.* xxxi. 7-10.

³ *Ibid.* 18-23. The list here given is different from that of Patañjali, who counts *ahiṃsā*, *satya*, *asteya*, *brahma-carya* and *aparigraha* as *yamas*. See *Yoga-sūtra*, II. 30.

whatever one may have (*santoṣa*), asceticism (*tapah*), faith in the ultimate truth being attainable only through the Vedas (*āstikya*), shame in committing prohibited actions (*hṛī*), muttering of *mantras* (*japa*), acceptance of the path dictated by the good teacher (*vrata*)¹. Though the *Yoga* is here described as the union of the lower and the higher soul, the author of the *Ahīrbudhnya* was aware of the *yogānuśāsana* of Patañjali and his doctrine of *Yoga* as the repression of mental states (*citta-vṛtti-nirodha*)².

The *Ahīrbudhnya* defines *pramā* as the definite knowledge of a thing as it really exists (*yathārthā-vadhāraṇam*), and the means by which it is attained is called *pramāṇa*. That which is sought to be discovered by the *pramāṇas* as being beneficial to man is called *pramāṇārtha*. This is of two kinds, that which is supremely and absolutely beneficial, and that which indirectly leads thereto, and as such is called *hita* and *sādhana*. Oneness with God, which is supremely blissful, is what is called supremely beneficial (*hita*). Two ways that lead to it are those of *dharma* and *jñāna*. This knowledge is of two kinds, as direct intuition (*sākṣātkāra*) and as indirect or inferential (*parokṣa*). *Dharma* is the cause of knowledge, and is of two kinds, one which leads directly, and the other indirectly, to worship of God. Self-offering or self-abnegation with reference to God is called indirect *dharma*, while the way in which the *Yogin* directly realizes God is called the direct *dharma*, such as is taught in the Pañcarātra literature, called the *sātvata-śāsana*. By the Sāṃkhya path one can have only the indirect knowledge of God, but through *Yoga* and Vedānta one can have a direct intuition of God. Emancipation (*mokṣa*) is as much an object of attainment through efforts (*sādhya*) as *dharma*, *artha* and *kāma*, though the last three are also mutually helpful to one another³.

¹ *Ahīrbudhnya-saṃhitā*, pp. 23-30. This list is also different from that of Patañjali, who counts *śauca*, *santoṣa*, *tapah*, *svādhyāya* and *īśvara-praṇidhāna* only as *niyamas*. See *Yoga-sūtra*, II, 32.

² *Ibid.* XIII, 27, 28.

³ *Ibid.* XIII.

CHAPTER XVII

THE ĀRVĀRS.

The Chronology of the Ārvārs.

IN the *Bhāgavata-purāṇa*, XI. 5. 38-40, it is said that the great devotees of Viṣṇu will appear in the south on the banks of Tāmraparṇī, Kṛtamālā (Vaigai), Payasvinī (Palar), Kāverī and Mahānadī (Periyar)¹. It is interesting to note that the Ārvārs, Nāmm'-ārvār and Madhura-kaviy-ārvār, were born in the Tāmraparṇī country, Periy-ārvār and his adopted daughter Āṇḍāl in the Kṛtamālā, Poygaiy-ārvār, Bhūtatt'-ārvār, Pēy-ārvār and Tiru-mariṣai Pirān in the Payasvinī, Toṇḍar-aḍi-poḍiy-ārvār, Tiru-pāṇ-ārvār and Tiru-maṅgaiy-ārvār in the Kāverī, and Periy-ārvār and Kula-śekhara Perumāl in the Mahānada countries. In the *Bhāgavata-māhātmya* we find a parable in which Bhakti is described as a distressed woman who was born in the Drāviḍa country, had attained her womanhood in the Carnatik and Mahārāṣṭra, and had travelled in great misery through Guzerat and North India with her two sons *Ĵñāna* and *Vairāgya* to Brindaban, and that owing to the hard conditions through which she had to pass her two sons had died. This shows that at least according to the traditions of the *Bhāgavata-purāṇa* Southern India was regarded as a great stronghold of the *Bhakti* cult.

The Ārvārs are the most ancient Vaiṣṇava saints of the south, of whom Saroyogin or Poygaiy-ārvār, Pūtayogin or Bhūtatt'-ārvār, Mahadyogin or Pēy-ārvār, and Bhaktisāra or Tiru-mariṣai Pirān are the earliest; Nāmm'-ārvār or Śaṭhakopa, Madhura-kaviy-ārvār, Kula-śekhara Perumāl, Viṣṇucittan (or Periy-ārvār) and Goḍa (Āṇḍāl) came after them and Bhaktāṅghireṇu (Toṇḍar-aḍi-poḍiy-ārvār), Yogivāha (Tiru-pāṇ-ārvār) and Parakāla (Tiru-maṅgaiy-

¹ This implies that the *Bhāgavata-purāṇa* in its present form was probably written after the Ārvārs had flourished. The verse here referred to has been quoted by Veṅkaṭanātha in his *Rahasya-traya-sāra*. The *Prapannā-mṛta* (Ch. 77) however refers to three other Vaiṣṇava saints who preceded the Ārvārs. They were (i) Kāsārayogin, born in Kāñci, (ii) Bhūtayogindra, born in Mallipura, (iii) Bhrānta-yogindra called also Mahat and Mahārya who was the incarnation of Viṣvakṣena. It was these sages who advised the five *saṃskāras* of Vaiṣṇavism (*tāpaḥ paundras tathā nāma mantrō yāgaś ca pañcamah*). They preached the emotional Vaiṣṇavism in which *Bhakti* is realized as maddening intoxication associated with tears, etc. They described their feelings of ecstasy in three works, comprising three hundred verses written in Tamil. They were also known by the names of Mādhava, Dāsārya and Saroyogin.

ārvār) were the last to come. The traditional date ascribed to the earliest Ārvār is 4203 B.C., and the date of the latest Ārvār is 2706 B.C.¹, though modern researches on the subject bring down their dates to a period not earlier than the seventh or the eighth century A.D. Traditional information about the Ārvārs can be had from the different "*Guru-paramparā*" works. According to the *Guru-paramparā*, Bhūtatt-, Poygaiy- and Pēy-ārvārs were incarnations of Viṣṇu's *Gadā*, *Śaṅkha* and *Nandaka*, and so also Kadamalai and Mayilai, while Tiru-mariṣai Pirān was regarded as the incarnation of the *cakra* (wheel) of Viṣṇu. Nāmm'-ārvār was incarnation of Viṣvaksena and Kula-śekhara Peru-māl of the *Kaustubha* of Viṣṇu. So Periy-ārvār, Toṇḍar-aḍi-poḍiy-ārvār and Tiru-maṅgaiy-ārvār were respectively incarnations of *Garuḍa*, *Vanamālā* and *Śārṅga* of Viṣṇu. The last Ārvār was Tiru-pāṇ-ārvār. Āṇḍāl, the adopted daughter of Periy-ārvār, and Madhura-kaviy-ārvār, the disciple of Nāmm'-ārvār, were also regarded as Ārvārs. They came from all parts of the Madras Presidency. Of these seven were Brahmins, one was a *Kṣattriya*, two were *śūdras* and one was of the low Panar caste. The *Guru-paramparās* give incidents of the lives of the Ārvārs and also fanciful dates B.C. when they are said to have flourished. Apart from the *Guru-paramparās* there are also monographs on individual Ārvārs, of which the following are the most important: (1) *Divya-sūri-carita* by Garuḍa-vāhana Paṇḍita, who was a contemporary of Rāmānuja; (2) *Guru-paramparā-prabhāvam* of Pinb'-aragiya Peru-māl Jīyar, based on the *Divya-sūri-carita* and written in *maṇi-pravāḷa* style, i.e. a mixture of Sanskrit and Tamil; (3) *Periya-tiru-muḍiy-aḍaivu* of Āṇbillai Kaṇḍāḍai-yappan, written in Tamil; (4) *Upadeśa-ratna-mālai* of Maṇavāḷa Mā-muni, written in Tamil, contains the list of Ārvārs; (5) *Yatindra-pravaṇa-prabhāvam* of Pillai Lokācāryar. The other source of information regarding the Ārvārs is the well-known collection of the works of Ārvārs known as *Nāl-āyira-divya-prabandham*. Among these are the commentaries on the *Divya-prabandham* and the *Tiru-vāy-moṟi* of Nāmm'-ārvār. In addition to these we have the epigraphical evidence in inscriptions scattered over the Madras Presidency².

¹ *Early History of Vaiṣṇavism in South India*, by S. K. Aiyangar, pp. 4-13; also Sir R. G. Bhandarkar's *Vaiṣṇavism, Śaivism and Minor Religious Sects*, pp. 68, 69.

² Sir Subrahmanya Ayyar Lectures, by the late T. A. Gopi-nātha Rāu, 1923.

Maṇavāḷa Mā-muni, in his *Yatindra-pravaṇa-prabhāvam*, says that the earliest of the Āṛvārs, Pēy-āṛvār, Bhūtatt'-āṛvār, Poygaiy-āṛvār, and Tiru-maṛiṣai Pirān, flourished at the time of the Pallavas, who came to Kāñcī about the fourth century A.D. Again, Professor Dubreuil says that Mamallai, the native town of Bhūtatt'-āṛvār, did not exist before Narasiṃhavarman I, who founded the city by the middle of the seventh century. Further, Tiru-maṅgaiy-āṛvār praised the Vaiṣṇava temple of Kāñcī built by Parameśvarvarman II. It seems, therefore, that the Āṛvārs flourished in the eighth century A.D., which was the period of a great Vaiṣṇava movement in the Cola and the Pāṇḍya countries, and also of the Advaitic movement of Śaṅkara¹.

According to the traditional accounts, Nāmm'-āṛvār was the son of Kāṛi, holding a high post under the Pāṇḍyas, and himself bore the names of Kāṛimāṇan, Parāṅkuśa and Śaṭhakopa, that his disciple was Madhura-kaviy-āṛvār, and that he was born at Tirukkurgur. Two stone inscriptions have been found in Madura of which one is dated at Kali 3871, in the reign of King Parāntaka, whose *uttara-mantrin* was the son of Māra, who was also known as Madhura-kaviy-āṛvār. The other is dated in the reign of Mārañ-jadaiyan. The Kali year 3871 corresponds to A.D. 770. This was about the year when Parāntaka Pāṇḍya ascended the throne. His father Parāṅkuśa died about the year A.D. 770. Māraṅkāri continued as *uttara-mantrin*. Nāmm'-āṛvār's name Kāṛimāṇan shows that Kāṛi the *uttara-mantrin* was his father. This is quite in accordance with the accounts found in *Guru-paramparā*. These and many other evidences collected by Gopi-nātha Rāu show that Nāmm'-āṛvār and Madhura-kaviy-āṛvār flourished at the end of the eighth century A.D. or in the first half of the ninth century. Kulaśēkhara Peru-māl also flourished probably about the first half of the ninth century. Periy-āṛvār and his adopted daughter Āṇḍāl were probably contemporaries of Śrīvallabhadeva, who flourished about the middle of the ninth century A.D. Toṇḍar-aḍi-poḍiy-āṛvār was a contemporary of Tiru-maṅgaiy-āṛvār and Tiru-pān-āṛvār. Tiru-maṅgaiy-āṛvār referred to the war drum of Pallavamalla, who reigned between A.D. 717 and A.D. 779, and these Āṛvārs could not have flourished before that time. But Tiru-maṅgaiy-āṛvār, in his praise

¹ Sir Subrahmanya Ayyar Lectures, by the late T. A. Gopi-nātha Rāu, 1923, p. 17.

of Viṣṇu at Kāñcī, refers to Vairamegha Pallava, who probably flourished in the ninth century. It may therefore be supposed that Tiru-maṅgaiy lived about that time. According to Mr S. K. Aiyangar the last of the Āṛvārs flourished in the earlier half of the eighth century A.D.¹ Sir R. G. Bhandarkar holds that Kula-śekhara Peru-māl flourished about the middle of the twelfth century. He was a king of Travancore and in his *Mukunda-mālā* he quotes a verse from the *Bhāgavata-purāṇa* (xi. 2. 36). On the basis of the inscriptional evidence that Permaḍi of the Senḍa dynasty, who flourished between 1138-1150, conquered Kula-śekharaṅka, and identifying Kula-śekhara Peru-māl with Kula-śekharaṅka, Bhandarkar comes to the conclusion that Kula-śekhara Peru-māl lived in the middle of the twelfth century A.D., though, as we have already seen, Mr Rāu attempts to place him in the first half of the ninth century. He, however, does not take any notice of the views of Sir R. G. Bhandarkar, who further thinks that the earliest Āṛvārs flourished about the fifth or the sixth century A.D. and that the order of the priority of the Āṛvārs as found in the *Guru-paramparā* lists is not reliable. One of the main points of criticism used by Aiyangar against Bhandarkar is the latter's identification of Kula-śekhara Peru-māl with Kula-śekharaṅka. The works of the Āṛvārs were written in Tamil, and those that survive were collected in their present form in Rāmānuja's time or in the time of Nāthamuni; this collection, containing 4000 hymns, is called *Nāl-āyira-divya-prabandham*. But at least one part of it was composed by Kuruttalvan or Kuruttama, who was a prominent disciple of Rāmānuja, and in a passage thereof a reference is made to Rāmānuja also². The order of the Āṛvārs given in this work is somewhat different from that given in the *Guru-paramparā* referred to above, and it does not contain the name of Nāmm'-āṛvār, who is treated separately. Again, Pillān, the disciple and apostolic successor of Rāmānuja, who commented on the *Tiru-vāy-mōṟi* of Nāmm'-āṛvār, gives in a verse all the names of the Āṛvārs, omitting only

¹ *Indian Antiquary*, Vol. xxxv, pp. 228, etc.

² This part is called *Rāmānuja-nurrundādi*. The order of the Āṛvārs given here is as follows: Poygaiy-āṛvār, Bhūtatt'-āṛvār, Pey-āṛvār, Tiru-pān-āṛvār, Tiru-maṇṣai Pirān, Tonḍar-adi-podiy-āṛvār, Kula-śekhara, Periy-āṛvār, Āṇḍāl, Tiru-maṅgaiy-āṛvār. Venkaṭanātha, however, in his *Prabandha-sāram* records the Āṛvārs in the following order: Poygaiy-āṛvār, Bhūtatt'-āṛvār, Pey-āṛvār, Tiru-maṇṣai Pirān, Nāmm'-āṛvār, Madhura-kaviy-āṛvār, Kula-śekhara, Periy-āṛvār, Āṇḍāl, Tonḍar-adi-podiy-āṛvār, Tiru-pān-āṛvār, Tiru-maṅgaiy-āṛvār.

Āṇḍāl¹. Thus it appears that Kula-śēkhara was accepted as an Ārvār in Rāmānuja's time. In Veṅkaṭanātha's (fourteenth-century) list, contained in one of his Tamil *Prabandhams*, all the Ārvārs excepting Āṇḍāl and Madhura-kaviy-ārvār are mentioned. The *Prabandham* contains also a succession list of teachers according to the Vaḍakalai sect, beginning with Rāmānuja².

Kula-śēkhara, in his *Mukunda-mālā*, says that he was the ruler of Kolli (Uraiyyūr, the Cola capital), Kudal (Mādurā) and Koṅgu. Being a native of Travancore (Vaṅjikulam), he became the ruler of the Pāṇḍya and Cola capitals, Mādurā and Uraiyyūr. After A.D. 900, when the Cola king Parāntaka became supreme and the Cola capital was at Tanjore instead of at Uraiyyūr, the ascendancy of the Travancore country (Kerala) over the Cola and the Pāṇḍya kingdoms would have been impossible. It could only have happened either before the rise of the great Pallava dynasty with Narasiṃhavarman I (A.D. 600) or after the fall of that dynasty with Nandivarman (A.D. 800). If Tiru-maṅgaiy-ārvār, the contemporary of Vairamegha, be accepted as the last Ārvār, then Kula-śēkhara must be placed in the sixth century A.D. But Gopi-nātha Rāu interprets a passage of Kula-śēkhara as alluding to the defeat and death of a Pallava king at his hands. He identifies this king with the Pallava king Dantivarman, about A.D. 825, and is of the opinion that he flourished in the first half of the ninth century A.D. In any case Bhandarkar's identification of Kula-śēkhara with Kula-śekharaṅka (A.D. 1150) is very improbable, as an inscription dated A.D. 1088 makes a provision for the recital of Kula-śēkhara's "*Tettarumtiral*."³ Aiyangar further states that in several editions of the *Mukunda-mālā* the quotation from the *Bhāgavata-purāṇa* referred to by Bhandarkar cannot be traced. We may thus definitely reject the view of Bhandarkar that Kula-śēkhara flourished in the middle of the twelfth century A.D.

There is a great controversy among the South Indian historians and epigraphists not only about the chronological order of the

¹ *Bhūtaṃ Saraś ca Mahad-anvaya-Bhaṭṭanātha-
Śrī-Bhaktisāra-Kulaśekhara-Yogivāhān

Śrī-mat-Parāṅkuśa-murṛi prapato'smi nityam.*

Verse quoted from Aiyangar's *Early History of Vaiṣṇavism*.

² Rāmānuja's preceptor was Periya Nambi, then come Alavandar, Manakkal Nambi, Uyyakkondar, Nāthamuni, Śaṭhakopa, Viśvakṣena (Senai Nathan), Mahālakṣmī and Viṣṇu. Aiyangar, *Early History of Vaiṣṇavism*, p. 21.

³ *Ibid.* p. 33.

different Ārvārs, but also regarding the dates of the first and the last, and of those who came between them. Thus, while Aiyangar wished to place the first four Ārvārs about the second century A.D., Gopi-nātha Rāu regards them as having flourished in the middle of the seventh century A.D.¹ Again, Nāmm'-ārvār is placed by Aiyangar in the middle of the sixth century, while Gopi-nātha Rāu would place him during the first half of the ninth century. While Aiyangar would close the history of the Ārvārs by the middle of the seventh century, Gopi-nātha Rāu would place Kula-śekhara in A.D. 825, Periy-ārvār in about the same date or a few years later, and Toṇḍar-ādi-poḍiy-ārvār, Tiru-maṅgaiy-ārvār and Tiru-pān-ārvār (contemporaries) about A.D. 830. From comparing the various matters of controversy, the details of which cannot well be described here, I feel it wise to follow Gopi-nātha Rāu, and am inclined to think that the order of the Ārvārs, except so far as the first group of four is concerned, is not a chronological one, as many of them were close contemporaries, and their history is within a period of only 200 years, from the middle of the seventh century to the middle of the ninth century.

The word Ārvār means one who has a deep intuitive knowledge of God and one who is immersed in the contemplation of Him. The works of the Ārvārs are full of intense and devoted love for Viṣṇu. This love is the foundation of the later systematic doctrine of *prapatti*. The difference between the Ārvārs and the Aragiyas, of whom we shall speak later on, is that, while the former had realized Brahman and had personal enjoyment of His grace, the latter were learned propounders who elaborated the philosophy contained in the works of the Ārvārs. Poygaiy, Bhūtatt' and Pēy composed the three sections of one hundred stanzas each of *Tiru-vantādi*². Tiru-maṇṣai Pirān spent much of his life in Triplicane, Conjeevaram and Kumbakonam. His hymns are the *Nan-mukham Tiru-vantādi*, containing ninety-six stanzas, and *Tiru-chaṇḍa-vṛuttam*. Nāmm'-ārvār was born of a Śūdra family at Kurukur, now Ālvārtirunagari in the Tinnevely district. He was the most voluminous writer

¹ These are Pēy-ārvār, Bhūtatt'-ārvār, Poygaiy-ārvār and Tiru-maṇṣai Pirān, the first three being known as Mudal-ārvārs among the Śrīvaiṣṇavas.

² As a specimen of *Tiru-vantādi* one may quote the following passage: "With love as lamp-bowl, desire as oil, mind melting with bliss as wick, with melting soul I have kindled the bright light of wisdom in the learned Tāmil which I have wrought for Nārāyaṇa."—Bhūtam, quotation from Hooper's *Hymns of the Ārvārs*, p. 12, n.

among the Ārvārs and a great mass of his poetry is preserved in the *Nāl-āyira-divya-prabandham*. His works are the *Tiru-vṛttam*, containing one hundred stanzas, *Tiru-vāṣiriyam*, containing seven stanzas, the *Periya tiru-vantādi* of eighty-seven stanzas, and the *Tiru-vāy-moṛi*, containing 1102 stanzas. Nāmm'-ārvār's whole life was given to meditation. His disciple Madhura-kavi considers him an incarnation of Viṣṇu. Kula-śekhara was a great devotee of Rāma. His chief work is the *Peru-māl-tiru-moṛi*. Periy-ārvār, known as Viṣṇucitta, was born at Śrībittiputtūr. His chief works are *Tiru-pall'-āṇḍu* and *Tiru-moṛi*. Āṇḍāl, adopted daughter of Periy-ārvār, was passionately devoted to Kṛṣṇa and considered herself as one of the Gopis, seeking for union with Kṛṣṇa. She was married to the God Raṅganātha of Śrīraṅgam. Her chief works are *Tiru-pāvai* and *Nacchiyār*. Tirumoṛi Toṇḍar-aḍi-poḍiy-ārvār was born at Mandagudi. He was once under the seduction of a courtesan called Devādevī, but was saved by the grace of Raṅganātha. His chief works are *Tiru-mālai*, and the *Tiru-palliy-eṛuchi*. Tiru-pāṇ-ārvār was brought up by a low-caste childless *panar*. His chief work was *Amalan-ādibirān* in ten stanzas. Tiru-maṅgaiy was born in the thief-caste. His chief works are *Periya-tiru-moṛi*, *Tirukuṟun-dāṇḍakam*, *Tiru-neḍun-dāṇḍakam*, *Tiru-verugūtt-irukkai*, *Śīriya-tiru-maḍal* and *Periya-tiru-maḍal*. Tiru-maṅgaiy was driven to brigandage, and gained his divine wisdom through the grace of Raṅganātha. The *Nāl-āyira-divya-prabandham*, which contains the works of the Ārvārs, is regarded in the Tamil country as the most sacred book and is placed side by side with the Vedas. It is carried in procession into the temple, when verses from it are recited and they are recited also on special occasions of marriage, death, etc. Verses from it are also sung and recited in the hall in front of the temple, and it is used in the rituals along with Vedic *mantras*.

The Philosophy of the Ārvārs.

As the hymns of the Ārvārs have only a literary and devotional form, it is difficult to utilize them for philosophical purposes. As an illustration of the general subject-matter of their works, I shall try to give a brief summary of the main contents of Nāmm'-ārvār's (Śaṭhakopa) work, following Abhirāmavarācārya's *Draṁḍopaniṣat-tātparya*¹. The feeling of devotion to God felt by Śaṭhakopa

¹ MS. from Government Oriental Manuscript Library, Madras.

could not be contained within him, and, thus overflowing, was expressed in verses which soothed all sufferers; this shows that his affection for suffering humanity was even greater than that of their own parents. Śaṭhakopa's main ideal was to subdue our so-called manhood by reference to God (*puruṣottama*), the greatest of all beings, and to regard all beings as but women dependent on Him; and so it was that Śaṭhakopa conceived himself as a woman longing for her lover and entirely dependent on him. In the first of his four works he prayed for the cessation of rebirth; in the second he described his experiences of God's great and noble qualities; in the third he expressed his longings to enjoy God; and in the fourth he described how all his experiences of God's communion with him fell far short of his great longings. In the first ten stanzas of his first centum he is infused with a spirit of service (*dāśya*) to God and describes his experiences of God's essential qualities. In the next ten stanzas he describes the mercy of God and recommends every one to give up attachment to all other things, which are of a trifling and temporary nature. Then he prays to God for his incarnation on earth with Lakṣmī, His consort, and pays adoration to Him. He continues with a description of his mental agonies in not attaining communion with God, confessing his own guilt to Him. He then embraces God and realizes that all his failings are his own fault. He explains that the spirit of service (*dāśya*) does not depend for its manifestation and realization on any elaborate rituals involving articles of worship, but on one's own zeal. What is necessary is true devotion (*bhakti*). Such a devotion, he says, must proceed through an intense enjoyment of the nature of the noble qualities of God, so that the devotee may feel that there is nothing in anything else that is greater than them. With a yielding heart he says that God accepts the service of those who, instead of employing all the various means of subduing a crooked enemy, adopt only the means of friendliness to them¹. God is pleased with those who are disposed to realize the sincerity of their own spirit, and it is through this that they can realize God in themselves. God's favour does not depend on anything but His own grace, manifesting itself in an all-embracing devotion. He says, in the second *śataka*, that the devotee, having,

on the one hand, felt the great and noble qualities of God, and yet being attached to other things, is pierced through with pangs of sorrow in not realizing God in communion, and feels a bond of sympathy with all humanity sharing the same grief. Through the stories of God related in the Purāṇas, e.g. in the *Bhāgavata*, Śaṭhakopa feels the association of God which removes his sorrow and so increases his contact with God. He then describes how the great saints of the past had within their heart of hearts enjoyed an immersion in the ocean of God's bliss, which is the depository of all blissful emotion; and he goes on to express his longings for the enjoyment of that bliss. Through his longings for Him there arose in Śaṭhakopa great grief of separation, devoid of any interest in furthering unworthy ends; he communicated to Him his great sorrow at his incapacity to realize Him, and in so doing he lost consciousness through intensity of grief. As a result God Kṛṣṇa appeared before him, and he describes accordingly the joy of the vision of God. But he fears to lose God, who is too mighty for him, and takes refuge in his great attachment to Him. Next he says that they only realize God who have a sense of possession in Him. He describes God's noble qualities, and shows that the realization of the proximity of God is much more desirable than the attainment of emancipation. He says that the true definition of *mokṣa* is to attain the position of God's servant¹.

In the beginning of the third centum he describes the beauty of God. Then he bemoans the fact that, on account of the limitations of his senses and his mind, he is unable to enjoy the fullness of His beauty. Next he describes the infinitude of God's glory and his own spirit of service to Him. Then he envisages the whole world and the words that denote the things of the world as being the body of God². Then he expresses the pleasure and bliss he feels in the service of God, and says that even those who cannot come into contact with God in His own essence can find solace in directing their minds to His image and to the stories of Kṛṣṇa related in the

Purāṇas. He then absorbs himself in the grief of his separation from God and hopes that by arresting all the inner senses he may see God with his own eyes. He also regrets the condition of other men who are wasting their time in devotion to gods other than Kṛṣṇa. He goes on to describe the vision of God and his great joy therein.

In the fourth centum he describes the transitoriness of all things considered as enjoyable, and the absolute superiority of the bliss of pleasing God. He goes on to explain how, through cessation of all inclination to other things and the increase of longing for God in a timeless and spaceless manner, and through the pangs of separation in not realizing Him constantly, he considers himself as a woman, and through the pangs of love loses his consciousness¹. Then he describes how Hari is pleased with his amour and satisfies his longings by making Him enjoyable through the actions of mind, words and body by His blissful embraces². Next he shows how, when he attempted to realize Kṛṣṇa by his spiritual zeal, Kṛṣṇa vanished from his sight and he was then once more filled with the grief of separation. Again he receives a vision of God and feels with joy His overwhelming superiority. He further describes how his vision of God was like a dream, and how, when the dream ceased, he lost consciousness. To fill up the emptiness of these occasional separations, he sorrowfully chanted the name of God, and earnestly prayed to Him. He wept for Him and felt that without Him everything was nothing. Yet at intervals he could not help feeling deep sympathy for erring humanity which had turned its mind away from God. According to him the real bondage consists in the preference man gives to things other than God. When one can feel God as all-in-all, every bond is loosened.

In the fifth centum he feels that God's grace alone can save man. He again describes himself as the wife of God, constantly longing for His embrace. In his grief and lamentation and his anxiety to meet God, he was overcome by a swoon which, like the night, dimmed all his senses. At the end of this state he saw the orna-

ments of God, but could not see Him directly, and was thus filled both with grief and happiness. As a relief from the pangs of separation he found enjoyment in identifying himself in his mind with God and in imitating His ways, thinking that the world was created by him¹. In a number of verses (seventy or eighty) he describes how he was attached to the image of the God Kṛṣṇa at Kumbhakonam and how he suffered through God's apathy towards him in not satisfying him, His lover, with embraces and other tokens of love, and how he became angry with His indifference to his amorous approaches and was ultimately appeased by God, who satisfied him with loving embraces and the like. Thus God, who was divine lord of the universe, felt sympathy and love for him and appeased his sorrows in the fashion of a human lover². He describes his great bliss in receiving the embrace of God. Through this rapturous divine love and divine embrace he lost all mundane interest in life.

In the ninth centum the sage, finding he could not look at the ordinary things of life, nor easily gain satisfaction in the divine presence of God in the whole world, fixed his mind on His transcendental form (*aprākṛta-vapuḥ*) and became full of wailing and lamentation as a means of direct access to it. A great part of this centum is devoted to laments due to his feeling of separation from God. He describes how through constant lamentation and brooding he received the vision of God, but was unhappy because he could not touch Him; and how later on God took human form in response to his prayers and made him forget his sufferings³. In many other verses he again describes the emotions of his distress at his separation and temporary union with God; how he sent messages to God through birds; how he felt miserable because He delayed to meet him; how he expected to meet Him at appointed times, and how his future actions in Heaven should be repeated in

earth and how his behaviour to God was like that of the Gopīs, full of ardent love and eagerness. In the concluding verses, however, he says that the real vision of God can come only to a deeply devoted mind and not to external eyes.

Hooper gives some interesting translations from the *Tiruvruttam* of Nāmm'-ārvār, a few of which may be quoted here to illustrate the nature of his songs of love for God¹:

Long may she love, this girl with luring locks,
Who loves the feet that heavenly ones adore,
The feet of Kaṇṇan, dark as rainy clouds:
Her red eyes all abrim with tears of grief,
Like darting *Kayal* fish in a deep pool².
Hot in this village now doth blow the breeze
Whose nature coolness is. Hath he, this once,
The rain-cloud hued, his sceptre turned aside
To steal the love-glow from my lady, lorn
For tuḷasī, with wide eyes raining tears?³

In separation from the lord the Ārvār finds delight in looking at darkness, which resembles Kṛṣṇa's colour:

Thou, fair as Kaṇṇan's heaven, when he's away
What ages long it is! He here, a span!
Whether friends stay for many days, or go,
We grieve. Yet, be this spreading darkness blest
In spite of many a cunning trick it has⁴.
What will befall my girl with bracelets fair,
With tearful eyes like gleaming *Kayal* big,
Who wanders with a secret pain at heart
For blooms of tuḷasī fresh from the Bird's Lord
Who with that hill protected flocks in storm?⁵

The Ārvār then laments and pleads with swans and herons to take his message:

The flying swans and herons I did beg,
Cringing: "Forget not, ye, who first arrive,
If ye behold my heart with Kaṇṇan there
Oh, speak of me and ask it 'Sir not yet
Hast thou returned to her? And is it right?'"

¹ *Hymns of the Ālvārs*, by J. S. M. Hooper, pp. 61-88.

² The maid who is represented as speaking here stands for Ārvār's disciple, and the lady in love is the mistress, and Kaṇṇan is Kṛṣṇa, the Lord.

³ This is also a speech from the maid, and *tuḷasī* stands for Kṛṣṇa.

⁴ The time of separation is felt to be too long, and the time of union is felt to be too short.

⁵ Lamentation of the mother for the girl, the Ārvār.

The Ārvār then laments that the clouds will not take his message. He speaks of the resemblance between the clouds and the Lord:

Tell me, ye clouds, how have ye won the means
That we are thus like Tirumāl's blest form?
Bearing good water for protecting life,
Ye range through all the sky. Such penance, sure,
As makes your bodies ache, has won this grace!

The friend speaks of the callousness of the lord:

E'en in this age-long time of so-called night
When men must grope, he pities not that she
Stands in her deep immitigable grief...
The jungle traversed by the fawn-eyed girl
With fragile waist, whom sinful I brought forth
After long praise of Kaṇṇan's lotus feet....

The Ārvār sees a likeness of his lord in the blue water-lily, and sees the lord's form everywhere:

All places, shining like great lotus pools
On a blue mountain broad, to me are but
The beauties of his eye—the lord of earth
Girt by the roaring sea, heaven's lord, the lord
Of other good souls, black-hued lord—and mine!

The Ārvār speaks of the greatness of the lord:

Sages with wisdom won by virtuous toil
Assert "His colour, glorious beauty, name,
His form—are such and such." But all their toil
Has measured not the greatness of my lord:
Their wisdom's light is but a wretched lamp.

The foster-mother pities the mistress unable to endure the length of the night:

This child of sinful me, with well-formed teeth,
Round breasts and rosy mouth, keeps saying, "These
Fair nights eternal are as my desire
For tuḷasi!"...

Again the foster-mother pities the girl as too young for such ardent love:

Breasts not yet full, and short her tresses soft;
Skirt loose about the waist; with prattling tongue
And innocent eyes...

Again the lord replies to a friend's criticism of his infatuation for his mistress:

Those lilies red, which are the life of me—
The eyes of her who's like the heaven of him...

The mistress is unable to endure the darkness and is yet further vexed by the appearance of the moon:

Oh, let the crescent moon which cleaves the dark
Encompassing of night, cleave me as well!
Ah, does it issue forth in brightness now,
That happy bloom may come to desolate me
Who only long for flowers of *tuḷasī*?

The mistress's friend despairs at the sight of her languishing:

... Ah! as she sobs and lisps
The cloud-hued's names, I know not if she'll live
Or if her frame and spirit mild must pass!

Again in Kula-śekhara's *Tirumal-Tiru-mōi*, C. 5:

Though red fire comes itself and makes fierce heat,
The lotus red blooms not
Save for the fierce-rayed one
Who in the lofty heavens has his seat.
Vitruvakōḍu's Lord, Thou wilt not remove
My woe, my heart melts not save at Thy boundless love...

With gathered waters all the streams ashine
Must spread abroad and run
And enter the deep sea
And cannot stand outside. So refuge mine,
Save in the shining bliss of entering Thee, is none,
Vitruvakōḍu's Lord, thick cloud-hued, virtuous one!¹

Again from the same book²:

No kinship with the world have I
Which takes for true the life that is not true.
"For thee alone my passion burns," I cry,
"Raṅgan, my Lord!"
No kinship with this world have I—
With throngs of maidens slim of waist:
With joy and love I rise for one alone, and cry
"Raṅgan, my Lord!"

¹ Hooper, *op. cit.* p. 48.

² *Ibid.* p. 44.

Again in the *Tiru-pāvai*, a well-known section of the *Nāl-āyira-divya-prabandham*, the poetess Āṇḍāl conceives herself as a Gopī, requesting her friends to go with her to wake the sleeping Kṛṣṇa,

After the cows we to the jungle go
And eat there—cowherds knowing nought are we,
And yet how great the boon we have, that thou
Wast born among us! Thou who lackest nought,
Gōvinda, kinship that we have with thee
Here in this place can never cease!—If through
Our love we call thee baby names, in grace
Do not be wroth, for we—like children—we
Know nought—O Lord, wilt thou not grant to us
The drum we ask? Ah, Ēlōrembāvāy!¹

Again Periy-ārvār conceives himself as Yaśodā and describes the infant Kṛṣṇa as lying in the dust and calling for the moon!

(1) He rolls round in the dust, so that the jewel on his brow keeps swinging, and his waist-bells tinkle! Oh, look at my son Gōvinda's play, big Moon, if thou hast eyes in thy face—and then, be gone!

(2) My little one, precious to me as nectar, my blessing, is calling thee, pointing, pointing, with his little hands! O big Moon, if thou wishest to play with this little black one, hide not thyself in the clouds, but come rejoicing!²

Again, Tiru-maṅgaiy says:

Or ever age creep on us, and we need
The staff's support; ere we are double bent
With eyes fix'd on the ground in front, and feet
That totter, sitting down to rest, all spent:
We would worship Vadari
Home of him who mightily
Suck'd his feignéd mother's breast
Till she died, ogress confest.

Again Āṇḍāl says:

Daughter of Nandagōpāl, who is like
A lusty elephant, who fleeth not,
With shoulders strong: Nappinnāi, thou with hair
Diffusing fragrance, open thou the door!
Come see how everywhere the cocks are crowing,
And in the *māthavi* bower the Kuyil sweet
Repeats its song.—Thou with a ball in hand,
Come, gaily open, with thy lotus hands
And tinkling bangles fair, that we may sing
Thy cousin's name! Ah, Ēlōrembāvāy!

¹ Hooper, *op. cit.* p. 57.

Ibid. p. 37.

Thou who art strong to make them brave in fight,
 Going before the three and thirty gods,
 Awake from out thy sleep! Thou who art just,
 Thou who art mighty, thou, O faultless one,
 Who burnest up thy foes, awake from sleep!
 O Lady Nappinnāi, with tender breasts
 Like unto little cups, with lips of red
 And slender waist, Lakshmi, awake from sleep!
 Proffer thy bridegroom fans and mirrors now,
 And let us bathe! Ah, Elōrembāvāy!¹

In describing the essential feature of the devotion of an Ārvār like Nāmm'-ārvār, called also Parāṅkuṣa or Śaṭhakopa, Gōvindāchāryar, the author of *The Divine Wisdom of the Drāviḍa Saints* and *The Holy Lives of the Āzhvārs*, says that according to Nāmm'-ārvār, when one is overcome by *bhakti*-exultation and self-surrendering devotion to God he easily attains truth². Nāmm'-ārvār said that God's grace is the only means of securing our salvation, and no effort is required on our part but to surrender ourselves to Him. In the following words Nāmm'-ārvār says that God is constantly trying to woo us to love Him:

Blissful Lord, heard I; anon my eyes in floods did run,
 Oh what is this? I asked. What marvel this? the Perfect one,
 Through friendly days and nights, elects with me to e'er remain,
 To union wooing me, His own to make; nor let me "lone."

Nāmm'-ārvār again writes that God's freedom is fettered by His mercy. Thus he says: "O mercy, thou hast deprived God of the freedom of His just will. Safe under the winds of mercy, no more can God Himself even of His will tear Himself away from me; for, if He can do so, I shall still exclaim, I am Victor, for He must purchase the freedom of His will by denying to Himself mercy." Illustrating the position, he refers to the case of a devout lady who clasped the feet of the Lord in Varadarāja's shrine at Kāñci and said: "God I have now clasped thy feet firmly; try if thou canst, spurn me and shake thyself off from me."

Nāmm'-ārvār used the term *Tuvaliḷ* or *Ninṇu kumiṇume*, a Tamil expression of love, which has been interpreted as signifying a continuous whirling emotion of love boring deeper and deeper, but never scattering and passing away. This circling and boring of

¹ Hooper, *op. cit.* p. 55.

² *Bhagavad-vishayam*, Bk. I, p. 571, as quoted in Gōvindāchāryar's *Divine Wisdom of the Drāviḍa Saints*.

love in the heart is mute, silent and incapable of expression; like the cow, whose teats filled with milk tingle, cannot withal express by mouth her painful longing to reach her calf who is tethered away from her. Thus, true love of God is perpetual and ever growing¹. The difference between the love of Nāmm'-ārvār and of Tirumaṅgaiy-ārvār is said to have been described by Yāmuna, as reported in the *Bhagavad-vishayam*, as of two different kinds. Tirumaṅgaiy-ārvār's love expresses the experience of a constant companionship with God in a state of delirious, rapturous reciprocation of ravishing love. He was immersed in the fathomless depth of love, and was in the greatest danger of becoming unconscious and falling into a stupor like one under the influence of a narcotic. Nāmm'-ārvār, however, was in a state of urgent pursuit after God. He was thus overcome with a sense of loneliness and unconscious of his individual self. He was not utterly intoxicated. The energy flowing from a mind full and strong with the ardent expectation of meeting his bridegroom and beloved companion still sustained him and kept him alive². This state is described in *Tiru-vāy-mōṛi* in the following manner:

Day and night she knows not sleep,
In floods of tears her eyes do swim.
Lotus-like eyes! She weeps and reels,
Ah! how without thee can I bear;
She pants and feels all earth for Him.

This love of God is often described as having three stages: recollection, trance and rallying. The first means the reminiscence of all the past ravishment of soul vouchsafed by God. The second means fainting and desolation at such reminiscences and a consciousness of the present absence of such ravishing enjoyments. The third is a sudden lucidity whilst in the state of trance, which being of a delirious nature may often lead to death through the rapid introduction of death-coma³.

The Ārvārs were not given to any philosophical speculation but only to ecstatic experiences of the emotion of love for God; yet we sometimes find passages in Nāmm'-ārvār's works wherein he reveals his experience of the nature of soul. Thus he says: "It is not possible to give a description of that wonderful entity, the soul

¹ *Divine Wisdom of the Drāviḍa Saints*, pp. 127-128.

² See the *Bhagavad-vishayam*, Bk. vi, p. 2865; also *Divine Wisdom*, pp. 130, 131.

³ *Bhagavad-vishayam*, Bk. vii, p. 3194; also *Divine Wisdom*, p. 151.

(*ātmā*)—the soul which is eternal, and is essentially characterized by intelligence (*jñāna*)—the soul which the Lord has condescended to exhibit to me as His mode, or I related to Him as the predicate is to the subject, or attribute is to substance (or consonants to the vowel A)—the soul, the nature of which is beyond the comprehension of even the enlightened—the soul, which cannot be classed under any category as this or that—the soul whose apperception by the strenuous mental effort called *yoga* (psychic meditation) is even then not comparable to such perception or direct proof as arises from the senses conveying knowledge of the external world—the soul (as revealed to me by my Lord) transcending all other categories of things, which could be grouped as ‘body’ or as ‘the senses,’ or as ‘the vital spirit’ (*prāṇa*), or as ‘the mind’ (*manas*), or as ‘the will’ (*buddhi*), being destitute of the modifications and corruptions to which all these are subject;—the soul, which is very subtle and distinct from any of these;—neither coming under the description ‘good,’ nor ‘bad.’ The soul is, briefly, an entity which does not fall under the cognizance of sense-knowledge¹.”

Soul is here described as a pure subtle essence unassociated with impurities of any kind and not knowable in the manner in which all ordinary things are known. Such philosophical descriptions or discussions concerning the nature of reality, or an investigation into the logical or epistemological position of the religion preached by them, are not within the scope and province of the Āṛvārs. They sang songs in an inspired manner and often believed that they themselves had no hand in their composition, but that it was God who spoke through them. These songs were often sung to the accompaniment of cymbals, and the intoxicating melody of the music was peculiar to the Āṛvārs and entirely different from the traditional music then current in South India. A study of the works of the Āṛvārs, which were collected together by the disciples of Rāmānuja at his special request, and from which Rāmānuja himself drew much inspiration and food for his system of thought, reveals an intimate knowledge of the Purāṇic legends of Kṛṣṇa, as found in the *Viṣṇu-purāṇa* and the *Bhāgavata*². There is at least one passage, already referred to, which may well be interpreted as

¹ *Divine Wisdom*, p. 169; also *Tiru-vāy-mōṇi*, VIII. 5-8.

² Sir R. G. Bhandarkar notes that the Āṛvār Kula-śekhara, in his work *Mukunda-mālā*, quotes a passage from the *Bhāgavata-purāṇa* (XI. 2. 36) (*The*

alluding to Rādhā (Nappinnāi), who is described as the consort of Kṛṣṇa. The Ārvārs refer to the legends of Kṛṣṇa's early life in Brindavan and many of them play the role either of Yośodā, the friends of Kṛṣṇa, or of the Gopīs. The spiritual love which finds expression in their songs is sometimes an earnest appeal of direct longing for union with Kṛṣṇa, or an expression of the pangs of separation, or a feeling of satisfaction, and enjoyment from union with Kṛṣṇa in a direct manner or sometimes through an emotional identification with the legendary personages associated with Kṛṣṇa's life. Even in the *Bhāgavata-purāṇa* (XI, XII) we hear of devotional intoxication through intense emotion, but we do not hear of any devotees identifying themselves with the legendary personages associated with the life of Kṛṣṇa and expressing their sentiment of love as proceeding out of such imaginary identification. We hear of the Gopī's love for Kṛṣṇa, but we do not hear of any person identifying himself with Gopī and expressing his sorrow of separation. In the *Viṣṇu-purāṇa*, *Bhāgavata-purāṇa* and the *Harivaṃśa*, the legendary love tales are only episodes in the life of Kṛṣṇa. But they do not make their devotees who identified themselves with the legendary lovers of Kṛṣṇa realize their devotion through such an imaginary identification. All that is therein expressed is that the legendary life of Kṛṣṇa would intensify the devotion of those who were already attached to Him. But the idea that the legend of Kṛṣṇa should have so much influence on the devotees as to infuse them with the characteristic spirits of the legendary personages in such a manner as to transform their lives after their pattern is probably a new thing in the history of devotional development in any religion. It is also probably absent in the cults of other devotional faiths of India. With the Ārvārs we notice for the first time the coming into prominence of an idea which achieved its culmination in the lives and literature of the devotees of the Gauḍīya school of Bengal, and particularly in the life of Caitanya, which will be dealt with in the fourth volume of the present work. The trans-

Vaiṣṇavism, Śaivism and Minor Religious Systems, p. 70). This has been challenged by S. K. Aiyangar, in his *Early History of Vaiṣṇavism in South India*, who says that this passage is absent from all the three editions (a Kannaḍa, a Grantha, and a Devanāgarī Edition) which were accessible to him (p. 28). It is further suggested there that the allusion in the passage is doubtful, because it generally occurs at the end of most South Indian books by way of an apology for the faults committed at the time of the recitation of holy verses or the performance of religious observances.

fusion of the spirits of the legendary personages in the life-history of Kṛṣṇa naturally involved the transfusion of their special emotional attitudes towards Kṛṣṇa into the devotees, who were thus led to imagine themselves as being one with those legendary personalities and to pass through the emotional history of those persons as conceived through imagination. It is for this reason that we find that, when this spirit was emphasized in the Gauḍīya school and the analysis of erotic emotions made by the rhetorical school of thinkers from the tenth to the fourteenth century received recognition, the Gauḍīya Vaiṣṇavas accepted the emotional analysis of the advancing stages of love and regarded them as indicating the stages in the development of the sentiment of devotion. As is well illustrated in Rūpa Gosvāmī's *Ujjvala-nīla-maṇi*, the transition from ordinary devotion to deep amorous sentiment, as represented in the legendary lives of Gopīs and Rādhā, was secured by sympathetic imitation akin to the sympathetic interest displayed in the appreciation of dramatic actions. The thinkers of the rhetorical school declare that a spectator of a dramatic action has his emotions aroused in such a manner that in their excess the individual limitations of time and space and the history of individual experiences which constitute his ordinary personality vanish for the time being. The disappearance of the ordinary individual personality and the overflow of emotion in one direction identify the person in an imaginary manner not only with the actors who display the emotion of the stage, but also with the actual personalities of those dramatic figures whose emotions are represented or imitated on the stage. A devotee, may, by over-brooding, rouse himself through auto-intoxication to such an emotional stage that upon the slightest suggestion he may transport himself to the imaginary sphere of a Gopī or Rādhā, and may continue to feel all the earnest affections that the most excited and passionate lover may ever feel.

It seems fairly certain that the Ārvārs were the earliest devotees who moved forward in the direction of such emotional transformation. Thus King Kula-śekhara, who was an Ārvār and devotee of Rāma, used to listen rapturously to the *Rāmāyaṇa* being recited to him. As he listened he became so excited that, when he heard of Rāma's venturing forth against Rāvaṇa, his demon opponent, he used to give orders to mobilize his whole army to march forward towards Laṅkā as an ally of Rāma.

The devotional songs of the Ārvārs show an intense familiarity with the various parts of the legendary life of Kṛṣṇa. The emotions that stirred them were primarily of the types of parental affection (as of a mother to her son), of friends and companions, servants to their masters, sons to their father and creator, as also that of a female lover to her beloved. In the case of some Ārvārs, as that of Nāmm'-ārvār and Tiru-maṅgaiy-ārvār, the last-mentioned type assumes an overwhelming importance. In the spiritual experiences of these Ārvārs we find a passionate yearning after God, the Lord and Lover; and in the expressions of their love we may trace most of the pathological symptoms of amorous longings which have been so intensely emphasized in the writings of the Vaiṣṇavas of the Gauḍīya school. In the case of the latter, the human analogy involving description of the bodily charms of the female lover is often carried too far. In the case of the Ārvārs, however, the emphasis is mostly on the transcendent beauty and charm of God, and on the ardent longings of the devotee who plays the part of a female lover, for Kṛṣṇa, the God. The ardent longing is sometimes expressed in terms of the pitiable pathological symptoms due to love-sickness, sometimes by sending messengers, spending the whole night in expectation of the Lord, and sometimes in the expressions of ravishing joy felt by the seemingly actual embrace of the Lord. We hear also of the reciprocation of love on the part of the Lord, who is described as being infatuated with the beauty and charms of the beloved, the Ārvār. In the course of these expressions, the personages in the legendary account of Kṛṣṇa's life are freely introduced, and references are made to the glorious episodes of His life, as showing points that heighten the love of the lady-lover, the Ārvār. The rapturous passions are like a whirlpool that eddies through the very eternity of the individual soul, and expresses itself sometimes in the pangs of separation and sometimes in the exhilaration of union. The Ārvār, in his ecstatic delight, visualizes God everywhere, and in the very profundity of his attainment pines for more. He also experiences states of supreme intoxication, when he becomes semi-conscious, or unconscious with occasional breaks into the consciousness of a yearning. But, though yearning after God is often delineated on the analogy of sex-love, this analogy is seldom carried to excess by studied attempts at following all the pathological symptoms of erotic love. It therefore represents a very

chaste form of the expressions of divine love in terms of human love. The Ārvārs were probably the pioneers in showing how love for God may be on terms of tender equality, softening down to the rapturous emotion of conjugal love. The Śaivism of South India flourished more or less at the same time. The hymns of the Śaivas are full of deep and noble sentiments of devotion which can hardly be excelled in any literature; but their main emphasis is on the majesty and the greatness of God and the feeling of submission, self-abnegation and self-surrender to God. The spirit of self-surrender and a feeling of clinging to God as one's all is equally dominant among the Ārvārs; but among them it melts down into the sweetness of passionate love. The Śaiva hymns are indeed pregnant with the divine fire of devotion, but more in the spirit of submissive service. Thus, Māṇikka-vāchakar, in his *Tiru-vācha kam*, speaking of Śiva, says¹:

And am I not Thy *slave*? and did'st Thou not make me Thine own,
I pray?

All those Thy servants have approached Thy Foot; this body full of sin
I may not quit, and see Thy face—Thou Lord of Ćiva-world!—I fear,
And *see not how to gain the sight!*

All *false* am I; *false* is my heart; and *false* my love; yet, if he weep,
May not Thy sinful servant Thee, Thou Soul's Ambrosial sweetness,
gain?

Lord of all honied gladness pure, in grace unto Thy servant teach
The way that he may come to Thee!

.

There was no love in me towards Thy Foot,
O Half of Her with beauteous fragrant locks!
By magic power that stones to mellow fruit
converts, Thou mad'st me lover of Thy Feet.
Our Lord, Thy tender love no limit knows.
Whatever sways me now, whate'er my deed,
Thou can'st even yet Thy Foot again to me
display and save, O Spotless Heavenly One!

The devotee also felt the sweetness of God's love and the fact that it is through Divine Grace that one can be attracted towards Him and can love Him:

¹ Pope's translation of the *Tiru vācha-kam*, p. 77.

Honey from any flower sip not, though small
 as tiniest grain of millet seed!
 Whene'er we think of Him, whene'er we see,
 whene'er of Him our lips converse,
 Then sweetest rapture's honey ever flows,
 till all our frame in bliss dissolves!
 To Him alone, the mystic Dancer, go;
 and breathe His praise, thou humming-bee!

Ārvārs and Śrī-vaiṣṇavas on certain points of controversy in religious dogmas.

The Aṛagiyas Nāthamuni, Yāmuna, Rāmānuja and their adherents largely followed the inspirational teachings of the Ārvārs, yet there were some differences of opinion among them regarding some of the cardinal points of religious faith. These have been collected in separate treatises, of which two may be regarded as most important. One of them is called *Aṣṭādaśa-rahasyārthavivaraṇa*, by Rāmānuja himself, and the other is called *Aṣṭādaśa-bheda-nirṇaya*¹. Veṅkaṭanātha and others also wrote important treatises on the subject. Some of these points of difference may be enumerated below.

The first point is regarding the grace of God (*svāmi-kṛpā*). It is suggested by the Ārvārs that the grace of God is spontaneous and does not depend on any effort or merit on the part of the devotee. If God had to depend on anything else for the exercise of His divine prerogative grace, it would be limited to that extent. Others, however, say that God's grace depends on the virtuous actions of the devotees. If that were not so, all people would in time be emancipated, and there would be no need of any effort on their part. If it was supposed that God in His own spontaneity extended His grace to some in preference to others, He would have to be regarded as partial. It is therefore to be admitted that, though God is free in extending His mercy, yet in practice He extends it only as a reward to the virtuous or meritorious actions of the devotee. God, though all-merciful and free to extend His mercy to all without effort on their part, does not actually do so except on the occasion of the meritorious actions of His devotees. The extension of God's mercy is thus both without cause (*nirhetuka*) and with cause (*saHetuka*)².

¹ Both these are MSS.

² *kṛpā-sva-rūpato nir-hetukah, rakṣaṇa-samaye cetanā-kṛta-sukṛtena sa-hetuko bhūtvā rakṣati*. (*Aṣṭādaśa-bheda-nirṇaya*, MS. p. 2.)

Here the latter view is that of Rāmānuja and his followers. It must, however, be pointed out in this connection that the so-called differences between the Ārvārs and the Rāmānujists on the cardinal points of religious faith are a discovery of later research, when the writings of the Ārvārs had developed a huge commentary literature and Rāmānuja's own writings had inspired many scholars to make commentaries on his works or to write independent treatises elucidating his doctrines. The later scholars who compared the results of the Ārvār and the Rāmānuja literatures came to the conclusion that there are some differences of view between the two regarding the cardinal faith of religion. This marks a sharp anti-thesis between the Ārvāric Teṅgalai school and the Vaḍagalai school, of which latter Veṅkaṭa was the leader. These differences are briefly narrated in the *Aṣṭādaśa-bheda-nirṇaya*. The cardinal faith of religion according to Rāmānuja has been narrated in the *Aṣṭādaśa-rahasyārtha-vivaraṇa*. The main principle of religious approach to God is self-surrender or *prapatti*. *Prapatti* is defined as a state of prayerfulness of mind to God, associated with the deep conviction that He alone is the saviour, and that there is no way of attaining His grace except by such self-surrender¹. The devotee is extremely loyal to Nārāyaṇa and prays to Him and no one else, and all his prayers are actuated by deep affection and no other motive. The virtue of *prapatti* involves within it universal charity, sympathy and friendliness even to the most determined enemy². Such a devotee feels that the Lord (*svāmī*), being the very nature of his own self, is to be depended on under all circumstances. This is called the state of supreme resignation (*nirbharatva*) in all one's affairs³. The feeling of the devotee that none of the assigned scriptural duties can be helpful to him in attaining the highest goal

¹ *an-anya-sādhye svābhīṣṭe mahā-viśvāsa-pūrvakam
tad-eko' pāyatā yācñā prapattiḥ śaraṇā-gatiḥ.*

Aṣṭādaśa-rahasyārtha-vivaraṇa, p. 3.

Rāmānuja, in his *Gadya-trayam*, says that such a state of prayerfulness of mind is also associated with confessions of one's sins and shortcomings and derelictions, and with a feeling that the devotee is a helpless servant of God extremely anxious to get himself saved by the grace of the Saviour. See the *Gadya-trayam*, *Śaraṇā-gati-gadyam*, pp. 52-54.

² This is technically known as *Prapatti-naiṣṭhikam* (*Aṣṭādaśa-rahasyārtha-vivaraṇa*, pp. 3-7). Cf. the parables of the pigeon and the monkey in the above section.

³ The interpretation is forced out of the conception of the word "svāmin," which etymologically involves the word "svam" meaning "one's own."

is technically called "*upāya-śūnyatā*," i.e. the realization of the uselessness of all other means. The devotee always smiles at all the calamities that may befall him. Considering himself to be a servant of God, he cheerfully bears all the miseries that may be inflicted on him by God's own people. This is technically called "*pāra-tantrya*," or supreme subordination. The devotee conceives his soul as a spiritual essence which has no independence by itself and is in every respect dependent on God and exists for God¹. The Vaiṣṇavas are often called *ekāntins*, and have sometimes been wrongly considered as monotheists; but the quality of *ekāntitva* is the definite characteristic of self-surrender and clinging to God in an unshaken manner—the fullest trustfulness in Him under all adverse circumstances. The devotee's mind is always exhilarated with the divine presence of the Lord who animates all his senses—his inclinations, emotions and experiences. The fullness with which he realizes God in all his own activities and thoughts, and in everything else in the universe, naturally transports him to a sphere of being in which all mundane passions—antipathy, greed, jealousy, hatred—become impossible. With the divine presence of God he becomes infused with the spirit of friendship and charity towards all beings on earth². The devotee has to take proper initiation from the preceptor, to whom he must confess all that is in his mind, and by abnegating all that is in him to his preceptor, he finds an easy way to conceive himself as the servant of Viṣṇu³. He must also have a philosophical conception of the entirely dependent relation of the human soul and all the universe to God⁴. Such a conception naturally involves realization of the presence of God in all our sense activities, which

¹ *jñāna-mayo hi ātmā śeṣo hi paramā-tmanah iti jñānā-nandamayo jñānā-nanda-guṇakah san sva-rūpaṁ bhagavad-adhīnaṁ sa tad-artham eva tiṣṭhati* ti jñātvā vatiṣṭhate iti yad etat tad-a-prākṛtatvam.

Aṣṭādaśa-rahasyārtha-vivaraṇam, p. 11.

² This virtue is technically called *nitya-rāgītva*.

³ The five *saṁskāras* that a *paramaikāntin* must pass through are as follows:
*tāpāḥ paundras tathā nāma mantrō yāgaś ca pañcamah
amī te pañca saṁskārāḥ paramaikānti-hetavaḥ.* *Ibid.* p. 15.

⁴ This is technically called *sambandha-jñānitvam*. The conception that everything exists for God is technically called *śeṣa-bhūtatvam*. *Ibid.* p. 18.

This naturally implies that the devotee must work and feel himself a servant of God and of His chosen men. The service to humanity and to God then naturally follow from the philosophical conception of the dependence of the human souls, and of the universe, on God as a part of Him and to be controlled by Him in every way. This is again technically called *śeṣa-vṛtti-paratva*. *Ibid.* pp. 19-20.

presence in its fullness must easily lead to the complete control of all our senses. Through the realization of God's presence in them, the devotees play the part of moral heroes, far above the influences of the temptation of the senses¹. The normal religious duties, as prescribed in the Vedas and the *smṛtis*, are only for the lower order of the people; those who are given entirely to God with the right spirit of devotion need not follow the ordinary code of duties which is generally binding for all. Such a person is released by the spontaneous grace of God, and without performing any of the scriptural duties enjoys the fruits of all². He is always conscious of his own faults, but takes no notice of the faults of others, to which he behaves almost as a blind man; he is always infused with the consciousness that all his actions are under the complete sway of the Lord. He has no enjoyment for himself, for he always feels that it is the Lord who would enjoy Himself through all his senses³.

In the *Aṣṭādaśa-bheda-nirṇaya* it is said that according to the Ārvārs, since emancipation means the discovery of a lost soul to God or the unlimited servitude of God, emancipation is for the interest of God and not of the devotee. The service of the servant is for the servitude of God alone. It has therefore no personal interest for the devotee⁴. According to the Aṛāgiyas, however, emancipation, though primarily for the interest of the Lord, is also

¹ This is technically called the *nitya-sūratva*.

² *jñāna-niṣṭho virakto vā mad-bhaktō hy a-napekṣakah
sa līṅgān āśramān tyaktvā cared a-vidhi-gocarah*

*ity evam iṣaṇa-traya-vinirmuktas san bhagavan-nir-hetuka-kaṭākṣa eva
mokṣo-pāyah iti tiṣṭhati khalu so'dhikārī sakala-dharmānām avāśyo bhavati.
Aṣṭādaśa-rahasyārtha-vivaraṇa, p. 23*

This spirit of following God, leaving all other scriptural duties, is technically called *a-vidhi-gocaratva*. In another section of this work Rāmānuja describes *mokṣa* or salvation as the conviction that the nature of God transcends, in bliss, power and knowledge, all other conceivable things of this or any other universe. A desire to cling to God as a true means of salvation is technically called *mumukṣutva*. The doctrine of *a-vidhi-gocaratva* herein described seems to be in conflict with Rāmānuja's view on the subject explained in the *bhāṣya* as interpreted by his many followers. This may indicate that his views underwent some change, and these are probably his earlier views when he was under the influence of the Ārvārs.

³ This is technically called *parā-kāśatva* (*Ibid.* pp. 23-24). The attitude of worshipping the image as the visible manifestation of God is technically called *upāya-svarūpa-jñāna*. The cessation of attachment to all mundane things and the flowing superabundance of love towards God, and the feeling that God is the supreme abode of life, is technically called *ātmā-rāmatva*.

⁴ *phalaṃ mokṣa-rūpam, tad bhagavata eva na svārthaṃ yathā pranaṣṭa-dṛṣṭa-
dravya-lābho dravyavata eva na dravyasya; tathā mokṣa-phalaṃ ca svāmīna eva*

at the same time for the interest of the devotee, because of the intense delight he enjoys by being a servant of God. The illustration of lost objects discovered by the master does not hold good, because human beings are conscious entities who suffer immeasurable sorrow which is removed by realizing themselves as servants of God. Though the devotee abnegates all the fruits of his actions in a self-surrender, yet he enjoys his position in the servitude of God and also the bliss of the realization of Brahman. Thus, those who take the path of knowledge (*upāsaka*) attain Brahma knowledge and the servitude of God, and those who take the path of self-surrender (*prapatti*) also attain Brahma knowledge and the servitude of God. In the state of salvation (*mukti*) there is no difference of realization corresponding to the variation of paths which the seekers after God may take¹. Again, in the Ārvār school of thought, besides the four ways of scriptural duties, philosophic wisdom, devotion to God and devotion to teachers, there was a fifth way, viz. that of intense self-surrender to God, i.e. *prapatti*. But the Aṛagiya thought that apart from *prapatti* there was only one other way of approaching God, namely devotion, *bhakti-yoga*. Rāmānuja and his followers maintain that *karma-yoga* and *jñāna-yoga* only help to purify the mind, as a preparation for *bhakti-yoga*. The devotion to the preceptor is regarded only as a form of *prapatti*; so there are only two ways of approach to God, viz. *bhakti-yoga* and *prapatti*².

Further, Śrī occupies an important position in Śrī-vaiṣṇavism. But as there are only three categories in the Śrī-vaiṣṇava system, a question may naturally arise regarding the position of Śrī in the threefold categories of *cit*, *acit* and *parameśvara*. On this point the view of the older school, as described in Ramya-jāmāṭṛ muni's *Tattva-dīpa*, is that Śrī is to be identified with human souls and is therefore to be regarded as atomic in nature³. Others, however, think that Śrī is as all-pervasive as Viṣṇu. Filial affection (*vātsalya*)

na muktasya; yad vā phalaṃ kainkaryam tat parā-rtham eva na svā-rtham; para-tantra-daśā-kṛtam kainkaryam sva-tantra-svāmy-artham eva. Aṣṭādaśa-bheda-nirṇaya, p. 2.

¹ *Ibid.* p. 3.

² *ataḥ prapatti-vyতিরিক্তো bhakti-yoga eka eve' ti. Ibid.* p. 4.

³ *Ibid.* In the next section it is urged that, according to some, Nārāyaṇa and not Śrī is the only agent who removes our sins, but others hold that sins may be removed also by Śrī in a remote manner, or, because Śrī is identical with Nārāyaṇa; as the fragrance is with the flower, she has also a hand in removing the sins. *Ibid.* p. 5.

lakṣmī upāyatam bhagavata iva sākṣāt abhyupagantavyam. Ibid.

for God is interpreted by the older schools as involving an attitude in which the faults of the beloved devotee are points of endearment to Him¹. In the later view, however, filial affection is supposed to involve an indifference or a positive blindness towards the faults of the devotee. God's mercy is interpreted by the older school as meaning God's affliction or suffering in noticing that of others. Later schools, however, interpret it as an active sympathy on His part, as manifested in His desire to remove the sufferings of others on account of His inability to bear such miseries².

Prapatti, otherwise called *nyāsa*, is defined by the older school as a mere passivity on the part of the Lord in accepting those who seek Him or as a mental state on the part of the seeker in which he is conscious of himself only as a spirit; but such a consciousness is unassociated with any other complex feeling, of egoism and the like, which invests one with so-called individuality. It may also mean the mental state in which the seeker conceives himself as a subsidiary accessory to God as his ultimate end, to Whom he must cling unburdened by any idea of scriptural duties³; or he may concentrate himself absolutely on the supreme interest and delight that he feels in the idea that God is the sole end of his being. Such a person naturally cannot be entitled without self-contradiction to any scriptural duty. Just as a guilty wife may return to her husband, and may passively lie in a state of surrender to him and resign herself, so the seeker may be conscious of his own true position with reference to God leading to a passive state of surrender⁴. Others think that it involves five elements: (i) that God is the only saviour;

¹ *yathā kāmukaḥ kāmīnyā mālinyaṃ bhogyatayā svīkaroti tathā bhagavān āśrita-doṣaṃ svīkaroti itare tu vātsalyaṇi nāma doṣadārśitam. Aṣṭādaśa-bheda-nirṇaya*, p. 6.

It is further suggested that, if a devotee takes the path of *prapatti*, he has not to suffer for his faults as much as others would have to suffer.

² The first alternative is defined as *para-duḥkha-duḥkhītvam dayā*. The second alternative is *svārtha-nirapekṣa-para-duḥkha-sahiṣṇutā dayā*; *sa ca tan nirākaraṇecchā*. In the first alternative *dayā* is a painful emotion; in the second it is a state of desire, stirred up by a feeling of repugnance, which is midway between feeling and volition. *Ibid.* p. 6.

³ *prapattir nāma a-nivāraṇa-mātram a-cid-vyāvrtti-mātram vā a-vidheyam śeṣātva-jñāna-mātram vā para-śeṣatui-ka-rati-rūpa-parisuddha-yāthātmya-jñāna-mātram vā. Ibid.* p. 6.

According to some, any of these conditions would define *prapatti* "ato'prati-śedhādy-anyaṭamai' va iti kecit kathayanti." *Ibid.*

⁴ *atyanta-para-tantrasya virodhatvena amuṣṭhānā-nupapatteḥ, pratyuta anuṣṭatur ānarthakya-muktam Śrīvacana-bhūṣaṇa, ciraṃ anya-parayā bhāryayā kadācid bharty-sakāṣam āgatayā mām angikuru iti vākyaavat cetana-kṛta-prapattir iti. Ibid.* p. 6.

(ii) that He is the only end to be attained; (iii) that He alone is the supreme object of our desires; (iv) that we absolutely surrender and resign ourselves to Him¹; and (v) supreme prayerfulness—all associated with absolute trustfulness in Him.

There are some who define the *prapanna*, or seeker of God, as one who has read the Ārvār literature of *prabandhas* (*adhīta-prabandhaḥ prapannaḥ*). Others, however, think that the mere study of the *prabandhas* cannot invest a man with the qualities of *prapatti*. They think that he alone is entitled to the path of *prapatti* who cannot afford to adopt the dilatory courses of *karma-yoga*, *jñāna-yoga* and *bhakti-yoga*, and therefore does not think much of these courses. Again, the older school thinks that the person who adopts the path of *prapatti* should give up all scriptural duties and duties assigned to the different stages of life (*āśrama*); for it is well evidenced in the *Gītā* text that one should give up all one's religious duties and surrender oneself to God. Others, again, think that the scriptural duties are to be performed even by those who have taken the path of *prapatti*. Further, the older school thinks that the path of knowledge is naturally against the path of *prapatti*; for *prapatti* implies the negation of all knowledge, excepting one's self-surrendering association with God. The paths of duties and of knowledge assume an egoism which contradicts *prapatti*. Others, however, think that even active self-surrender to God implies an element of egoism, and it is therefore wrong to suppose that the paths of duties and of knowledge are reconcilable with *prapatti* on account of its association with an element of egoism. The so-called egoism is but a reference to our own nature as self, and not to *ahaṅkāra*, an evolute². Again, some think that even a man who has

¹ In the second alternative it is defined as follows:

*an-anya-sādhye svā-bhāṣte mahā-viśvāsa-pūrvakam
tad-eko'pāyatā yācā prapattiś śaraṇa-gatiḥ.*

These are the five *aṅgas* of *prapatti*, otherwise called *nikṣepa*, *tyāga*, *nyāsa* or *śaraṇa-gati* (*Aṣṭādaśa-bheda-nirṇaya*, pp. 6, 7). The difference between the first and second alternative is that, according to the former, *prapatti* is a state of mind limited to the consciousness of its true nature in relation to God; on the part of God also it indicates merely a passive toleration of the seekers flocking unto Him (*a-nivāraṇa-mātram*). In the second alternative, however, *prapatti* is defined as positive self-surrendering activity on the part of the seekers and unconditional protection to them all on the part of God. It is, therefore, that on the first alternative the consciousness of one's own true nature is defined in three ways, any one of which would be regarded on that alternative as a sufficient definition of *prapatti*. The first one is merely in the cognitive state, while the second involves an additional element of voluntary effort.

² *Ibid.* pp. 8, 9.

adopted the path of *prapatti* may perform the current scriptural duties only with a view to not lending any support to a reference to their cases as pretexts for neglect of normal duties by the unenlightened and the ignorant, i.e. those that have adopted the path of *prapatti* should also perform their duties for the purpose of *loka-saṃgraha*. Others, however, think that the scriptural duties, being the commandments of God, should be performed for the satisfaction of God (*bhagavat-prīty-artham*), even by those who have taken the path of *prapatti*. Otherwise they would have to suffer punishment for that.

The accessories of *prapatti* are counted as follows: (i) A positive mental attitude to keep oneself always in consonance with the Lord's will (*ānukūlyasya saṃkalpaḥ*); (ii) a negative mental attitude (*prātikūlyasya varjanam*), as opposing anything that may be conceived as against His will; (iii) a supreme trustfulness that the Lord will protect the devotee (*rakṣiṣyatīti viśvāsaḥ*); (iv) prayer to Him as a protector (*goptrtva-varaṇam*); (v) complete self-surrender (*ātma-nikṣepaḥ*); (vi) a sense of complete poverty and helplessness (*kārpaṇyam*). The older school thinks that the man who adopts the path of *prapatti* has no desires to fulfil, and thus he may adopt any of these accessories which may be possible for him according to the conditions and inclinations of his mind. Others, however, think that even those who follow the path of *prapatti* are not absolutely free from any desire, since they wish to feel themselves the eternal servants of God. Though they do not crave for the fulfilment of any other kind of need, it is obligatory upon them to perform all the six accessories of *prapatti* described above.

The older school thinks that God is the only cause of emancipation and that the adoption of the path of *prapatti* is not so; the later school, however, thinks that *prapatti* is also recognized as the cause of salvation in a secondary manner, since it is only through *prapatti* that God extends His grace to His devotees¹. Again, the older schools think that there is no necessity for expiation (*prāyaścitta*) for those who adopt the path of *prapatti*; for with them God's grace is sufficient to remove all sins. The later schools, however, think that, if the follower of the path of *prapatti* is physically fit to perform the courses of expiation, then it is obligatory on him. According to the older school a man possessing the eight kinds of devo-

¹ *Aṣṭādaśa-bheda-nirṇaya*, p. 10.

tion (*bhakti*), even if he be a *mleccha*, is preferred to a Brahman and may be revered as such. According to the later schools, however, a devotee of a lower caste may be shown proper respect, but he cannot be revered as a Brahman. Again, on the subject of the possibility of pervasion of the atomic individual souls by God, the older schools are of opinion that God by His infinite power may enter into the atomic individuals; the later schools, however, think that such a pervasion must be of an external nature, i.e. from outside. It is not possible for God to penetrate into individual souls¹. As regards *Kaivalya* the older schools say that it means only self-apperception. He who attains this state attains the highest stage of eternity or immortality. The later school, however, thinks that he who has merely this self-apperception cannot attain immortality through that means only; for this self-apperception may not necessarily mean a true revelation of his nature with reference to God. He can realize that only as he passes through higher spheres and ultimately reaches Vaikunṭha—the abode of God, where he is accepted as the servant of the Lord. It is such a state that can be regarded as eternal².

¹ *Aṣṭādaśa-bheda-nirṇaya*, p. 12. The view is supported by a reference to Varadācārya's *Adhikaraṇa-cintāmaṇi*.

² The eighteen points of dispute as herein explained have been collected in the *Aṣṭādaśa-bheda-nirṇaya*, according to the ancients in a verse quoted from them as follows:

*bhedaḥ svāmi-kṛpā-phalā-nya-gatiṣu śrī-vyāpty-upāyatvayos
tad-vātsalya-dayā-nirukti-vacasornyāse ca tat kartari
dharma-tyāga-virodhayos sva-vihite nyāsā-ṅga-hetutvayoh
prāyaścitta-vidhau tadya-bhajane' nvyāpti-kaivalyayoh.* *Ibid.* p. 1.

CHAPTER XVIII

AN HISTORICAL AND LITERARY SURVEY OF THE VIŚIṢṬĀ-DVAITA SCHOOL OF THOUGHT

The Aṛagiyas from Nāthamuni to Rāmānuja.

A. GÖVINDĀCHĀRYAR has written a book, *The Holy Lives of the Āzhvārs*, based upon a number of old works¹. The writings of the Ārvārs may be sub-divided generally into three *rahasyas* (or mystical accounts) called *Tiru-mantra-churukku*, *Dvaya-churukku*, *Carama-śloka-churukku*. These three *rahasyas* have also been dealt with in later times by very prominent persons, such as Venkaṭanātha, Rāghavācārya and others. Some account of these, in the manner of these later writers, will be briefly given in the proper place, since the scope of this work does not permit us to go into the details of the lives of the Ārvārs. The hagiologists make a distinction between the Ārvārs and the Aṛagiyas in this, that, while the former were only inspired men, the latter had their inspirations modified by learning and scholarship. The list of Aṛagiyas begins with Nāthamuni. There is some difficulty in fixing his age. The *Guru-paramparā*, the *Divya-sūri-carita* and the *Prapannāmṛta*, are of opinion that he was in direct contact with Nāmm'-ārvār, otherwise called Śaṭhakopa, or Kaṛimāraṇ, or rather with his disciple Madhura-kaviy-ārvār. Thus, the *Prapannāmṛta* says that Nāthamuni was born in the village called Vīranārāyaṇa, near the Cola country. His father's name was Īśvara Bhaṭṭa, and his son was Īśvaramuni². He went on a long pilgrimage, in the course of which he visited the northern countries, including Mathurā, Vṛndāvana and Haridvāra, and also Bengal and Purī. After returning to his own place he found that some of the

¹ (1) *Divya-sūri-carita* (a. earlier work than the *Prapannāmṛta*, which often alludes to it) by Garuḍa-vāhana Paṇḍita, contemporary and disciple of Rāmānuja; (2) *Prapannāmṛta*, by Ananta-sūri, disciple of Śaila-raṅgeśa guru; (3) *Prabandha-sūtra*, by Venkaṭanātha; (4) *Upadeśa-ratna-mālai* by Rāmyajāmātr-mahā-muni, otherwise called Varavara-muni or Periya-jīyar or Maṇavāla Mā-muni; (5) *Guru-paramparā-prabhāvam* by Pinb'-aṛagiya Peru-māl Jīyar; and (6) *Pazhanadai-vilakkan*.

² It is said that he belonged to the lineage of Śaṭhakopa or Śaṭha-marṣaṇa. His other name was Śrī-raṅga-nātha. (See introduction to *Caruḥ-śloka*, Ananda Press, Madras, p. 3.)

Śrīvaiṣṇavas, who came from the Western countries to the temple of Rājagopāla, recited there ten verses by Kaṛimāra. Nāthamuni, who heard those hymns, realized that they were parts of a much bigger work and decided to collect them. He went to Kumbhakoṇa, and under the inspiration of God proceeded to the city of Kurakā, on the banks of Tāmraparṇī, and there met Madhura-kaviy-āṟvār, the disciple of Nāmm'-āṟvār, and asked him if the hymns of Nāmm'-āṟvār were available. Madhura-kaviy-āṟvār told him that after composing a big book of hymns in Tamil and instructing Madhura-kaviy-āṟvār the same, Nāmm'-āṟvār had attained salvation. The work could not, therefore, obtain currency among the people. The people of the locality had the misconception that the study of the work would be detrimental to the Vedic religion. So they threw it into the river Tāmraparṇī. Only one page of the book, containing ten verses, was picked up by a man who appreciated the verses and recited them. Thus only these ten verses have been saved. Nāthamuni recited twelve thousand times a verse composed by Madhura-kaviy-āṟvār in adoration of Nāmm'-āṟvār, and, as a result of that, Nāmm'-āṟvār revealed the purport of the whole work to him. But when Nāthamuni wanted to know all the verses in detail he was advised to approach an artisan of the place who was inspired by Nāmm'-āṟvār to reveal all the verses to him. So Nāthamuni received the entire work of Nāmm'-āṟvār from the artisan. He then gave it to his pupil Puṇḍarikākṣa, and Puṇḍarikākṣa gave it to his disciple Rāma Miśra, and Rāma Miśra gave it to Yāmuna, and Yāmuna gave it to Goṣṭhīpūrṇa, and Goṣṭhīpūrṇa gave it to his daughter Devakī Śrī. Nāthamuni brought the hymns together, and, through his two nephews, Melaiyagattāṟvār and Kilaiyagattāṟvār, set them to music in the Vedic manner; from that time forward these hymns were sung in the temples and were regarded as the Tamil Veda¹. The oldest *Guru-paramparā* and *Divya-sūri-carita*, however, say that Nāthamuni obtained the works of Nāmm'-āṟvār directly from him. The later Śrīvaiṣṇavas found that the above statements did not very well suit the traditional antiquity of the Āṟvārs, and held that Madhura-kaviy-āṟvār was not the direct disciple of Nāmm'-āṟvār and that Nāthamuni attained the high age of three hundred years. But, if, as we found before, Nāmm'-āṟvār's date be fixed in the ninth century, no such supposition

¹ *Prapannāmṛta*, Chs. 106 and 107.

becomes necessary. Gopīnātha Rāu refers also to a Sanskrit inscription in the middle of the tenth century, in which it is stated that the author of the verses was a disciple of Śrīnātha. If this Śrīnātha is the same as Nāthamuni, then the computation of Nāthamuni's date as falling in the tenth century is quite correct. He had eleven disciples, of whom Puṇḍarikākṣa, Karukānātha and Śrīkṛṣṇa Lakṣmīnātha were the most prominent. He wrote three works, *Nyāya-tattva*, *Puruṣa-niṇṇaya* and *Yoga-rahasya*¹. Nāthamuni is also described as a great yogin who practised the *yoga* of eight accessories (*aṣṭāṅga-yoga*)². The *Prapannāmṛta* says that he died by entering into *yoga* in the city of Āgaṅgā (probably Gaṅgaikoṇḍaṣoḍapuram). Gopī-nātha, however, thinks that he could not have died in that city, for it was not founded by Rajendra-*dracola*, otherwise called Gaṅgaikoṇḍasola, before 1024, which must be later than the date of Nāthamuni. Nāthamuni lived probably in the reign of Parāntaka Cola I, and died before or in the reign of Parāntaka Cola II, i.e. he lived eighty or ninety years in the middle of the tenth century. He had made an extensive tour in Northern India as far as Mathurā and Badarī-nātha and also to Dvārakā and Purī. Śrīkṛṣṇa Lakṣmīnātha, disciple of Nāthamuni, wrote an extensive work on the doctrine of *prapatti*. He was born at a place called Kṛṣṇamaṅgala. He was well-versed in the Vedas, and was a specialist in Vedānta and also a great devotee, who constantly employed himself in chanting the name of Viṣṇu (*nāma-saṅkīrtana-rataḥ*). He used often to go about naked and live on food that was thrown to him. The hagiologists say that he entered into the image of the temple and became one with God. Puṇḍa-

¹ The *Nyāya-tattva* is referred to by Venkaṭanātha in his *Nyāya-parīśuddhi* (p. 13) as a work in which Gautama's *Nyāya-sūtras* were criticized and refuted:

*bhagavan-nātha-munibhir nyāya-tattva-samāhwayā
avadhīrā kṣapādādin nyabandhi nyāya-paddhatih*

Nyāya-parīśuddhi, p. 13.

² The practice of *aṣṭāṅga-yoga* was not a new thing with Nāthamuni. In giving an account of Tiru-māṇḍai Pirān, also called Bhaktisāra, the *Prapannāmṛta* says that he first became attached to the god Śiva and wrote many Tamil works on Śaiva doctrines; but later on the saint Mahārya initiated him into Vaiṣṇavism and taught him *aṣṭāṅga-yoga*, through which he realized the great truths of Vaiṣṇavism. He then wrote many works in Tamil on Vaiṣṇavism. Bhakti-sāra also wrote a scholarly work, refuting the views of other opponents, which is known as *Tattvārtha-sāra*. Bhakti-sāra also used to practise *aṣṭāṅga-yoga* and was learned in all the branches of Indian philosophy. Bhakti-sāra had a disciple named Kanikṛṣṇa, who wrote many extremely poetical verses or hymns in adoration of Viṣṇu. Kula-śekhara Peru-māl is also said to have practised *yoga*.

rikākṣa Uyyakoṇḍār is supposed to have very much influenced the character of Kurukānātha, who in the end entered into *yoga* and died. Rāma Miśra was born in the city of Saugandhakulya, in a Brahmin family, and was a pupil of Puṇḍarikākṣa. The name of Puṇḍarikākṣa's wife was Āṇḍāl. Puṇḍarikākṣa asked Rāma Miśra (Manakkal-lambej) to teach Yāmuna all that he was taught. Yāmuna, however, was not born during the life of Puṇḍarikākṣa, and Puṇḍarikākṣa only prophesied his birth in accordance with the old prophecy of Nāthamuni. Rāma Miśra had four disciples, excluding Yāmuna, of whom Lakṣmī was the most prominent¹. He used to stay in Śrīraṅgam and expound the doctrines of the Vedānta.

Yāmunācārya, otherwise called Ālavandār, son of Īśvaramuni and grandson of Nāthamuni, was born probably in A.D. 918 and is said to have died in A.D. 1038. He learned the Vedas from Rāma Miśra, and was reputed to be a great debater². Becoming a king, he was duly married and had two sons named Vararaṅga and Śoṭṭha-pūrṇa. He lived happily for a long time, enjoying his riches, and took no notice of Rāma Miśra. But Rāma Miśra with some difficulty obtained access to him and availed himself of the opportunity to teach him the *Bhagavad-gītā*, which aroused the spirit of detachment in him, and he followed Rāma Miśra to Śrīraṅgam and, renouncing everything, became a great devotee³. One of the last

¹ (1) Taivattuk-k-arasu-Nambi; (2) Gomathattut-tiruvinnagar-appan; (3) Sirup-pullur-udaya-Pillai; (4) Vangi-puratt-acchi. (See *The Life of Rāmānuja*, by Govindāchāryar, p. 14.)

² The *Prapannāmṛta* relates a story of Yāmuna's debating power at the age of twelve. The king of the place had a priest of the name of Akkaialvan, who was a great debater. Yāmuna challenged him and defeated him in an open debate held in the court of the king. He was given half the kingdom as a reward. He seems to have been very arrogant in his earlier days, if the wording of his challenge found in the *Prapannāmṛta* can be believed. The words of challenge run as follows:

*ā śailād adri-kanyā-caraṇa-kisalaya-nyāsa-dhanyopakanthād
ā rakṣo-nīta-sītā-mukha-kamala-samullāsa-hetoḥ ca setoh
ā ca prācya-praticya-kṣīti-dhara-yuga tadarkacandrāvataṁsān
mīmāṁsā-śāstra-yugma-śrama-vimala-manā mṛgyatām mādrśo'nyah*

Ch. III.

³ A story is told in the *Prapannāmṛta* that, when Yāmuna became a king and inaccessible to him, Rāma Miśra was concerned how he could carry out the commands of his teachers and initiate Yāmuna to the path of devotion. He got in touch with Yāmuna's cook, and for six months presented some green vegetables (*aiarka-śāka*) which Yāmuna very much liked. When, after the six months, the king asked how the rare vegetables found their way into the kitchen, Rāma Miśra stayed away for four days praying to Raṅganātha, the deity, to tell him how he could approach Yāmuna. In the meanwhile the king missed the green vegetables and asked his cook to present Rāma Miśra when next he should come to the kitchen. Rāma Miśra was thus presented to Yāmuna.

instructions of Rāma Mīśra was to direct him to go to Kurukānātha (Kurugai-kkaval-appan) and learn from him the *aṣṭāṅga-yoga*, which had been left with him (*Kurukā*) by Nāthamuni for Yāmuna. Yāmuna had many disciples, of whom twenty-one are regarded as prominent. Of these disciples, Mahāpūrṇa belonged to the Bhāradvāja *gotra*, and had a son named Puṇḍarikākṣa and a daughter named Attutayi. Another disciple, called Śrīśailapūrṇa, was known also by the name Tātācārya¹. Another of his disciples, Goṣṭhīpūrṇa, was born in the Pāṇḍya country, where also, in the city of Śrīmadhurā, was born another of Yāmuna's disciples, Mālādhara. In the city of Maraner in the Pāṇḍya country was born another disciple, Maraner Nambi, a *śūdra* by caste; a further disciple, Kāñcīpūrṇa, who was also of the *śūdra* caste, was born in the city of Punamallī. Yāmuna used to invest all his disciples with the five Vaiṣṇava *saṃskāras*, and he also converted the Cola king and queen to the same faith and made over the kingdom he had hitherto enjoyed to the service of the deity Raṅganātha of Śrīraṅgam. Śrīśailapūrṇa, or Bhūri Śrīśailapūrṇa, or Mahāpūrṇa had two sons, two sisters and two daughters. The elder sister, Kāntimatī, was married to Keśava Yajvan, also called Āsuri Keśava, Rāmānuja's father, and the second sister, Dyutimatī, was married to Kanalakṣa Bhaṭṭa, and a son was born to them called Govinda. Kureśa, who was long in association with Rāmānuja, was born of Ananta Bhaṭṭa and Mahādevī, and this Kureśa was the father of Anantācārya, writer of the *Prapannāmyta*². Dāsarathi was born of Ananta Dīkṣita, of Vādhūla *gotra*, and Lakṣmī. Dāsarathi had a son called Kaṇḍaṇātha, who was also called Rāmānujadāsa. They are all associates of Rāmānuja, who had seventy-four prominent disciples.

Yāmuna was very fond of Nāmm'-āṟvār's works, the doctrines of which were often explained to the people. Yāmuna wrote six works: (i) *Stotra-ratnam*, in adoration to the deity Varada; (ii) *Catuḥ-śloki*; (iii) *Āgama-prāmāṇya*; (iv) *Siddhi-traya*; (v) *Gītārtha-saṃgraha*; (vi) *Mahā-puruṣa-nirṇaya*³. Of these the *Siddhi-traya* is the most important, and the section on Yāmuna in this volume has been based almost entirely on it. The *Āgama-prāmāṇya* is a work in which he tries to establish the high antiquity and undisputed

¹ *Prapannāmyta*, Ch. 113, p. 440.

² *Ibid.* Ch. 150, p. 450. Anantācārya, called also Ananta Sūri, was the pupil of Śailaraṅgeśa-guru. He reveres also Rāmyajāmātr-mahā-muni.

³ See Venkaṭanātha's introduction to the *Gītārtha-saṃgraha-rakṣā*.

authority of the Pañcarātra literature, which is supposed to be the canon of the Śrīvaiṣṇavas. The *Stotra-ratnam*, *Catuḥ-śloki* and *Gītārtha-saṃgraha* were all commented upon by various persons, but the most important of the commentaries is that of Veṅkaṭanātha¹. The *Stotra-ratnam* consists of sixty-five verses in which Yāmuna describes the beauty of the Lord Kṛṣṇa, as set forth in the Purāṇas, and confesses to Him the deep affliction of all his sins and guilt, frailties and vices, and asks for forgiveness of them. He also describes the greatness of the Lord as transcendent and surpassing the greatness of all other deities, as the supreme controller and upholder of the universe. He narrates his own complete surrender to Him and entire dependence on His mercy. If the mercy and grace of the Lord be so great, there is none so deserving of mercy in his wretchedness as a sinner. If the sinner is not saved, the mercy of the Lord becomes meaningless. The Lord requires the sinner in order to realize Himself as the all-merciful. Yāmuna further describes how his mind, forsaking everything else, is deeply attracted to the Lord; and the sense of his supreme helplessness and absolute abnegation². The devotee cannot bear any delay in his communion with God, and is extremely impatient to meet Him; it is galling to him that God should heap happiness after happiness on him and thus keep him away. The fundamental burden of the hymns is an expression of the doctrine of *prapatti*; this has been very clearly brought out in the commentary of Veṅkaṭanātha. It is said that it was after reading these hymns that Rāmānuja became so deeply attracted to Yāmuna. The *Catuḥ-śloki* consists of only four verses in praise of Śrī or Lakṣmī³.

In the *Gītārtha-saṃgraha* Yāmuna says that the means to the

¹ The commentary on the *Catuḥ-śloki* by Veṅkaṭanātha is called *Rahasya-rakṣā*, and the commentary on the *Stotra-ratnam* goes also by the same name. The commentary on the *Gītārtha-saṃgraha*, by Veṅkaṭanātha, is called *Gītārtha-saṃgraha-rakṣā*.

² Two specimen verses may be quoted from the *Stotra-ratnam*:

*na dharmā-niṣtho'smī na cā' tma-vedī na bhaktimāms tvac-caraṇā-ravinde
a-kiñcano nā'nya-gatis śaraṇya tvat-pāda-mūlaṃ śaraṇaṃ prapadye.* Śl. 22.

*na ninditaṃ karma tad asti loke
sahasraśo yan na mayā vyadhāyi
so'ham vipākā-vasare mukunda
krandāmi sampraty a-gatis tavāgre.* Śl. 23.

³ Veṅkaṭanātha, in his commentary on the *Catuḥ-śloki*, discusses the position of Lakṣmī according to the Vaiṣṇava tradition. Lakṣmī is regarded as a being

attainment of the ultimate goal of life is devotion, which is produced as a result of the performance of scriptural duties and the emergence of self-knowledge¹. According to Yāmuna, *yoga* in the *Gītā* means *bhakti-yoga*. So the ultimate object of the *Gītā* is the propounding of the supreme importance of *bhakti* (devotion) as the ultimate object, which requires as a precedent condition the performance of the scriptural duties and the dawning of the true spiritual nature of the self as entirely dependent on God.

It is related in the *Prapannāmṛta* that Yāmuna was anxious to meet Rāmānuja, but died immediately before Rāmānuja came to meet him. So Rāmānuja could only render the last homage to his dead body.

Rāmānuja².

It has already been said that Mahāpūrṇa (Nambi), disciple of Yāmuna, had two sisters, Kāntimatī and Dyutimatī, of whom the former was married to Keśava Yajvan or Āsuri Keśava of Bhūtapuri and the latter to Kamalākṣa Bhaṭṭa. Rāmānuja (Ilaya Perumal), son of Keśava Yajvan, was born in A.D. 1017. He received his training, together with his mother's sister's son Govinda Bhaṭṭa, from Yādavaprakāśa, a teacher of Vedānta of great reputation. The details of Yādavaprakāśa's views are not known, but it is very probable that he was a monist³. Before going to study with

different from Nārāyaṇa, but always associated with Him. He thus tries to refute all the views that suppose Lakṣmī to be a part of Nārāyaṇa. Lakṣmī should also not be identified with *māyā*. She is also conceived as existing in intimate association with Nārāyaṇa and, like a mother, exerting helpful influence to bring the devotees into the sphere of the grace of the Lord. Thus Lakṣmī is conceived to have a separate personality of her own, though that personality is merged, as it were, in the personality of Nārāyaṇa and all His efforts, and all her efforts are in consonance with the efforts of Nārāyaṇa (*parasparā-nukūlatayā sarvatra sāmāśyam*). On the controversial point whether Lakṣmī is to be considered a *jīva* and therefore atomic in nature, the problem how she can then be all-pervasive, and the view that she is a part of Nārāyaṇa, Veṅkaṭanātha says that Lakṣmī is neither Jīva nor Nārāyaṇa, but a separate person having her being entirely dependent on God. Her relation to Nārāyaṇa can be understood on the analogy of the relation of the rays to the sun or the fragrance to the flower.

nārāyaṇaḥ paraṁ brahma gītā-śāstre samuditah

Gītārtha-saṁgraha, verse 1.

² Most of the details of Rāmānuja's life are collected from the account given in the *Prapannāmṛta* by Anantācārya, a junior contemporary of Rāmānuja.

³ Yādava held that Brahman, though by its nature possessing infinite qualities, yet transforms itself into all types of living beings and also into all kinds of inanimate things. Its true nature is understood when it is realized that it is one

Yādavaprakāśa, Rāmānuja was married at the age of sixteen, by his father, who died shortly afterwards. His teacher Yādavaprakāśa lived in Kāñcī. So Rāmānuja left Bhūtapurī his native place with his family and went to Kāñcī. In the early days of his association with Yādavaprakāśa, it is said that Yādavaprakāśa became annoyed with him, because he had cured the daughter of a certain chief of the place from possession by a spirit, which his teacher Yādavaprakāśa had failed to do. Shortly after this there was a difference of opinion between Yādava and Rāmānuja on the interpretation of certain Upaniṣad texts, which Yādava interpreted in the monistic manner, but Rāmānuja on the principle of modified dualism. Yādava became very much annoyed with Rāmānuja and arranged a plot, according to which Rāmānuja was to be thrown into the Ganges while on a pilgrimage to Allahabad. Govinda divulged the plot to Rāmānuja, who was thus able to wander away from the company and retire to Kāñcī, after suffering much trouble on the way. While at Kāñcī he became associated with a devout person of the *śūdra* caste, called Kāñcīpūrṇa. Later Rāmānuja was reconciled to his teacher and studied with him. When Yāmuna once came to Kāñcī he saw Rāmānuja at a distance among the students of Yādava marching in procession, but had no further contact with him, and from that time forward was greatly anxious to have Rāmānuja as one of his pupils. Rāmānuja again fell out with his teacher on the meaning of the text *kapyāsam puṇḍarikam* (*Chāndogya*, p. 167). As a result of this quarrel, Rāmānuja was driven out by Yādava. Thenceforth he became attached to the worship of Nārāyaṇa on Hastiśaila in Kāñcī, where he first heard the chanting of the *Stotra-ratnam* of Yāmuna by Mahāpūrṇa, his maternal uncle and pupil of Yāmuna. From Mahāpūrṇa Rāmānuja learnt much of Yāmuna and started for Śrīraṅgam with him. But before he could reach Śrīraṅgam Yāmuna died. It is said that after his death three fingers of Yāmuna were found to be twisted and Rāmānuja thought that this signified three unfulfilled desires: (1) to convert the people to the *prapatti* doctrine of Vaiṣṇavism, making them well versed in

in spite of its transformation into diverse forms of animate and inanimate entities —*anye punar atkyāvabodha-yāthātmyaṃ varṇayantaḥ svābhāvika-nīratīśaya-porimitodāra-guṇa-sāgarāṃ brahmaiva sura-nara-tīryak-sthāvara-nūraki-svargy-āpavargi-caitanyaika-svabhāvaṃ* *sva-bhāvato vilakṣaṇam avilakṣaṇam ca viyad-ādi-nānā-vidhā-mala-rūpa-pariṇāmā-spadaṃ ceti pratyavatiṣṭhante*. Rāmānuja, *Vedārtha-saṃgraha*, p. 15, printed at the Medical Hall Press, 1894.

the works of the Ārvārs; (2) to write a commentary to the *Brahma-sūtra* according to the Śrīvaiṣṇava school; (3) to write many works on Śrīvaiṣṇavism. Rāmānuja, therefore, agreed to execute all these three wishes¹. He returned to Kāñcī and became attached to Kāñcīpūrṇa, the disciple of Yāmuna, as his teacher. Later he set out for Śrīraṅgam and on the way was met by Mahāpūrṇa, who was going to Kāñcī to bring him to Śrīraṅgam. He was then initiated by Mahāpūrṇa (the *ācārya*), according to the fivefold Vaiṣṇava rites (*pañca-saṃskāra*). Rāmānuja, being annoyed with his wife's discourteous treatment with Mahāpūrṇa's wife, and also with people who came to beg alms, sent her by a ruse to her father's house, and renounced domestic life when he was about 30 or 32 years of age. After establishing himself as a *sannyāsin*, his teaching in the Śāstras began with Dāśarathi, son of his sister², and Kuranātha, son of Anantabhaṭṭa. Yādavaprakāśa also became a disciple of Rāmānuja³. Eventually Rāmānuja left for Śrīraṅgam and dedicated himself to the worship of Raṅgeśa. He learnt certain esoteric doctrines and *mantras* from Goṣṭhīpūrṇa who had been initiated into them by his teacher. Later on Rāmānuja defeated in discussion a Śaṅkarite named Yajñamūrti, who later became his disciple and wrote two works in Tamil called *Ṟñāna-sāra* and *Prameya-sāra*⁴. He now had a number of well reputed disciples such as Bhaktagrāma-pūrṇa, Marudha-grāma-pūrṇa, Anantārya, Varadācārya and Yajñeśa. Rāmānuja first wrote his *Gadya-traya*. He then proceeded to the Śāradā-maṭha with Kureśa, otherwise called Śrīvatsāṅka Miśra or Kuruttālvan, procured the manuscript of the *Bodhāyana-vṛtti*, and started towards Śrīraṅgam. The keepers of the temple, however, finding the book missing, ran after him and

¹ *Prapaṇāmṛta*, IX, p. 26. The interpretation of this passage by Govindācārya and Ghoṣa seems to me to be erroneous; for there is no reference to Śaṭhakopa here. Kureśa, or Śrīvatsāṅka Miśra, had two sons; one of them was baptized by Rāmānuja as Parāśara Bhaṭṭārya and the other as Rāmadeśika. Rāmānuja's maternal cousin, Govinda, had a younger brother, called Bāla Govinda, and his son was baptized as Parāṅkuśa-pūrṇārya.

² The name of Dāśarathi's father is Anantadīkṣita.

³ His baptismal name was Govindadāsa. After his conversion he wrote a book entitled *Yati-dharma-samuccaya*. This Govindadāsa must be distinguished from Govinda, son of the aunt of Rāmānuja, who had been converted to Śaivism by Yādavaprakāśa and was reconverted to Śrīvaiṣṇavism by his maternal uncle Śrīśailapūrṇa, pupil of Yāmuna. Govinda had married, but became so attached to Rāmānuja that he renounced the world. Śrīśailapūrṇa wrote a commentary on the *Sahasra-gīti*. Rāmānuja had another disciple in Puṇḍarikākṣa, Mahāpūrṇa's son.

⁴ His baptismal names were Devarāṭ and Devamānnātha.

took it away. Fortunately, however, Kureśa had read the book during the several nights on the way, had remembered its purport and so was able to repeat it. Rāmānuja thus dictated his commentary of *Śrī-bhāṣya*, which was written down by Kureśa¹. He also wrote *Vedānta-dīpa*, *Vedānta-sāra* and *Vedārtha-saṃgraha*. The *Śrī-bhāṣya* was written probably after Rāmānuja had made extensive tours to Tirukkovalur, Tirupati, Tirupputkuli, Kumbha-koṇam, Aḷagārkoil, Tiruppullani, Ārvār-Tirunagari, Tirukkurungudi, Tiruvaṇpariśāram, Tiruvaṭṭar, Tiruvanandapuram, Tiruvallikeṇi, Tirunirmalai, Madhurantakam and Tiruvaigundipuram². Later on he made extensive tours in Northern India to Ajmir, Mathurā, Brindāvan, Ayodhyā and Badarī, defeating many heretics. He also went to Benares and Purī and at the latter place established a *maṭha*. He forcibly tried to introduce the Pañcarātra rites into the temple of Jagannātha, but failed. According to the *Rāmānujārya-divya-charitai*, the *Śrī-bhāṣya* was completed in 1077 śaka or A.D. 1155, though two-thirds of the work were finished before the Cola persecution began. But this date must be a mistake; for Rāmānuja died in 1059 śaka or A.D. 1137³. The eyes of Mahāpūrṇa (Periyalnāmbi) and Kureśa were put out by the Cola king Koluttuṅga I, probably in the year 1078–1079, and this must be the date when Rāmānuja was forced to take refuge in the Hoysala country. It was in A.D. 1117, on the death of Koluttuṅga I, that Rāmānuja again returned to Śrīraṅgam, where he met Kureśa and finished the *Śrī-bhāṣya*⁴. In a *Madhva* work called *Chalāri-smṛti* it is said that in 1049 śaka, that is A.D. 1127, it was already an established work⁵. It is therefore very probable that the *Śrī-bhāṣya* was completed between A.D. 1117 and 1127. Gopī-nātha Rāu thinks that it was completed in A.D. 1125.

Rāmānuja fled in the garb of an ordinary householder from

¹ Rāmānuja had asked Kureśa to check him if he were not correctly representing the *Bodhāyana-vṛtti*, and in one place at least there was a difference of opinion and Rāmānuja was in the wrong.

² See Gopī-nātha Rāu's Lectures, p. 34, footnote.

³ See *Ibid.*

⁴ *Rāmānujārya-divya-charitai* (a Tamil work), p. 243, quoted in Gopī-nātha Rāu's Lectures.

⁵ *kalau pravṛtta-bauddhā'-di-matam rāmānujam tathā śake hy eko-na-pañcāśad-adhikā-bde sahasrake nirākartum mukhya-vāyūḥ san-mata-sthāpanāya ca ekā-daśa-śate śake viṃśaty-aṣṭa-yuge gate avatīrṇam madhva-gurum sadā vande mahā-guṇam.*

Chalāri-smṛti, quoted in Gopī-nātha Rāu's Lectures, p. 35.

Śrīraṅgam to Toṇḍāṇur, to escape from the persecution of Koluttuṅga I or Rājendracola, otherwise called Kṛmikanṭha, a Śaiva king. He was successful in converting the Jain king Bittideva of the Hoysala country, who was renamed Viṣṇuvardhanadeva after the *Vaiṣṇava* fashion. Mr Rāu says that this conversion took place some time before A.D. 1099¹. With the help of this king he constructed the temple Tīrunarayanapperumāl at Melukot (Yāda-vādrī), where Rāmānuja lived for about twelve years². According to the *Rāmānujārya-dīvyā-charitai* Rāmānuja lived for eleven years after his return to Śrīraṅgam (some time after the death of Koluttuṅga I in 1118) and died in A.D. 1137. He thus enjoyed an extraordinary long life of one hundred and twenty years, which was spread over the reigns of three Cola kings, Koluttuṅga I (A.D. 1070–1118), Vikrama Cola (A.D. 1118–1135), and Koluttuṅga II (A.D. 1123–1146)³. He had built many temples and *mathas* in his lifetime, and by converting the temple superintendent of Śrīraṅgam got possession of the whole temple.

Rāmānuja's successor was Parāśara Bhaṭṭārya, son of Kureśa, who wrote a commentary on the *Sahasra-gīti*. Rāmānuja had succeeded in securing a number of devoted scholars as his disciples, and they carried on his philosophy and forms of worship through the centuries. His religion was catholic, and, though he followed the rituals regarding initiation and worship, he admitted Jains and Buddhists, Śūdras and even untouchables into his fold. He himself was the pupil of a Śūdra and used to spend a long time after his bath in the hut of an untouchable friend of his. It is said that he ruled over 74 episcopal thrones, and counted among his followers 700 ascetics, 12,000 monks and 300 nuns (Keṭṭi ammais). Many kings and rich men were among his disciples. Kureśa, Daśarathi, Naḍāḍur Ārvān and the Bhaṭṭāra were dedicated to scholarly discourses. Yajñamūrti performed the function of the priest; one disciple was in charge of the kitchen; Vaṭapūrṇa or Andhrapūrṇa and Gomāṭham Siṭiyārvān were in charge of various kinds of personal service; Dhanurdāsa was trea-

¹ Mr Rice, however, says in the *Mysore Gazetteer*, vol. 1, that the conversion took place in 1039 śaka or A.D. 1117. But Rāu points out that in the *Epigraphia Carnatica* we have inscriptions of Bittideva as early as śaka 1023 (No. 34 Arsiker), which call him *Viṣṇu-vardhana*.

² The general tradition is that Rāmānuja kept away from Śrīraṅgam for a total period of twelve years only; but Rāu holds that this period must be about twenty years, of which twelve years were spent in Yādavādrī.

³ *Śrī Rāmānujācārya*, by S. K. Aiyangar, M.A. Natesan and Co., Madras.

surer; Ammaṅgi of boiled milk; Ukkal Ārvān served meals; Ukkal-ammal fanned, and so on¹. Rāmānuja converted many Śaivas to Vaiṣṇavism, and in the conflict between the Śaivas and the Vaiṣṇavas in his time; though he suffered much at the hands of the Cola king Kṛmikanṭha who was a Śaiva, yet Kṛmikanṭha's successor became a Vaiṣṇava and his disciple, and this to a great extent helped the cause of the spread of Śrīvaiṣṇavism.

The sources from which the details of Rāmānuja's life can be collected are as follows: (1) *Divya-sūri-charitai*, written in Tamil by Garuḍavāha, a contemporary of Rāmānuja; (2) *Gurū-paramparā-prabhāvam*, written in *maṇḍipravāla* in the early part of the fourteenth century by Pinb'-aṟagiya Perū-māl Jiyar; (3) Pillai Lokam-jīyar's *Rāmānujārya-divya-charitai*, written in Tamil; (4) Āṇbillai Kaṇḍāḍaiyappan's brief handbook of Ārvārs and Aṟagiyas called *Periya-tiru-muḍiy-aḍaiva*, written in Tamil; (5) *Prappannāmṛta*, by Anantācārya, a descendant of Andhrapūrṇa, and pupil of Śailaraṅgeśa-guru; (6) the commentaries on the *Tiru-vāy-mōri* which contain many personal reminiscences of the Aṟagiyas; (7) other epigraphical records.

The Precursors of the Viśiṣṭādvaita Philosophy and the contemporaries and pupils of Rāmānuja.

The *bhedābheda* interpretation of the *Brahma-sūtras* is in all probability earlier than the monistic interpretation introduced by Śaṅkara. The *Bhagavad-gītā*, which is regarded as the essence of the Upaniṣads, the older *Purāṇas*, and the *Pañcarātra*, dealt with in this volume, are more or less on the lines of *bhedābheda*. In fact the origin of this theory may be traced to the *Puruṣa-sūkta*. Apart from this, Dramiḍācārya, as Yāmuna says in his *Siddhī-traya*, explained the *Brahma-sūtra*, and that it was further commented upon by Śrīvatsāṅka Miśra. Bodhāyana, referred to by Rāmānuja as *Vṛtti-kāra* and by Śaṅkara as Upavarṣa, wrote on the *Brahma-sūtras* a very elaborate and extensive *vṛtti*, which formed the basis of Rāmānuja's *bhāṣya*². Ānandagiri also refers

¹ *The Life of Rāmānuja*, by Govindāchāryar, p. 218.

² Veṅkaṭanātha in his *Tattva-ṭikā* says "*Vṛtti-kāraṣya Bodhāyanasyai'va hi Upavarṣa iti syān nāma.*" In his *Sesvara-nūmāṃsā*, however, he refutes the view of Upavarṣa, for in the *Vaijayanṭī* lexicon Kṛtakotī and Halabhūti are said to be names of Upavarṣa.

See also the second volume of the present work, p. 43 n.

to *Drāviḍa-bhāṣya* as being a commentary on the *Chāndogya Upaniṣad*, written in a simple style (*ṛju-vivaraṇa*) previous to Śaṅkara's attempt. In the *Samkṣepa-śārīraka* (III. 217-27) a writer is referred to as Ātreya and *Vākya-kāra*, and the commentator Rāmatīrtha identifies him with Brahmanandin. Rāmānuja, in his *Vedārtha-saṃgraha*, quotes a passage from the *Vākya-kāra* and also its commentary by Dramiḍācārya¹. While the *Vākya-kāra* and Dramiḍācārya, referred to by Rāmānuja, held that Brahman was qualified, the Dramiḍācārya who wrote a commentary on Brahmanandin's work was a monist and is probably the same person as the Draviḍācārya referred to by Ānandagiri in his commentary on Śaṅkara's *bhāṣyopodghāta* on the *Chāndogya Upaniṣad*. But the point is not so easily settled. Sarvajñātma muni, in his *Samkṣepa-śārīraka*, refers to the *Vākya-kāra* as a monist. It is apparent, however, from his remarks that this *Vākya-kāra* devoted the greater part of his commentary to upholding the *pariṇāma* view (akin to that of Bhāskara), and introduced the well known example of the sea and its waves with reference to the relation of Brahman to the world, and that it was only in the commentary on the sixth *prapāṭhaka* of the *Chāndogya* that he expounded a purely monistic view to the effect that the world was neither existent nor non-existent. Curiously enough, the passage referred to Sarvajñātma muni as proving decidedly the monistic conclusion of Ātreya *Vākya-kāra*, and his commentator the Dramiḍācārya is referred to by Rāmānuja in his *Vedārtha-saṃgraha*, as being favourable to his own view. Rāmānuja, however, does not cite him as Brahmanandin, but as *Vākya-kāra*. The commentator of the *Vākya-kāra* is referred to by Rāmānuja also as Dramiḍācārya. But though Sarvajñātma muni also cites him as *Vākya-kāra*, his commentator, Rāmatīrtha, refers to him as Brahmanandin and the *Vākya-kāra*'s commentator as Draviḍācārya, and interprets the term "*Vākya-kāra*" merely as "author." Sarvajñātma muni, how-

¹ *Vedārtha-saṃgraha*, p. 138. The *Vākya-kāra*'s passage is "yuktam tad-guṇopāsanād," and Dramiḍācārya's commentary on it is "yady-api sac-citto na nirbhugna-dāvatam guṇa-gaṇam manasā mudhāret tathā'py antar-guṇām eva devatām bhajata iti tatvā'pi sa-guṇa'eva devatā prāpyata iti." The main idea of these passages is that, even if God be adored as a pure qualityless being, when the final release comes it is by way of the realization of God as qualified.

MM.S. Kuppusvāmī Śāstrī, M.A., identifies Dramiḍācārya with Tirumariṣai Pirān, who lived probably in the eighth century A.D. But the reasons adduced by him in support of his views are unconvincing. See *Proceedings and Transactions of the Third Oriental Conference*, Madras, 1924, pp. 468-473.

ever, never refers to Brahmanandin by name. Since the passage quoted in the *Samkṣepa-sārīraka* by Sarvajñātma muni agrees with that quoted by Rāmānuja in his *Vedārtha-saṃgraha*, it is certain that the *Vākya-kāra* referred to by Sarvajñātma muni and Rāmānuja, and the Dramiḍācārya referred to by Sarvajñātma, Rāmānuja and Ānandagiri are one and the same person. It seems, therefore, that the *Vākya-kāra*'s style of writing, as well as that of his commentator Dramiḍācārya, was such that, while the monists thought that it supported their view, the Śrīvaiṣṇavas also thought that it favoured them. From Sarvajñātma muni's statement we understand that the *Vākya-kāra* was also called Ātreya, and that he devoted a large part of his work in propounding the *bhedābheda* view. Upavarṣa is also referred to by Śaṅkara as a reputed exponent of the Mīmāṃsā philosophy and the *Brahma-sūtra*; and as having been the author of one *tantra* on Mīmāṃsā and another on the *Brahma-sūtra*¹. Our conclusion, therefore, is that we have one *Vākya-kāra* who wrote a commentary on the *Chāndogya Upaniṣad*, and that he had a commentator who wrote in a clear and simple style and who was known as Dramiḍācārya, though he wrote in Sanskrit and not in Tamil. If we believe in Rāmatīrtha's identification, we may also believe that his name was Brahmanandin. But, whoever he may be, he was a very revered person in the old circle, as the epithet "*bhagavān*" has been applied to him by Sarvajñātma muni. Regarding Upavarṣa we may say that he also was a very revered person, since Śaṅkara applies the epithet "*bhagavat*" to him, and quotes him as an ancient authority in his support. He seems to have flourished sometime before Śabara Svāmin, the great Mīmāṃsā commentator². Ānandagiri and Veṅkaṭanātha, in the fourteenth century, identify Upavarṣa with the *Vṛtti-kāra*, and Veṅkaṭanātha further identifies

¹ *ata eva ca bhagavato' pavarṣeṇa prathame tantre ātmā-stitvā-bhidhāna-prasaktau sārīrake vyakṣyāma ity uddhāraḥ kṛtaḥ*. Śaṅkara's *bhāṣya* on *Brahma-sūtra*, III. 3. 53.

Govindānanda, in his *Ratna-prabhā*, identifies Upavarṣa with the *Vṛtti-kāra*. Ānandagiri also agrees with this identification. In the *Brahma-sūtra-bhāṣya*, I. 1. 19 and I. 2. 23, Śaṅkara refutes views which are referred to as being those of the *Vṛtti-kāra*. What can be gathered of the *Vṛtti-kāra*'s views from the last two passages, which have been regarded by the commentator Govindānanda as referring to the *Vṛtti-kāra*, is that the world is a transformation of God. But we can never be certain that these views refuted by Śaṅkara were really held by the *Vṛtti-kāra*, as we have no other authority on the point except Govindānanda, a man of the thirteenth or fourteenth century.

² Śabara, in his *bhāṣya* on the *Mīmāṃsā-sūtra*, I. 1. 5, refers to Upavarṣa with the epithet "*bhagavān*" on the subject of *sphoṭa*.

him in a conjectural manner with Bodhāyana. Even if Upavaṛṣa was the *Vṛtti-kāra*, it is doubtful whether he was Bodhāyana. On this point we have only the conjectural statement of Veṅkaṭanātha referred to above. Śaṅkara, in his commentary on the *Brahma-sūtra*, 1. 3. 28, refers again to Upavaṛṣa in support of his refutation of the *sphoṭa* theory¹. But this point is also indecisive, since neither Śaṅkara nor the Śrīvaiṣṇavas admit the *sphoṭa* theory. There seems, however, to be little evidence. We are therefore not in a position to say anything about Upavaṛṣa, the *Vṛtti-kāra* and Bodhāyana². If the testimony of the *Prapaṇnāmṛta* is to be trusted, Bodhāyana's *Iṛtti* on the *Brahma-sūtra* must have been a very elaborate work, and Dramiḍācārya's work on the *Brahma-sūtra* must have been a very brief one. This was the reason why Rāmānuja attempted to write a commentary which should be neither too brief nor too elaborate.

Now we have in MS. a small work called *Brahma-sūtrārhasaṃgraha* by Śaṭhakopa, and we do not know whether this is the Dramiḍa commentary referred to in the *Prapaṇnāmṛta*. Yāmuna, in his *Siddhi-traya*, refers to a *bhāṣya-kāra* and qualifies him as "*parimita-gambhīra-bhāṣiṇā*," which signifies that it was a brief treatise pregnant with deep sense. He further says that this *bhāṣya* was elaborated by Śrīvatsāṅka-Miśra. The views of these two writers were probably consonant with the views of the Śrīvaiṣṇava school. But Yāmuna mentions the name of Taṅka, Bhartṛ-prapañca, Bhartṛmitra, Bhartṛhari, Brahmadatta, Śaṅkara and Bhāskara. An account of Bhartṛprapañca's interpretation of the *Brahma-sūtra* has been given in the second volume of the present work. An account of Bhāskara's view has been given in the present volume. Nothing is definitely known about the interpretations of Taṅka, Bhartṛmitra, Bhartṛhari and Brahmadatta, except that they were against the views of the Śrīvaiṣṇavas.

Rāmānuja, in his *bhāṣya* on the *Brahma-sūtra*, says that Bodhāyana wrote a very elaborate work on the *Brahma-sūtra* and that

¹ *varṇā eva tu śabdāḥ itī bhagavān upavaṛṣaḥ*. Śaṅkara's commentary on the *Brahma-sūtra*, 1. 3. 28.

Deussen's remark that the entire discussion of *sphoṭa* is derived from Upavaṛṣa is quite unfounded. According to *Kathā-sarit-sāgara* Upavaṛṣa was the teacher of Pāṇini.

² Śavara, also, in his commentary on the 5th sūtra of the *Mīmāṃsā-sūtra*, 1. 1. 5, refers to a *Vṛtti-kāra*, a Mīmāṃsā writer prior to Śavara. The fact that in the *bhāṣya* on the same sūtra Śavara refers to bhagavān Upavaṛṣa by name makes it very probable that the *Vṛtti-kāra* and Upavaṛṣa were not the same person.

this was summarized very briefly by the older teachers. He says, further, that in making his *bhāṣya* he has closely followed the interpretation of the *Sūtra*, as made by Bodhāyana¹. Rāmānuja also owes a great debt of gratitude to Yāmuna's *Siddhi-traya*, though he does not distinctly mention it in his *bhāṣya*. It is said that Yāmuna had a large number of disciples. Of these, however, Mahāpūrṇa, Goṣṭhīpūrṇa, Mālādharma, Kāñcīpūrṇa, Śrīśailapūrṇa, also called Tātācārya (Rāmānuja's maternal uncle), and Śrīraṅganātha-gāyaka were the most important. Śrīśailapūrṇa's son Govinda, the cousin and fellow-student of Rāmānuja with Yādavaprakāśa, became later in life a disciple of Rāmānuja². Of the seventy-four prominent disciples of Rāmānuja, Praṇatārtihara of Ātreya *gotra*, Kureśa or Śrīvatsāṅka Miśra, Dāśarathi, Andhrapūrṇa or Vaṭapūrṇa, Varadaviṣṇu, Yatiśekhara-bhārata, Yādava-prakāśa or Govinda and Yajñamūrti are the most important³. Of these Dāśarathi of Vādhūla *gotra* and Varadaviṣṇu or Varadaviṣṇu Miśra were the sister's sons of Rāmānuja. Varadaviṣṇu was better known as Vātsya Varadaguru. Kureśa or Śrīvatsāṅka Miśra had a son by Āṇḍāl, called Parāśara Bhaṭṭārya, who defeated the Vedāntin Mādhavadāsa and afterwards became the successor of Rāmānuja⁴. Parāśara Bhaṭṭārya had a son called Madhya Pratoli Bhaṭṭārya or Madhya-vīthi Bhaṭṭārya. Kureśa had another son named Padmanetra; Padmanetra's son was called Kurukeśvara⁵. Kurukeśvara's son was Puṇḍarikākṣa, and his son was Śrīnivāsa. Śrīnivāsa had a son Nṛsiṃhārya. They belonged to the Śrīśaila lineage, probably from the name of Bhūri Śrī Śailapūrṇa, Kureśa's father. Nṛsiṃhārya had a son called Rāmānuja. Rāmānuja had two sons,

¹ Sudarśana Sūri, in his commentary on the *bhāṣya* called the *Śruta-prakāśikā*, explains the word "*pūrvācārya*" in Rāmānuja's *bhāṣya* as *Dramiḍa-bhāṣya-kārādayah*. On the phrase *bodhāyana-matā'nusāreṇa sūtrā-kṣārāṇi vyākhyāyante*, he says "*na tu svo-tprekṣitamatā-ntareṇa sūtrā-kṣārāṇi sūtra-padānāṃ prakṛti-pratayaya-vibhāgā-nugūṇaṃ vadāmaḥ na tu svot-prekṣitā-rtheṣu sūtrāṇi yathā-kathāṇi cit dyotayitavyāni*."

² It is interesting to note that Yāmuna's son Vararaṅga later on gave instruction to Rāmānuja and had his younger brother Sottanambi initiated as a disciple of Rāmānuja. Vararaṅga had no son. He had set the *Sahasra-gīti* to music. *Prapannāmṛta*, 23. 45.

³ Rāja Gopalacariyar also mentions the name of Tirukurugaipiran Pillai as a prominent disciple of Rāmānuja. He wrote a commentary on Nāmm-āyṡār's *Tiru-vāymōṛi*.

⁴ Kureśa had another son named Śrī Rama Pillai or Vyāsa Bhaṭṭār.

⁵ It is rather common in South India to give one's son the name of his grandfather.

Nṛsiṃhārya and Raṅgācārya, who lived probably in the fifteenth century. Rāmānuja's disciple, Yajñamūrti, was an exceedingly learned man. When Rāmānuja accepted him as a disciple, he changed his name to Devarāṭ or Devamannātha or Devarāja and had a separate maṭha established in Śrīraṅgam for him. Yajñamūrti had written two very learned works in Tamil, called *Ṣṇāna-sāra* and *Prameya-sāra*. Rāmānuja had four of his disciples, Bhaktagrāma-pūrṇa, Marudha-grāma-pūrṇa, Anantārya and Yajñeśa, initiated into Vaiṣṇavism by Yajñamūrti¹. Another pupil of Rāmānuja, Tirukurugai-piran Pillai, wrote a commentary of Nāmmārṇvār's *Tiruvāy-mōṛi*. Praṇatārtihara Pillan, another pupil of Rāmānuja, of Ātreya *gotra*, had a son Rāmānuja, a disciple of Naḍaḍur Ammal of the lineage of Vātsya Varada². This Rāmānuja, alias Padmanābha, had a son called Śrī Rāmānuja Pillan, a disciple of Kidāmbi Rāmānuja Pillan. This Padmanābha had a son called Rāmānuja Pillan and a daughter Totārambā, who was married to Anantasūri, the father of Venkātānātha. Rāmānuja's other disciple and nephew, Dāśarathi, of Vādhūla *gotra*, had a son called Rāmānuja, who had a son called Toḍappā or Vāraṇādrīśa or Lokārya or Lokācārya. After Parāśara Bhaṭṭārya the Vedānti Mādhavadāsa, called also Nanjiar, became his successor. Mādhavadāsa's successor was Nambilla or Namburi Varadārya or Lokācārya. He had two wives Āṇḍal and Śrīraṅganāyākī and a son called Rāmānuja³. Nambilla's other name was Kalijit or Kalivairi. Now Vāraṇādrīśa became a disciple of Nambilla or the senior Lokācārya. Vāraṇādrīśa was known as Pillai Lokācārya. Namburi Varada had a pupil called Mādhava. Varada had a son called Padmanābha who had a disciple called Rāmānujadāsa. Rāmānujadāsa had a son called Devarāja, who had a son called Śrīśailanātha, and Śrīśailanātha had a pupil called Saumya Jāmāṭṭ muni or Ramyajāmāṭṭ muni, also called Varavara muni or Yatīndrapravaṇa or Manavalamahāmuni or Periya-jiyar. It is said that he was the grandson of Kattur-āraḡiya-vanavalapillai. All these people were influenced by the *Sahasra-gīti-vyākhyā* of Kureśa. Namburi Varadārya, otherwise called Kalijit, had two other pupils called Udak-pratoḷi-kṛṣṇa, and Kṛṣṇa-samāhbhaya, also called Kṛṣṇapāda. Kṛṣṇapāda's son Lokācārya was a pupil of

¹ See *Praṇannāmṛta*, Ch. 26.

² See Govindāchāryar's *Life of Rāmānuja*.

³ He wrote two works called *Sārā-rtha-saṃgraha* and *Rahasya-traya*. *Praṇannāmṛta*, 119/3.

Kalijit, and Kṛṣṇapāda himself. Kṛṣṇapāda's second son was Abhirāma-Varādhīśa.

Rāmānuja's brother-in-law Devarāja, of Vātsya *gotra*, had a son called Varadaviṣṇu Mīśra or Vātsya Varada, who was a pupil of Viṣṇucitta, a pupil of Kureśa. This Vātsya Varada was a great writer on Vedāntic subjects. Kureśa had a son called Śrī Rama Pillai, or Vedavyāsa Bhaṭṭa, who had a son called Vādivijaya, who wrote *Kṣamā-śodaśī-stava*. Vādivijaya had a son called Sudarśana Bhaṭṭa, who was a pupil of Vātsya Varada, a contemporary of Varadaviṣṇu. Sudarśana Bhaṭṭa was the famous author of the *Śruta-prakāśikā*. The celebrated Aṇṇayācārya also was a pupil of Pillai Lokācārya, the pupil of Kalijit. Śrīśaila Śrīnivāsa, or Śrīśailanātha, was the son of Aṇṇayācārya. Ramyajāmāṭṛ muni had a number of disciples, such as Rāmānuja, Paravastu Prativādibhayāṅkara Aṇṇayācārya, Vanamamalai-jīyar, Periya-jīyar, Koyilkaṇḍaiaṇṇan, etc.¹ Of Venkatanātha's pupils two are of most importance: his son Nainārācārya, otherwise called Kumāra-Vēdānta-deśika, Varadanātha or Varadaguru, who wrote many Vedāntic works, and Brahmatantra-jīyar. Parakāladāsa and Śrīraṅgācārya were probably pupils of Kṛṣṇapāda, or Kṛṣṇasūri, the pupil of Kalijit or Namburi Varadārya. Abhirāma Varādhīśa was a pupil of Rāmānuja, son of Saumya Jāmāṭṛ muni. The pontifical position of Śrīvaiṣṇavism was always occupied in succession by eminent men in different important *maṭhas* or temples, and there arose many great preachers and teachers of Vedānta, some of whom wrote important works while others satisfied themselves with oral teachings. The works of some of these have come down to us, but others have been lost. It seems, however, that the *Viśiṣṭā-dvaita* philosophy was not a source of perennial inspiration for the development of ever newer shades of thought, and that the logical and dialectical thinkers of this school were decidedly inferior to the prominent thinkers of the Śāṅkara and the Madhva school. There is hardly any one in the whole history of the development of the school of Rāmānuja whose logical acuteness can be compared with that of Śrīharṣa or Citsukha, or with that of Jayatīrtha or Vyāsātīrtha. Venkatanātha, Meghanādāri or Rāmānujācārya, called also Vādihaṃsa, were some of the most prominent writers of this school; but even with them philosophic

¹ The Tamil names of some of the disciples have been collected from the *Life of Rāmānujācārya* by Govindāchāryar.

criticism does not always reach the highest level. It was customary for the thinkers of the Śāṅkara and the Madhva schools in the fourteenth, fifteenth and sixteenth centuries to accept the concepts of the new School of Logic of Mithilā and Bengal and introduce keen dialectical analysis and criticism. But for some reason or other this method was not adopted to any large extent by the thinkers of the Śrīvaiṣṇava school. Yet this was the principal way in which philosophical concepts developed in later times.

In dealing with the names of teachers of the Rāmānuja school, one *Guru-paramparā* mentions the name of Paravādibhayaṅkara, who was a pupil of Ramyajāmātr muni and belonged to the Vātsya *gotra*. Prativādibhayaṅkara was the teacher of Śaṭhakopa Yati. The treatise speaks also of another Ramyajāmātr muni, son of Anantārya, grandson of Prativādibhayaṅkara and pupil of Śrīveṅkaṭeśa. It also mentions Vedāntaguru; of the Vātsya *gotra*, a pupil of Ramyajāmātr muni and Varadārya; Sundaradeśika, of the Vātsya *gotra*, son of Prativādibhayaṅkara; Aparyātmāmṛtācārya, son of Śrīveṅkaṭaguru and grandson of Prativādibhayaṅkara. This Veṅkaṭācārya had a son called Prativādibhayaṅkara. Ramyajāmātr muni had a son called Śrīkṛṣṇa-deśika. Puruṣottamārya, of the Vātsya *gotra*, was the son of Śrīveṅkaṭācārya. Śrīkṛṣṇa-deśika had a son called Ramyajāmātr muni, who had a son called Kṛṣṇa Sūri. Anantaguru had a son called Veṅkaṭa-deśika. Śrīnivāśaguru was pupil of Veṅkaṭārya and Vātsya Śrīnivāśa, who had a son called Anantārya. It is unnecessary to continue with the list, as it is not very useful from the point of view of the development of the Śrīvaiṣṇava school of philosophy or literature. The fact that the names of earlier teachers are reverently passed on to many of those who succeeded them makes it difficult to differentiate them one from the other. But the history of the school is unimportant after the sixteenth or the early part of the seventeenth century, as it lost much of its force as an intellectual movement. In the days of the Āryvārs the Śrīvaiṣṇava movement was primarily a religious movement of mystic and intoxicating love of God and self-surrender to Him. In the days of Rāmānuja it became intellectualized for some time, but it slowly relapsed into the religious position. As with Śāṅkara, and not as with Madhva, the emphasis of the school has always been on the interpretations of Vedic texts, and the intellectual appeal has always been subordinated to the appeal to the Upaniṣadic texts and their

interpretations. The chief opponents of the Rāmānuja school were the Śāṅkarites, and we may read many works in which copious references are made by writers of the Śāṅkara school who attempted to refute the principal points of the *bhāṣya* of Rāmānuja, both from the point of view of logical argument and from that of interpretations of the Upaniṣadic texts. But unfortunately, except in the case of a few later works of little value, no work of scholarly refutation of the views of Rāmānuja by a Śāṅkarite is available. The followers of Rāmānuja also offered slight refutation of some of the doctrines of Bhāskara, Jāḍava-prakāśa, and Madhva and the Śaivas. But their efforts were directed mainly against Śāṅkara.

It has already been noted that Rāmānuja wrote a *bhāṣya* on the *Brahma-sūtra*, *Vedārtha-saṃgraha*, *Vedānta-sāra* and *Vedānta-dīpa*, a commentary on the *Śrīmad-bhagavad-gītā*, *Gadya-traya*, and *Bhagavad-ārādhana-krama*¹. According to traditional accounts, Rāmānuja was born in A.D. 1017 and died in 1137. The approximate dates of the chief events of his life have been worked out as follows: study with Yādavaprakāśa, 1033; first entry into Śrīraṅgam to see Yāmuna, 1043; taking holy orders, 1049; flight to Mysore for fear of the Cola king's persecution, 1096; conversion of Biṭṭi-deva, the Jain king of Mysore, the Hoysala country, 1098; installing the temple God at Melukot, 1100; stay in Melukot, up to 1116; return to Śrīraṅgam, 1118; death, 1137². His nephew and disciple Dāśarathi and his disciple Kureśa were about fifteen or sixteen years junior to him³. Rāmānuja's *bhāṣya*, called also *Śrī-bhāṣya*, was commented on by Sudarśana Sūri. His work is called *Śruta prakāśikā*, and is regarded as the most important commentary on the *Śrī-bhāṣya*.

¹ *viṣṇu'arcā-kṛtam avanotsukojñānam śrīgītā-vivaraṇa-bhāṣya-dīpa-sārāṇ tad gadya-trayam akṛta prapanna-nityā-nuṣṭhāna-kramam api yogi-rāṭ pravandhān. Divya-sūri-Caritai.*

Reference to the *Vedārtha-saṃgraha* of Rāmānuja is also found in the same work.

*ity uktvā nigama-śikhā'rtha-saṃgrahā-khyam
bhinnas tām kṛtim urarīkriyā-rtham asya.*

² Govindāchāryar's *Life of Rāmānuja*. Yāmuna, according to the above view, would thus have died in 1042, corresponding with the first visit of Rāmānuja to Śrīraṅgam; but Gopī-nātha Rāu thinks that this event took place in 1038. The date of the Cola persecution is also regarded by Gopī-nātha Rāu as having occurred in 1078-79, which would correspond to Rāmānuja's flight to Mysore; and his return to Śrīraṅgam must have taken place after 1117, the death of the Cola king Koluttuṅga. Thus there is some divergence between Govindācārya and Gopī-nātha Rāu regarding the date of Rāmānuja's first visit to Śrīraṅgam and the date of his flight to Mysore. Gopī-nātha Rāu's views seem to be more authentic.

³ Apart from the *Sahasra-gītī-bhāṣya*, Kureśa wrote a work called *Kureśa-vijaya*.

Rāmānuja Literature.

As already noted, the principal commentary on Rāmānuja's *bhāṣya*, was the *Śruta-prakāśikā* by Sudarśana Sūri. Even before this *Śruta-prakāśikā* was written, another commentary, called *Śrī-bhāṣya-vivṛti*, was written by Rāma-miśra-deśika, a disciple of Rāmānuja, under his own direction. This work was written in six chapters and was not a commentary in the ordinary sense, but a study of the principal contents of Rāmānuja's *bhāṣya*. This Rāma Miśra was a different man from Rāma Miśra, the teacher of Yāmuna. The *Śruta-prakāśikā* had a further study, entitled *Bhāva-prakāśikā*, by Vīrarāghavadāsa. Criticisms of this work were replied to in a work called *Bhāṣya-prakāśikā-dūṣaṇoddhāra* by Śaṭhakopācārya, a writer of the sixteenth century. The *Śruta-prakāśikā* had another commentary, called *Tūlikā*, by Vādhūla Śrīnivāsa, a writer who probably belonged to the fifteenth century. The contents of the *Śruta-prakāśikā* were summarized in a work called *Śruta-prakāśikā-sāra-saṃgraha*. The *bhāṣya* of Rāmānuja was further commented on in the *Tattva-sāra*, by Vātsya Varada, a nephew of Rāmānuja. The name of the commentator's father was Devarāja, and his mother was Kamalā, a sister of Rāmānuja. He was a pupil of Śrīviṣṇucitta, a disciple of Kureśa. This *Tattva-sāra* provoked a further criticism, called *Ratna-sārīṇī*, by Vīra-rāghava-dāsa, son of Vādhūla Nara-siṃha-guru and pupil of Vādhūla Varadaguru, son of Vādhūla Veṅkaṭācārya. He also himself wrote a commentary on the *Śrī-bhāṣya*, called *Tātparyā-dīpikā*. Vīra-rāghava-dāsa lived probably in the later half of the fourteenth or the beginning of the fifteenth century. Rāmānuja's views were also collected together in a scholarly manner in a work called *Naya-mukha-mālikā*, by Apyaya-dīkṣita, who was born in the middle of the sixteenth century. Rāmānuja's *bhāṣya* is also dealt with by the famous Veṅkaṭanātha, in his work *Tattva-ṭīkā*. The *Śrī-bhāṣya* had another commentary called *Naya-prakāśikā*, by Meghanādāri, a contemporary of Veṅkaṭanātha of the fourteenth century¹. A further commentary is

¹ Meghanādāri's great work, *Naya-dyu-maṇi*, has been treated in detail in a later section. He was the son of Ātreyanātha and his mother's name was Adhvaranāyikā. He had three brothers, Hastyadrinātha or Vāraṇādrīśa, Varadarāt, and Rāma Miśra. This Vāraṇādrīśa should not be confused with Dāśarathī's grandson, who was of Vādhūla gotra. Meghanādāri's other works are *Bhāva-prabodha* and *Mumukṣu-pāya-saṃgraha*.

called *Mita-prakāśikā*, by Parakāla Yati, probably of the fifteenth century. Parakāla Yati had a disciple called Raṅga Rāmānuja, who wrote a study of the *Śrī-bhāṣya*, called *Mūla-bhāva-prakāśikā*. One Śrīnivāsācārya also criticized the *Śrī-bhāṣya* in *Brahma-vidyā-kaumudī*. It is difficult to guess which Śrīnivāsa was the author of the work, there being so many Śrīnivāsas among the teachers of the Rāmānuja school. Campakeśa, disciple of Veṅkaṭanātha, also dealt with the *Śrī-bhāṣya*. Śuddhasattva Lakṣmaṇācārya also wrote on the *Śrī-bhāṣya*, a work entitled *Guru-bhāva-prakāśikā* which was based upon the *Guru-tattva-prakāśikā* of Campakeśa. This work was in reality a commentary on the *Śrūti-prakāśikā*. The author was the son of Śuddhasattva Yogīndra. He descends from the line of Rāmānuja's mother's sister, in which there were born eighteen teachers of Vedānta; he was the pupil of Saumya Jāmātṛ muni and flourished probably in the latter half of the sixteenth century. This *Guru-bhāva-prakāśikā* was commented on in the *Guru-bhāva-prakāśikā-vyākhyā*. Sudarśana Sūri also seems to have written a commentary on the *Śrī-bhāṣya*, called *Śruti-dīpikā*. Śrīnivāsa, the son of Tāta-yārya and Lakṣmī-devi, of Śrīśaila lineage and pupil of Aṇṇayārya and Koṇḍinna Śrīnivāsa-dīkṣita, wrote another digest on the *Śrī-bhāṣya*, called *Tattva-mārtaṇḍa*. He probably lived in the latter half of the fifteenth or the beginning of the sixteenth century. The name of his grandfather was Aṇṇa-guru. He wrote *Ṇatva-darpaṇa*, *Bheda-darpaṇa*, *Siddhānta-cintāmaṇi*, *Sāra-darpaṇa*, and *Virodha-nirodha*¹. He is also known as Śrīśaila Śrīnivāsa, and he wrote other books, e.g. *Jijñāsā-darpaṇa*, *Naya-dyu-maṇi-dīpikā*, and *Naya-dyu-maṇi-saṃgraha*. The *Naya-dyu-maṇi* of *Naya-dyu-maṇi-dīpikā* is not to be confused with the *Naya-dyu-maṇi* of Megha-nādāri; for it is a summary in verse of Rāmānuja's *bhāṣya* with a commentary in prose. The *Naya-dyu-maṇi-saṃgraha* is a work in

¹ In his *Virodha-nirodha* he makes reference to a *Mukti-darpaṇa* (MS. p. 82), *Jñāna-ratna-darpaṇa* (MS. p. 87), and in his *Bheda-darpaṇa* (MS. p. 96) he refers to his *Guṇa-darpaṇa*. In his *Virodha-nirodha* he makes further reference to his other works, *Advaita-vana-kuthāra* and *Bheda-maṇi* (MS. p. 37), to his *Bheda-darpaṇa* (MS. p. 68), and to his *Sāra-darpaṇa* (MS. p. 66) and *Tattva-mārtaṇḍa* (MS. p. 87). His *Sāra-darpaṇa* gives the principal contents of Rāmānuja's philosophy. In his *Virodha-nirodha* (MS. p. 37) he refers to a *Virodha-bhañjana*, by his elder brother Aṇṇayārya and to his own *Siddhānta-cintāmaṇi* (MS. p. 12). In referring to his elder brother he says that his *Virodha-nirodha* is largely a rearrangement of the arguments adduced by him in his *Virodha-bhañjana*, some of which had been elaborated and others condensed and rearranged in his *Virodha-nirodha*. The *Virodha-nirodha* is thus admitted by the author to have been based materially on *Virodha-bhañjana* by Aṇṇayārya, his elder brother.

prose on the *bhāṣya* of Rāmānuja, and the first four *sūtras* intended to refute the criticisms made by his opponents. The *Naya-dyu-maṇi-saṃgraha* is a much smaller work than the *Naya-dyu-maṇi*, which is often referred to by the author for details. It makes constant reference to objections against Rāmānuja without mentioning the name of the critic. In the *Naya-dyu-maṇi* the author has made detailed discussions which are summarized by him in this work¹. Thus Śrīnivāsa wrote three works *Naya-dyu-maṇi*, *Naya-dyu-maṇi-saṃgraha*, and *Naya-dyu-maṇi-dīpikā*. In his *Siddhānta-cintāmaṇi* Śrīnivāsa tries mainly to uphold the theory that Brahman is the only cause of all creation, animate and inanimate. In this work he tries to refute at every point the theory of Brahma-causality, as held by Śaṅkara.

Again, Deśikācārya wrote a commentary on the *Śrī-bhāṣya*, called *Prayoga-ratna-mālā*. Nārāyaṇamuni wrote his *Bhāva-pradīpikā*, and Puruṣottama his *Subodhinī* also as commentaries on the *Śrī-bhāṣya*. These writers probably lived some time about the seventeenth century. Vīra-rāghava-dāsa also criticized the *Śrī-bhāṣya* in the *Tātparyā-dīpikā*. His name has already been mentioned in connection with his study, *Ratna-sāriṇī*, on Vātsyā Varada's *Tattva-sāra*. Śrīnivāsa Tātācārya wrote his *Laghu-prakāśikā*, Śrīvatsāṅka Śrīnivāsa his *Śrī-bhāṣya-sārārtha-saṃgraha*, and Śaṭhakopa his *Brahma-sūtrārtha-saṃgraha* as commentaries on the *Śrī-bhāṣya*. These writers seem to have flourished late in the sixteenth century. Śrīvatsāṅka Śrīnivāsa's work was further summarized by Raṅgācārya in his *Śrīvatsa-siddhānta-sāra*. Appaya-dikṣita, of the middle of the seventeenth century, wrote a commentary on the *Brahma-sūtras*, called *Naya-mukha-mālikā*, closely following the ideas of Rāmānuja². Raṅga Rāmānuja also wrote a commentary, called

¹ *bhāṣyā-rṇavam avatīrṇo vistīrṇaṃ yad avadam Naya-dyumaṇau saṃkṣīpya tat paroktīr vīkṣīpya karomi toṣaṇaṃ viduṣām.*

Naya-dyu-maṇi-saṃgraha, MS.

The general method of treatment followed in the book is to indulge in long discussions in refutation of the views of opponents and to formulate, as conclusion, the positive contentions of the *Viśiṣṭā-dvaita* theory on the special points of interest. Thus at the end of a long discussion on the *Brahma-sūtra*, 1. 1. 2, he says: *rāddhāntas tu na jannā'dinām viśeṣaṇatve viśeṣya-bheda-prasaṅgaḥ, avirud-dhaviśeṣaṇānām āśraya-bhedakatvāt na caivaṃ viśeṣaṇatvā-acchedena na vyāvar-takata-bhaṅgaḥ tad-an-āśraya-jivādi-vyāvartakatvenaitā tad-asiddheḥ.* (*Naya-dyu-maṇi*, MS. p. 126.)

² *Lakṣmaṇārya-hṛdayā'nusārīṇī likhyate Naya-mālikā.*

Naya-mukha-mālikā, printed in Kumbakonam, 1915, p. 3.

Śārīraka-śāstrārtha-dīpikā, on the *Brahma-sūtra*, following the interpretations of Rāmānuja. His *Mūla-bhāva-prakāśikā*, a commentary on the *Śrī-bhāṣya*, has already been referred to in this section. He wrote also a commentary on the *Nyāya-siddhāntjāna* of Veṅkaṭanātha, called *Nyāya-siddhāntjāna-vyākhyā*. He was a pupil of Parakāla Yati and probably lived in the sixteenth century. He wrote also three other works, called *Viśaya-ṛākya-dīpikā*, *Chāṇḍa-gyopaniṣad-bhāṣya*, and *Rāmānuja-siddhānta-sāra*. Rāmānujadāsa, called also Mahācārya, lived probably early in the fifteenth century, and was a pupil of Vādhūla Śrīnivāsa. This Vādhūla Śrīnivāsa, author of the *Adhikaraṇa-sārārtha-dīpikā*, must be an earlier person than Śrīnivāsādāsa, author of the *Yatīndra-mata-dīpikā*, who was a pupil of Mahācārya. Mahācārya wrote a work called *Pārāśarya-vijaya*, which is a thesis on the general position of the Rāmānuja Vedānta. He wrote also another work on the *Śrī-bhāṣya* called *Brahma-sūtra-bhāṣyopanyāsa*. Mahācārya's other works are *Brahma-vidyā-vijaya*, *Vedānta-vijaya*, *Rahasya-traya-mīmāṃsā*, *Rāmānuja-carita-culuka*, *Aṣṭādaśa-rahasyārtha-nirṇaya*, and *Caṇḍa-māruta*, a commentary on the *Śata-dūṣaṇi* of Veṅkaṭanātha. He should be distinguished from Rāmānujācārya, called also Vādihaṃsāmbuvāha, uncle of Veṅkaṭanātha.

There is a work called *Śrī-bhāṣya-vārttika*, which, unlike most of those above, has already been printed; but the author does not mention his name in the book, which is composed in verse. Senānātha, or Bhagavat Senāpati Miśra, who is an author of later date, wrote *Śārīraka-nyāya-kalāpa*. Vijayīndra Bhikṣu was the author of *Śārīraka-mīmāṃsā-vṛtti*, and Raghunāthārya of *Śārīraka-śāstra-saṃgati-sāra*. Sundararāja-deśika, an author of the sixteenth century, wrote a simple commentary on the *Śrī-bhāṣya* called *Brahma-sūtra-bhāṣya-vyākhyā*. Veṅkaṭācārya, probably an author of the sixteenth century, wrote *Brahma-sūtra-bhāṣya-pūrva-pakṣa-saṃgraha-kārikā* in verse. This Veṅkaṭācārya was also known as "Prativādiabhakeśari." He also composed *Ācārya-pañcāśat*. Campakeśa, who has already been referred to, wrote a commentary on the *Śrī-bhāṣya*, called *Śrī-bhāṣya-vyākhyā*. Veṅkaṭanāthārya wrote a work called *Śrī-bhāṣya-sāra*. Śrīvatsāṅka Śrīnivāsācārya was the author of *Śrī-bhāṣya-sārārtha-saṃgraha*. Śrīraṅgācārya composed *Śrī-bhāṣya-siddhānta-sāra* and Śrīnivāsācārya wrote a work called *Śrī-bhāṣyopanyāsa*. There are two other commentaries, called

Brahma-sūtra-bhāṣya-saṃgraha-vivaraṇa and *Brahma-sūtra-bhāṣyā-rambha-prayoyana-samarthana*; but the names of the authors are missing in the manuscripts. Veṅkaṭanātha, of the thirteenth century, wrote *Adhikaraṇa-sārāvalī*, and Maṅgācārya Śrīnivāsa, *Adhikaraṇa-sārārtha-dīpikā*. Varadārya or Varadanātha, son of Veṅkaṭanātha, wrote a commentary on the *Adhikaraṇa-sārāvalī* called *Adhikāra-cintāmaṇi*. There is another work on similar subjects called *Adhikaraṇa-yukti-vilāsa*; but, though the author offers an adoration to Śrīnivāsa, he does not mention his name and it is difficult to discover who this Śrīnivāsa was. Jagannātha Yati wrote a commentary on the *Brahma-sūtra* on the lines of Rāmānuja's *bhāṣya*, and it was called *Brahma-sūtra-dīpikā*. It will thus be seen that Rāmānuja's *bhāṣya* inspired many scholars and thinkers and a great literature sprang up on its basis. But it must be noted with regret that this huge critical literature on Rāmānuja's *bhāṣya*, is not in general of much philosophical importance. Rāmānuja's *Vedārtha-saṃgraha* was commented on by Sudarśana Sūri of the fourteenth century, in *Tūtparya-dīpikā*. He was the son of Vāgvijaya, or Viśvajaya, and pupil of Vātsya Varada. In addition to his study of Rāmānuja's *bhāṣya* already referred to, he wrote a *Sandhyā-vandana-bhāṣya*. Rāmānuja's *Vedānta-dīpa* (a brief commentary on the *Brahma-sūtra*) was dealt with by Ahobila Raṅganātha Yati, of the sixteenth century. Rāmānuja's *Gadya-traya* was criticized by Veṅkaṭanātha, and Sudarśanācārya also wrote a commentary; Kṛṣṇapada, a later author, also wrote another commentary. Rāmānuja's commentary on the *Gītā* also was commented on by Veṅkaṭanātha. The *Vedānta-sāra* was a brief commentary on the *Brahma-sūtra* by Rāmānuja himself, based on his *Śrī-bhāṣya*.

Rāmānujācārya, called also Vādihaṃsāmbuvāhācārya of Ātreya *gotra*, son of Padmanābha and maternal uncle of Veṅkaṭanātha, lived in the thirteenth or fourteenth century; he wrote an important work, called *Naya-kulīśa* or *Nyāya-kulīśa*, which has been noticed before. He composed also *Dīrya-sūri-prabhāva-dīpikā*, *Sarva-darśana-śiromaṇi*, and *Mokṣa-siddhi*, to which he himself refers in his *Nyāya-kulīśa*¹. It might seem that the *Nyāya-kulīśa* was one of the earliest logical or ontological treatises of the *Viśiṣṭā-dvaita* school; but we find that there were other treatises of this type

¹ I have not been able to procure a MS. of the *Mokṣa-siddhi*, and, so far as I can guess, the book is probably lost.

written during this period and even earlier than Rāmānuja. Thus Nāthamuni wrote a *Nyāya-tattva*, in which he refuted the logical views of Gautama and founded a new system of Logic. Viṣṇucitta, a junior contemporary of Rāmānuja, wrote two works, *Prameya-samgraha* and *Samgati-mālā*. Varada Viṣṇu Miśra, who flourished probably in the latter half of the twelfth century, or the beginning of the thirteenth century, wrote a *Māna-yāthātmya-nirṇaya*. Varada Nārāyaṇa Bhaṭṭāraka, who flourished before Veṅkaṭanātha, also wrote a *Prajñā-paritrāṇa*¹. Parāśara Bhaṭṭāraka, who also probably lived in the thirteenth century, wrote a *Tattva-ratnākara*². These works have been referred to by Veṅkaṭanātha in his *Nyāya-parisuddhi*; but the manuscripts were not available to the present writer. Vātsya Varada's works have been mentioned in a separate section.

Veṅkaṭanātha, called also Vedānta-deśika, Vedāntācārya, and Kavitārkikasimha, was one of the most towering figures of the school of *Viśiṣṭādvaita*. He was born at Tupple in Kanjivaram in A.D. 1268. His father was Ananta Sūri, his grandfather's name was Puṇḍarikākṣa, and he belonged to the Viśvāmītra *gotra*; his mother was Totārambā, sister of Ātreya Rāmānuja, otherwise called Vādikalahamsāmbuvāhācārya. He studied with his uncle Ātreya Rāmānuja, and it is said that he accompanied him to Vātsya Varadācārya's place, when he was five years old. The story goes that even at such an early age he showed so much precocity that it was predicted by Vātsya Varada that in time he would be a great pillar of strength for the *Viśiṣṭā-dvaita-vāda* school and that he would repudiate all false systems of philosophy³. It appears that he also studied with Varadārya himself⁴. It is said that he used to live by *uñcha-vṛtti*, receiving alms in the streets, and spent all his life in

¹ He is said to have written another work, called *Nyāya-sudarśana*, mentioned in the introduction to the *Tattva-muktā-kalāpa* (Mysore, 1933).

² He also wrote another work, called *Bhagavad-guṇa-darpaṇa*.

³ *utprekṣyate budha-janair upapatti-bhūmnyā
ghanṭā hareḥ samajaniṣṭa jadātmanī ti
pratiṣṭhāpita-vedāntaḥ pratikṣipta-bahir-mataḥ
bhūyās traividya-mānyas tvam bhūri-kalyāṇa-bhājanam.*

It is said that he was blessed by Varadācārya in the aforesaid verse, in which he describes Veṅkaṭanātha as an incarnation of the bell of God. *Vaiṣṇavite Reformers of India*, by T. Rajagopalachariar.

⁴ *śrutvā rāmānujāryāt sad-asad-api tatas tattva-muktā kalāpaṃ
vyūtānīd veṅkaṭeśo varada-guru-kṛpā-lambhito-ddāna-bhūmā.
Tattva-muktā-kalāpa, śl. 2.*

writing philosophical and religious works. In the *saṃkalpa-sūryodaya* he says that at the time when he was writing that work he had finished the *Śrī-bhāṣya* for the thirtieth time. While he lived in Kāñcī and Śrīraṅgam, he had to work in the midst of various rival sects, and Pillai Lokācārya, who was very much senior to him in age and was the supporter of the Teṅgalai school, against which Veṅkaṭanātha fought, wrote a verse praising him. Scholars are in general agreement that Veṅkaṭanātha died in 1369, though there is also a view that he died in 1371. He enjoyed a long life and spent much of his time in pilgrimage to various northern countries such as Vijayanagara, Mathurā, Brindāban, Ayodhyā, and Purī. The story of Vidyāraṇya's friendship with Veṅkaṭanātha may be true or false; but we know that Vidyāraṇya was acquainted with the *Tattva-muktā-kalāpa*, and he quotes from it in his account of the *Viśiṣṭā-dvaita* view in *Sarva-darśana-saṃgraha*. When Veṅkaṭanātha was middle-aged, Sudarśana Sūri, writer of the *Śruta-prakāśikā*, was already an old man, and it is said that he called Veṅkaṭanātha to Śrīraṅgam and handed over to him his commentary on the *Śrī-bhāṣya*, so that it might get a greater publicity. Veṅkaṭanātha himself also wrote a commentary on the *Śrī-bhāṣya*, called the *Tattva-tīkā*. Though an extremely kind man of exemplary and saintly character, he had many enemies who tried to harass and insult him in countless ways. A great difference in interpretation of the nature of *prapatti*, or self-surrender to God, was manifested at this time in the writings of different Śrīvaiṣṇava scholars. Two distinct sects were formed, based mainly on the different interpretation of the nature of *prapatti*, though there were minor differences of a ritualistic nature, such as the marks on the forehead, etc. Of these two sects, the leader of the Vaḍakalai was Veṅkaṭanātha, and that of the Teṅgalai was Pillai Lokācārya. Later on Saumya Jāmātrī muni became the accepted leader of the Teṅgalai school. Though the leaders themselves were actuated by a spirit of sympathy with one another, yet their followers made much of these little differences in their views and constantly quarrelled with one another, and it is a well known fact that these sectarian quarrels exist even now.

It was during Veṅkaṭanātha's life that Malik Kāfur, a general of 'Alā-ud-dīn, invaded the Deccan in 1310. He easily conquered the countries of Warangal and Dvārasamudra and pushed to the extreme south, spreading devastation and plundering everywhere.

In 1326 the Mahomedans invaded Śrīraṅgam and pillaged the city and the temple. About 1351 the Hindu Kingdom in Vijayanagar was established by King Bukka I. When the Mahomedans pillaged the temple of Śrīraṅgam, the temple-keepers had fled away to Madurā with the God Raṅganātha, who was established in Tīrupati and was worshipped there. Bukka's son Kampana began to make conquest in the south and eventually Gopana, a general of Kampana, succeeded in restoring Raṅganātha to Śrīraṅgam. This affair has been immortalized by a verse composed by Venkaṭanātha, which is still written on the walls of the temple of Śrīraṅgam, though certain authorities think that the verse was not by him, but is only attributed to him. This story is found in a Tamil work, called *Kavilologu*, and is also recorded in the *Vaḍakalai Guru-paramparā* of the fifteenth century. During the general massacre at Śrīraṅgam, Venkaṭanātha hid himself among the dead bodies and fled ultimately to Mysore. After having spent some years there he went to Coimbatore, and there he wrote his *Abhīti-stava*, in which he makes references to the invasion of the Mahomedans and the tragic condition at Śrīraṅgam. When he heard that by Gopana's endeavours Raṅganātha was restored to Śrīraṅgam he went there and wrote a verse applauding his efforts¹.

Venkaṭanātha was a prolific writer on various subjects and also a gifted poet. In the field of poetry his most important works are the *Yādavābhyudaya*, *Haṃsa-saṃdeśa*, *Subhāṣita-nīvi*, and *Samkalpa-sūryodaya*, an allegorical drama in ten acts. The *Yādavābhyudaya* was a work on the life of Kṛṣṇa, which was commented upon by no less a person than Appaya-dīkṣita. The *Subhāṣita-nīvi*, a didactic poem, was commented upon by Śrīnivāsa Sūri of the

¹ āriyā'nīla-śṛṅga-dyuti-racita-jagad-rañjanād aṅjanā'dreś
ceṅcyām ārādhya kañ cit samayam atha nihatyod'dhanuṣkāns tuluṣkān
lakṣmī-bhūmyāv'ubhābhyāṃ saha nija-nagare sthāpayan raṅganāthaṃ
samyag-varyāṃ saparyāṃ punar akṛta yaśo-darpaṇaṃ goppanā-ryaḥ.

The verse appears in *Epigraphica Indica*, vol. vi, p. 330.

This fact has also been recorded in Doddācārya's *Vedānta-deśika-vaibhava-prakāśikā* and *Yatindra-pravaṇa* in the following verse:

jītvā tuluṣkān bhuvi goppanendro
raṅgā-dhīpaṃ sthāpītavān sva-deśe
ity'evam ākarṇya guruḥ kavīndro
dhṛṣṭavad yas tam ahaṃ prapadye.

According to the commentary, the aforesaid *Vaibhava-prakāśikā*, Venkaṭanātha was born in 1269 and died in 1369. Goppanārya's reinstallation of Śrīraṅganātha took place in 1371.

Śrīśaila lineage, son of Veṅkaṭanātha. He lived in all probability in the fifteenth century. Veṅkaṭanātha's other poem was *Haṃsa-sandeśa*. In his *Samkalpa-sūryodaya* he dramatically describes, after the pattern of the *Prabodha-candro-daya*, the troubles and difficulties of the human soul in attaining its final perfection. He wrote about thirty-two adoration hymns such as the *Haya-grīva-stotra*, and *Devanāyaka-pañcāśāt* and *Pādukā-sahasra-nāma*. He also wrote many devotional and ritualistic pieces, such as the *Yajñopavīta-pratiṣṭhā*, *Ārādhana-krama*, *Hari-dīna-tilaka*, *Vaiṣṇaveśa-kārikā*, *Śrī-pañcarātra-rakṣā*, *Sac-caritra-rakṣā* and *Nikṣepa-rakṣā*. He also collected from various sources the verses regarding the doctrine of *prapatti*, and wrote the *Nyāsa-viṃśati* and a further work based on it, called the *Nyāsa-tilaka*, which was commented upon by his son Kumāra-Vēdānta-deśika in a work called *Nyāsa-tilaka-ṭyākhyā*. Due notice of his *Pañcarātra-rakṣā* has been taken in the section on *Pañcarātra* of the present volume. He wrote also a work called *Śilpārtha-sāra*, two works on medicine called *Rasa-bhaumāmṛta* and *Vṛkṣa-bhaumāmṛta*, a Purāṇika geography called *Bhū-gola-nirṇaya*, and a philosophical work called *Tattva-muktā-kalāpa* in verse with his own commentary on it called *Sarvārtha-siddhi*, which have been noticed in some detail in the special section on Veṅkaṭanātha. This work has two commentaries, called *Ananda-dāyini* or *Ananda-ṭallārī* (in some manuscripts) or *Nṛsimha-rājīya* and *Bhāva-prakāśa*, of which the latter is of an annotative character. The commentary called *Ananda-dāyini* was written by Vātsya Nṛsimhadeva, son of Narasimha-sūri, and Totārambā and Devarāja Sūri. Nṛsimhadeva's maternal grandfather was Kauśika-Śrībhāṣya-Śrīnivāsa, who was also his teacher. He had another teacher, named Appayācārya. This Devarāja Sūri was probably the author of the *Viṃśa-tattva-prakāśikā* and *Caramopāya-tātparya*. Nṛsimhadeva's other works were *Para-tattva-dīpikā*, *Bheda-dhikkāra-nyakkāra*, *Maṇi-sāradhikkāra*, *Siddhānta-nirṇaya*, a commentary on Veṅkaṭanātha's *Nikṣepa-rakṣā*, called *Nṛsimha-rājīya*, and a commentary on the *Sata-dūṣaṇī*. This Nṛsimhadeva lived probably in the sixteenth century. The commentary called *Bhāva-prakāśa* was written by Navyaraṅgeśa. He describes himself as a disciple of Kalijit; but this must have been a different Kalijit from the well-known Lokācārya; for the *Bhāva-prakāśikā* commentary, as it refers to the topics of the *Ananda-dāyini*, is a later one. It must have been

written late in the sixteenth or at the beginning of the seventeenth century.

Veṅkaṭanātha also wrote the *Nyāya-parisuddhi*, a comprehensive logical work of the *Viśiṣṭā-dvaita* school. It was criticized by Śrinivāsadāsa, son of Devarājācārya, who was a disciple of Veṅkaṭanātha. He may have been an uncle and teacher of Nṛsiṃha-deva, author of the *Ānanda-dāyini*. His commentary was called *Nyāya-sāra*. The *Nyāya-parisuddhi* had two other commentaries, *Nikāśa*, by Śaṭhakopa Yati, a disciple of Ahovila and *Nyāya-parisuddhi-vyākhyā*, written by Kṛṣṇatātācārya.

Veṅkaṭanātha wrote a work supplementary to the *Nyāya-parisuddhi*, called *Nyāya-siddhā-ñjana*, the contents of which have been noted in the separate sections on Veṅkaṭanātha. He also wrote another work called *Para-mata-bhaṅga*, and a polemical work called *Śata-dūṣaṇi*. The name *Śata-dūṣaṇi* signifies that it contains a hundred refutations; but actually, in the printed text available to me, I can trace only forty. The best-known commentary, by Rāmānujadāsa, pupil of Vādhūla Śrinivāsa, is called *Caṇḍa-māruta*. All important discussions contained in the *Śata-dūṣaṇi*, which are directed mainly against the Śāṅkara school, have been duly noticed in a different section. It had another commentary, by Nṛsiṃharāja, which is also called *Caṇḍa-māruta*, and another, by Śrinivāsācārya, called *Sahasra-kiraṇi*.

Veṅkaṭanātha, in addition to his *Tattva-ṭikā* commentary on the *Śrī-bhāṣya*, wrote a summary of the general topics of the *Śrī-bhāṣya* discussion, called *Adhikaraṇa-sārāvali*, which was commented upon by his son Kumāra Vedantācārya or Varadanātha, in a work called *Adhikaraṇa-sārāvali-vyākhyā* or *Adhikaraṇa-cintāmaṇi*. He also wrote two small pamphlets, called *Cakāra-samarthana* and *Adhikaraṇa-darpaṇa*; a commentary on the *Īsopaniṣat*; one on Yāmuna's *Gītārtha-saṃgraha*, called *Gītārtha-saṃgraha-rakṣā*, and a commentary on Rāmānuja's *Gītā-bhāṣya*, called *Tātparya-candrikā*. He also criticized Rāmānuja's *Gadya-traya*, in a work called *Tātparya-dīpikā*, and wrote commentaries on Yāmuna's *Catuḥ-śloki* and *Stotra-ratnākara*, which are called *Rahasya-rakṣā*. In addition he composed thirty-two works in the *maṇi-pravāla* style, some of which have been translated into Sanskrit. These works are *Sampradāya-parisuddhi*, *Tattva-padaṇī*, *Rahasya-padaṇī*, *Tattva-navanītam*, *Rahasya-navanītam*, *Tattva-*

mātrkā, *Rahasya-mātrkā*, *Tattva-sandeśa*, *Rahasya-sandeśa*, *Rahasya-sandeśa-vivaraṇa*, *Tattva-ratnāvali*, *Tattva-ratnāvali-saṃgraha*, *Rahasya-ratnāvali*, *Rahasya-ratnāvali-hṛdaya*, *Tattva-traya-culuka*, *Rahasya-traya-culuka*, *Sāra-dīpa*, *Rahasya-traya-sāra*, *Sāra-sāra*, *Abhaya-pradāna-sāra*, *Tattva-śikhā-maṇi*, *Rahasya-śikhā-maṇi*, *Añjali-vaibhava*, *Pradhānā-śataka*, *Upakāra-saṃgraha*, *Sāra-saṃgraha*, *Virodha-parihāra*, *Muni-vāhana-bhoga*, *Madhura-kavi-hṛdaya*, *Parama-pāda-sopāna*, *Para-mata-bhaṅga*, *Hastigiri-māhātmya*, *Draviḍopaniṣat-sāra*, *Draviḍopaniṣat-tātparyāvali* and *Nigama-parimala*. The last three are works summarizing the instructions of the Ārvārs. He was the author of twenty-four poems in the Tamil language¹.

Veṅkaṭanātha also wrote a small pamphlet called *Vādi-traya-khaṇḍana*, in which he tried to refute the views of Śaṅkara, Yādava-prakāśa, and Bhāskara. Most of the arguments are directed against Śaṅkara, whereas the views of Yādavaprakāśa and Bhāskara were but slightly touched. He also wrote two works on Mīmāṃsā, called *Mīmāṃsā-pādukā* and *Seśvara-mīmāṃsā*. In the last work Veṅkaṭanātha tries to interpret the *Mīmāṃsā-sūtra* of Jaimini in a manner different from that of Śābara. His main intention was to interpret the *Mīmāṃsā-sūtra* in such a manner that it might not be in conflict with the *Brahma-sūtra*, but might be regarded as a complementary accessory to the teachings of the *Brahma-sūtra*. Thus, in interpreting the first *sūtra* of Jaimini, he says that the injunction of reading the Vedas is satisfied with the mere study of the Vedas. The injunction does not include an enquiry into the meaning of the texts and a study of the Mīmāṃsā, which comes out of the natural desire for knowing the meanings of the texts and their applications. The study of the Mīmāṃsā may therefore be undertaken even after the final bath of the *brahma-cārīn*. Thus, a man may, after finishing his obligatory studies as a *brahma-cārīn* in the house of his teacher, still continue to live there for the study of Mīmāṃsā, but the latter is no part of his obligatory duty. Again, in defining the nature of *dharma*, Veṅkaṭanātha says that *dharma* is that which contributes to our good and is also in accordance with the injunctions². Though

¹ The list of these Tamil works, which were not accessible to the present writer, has been collected from the introduction to the Mysore edition of the *Tattva-muktā-kalāpa*.

² *Codanā-lakṣaṇatva-viśeṣitam evārthe sādhanatvaṃ dhurma-lakṣaṇam. Īśvara-mīmāṃsā*, p. 18.

the word *dharma* may be otherwise used by some persons, yet its accepted meaning, as defined above, remains unaltered. The instructions of the *Smṛtis*, *Purāṇas*, *Pañcarātras*, *Brahma-sūtras*, etc., are to be regarded as *dharma*, as being based upon the Vedas, which are their source. The validity of the nature of *dharma* cannot be determined by a reference to any other *pramāṇa* than the scriptural texts. In all matters of doubt and dispute the *Mīmāṃsā-sūtra* should be interpreted in such a manner that it does not come in conflict with the views of Bādarāyaṇa, who was the teacher of Jaimini.

Veṅkaṭanātha's son was also a great writer on Vedānta. He was called Kumāra Vedāntācārya, Varadārya or Varadānātha or Varada Deśikācārya or Varadarāja Sūri or Varadanāyaka Sūri or Varadaguru. He wrote a *Tattva-traya-culuka-saṃgraha*, a work in Sanskrit prose, in which he summarizes the contents of the Tamil *Tattva-traya-culuka* of Veṅkaṭanātha, describing the fundamental Śrīvaiṣṇava doctrines regarding soul, matter and God¹. His other works are *Vyavahāraika-satyatva-khaṇḍana*, *Prapatti-kārikā*, *Rahasya-traya-culuka*, *Carama-guru-nirṇaya*, *Phala-bheda-khaṇḍana*, *Ārādhana-saṃgraha*, *Adhikaraṇa-cintāmaṇi*, *Nyāsa-tilaka-vyākhyā*, *Rahasya-traya-sārārtha-saṃgraha*. The last three works are commentaries on Veṅkaṭanātha's *Adhikaraṇa-sārāvali*, *Nyāsa-tilaka*, and *Rahasya-traya-sāra*. Varadārya lived till the end of the fourteenth or the beginning of the fifteenth century.

Meghanādāri lived probably in the twelfth and the early thirteenth centuries. He was closely associated with his elder brother Rāma Miśra, a pupil of Rāmānuja. He wrote a *Naya-prakāśikā*, a commentary on the *Śrī-bhāṣya*, *Bhāva-prabodha*, *Mumukṣū-pāya-saṃgraha*, and *Naya-dyu-maṇi*. The last work is one of the most recondite works on the *Viśiṣṭā-dvaita* school of thought, and its main contents have been noted in a separate section. He was the son of Ātreyanātha and Adhvara-nāyikā. He had three brothers, Hastyadrinātha, Varadarāj, and Rāma Miśra.

Rāmānujadāsa or Mahācārya wrote a *Brahma-sūtra-bhāṣyopanyāsa*, a commentary on the *Śrī-bhāṣya*. He wrote also a *Pārāśarya*, in which he tried to show that the commentaries of Śaṅkara, Madhva and others were not in consonance with the *Sūtras* of

¹ It is also called *cid-acid-śvara-tattva-nirūpaṇa*, or *Tattva-traya*.

Bādarāyaṇa. Some account of this will be found in the fourth volume of the present work. He also wrote a *Rāmānuja-carita-culuka*, *Rahasya-traya-mīmāṃsā-bhāṣya*, and *Caṇḍa-māruta*, a learned commentary on the *Śata-dūṣaṇī* of Veṅkaṭanātha. Sudarśanaguru wrote a commentary on his *Vedānta-vijaya*, called *Maṅgala-dīpikā*. He wrote a big treatise called *Vedānta-vijaya*, which was divided into several more or less independent, though inter-related parts. The first part is *Gurūpasatti-vijaya*, in which the methods of approaching the teacher are discussed. The manuscript is fairly voluminous, containing 273 pages, and the modes of discussion are on the basis of Upaniṣadic texts. The second part is called *Brahma-vidyā-vijaya* (a MS. containing 221 pages), in which he tries to prove, on the basis of Upaniṣadic texts, that Brahman means Nārāyaṇa and no other deity. The third part, called *Sad-vidyā-vijaya*, contains seven chapters and is philosophical and polemical in spirit. I have in a later section given an account of its principal contents. The last part is called *Vijayollāsa* (a MS. of 158 pages), in which he seeks to prove that the Upaniṣads refer to Nārāyaṇa alone. I have not been able to trace the fourth part. Sudarśanaguru wrote a commentary on this *Vedānta-vijaya*. This Sudarśana is different from Sudarśanācārya. He wrote also an *Advaita-vidyā-vijaya*, a work in three chapters, based principally on Upaniṣadic texts. The three chapters are *Prapañca-mithyātva-bhaṅga*, *Jīveśvaraikya-bhaṅga*, and *Akhaṇḍārthatva-bhaṅga*. He also composed another work, called *Upaniṣad-maṅgala-dīpikā*, which was not accessible to the present writer. He describes himself sometimes as a pupil of Vādhūla Śrīnivāsa and sometimes as a pupil of his son Prajñānidhi. He lived probably in the fifteenth century. He was the disciple of Vādhūla Śrīnivāsa, who wrote the *Tūlikā* commentary on the *Śruta-prakāśikā*.

Raṅga Rāmānuja Muni lived probably in the fifteenth century. He was the disciple of Vātsya Anantārya, Tātayārya, and Parakāla Yati or Kumbha-koṇa Tātayārya. He wrote a commentary on the *Śribhāṣya*, called *Mūla-bhāva-prakāśikā*, and one on the *Nyāya-siddhāntajana*, called *Nyāya-siddhāntajana-vyākhyā*. He also wrote a *Dramiḍopaniṣad-bhāṣya*, *Viśaya-vākya-dīpikā*, *Rāmānuja-siddhānta-sāra*, a commentary on the *Chāndogyo-paniṣad*, called *Chandogyo-paniṣad-prakāśikā*, and one on the *Bṛhad-āranyako-paniṣat-prakāśikā*. He wrote an independent commentary on the *Brahma-sūtra*,

called *Śārīraka-Śāstrārtha-dīpikā*. Aufrecht reports, in his *Catalogus Catalogorum*, that he wrote also the following works (which, however, are not accessible to the present writer): *Upaniṣad-vākya-vivaraṇa*, *Upaniṣat-prakāśikā*, *Upaniṣad-bhāṣya*, *Draviḍopaniṣat-sāra-ratnāvalī-vyākhyā*, *Kaṭhavalī-upaniṣat-prakāśikā*, *Kauṣīta-kopaniṣat-prakāśikā*, *Taittirīyopaniṣat-prakāśikā*, *Prasnopaniṣat-prakāśikā*, *Māṇḍūkyopaniṣat-prakāśikā*, *Muṇḍakopaniṣat-prakāśikā*, *Śvetāśvataropaniṣat-prakāśikā*, *Śrūta-bhāva-prakāśikā*, *Guru-bhāva-prakāśikā*¹.

Raṅga Rāmānuja's teacher, Parakāla Yati, otherwise called Kumbha-koṇa Tātayārya, wrote the following works: *Draviḍa-śruti-tattvārtha-prakāśikā*, *Tiruppalāṇḍu-vyākhyāna*, *Tiruppalavai-vyākhyāna*, *Kaṇṇinṇuṇ-śirattāmbu-vyākhyāna*, *Adhikāra-saṃgraha-vyākhyā*. He wrote also a *Vijayīndra-parāḷaya* in refutation of the *Para-tattva-prakāśikā* of Vijayīndra.

Śrinivāsadāsa, of the lineage of Mādhava, son of Devarājācārya and a pupil of Veṅkaṭanātha, wrote a *Nyāya-sāra*, a commentary on the *Nyāya-pariśuddhi*, and also a commentary called *Śata-dūṣaṇī-vyākhyā-sahasra-kiraṇī*. It is possible that the Śrinivāsadāsa who wrote the *Viśiṣṭa-dvaita-siddhānta*, *Kaivalya-śata-dūṣaṇī*, *Durupadeśa-dhikkāra*, *Nyāsa-vidyā-vijaya*, *Mukti-śabda-vicāra*, *Siddhy-upāya-sudarśana*, *Sāra-niṣkarṣa-ṭippanī* and *Vādādri-kuliśa* is the same as the author of the *Nyāya-sāra*. He lived late in the fourteenth and in the fifteenth century. This Śrinivāsa must be distinguished from Śrīśaila Śrinivāsa, whose works have been treated in a separate section. Śrīśaila Śrinivāsa also lived probably in the fifteenth century.

We have another Śrinivāsa, who wrote an *Adhikaraṇa-sārārtha-dīpikā*. On some interpretations of the colophon he may probably be styled as Vādhūla Śrinivāsa, in which case he would be the teacher of Mahācārya².

There is another Śrinivāsa, who was the pupil of Mahācārya, alias Rāmānujadāsa, and son of Govindārya. He wrote a commentary on the *Śrūta-prakāśikā* and also the *Yatīndra-mata-dīpikā*, or *Yatipati-mata-dīpikā*. The author says that in writing this elementary treatise on the fundamental principle and doctrines of Śrīvaiṣ-

¹ See Aufrecht's *Catalogus Catalogorum*, pp. 488-9.

² On the other interpretation the adjective Vādhūla-kula-tilaka applies to his teacher *Samara-puṅgavācārya*. This Śrinivāsa was known also as Maṅgācārya Śrinivāsa.

navism he collected his materials from a large number of ancient treatises.¹

The book *Yatindra-mata-dīpikā* contains ten chapters. The first chapter enumerates the different categories, gives the definition of perception and shows how other sources of knowledge, such as memory, recognition, and non-perception, can all be included within this definition. It then gives a refutation of the various theories and establishes the theory of *sat-khyāti*. It denies the claim of verbal cognition to be regarded as a case of perception, refutes the definition of indeterminate cognition, and does not admit the possibility of any inference regarding God.

In the second chapter the writer defines "inference," classifies it and enumerates the rules regarding the validity of it and also gives a list of fallacies that may arise out of the violation of these rules. He includes analogy (*upamiti*) and proof by implication (*arthāpatti*) in the definition of inference and names the different modes of controversy.

In the third chapter we get the definition of "verbal testimony." The authority of the scriptures is established, and an attempt has been made to show that all words convey the sense of Nārāyaṇa the Lord.

The fourth chapter is longer than all the others. The author here refutes the categories of the *Nyāya* school of thought such as the universals, the relation of inherence, the causality of the atoms, and gives his own view about the genesis of the different categories, the mind-stuff, the body, the senses, the five primordial elements of earth, air, heat, water, sky, and so on.

The fifth chapter gives an account of time and establishes its all-pervasive and eternal nature. The sixth chapter enumerates the eternal, transcendental attributes of pure *sattva*, which belongs both to *īśvara* and *jīva*.

The seventh chapter is more philosophical. It contains a de-

¹ *evam Drāviḍa-bhāṣya—Nyāya-tattva—Siddhi-traya—Śrī-bhāṣya—Dīpa-sāra—Vedārtha-saṃgraha—Bhāṣya-vivaraṇa—Saṃgīta-mālā—Sudārtha-saṃkṣepa—Śrūta-prakāśika—Tattva-ratnākara—Prajñā-paritrāṇa—Prameya-saṃgraha—Nyāya-kulīśa—Nyāya-sudarśana—Māna-yāthātmya-nirṇaya—Nyāya-sāra—Tattva-dīpena—Tattva-nirṇaya—Sarvārtha-siddhi—Nyāya-pariśuddhi—Nyāya-siddhānta—Paramata-bhaṅga—Tattva-traya-cūluka—Tattva-traya-nirūpaṇa—Tattva-traya-praśaṇḍa-māruta—Vedānta-vijaya—Pārāśarya-vijaya—dīpikā—cārya-prabandhā-nusāreṇa jñātavyārthān saṃgrhya bālābuddhārtham Yatindra-mata-dīpikā-khya-śārīraka-paribhāṣyām te pratipādītāḥ. Yatindra-mata-dīpikā, p. 101.*

tailed discussion as to how knowledge may be both an attribute and a substance, so that it may be a quality of the self and also constitute its essence. Attempts are here made to show that all mental states, including that of feeling, can be reduced to that of knowledge. Devotion and the attitude of self-surrender are discussed and the three courses, knowledge, action, and devotion, are elaborated. The writer also brings out the futility of the means of salvation prescribed by other systems of thought.

In the eighth chapter the author enumerates the attributes common to both *jīva* and *īśvara*, and deals at great length with the true nature of the individual self, refuting the theory of the Buddhists on this point. He gives also a description of the devotees and their twofold classification, and enumerates the attributes of the emancipated *jīvas*.

The ninth chapter is devoted to the definition of God, and establishes Him as the instrumental, material and the accessory cause of the world. It refutes the theory of *māyā* of the monists (*advaitins*) and gives an account of the fivefold aspects of God such as *vibhavas*, *avatāras*, etc. The tenth chapter enumerates and defines ten categories other than substance, such as the *sattva*, *rajas*, *tamas*, *śabda*, *śparsa*, and the relation of contact, etc.

There was another Śrīnivāsadāsa, of the Āṇḍān lineage, who was author of a *Ātma-tattva-paritrāṇa*. He tried to prove that the word Nārāyaṇa is not an ordinary compound word, but a special word which stands by itself indicative of the name of the highest God. There was yet another Śrīnivāsa, called Śrīnivāsa Rāghavādāsa and Caṇḍa-māruta, who wrote a *Rāmānuja-siddhānta-saṃgraha*.

This Śrīnivāsa again must be distinguished from another Śrīnivāsa of the lineage of Śaṭhamarṣana, who wrote at least one work known to the present writer, *Ānanda-tāratamya-khaṇḍana*. In this small treatise he tries to refute, by a reference to scriptural passages, the view that there are differences in the state of salvation.

A few other Śrīnivāsas and their works are also known to the present writer, and it is possible that they flourished in the fifteenth or the sixteenth century. These are Śrīvatsāṅka Miśra, who wrote a small work called *Śrī-bhāṣya-sārārtha-saṃgraha*; Śrīnivāsa Tātārya, who wrote *Laghu-bhāva-prakāśikā*; Śrīśaila Yogendra,

who wrote a work called *Tyāga-śabdārtha-ṭippanī*; Śrīśaila Rāghavārya, grandson of Veṅkaṭanātha, who wrote a *Vedānta-kaustubha*; Śrīśailadāsa, son of Raṅgadāsa, who wrote *Siddhānta-saṃgraha*; Sundararājadeśika, author of *Brahma-sūtra-bhāṣya-vyākhyā* (an elementary commentary). These minor writers flourished probably in the sixteenth, seventeenth and eighteenth centuries.

Śrīnivāsa-dikṣita, son of Śrīśaila Śrīnivāsa Tātayārya, grandson of Aṇṇayārya, and a pupil of Ācārya-dikṣita, wrote a work called *Virodha-varūthinī-pramāthinī*. This must be distinguished from the *Virodha-varūthinī-pramāthinī* of Raṅgācārya dealt with in a different section. Śrīnivāsa-sudhī also wrote *Brahma-jñāna-nirāsa*, which records the controversy which the author had with Tryambaka Paṇḍita, a follower of Śaṅkara. It generally follows a line of argument adapted in the *Śata-dūṣaṇī* in refuting the monistic Vedānta of Śaṅkara. It is difficult to say whether the works *Naya-maṇi-kalikā*, *Lakṣmaṇārya-siddhānta-saṃgraha*, and *Hari-guṇa-maṇimālā* should be attributed to this author or to the Śrīnivāsa who wrote the *Virodha-nirodha*.

Sudarśana Sūri, who lived in the thirteenth and fourteenth centuries, of the lineage of Hārīta, son of Vāgvijaya and pupil of Vātsya Varada, has been already mentioned. He wrote a treatise on the commentary of Rāmānuja from whose works all succeeding writers drew their inspiration. The title of his commentary is *Śruta-prakāśikā*, which incorporates, often word for word, what he heard from his teacher Vātsya Varada¹. He also wrote a *Sandhyā-vandana-bhāṣya*, *Vedānta-saṃgraha-tātparyā-dīpikā*, a commentary on the *Vedārtha-saṃgraha* of Rāmānuja, and another work, called *Śruta-pradīpikā*. He was often called Vedavyāsa Bhaṭṭārya. This Sudarśana must be distinguished from Sudarśanaguru who wrote a commentary on the *Vedānta-vijaya* of Mahācārya. Śaṭhakopa muni, who was a pupil of Śaṭhāri Sūri and often known as Śaṭhakopa Yati, lived probably towards the end of the sixteenth century. He wrote the following works: *Brahma-lakṣaṇa-vākyārtha-saṃgraha*, *Brahma-śabdārtha-vicāra*, *Vākyārtha-saṃgraha*, *Brahma-sūtrārtha-saṃgraha*, *Brahma-lakṣaṇa-vākyārtha*, *Dirya-prabandha* and *Bhāva-prakāśikā-dūṣaṇoddhāra*. The last work is an attempt at

¹ *gurubhyo' rītaḥ śrutaḥ śabdais tat-prayuktaiś ca yojitāḥ
saukaryāya bubhūtsūnām saṃkalayya prakāśyate.*

Introductory verses to the *Śruta-prakāśikā*.

refutation of the criticism of the *Bhāva-prakāśikā*, a commentary on *Śrūta-prakāśikā*, by Varada Viṣṇu Sūri.

Ahobila Raṅganātha Yati, who flourished at the beginning of the fifteenth century, wrote a *Nyāsa-vivṛti*, in which he deals with the topics of *nyāsa* as expounded in Veṅkaṭanātha's *Nyāsa-tilaka*. Ādivarāha Vedāntācārya wrote a *Nyāya-ratnāvali*. Kṛṣṇatātācārya, who flourished in the fifteenth century and belonged to the Śrīśaila lineage, wrote a commentary on the *Nyāya-pariśuddhi*, called *Nyāya-pariśuddhi-vyākhyā* and some small treatises called *Dūrārtha-dūrikaraṇa*, *Brahma-sabdārtha-vicāra* and *Ṇatva-candrikā*. Kṛṣṇa-pāda-lokaguru, probably of the same century, wrote a *Rahasya-traya-mīmāṃsā-bhāṣya*, *Dīvyā-prabandha-vyākhyā*, *Catuḥ-śloki-vyākhyā*, and a number of Tamil works. Campakeśa, of the fifteenth century, wrote a *Guru-tattva-prakāśikā*, and a *Vedānta-kaṇṭako-ddhāra*. In the last work he tried to refute the criticisms of the Śrī-bhāṣya¹. He was a pupil of Veṅkaṭanātha. Another Tātācārya, who was grandfather of Veṅkaṭādhvārī, the author of the *Viśva-guṇādarśa*, wrote a *Tātācārya-dina-caryā*. He was the maternal uncle of Appaya-dīkṣita. Again, Deśikācārya, who wrote the *Prayoga-ratna-mālā* as a commentary on the *Śrī-bhāṣya*, also wrote a book on the commentary on Veṅkaṭanātha's *Pañyikā* on the *Taittirīyopaniṣat*, which was called the "*Asti-brahmeti-śruty-arthavicāra*." Doḍḍayācārya, who lived probably in the fifteenth century, wrote a *Parikara-vijaya*, often referred to in Mahācārya's works, and a life of Veṅkaṭanātha, called *Vedānta-deśika-vaibhava-prakāśikā*. Nārāyaṇa muni wrote a *Bhāva-pradīpikā*, *Gītārtha-saṃgraha*, *Gītā-sāra-rakṣā*, *Gītā-saṃgraha-vibhāga*, *Rahasya-traya-jīvātu*. He was the son of Śrīśaila Tātayārya, grandson of Anantārya and pupil of Rāmānujācārya, probably Mahācārya. He lived perhaps late in the fifteenth century. Nṛsiṃharāja, who wrote a commentary on the *Śata-dūṣaṇī*, called *Śata-dūṣaṇī-vyākhyā*, was probably the same person who wrote an *Ānanda-dāyini* on the *Tattva-muktā-kalāpa*. Nṛsiṃhasūri, a much later writer, wrote a *Śarīra-bhāvādhikaraṇa-vicāra* and *Tat-kratu-nyāya-vicāra*. Para-

¹ Śuddhasattvalakṣaṇārya wrote a work called *Guru-bhāva-prakāśikā* as a commentary on the *Śrūta-prakāśikā*, which he based upon the *Guru-tattva-prakāśikā* of Campakeśa. He was the disciple of Śuddhasattvācārya, son of Saumya Jāmāṭṛ muni. In his commentary he constantly refers to the *Tūlikā* commentary of Vādhula Śrīnivāsa. He lived probably in the sixteenth century, and may have been a contemporary of Mahācārya.

vastu Vedāntācārya, son of Ādivarāhācārya, composed a *Vedānta-kaustubha*. Puruṣottama wrote a commentary on the *Śrī-bhāṣya* called *Subodhinī*, and Bhagavat Senāpati Miśra wrote a *Sārīraka-nyāya-kalā*.

Pela Puradeśika wrote a work called *Tattva-bhāskara*. It is divided into two parts, in the first of which he tries to ascertain the meaning of *māyā* and elucidates the nature of God on the basis of Dravidian and Sanskrit texts. The second part is of a ritualistic nature. Raṅgarāja, who lived probably in the sixteenth century, was the author of *Advaita-valiṣkāra*. Raṅganāthācārya wrote an *Aṣṭādaśa-bheda-vicāra*, *Puruṣārtha-ratnākara*, *Viśvādūrtha-saṃgraha*, *Kāryādhikaraṇa-veda* and *Kāryādhikaraṇa-tattva*. The contents of the last two works have been dealt with in a different section. He lived perhaps in the sixteenth century, and was a pupil of Saumya Jāmāṭṛ muni. A Rāmānuja called Vedānta Rāmānuja wrote a *Dīṇya-sūri-prabhāva-dīpikā* and a *Sarva-darśana-śiromaṇi*. Rāmānujadāśabhikṣu wrote *Sauri-rāja-caraṇāravinda-śaraṇa-gatisāra*, and Rāma Subrahmaṇyasāstrī *Viṣṇu-tattva-rahasya*. These two writers flourished probably in the seventeenth or late in the sixteenth century.

Ātreya Varada wrote a *Rahasya-traya-sāra-tyākhyā*, a commentary on Veṅkaṭanātha's *Rahasya-traya-sāra*. Varadadāsa wrote *Nyāsa-vidyā-bhūṣaṇa* and Vādi Keśarī Miśra the following: *Adhyātma-cintā*, *Tattva-dīpa-saṃgraha-kārikā*, *Tattva-dīpa* and *Rahasya-traya-kārikā*. These small works are of little value. Only the *Tattva-dīpa* contains some philosophical materials inspired by the *Śrūta-prakāśikā* of Sudarśana. Vīra-rāghava-dāsa, son of Vādhūla Narasiṃha and pupil of Vādhūla Varadaguru, produced a commentary on the *Śrī-bhāṣya*, called *Tātparya-dīpikā*, and one on Vātsyā Varada's *Tattva-sāra*, called *Ratna-sārīṇī*. Veṅkaṭa Sudhī wrote a voluminous work in four chapters, called *Siddhānta-ratnāvalī*, in which he tried to prove that Nārāyaṇa and not Śiva is the supreme Lord and the cause of the world, and dealt with many sectarian doctrines which are of no philosophical value. He was the pupil of Veṅkaṭanātha and son of Tātācārya of Śaṭhamarṣaṇa lineage. Some notice of the work will be taken in the section on *Pañcarātra*. Veṅkaṭadāsa, called also Vucci Veṅkaṭācārya, the third son of Aṇṇayārya, of Śaṭhamarṣaṇa lineage, composed a work called *Vedāntakārikāvalī*. Veṅkaṭādhvārī wrote a work called *Yati-*

prativandana-khaṇḍana, Ayyaṇṇa wrote *Vyāsa-tātparya-nirṇaya* and Aṇṇavāyyaṅgācārya, *Tṛṃśa-praśno-ttara*, *Kesara-bhūṣaṇa* and *Śrī-tattva-darpaṇa*. Gopālatāta wrote *Śatakoṭi-dūṣaṇa-parihāra*, Govindācārya *Pramāṇa-sāra* and Jagannātha Yati *Brahma-sūtra-dīpikā*. Devanātha wrote *Tattva-nirṇaya*, Dharmakureśa *Rāmānuja-nava-ratna-mālikā*, Nilameghatātācārya *Nyāsa-vidyārtha-vicāra*, Raṅgācārya *Śrīvatsa-siddhānta-sūra*, Raghunāthācārya *Būla-sarasvatī* and *Sanḡati-sāra*. Rāghavācārya wrote *Rahasya-traya-sāra-saṃgraha*, Rāmanātha Yogī *Sadā-cāra-bodha*, Rāmānuja *Gāyatrī-sata-dūṣaṇi* and Tirumalācārya of Bharadvāja lineage *Ṇattvopapatti-bhaṅga*.

Aṇṇayārya, brother of Śrīśaila Śrīnivaśa, wrote *Saptati-ratna-mālikā*, *Vyavahārikatva-khaṇḍana-sāra*, *Mithyātva-khaṇḍana*, *Ācārya-vimśati*, *Ānanda-tāratamya-khaṇḍana*. Appaya-dikṣita of the sixteenth century commented on the *Brahma-sūtra* in accordance with the views of Rāmānuja, in a work called *Naya-mukha-mālikā*. Anantārya of the nineteenth century wrote a number of works of which the following have been published: *Ṇattva-tattva-vibhūṣaṇa*, *Śatakoṭi-khaṇḍana*, *Nyāya-bhāskara*, *Ācāra-locana* (a refutation of widow-remarriage), *Śāstrārambha-samarthana*, *Samāsa-vāda*, *Viśayatā-vāda*, *Brahma-śakti-vāda*, *Śāstraikya-vāda*, *Mokṣa-kāraṇatā-vāda*, *Nirviśeṣa-pramāṇa-vyudāsa*, *Samvīn-nān-ātva-samarthana*, *Jñāna-yāthārthya-vāda*, *Brahma-lakṣaṇa-vāda*, *Īkṣaty-adhikaraṇa-vicāra*, *Pratijñā-vāda*, *Ākāśādhikaraṇa-vicāra*, *Śrībhāṣya-bhāvāṅkura*, *Laghu-sāmānādhikaraṇya-vāda*, *Guru-sāmānādhikaraṇya-vāda*, *Śārīra-vāda*, *Siddhānta-siddhāṅjana*, *Vidhisudhākara*, *Sudarśana-sura-druma*, *Bheda-vāda*, *Tat-kratu-nyāya-vicāra*, *Drśyatvā-numāna-nirāsa*. These treatises are mostly short papers, though a few are more elaborate. The *Nyāya-bhāskara* is a refutation of the *Gauḍa-brahmānandī* commentary on the *Advaita-siddhi*, in refutation of the *Nyāyāmṛta-taraṅgiṇī*. It consists of twelve topics, and the refutations are mostly of a scholastic nature following the style of the new school of logic in Bengal which found fault with the definitions of their opponents. Some of the most important works of this writer have been referred to in the relevant places of this work.

The Influence of the Āṛvārs on the followers of Rāmānuja.

We have already referred to the *Divya-prabandhas*, written by the Āṛvārs in Tamil, which exerted a profound influence on all teachers of the Śrīvaiṣṇava school¹. Kureśa (Tirukkurukaippiran Pillai) wrote a commentary of 6000 verses on a selection of Nāmm'-āṛvār's one thousand verses called the *Sahasra-gīti*. Parāśara Bhaṭṭārya wrote a commentary of 9000 verses. Under the directions of Kalijit (Lokācārya) Abhaya-prada-rāja wrote a commentary of 24,000 verses. Kṛṣṇapāda, pupil of Kalijit, wrote another commentary of 3600 verses. Saumya Jāmāṭṛ muni wrote 12,000 verses interpreting the views of Nāmm'-āṛvār. The commentaries of Abhaya-prada-rāja on the *Divya-prabandhas* helped the later teachers to understand the esoteric doctrine of the later works. The commentaries on the *Divya-prabandhas* written by Saumyajāmāṭṛ muni, the younger brother of Pillai Lokācārya, had already become rare in the time of Abhirāma Varācārya, the translator of the *Upadeśa-ratna-mālā* and the grandson of Saumya Jāmāṭṛ muni.

It is thus seen that Parāśara Bhaṭṭārya, the successor of Rāmānuja in the pontifical chair, and his successor Vedānti Mādhava, called also Nanjiyar, and his successor Namburi Varadarāja, called also Kalijit or Lokācārya I, and his successor Pillai Lokācārya, all wrote works dealing not so much with the interpretation of Rāmānuja's philosophy, as with the interpretation of devotion as dealt with in the *Sahasra-gīti* and the *Divya-prabandhas*. Their writings are mostly in Tamil, only a few have been translated into Sanskrit,

¹ These *Divya-prabandhas* are four thousand in number. Thus Poygaiy-āṛvār wrote *Muḍal-tiru-vantādi* of 100 stanzas; Bhūtatt'-āṛvār, *Iraṇḍam-tiru-vantādi* of 100 stanzas; Pēy-āṛvār, *Munṇām-tiru-vantādi* of 100 stanzas; Tīru-māiṣai Pirān, *Nān-mukam Tīru-vantādi* and *Tīru-chaṇḍa-vruttam* of 96 and 120 stanzas respectively; Madhura-kaviy-āṛvār wrote *Kaṇṇinuṅ-ṣiruttāmbu* of 11 stanzas; Nāmm'-āṛvār wrote *Tīru-vruttam* of 100 stanzas, *Tīru-vāṣīyam*, *Periya-tīru-vantādi* of 87 stanzas and *Tīru-vāy-mōri* of 1102 verses; Kula-śekhara Perumāl wrote *Perumāl-tirumōli* of 105 stanzas, *Periy-āṛvār-tiruppālāṇḍu* and *Periy-āṛvār-tirumōri* of 12 and 461 stanzas, *Āṇḍal, Tiruppāvai* and *Nācchiyār-tirumōli* of 30 and 143 stanzas; Toṇḍar-āḍi-poḍiy-āṛvār, *Tīru-palliy-eruchi* and *Tīru-mālai* of 10 and 45 stanzas respectively; Tīru-pān-āṛvār, *Amalanādi-piṇān* of 10 stanzas; Tīru-maṅgaiy-āṛvār wrote *Periya-tirumōli* of 1084 verses, *Tīru-kkurundāṇḍakam* of 20 stanzas, *Tīruneḍundāṇḍakam* of 30 stanzas, *Tīruvelukkū-tirukkai* of 1 stanza, *Śīriya-tirumaḍal* of 77 stanzas and *Periya-tirumaḍal* of 148 stanzas, thus making a total of 4000 verses in all. They are referred to in the *Upadeśa-ratna-mālā* of Saumya Jāmāṭṛ muni (junior) and in its introduction by M. T. Narasimhiengar.

and in the present work notice is taken only of the Sanskrit works of these writers (mostly in the manuscript form) which have been available to the present writer. Both Pillai Lokācārya and Saumya Jāmāṭṛ muni, called also Vādikeśari, were sons of Kṛṣṇapāda, but this Saumya Jāmāṭṛ muni must be distinguished from a later Saumyajāmāṭṛ muni, called also Yatindrapraṇācārya, who was a much more distinguished man. Parāśara Bhaṭṭārya was probably born before A.D. 1078 and he died in A.D. 1165. He was succeeded by Vedānti Mādhava or Nanjiyar, who was succeeded by Namburi Varadarāja or Lokācārya I. He was succeeded by Pillai Lokācārya, a contemporary of Veṅkaṭanātha, and Śruta-prakāśikācārya or Sudarśana Sūri. It was in his time that the Mahomedans attacked Śrīraṅgam. as has already been mentioned in connection with our account of Veṅkaṭanātha. The Mahomedans were expelled from Śrīraṅgam by Goppanārya, and the image of Raṅganātha was re-installed in A.D. 1293. It was at this time that the famous Saumya Jāmāṭṛ muni (junior) was born. The senior Saumya Jāmāṭṛ muni, younger brother of Pillai Lokācārya, called also Vādikesari, wrote some commentaries on the *Divya-prabandhas*, a work called *Dīpa-prakāśa*, and *Piyaruli-ceyalare-rahasya*. He is referred to by the junior Saumya Jāmāṭṛ muni, called also Varavara muni, in his *Upadeśa-ratna-mālā*, *Tattva-traya-bhāṣya* and *Śrīvacana-bhūṣaṇa-vyākhyā*. We cannot be sure whether the *Adhyātma-cintāmaṇi*, in which Vādhūla Śrīnivāsa is adored as his teacher, was written by Saumya Jāmāṭṛ muni. Mahācārya also described himself as a pupil of Vādhūla Śrīnivāsa, and, if the senior Saumya Jāmāṭṛ and Mahācārya were pupils of the same teacher, Mahācārya must have lived in the fourteenth century. If, however, the junior Saumya Jāmāṭṛ wrote the *Adhyātma-cintāmaṇi*, Mahācārya will have to be placed at a later date.

The present writer has been able to trace only three books in Sanskrit by Pillai Lokācārya: *Tattva-traya*, *Tattva-śekhara*, and *Śrīvacana-bhūṣaṇa*¹. The *Tattva-traya* is a very useful compendium of the Śrīvaiṣṇava school of thought, in which the nature of the inanimate (*acit*), the souls, God and their mutual relations are dealt

¹ Some of his other works are *Mumukṣu-ppaḍi*, *Prameya-śekhara*, *Nava-ratna-mālā*, *Tani-praṇava*, *Prapanna-paritrāṇa*, *Yādycchika-ppaḍi*, *Dvayam*, *Artha-pañcaka*, *Sāra-saṃgraha*, *Paranda-paḍi*, *Saṃsāra-sāmrājyam*, *Śrīyaḥ-pati-ppaḍi*, *Caramam*, *Arcir-ādi*, *Nava-vidha-sambandha*. Vide footnote in *Tattva-śekhara*, p. 70.

with. There is an excellent commentary by Varavara muni. The *Tattva-śekhara* is a work in four chapters. The first chapter quotes scriptural evidences in support of the view that Nārāyaṇa is the highest God and the ultimate cause; in the second chapter he describes the nature of self by reference to scriptural testimony. The same description of the nature of self is continued in the third chapter. In the fourth chapter he deals with the ultimate goal of all souls, self-surrender to God. He says that the ultimate *summum bonum* (*puruṣārtha*) consists in the servitude (*kainkarya*) to God roused by love of Him (*prīti-kārita*), due to the knowledge of one's own nature and the nature of God in all His divine beauty, majesty, power and supreme excellence. Not all servitude is undesirable. We know in our ordinary experience that servitude through love is always pleasurable. In the ordinary idea of emancipation, a man emphasizes his own self and his own end. This is therefore inferior to the *summum bonum* in which he forgets his own self and regards the servitude of God as his ultimate end. Lokācārya then refutes the various other conceptions of the ultimate goal in other schools of philosophy. He also refutes the conception of the *summum bonum* as the realization of one's own nature with a sense of supreme subordination (*para-tantratvena svā-nubhava-mātram na puruṣārthah*). This is also technically called *kaivalya* in the Śrīvaiṣṇava system. Our ultimate end is not cessation of pain, but enjoyment of bliss. Positive bliss is our final aim. It is held that in the emancipation as described above the individual realizes himself in close association with God and enjoys supreme bliss thereby; but he can never be equal to Him. Bondage (*bandha*) is true and the removal of bondage is also true. *Prapatti*, or self-surrender to God, is regarded as a means to cessation of bondage. This *prapatti* may be direct (*a-vyavahita*) and indirect (*vyavahita*). In the first case the self-surrender is complete and absolute and done once for all¹. The in-

¹ *Prapatti* is defined as follows:

bhagavad-āñātivartana-nivṛtti-bhagavad-ānukūlya-sarva-śaktitvā-musandhāna-prabhṛti-sahitaḥ yacñā-garbho vijṛmbha-rūpa-jñāna-viśeṣaḥ; tatra jñeyākāra īśvarasya nirapekṣa-sādhanaṭvam jñānākaro vyavasāyā-imakatvam; etac ca śāstrā-rthatvāt sakṛt kartavyam. Tattva-śekhara, p. 64.

Just as the Śāṅkarites hold that, once the knowledge regarding the unity of the individual with Brahman dawns through the realization of the meaning of such texts, there remains nothing to be done. So here also the complete self-surrender to God is the dawning of the nature of one's relation to God, and, when this is once accomplished, there is nothing else to be done. The rest remains with God in His adoption of the devotee as His own.

direct *prapatti* is the continual meditation on God through love of Him, along with the performance of the obligatory duties and the non-commission of prohibited actions. This is decidedly the lower stage; the more deserving ones naturally follow the first method.

The main contents of Pillai Lokācārya's *Śrī-vacana-bhūṣaṇa* follow in a separate section in connection with the account of the commentary on it and sub-commentary by Saumya Jāmāṭṛ muni (junior) and Raghūttama. The *Śrīvacana-bhūṣaṇa* consists of 484 small sentences longer than the *Sūtra*-phrases, but often shorter than ordinary philosophical sentences. Lokācārya followed this style in his other works also, such as his *Tattva-traya* and *Tattva-śekhara*.

Ramya-jāmāṭṛ muni or Saumya Jāmāṭṛ muni, called also Maṇavālama muni or Periya-jīyar, was the son of Tikalakkidāndāntirunāvīruḍaiyāpiṇān-Tātar-aṇṇar, a disciple of Pillai Lokācārya and grandson of Kollikavaladasar, who was also a disciple of Pillai Lokācārya. He was born in the Tinnevely district in A.D. 1370 and lived for seventy-three years, that is till A.D. 1443. He first obtained training from Śrīśaileśa, called also Tiru-maṇai Ārvār, in Tiruvāy-moṛi. One of the first works of his early youth was a poem called *Yati-rāja-vimśati*, in honour of Rāmānuja, which is incorporated and published in Varavara muni's *Dina-caryā*. On account of his deep devotion for Rāmānuja he was also known as Yatindra-pravaṇa, and wrote a commentary on a short life of Rāmānuja called *Prapanna-sāvitṛi* or *Rāmānuja-nuṇḍādī* of *Tiruvarangattamudanār*. After completing his studies under Śrīśaileśa he remained at Śrīraṅgam and studied the commentaries on the *Divya-prabandhas*, the *Śrīvacana-bhūṣaṇa* and other *Drāviḍa Vedānta* works. In his study of the *Divya-prabandhas* and the *Gītā-bhāṣya* he was helped by his father Tatar-aṇṇar. He also studied with Kidāmbi-Tirumalai-Nayinār, called also Kṛṣṇadeśika, the *Śrī-bhāṣya* and *Śruta-prakāśikā*. He also studied the *Ācārya-hṛdaya* with Aṇṇayācārya, called also Devarājaguru, of Yādavādri. He renounced the world, became a *sannyāsin*, and attached himself to the Pallava-maṭha at Śrīraṅgam, where he built a *vyākhyāna-maṇḍapa*, in which he used to deliver his religious lectures. He was very proficient in the *Drāviḍa Vedānta*, produced many works in the *maṇi-pravāla* style (mixture of Sanskrit and Tamil), and had hundreds of followers. He had a son, called Rāmānujārya, and a grandson, called Viṣṇucitta. Of his pupils eight were very famous: Bhaṭṭa-

nātha, Śrīnivāsa-yati, Devarājaguru, Vādhūla Varada Nārāyaṇa-guru, Prativādibhayaṅkara, Rāmānujaguru, Sūtākhyā, and Śrīvānācala Yogīndra. These eight disciples were great teachers of *Vedānta*¹. He taught the *Bhāṣya* to Raṅgarāja. There were many ruling chiefs in South India who were his disciples. Among his works the following are noteworthy, *Yati-rāja-vimśati*, *Gītā-tātparya-dīpa*, a Sanskrit commentary on the *Gīta*, *Śrī-bhāṣyā-ratha*, *Taittirīyo-paniṣad-bhāṣya*, *Para-tattva-nirṇaya*. He wrote also commentaries on the *Rahasya-traya*, *Tattva-traya* and *Śrī-vacana-bhūṣaṇa* of Pillai Lokācārya and the *Ācārya-hṛdaya* of the senior Saumya Jāmāṭṛ muni, called also Vādikeśārī, brother of Pillai Lokācārya; commentaries on *Priyālvār-tiru-moṛi*, *Jñāna-sāra* and *Prameya-sāra* of Devarāja, and the *Sapta-gāthā* of Viṛāmsolai-ppillai; glosses on the authorities quoted in the *Tattva-traya*, *Śrīvacana-bhūṣaṇa*, and commentaries on the *Divya-prabandha* called the *Idu*; many Tamil verses, such as *Tiruvāymōṛi-nūṛundādi*, *Artti-prabandha*, *Tiruvārūdhana-krama*, and many Sanskrit verses. He occupied a position like that of Rāmānuja, and his images are worshipped in most Vaiṣṇava temples in South India. Many works were written about him, e.g. *Varavara-muni-dinacaryā*, *Varavara-muni-śataka*, *Varavara-muni-kāvyā*, *Varavara-muni-campu*, *Yatindra-pravaṇa-prabhāva*, *Yatindra-pravaṇa-bhadra-campu*, etc. His *Upadeśa-ratna-mālā* is recited by Śrivaishnavas after the recital of the *Divya-prabandha*. In his *Upadeśa-ratna-mālā* he gives an account of the early Āṛvārs and the Āṛagiyas. It was translated into Sanskrit verse by his grandson Abhirama-varācārya, whose *Aṣṭādaśa-bheda-nirṇaya* has already been noted in the present work. He also wrote another book called *Nakṣatra-mālikā* in praise of Śaṭhakopa².

Though Mr Narasimhiengar says that a commentary on the *Śrīvacana-bhūṣaṇa* was written by Saumya Jāmāṭṛ muni (junior) in the *maṇipravāla* style, yet the manuscript of the commentary, with a sub-commentary on it by Raghūttama, which was available to the present writer, was a stupendous volume of about 750 pages, all written in Sanskrit. The main contents of this work will appear in a separate section.

¹ See *Prapannāmṛta*, Ch. 122.

² The present writer is indebted for some of his information regarding the works of Saumya Jāmāṭṛ muni to M. T. Narasimhiengar's Introduction to the English translation of the *Upadeśa-ratna-mālā*.

CHAPTER XIX

THE PHILOSOPHY OF YĀMUNĀCĀRYA

THOUGH in later days Bodhāyana is regarded as the founder of the Vaiṣṇava systems, yet, as his commentary on the *Brahma-sūtras* is not now available, we may look upon Yāmuna as being the earliest of the latter-day Vaiṣṇava philosophers. We hear that many other people, such as Taṅka, Dramiḍa and Bharuchi, wrote in accordance with the teachings contained in the commentary of Bodhāyana, endeavouring to refute the views of other systems of thought. Dramiḍa wrote a *Bhāṣya* which was elaborated by Śrīvatsāṅka Miśra and is frequently referred to by Yāmuna. The sage Vakulābharaṇa, called Śaṭhakopācārya, also wrote an elaborate treatise in the Tamil language on the *bhakti* creed, but this also is hardly available now. Thus the history of modern Vaiṣṇavism should, for all practical purposes, begin with Yāmunācārya, who flourished during the latter part of the tenth and the earlier part of the eleventh century. Yāmunācārya was said to be the preceptor of Mahāpurṇa from whom the great Rāmānuja had his initiation. So far as I am aware, Yāmuna wrote four books, namely, *Siddhi-traya*, *Āgama-prāmāṇya*, *Puruṣa-ninṇaya*, and *Kāśmīrāgama*. Of these only the first two have been printed.

Yāmuna's doctrine of Soul contrasted with those of others.

We have seen that from the Cārvākas to the Vedāntists there had been many schools of philosophy and each of them had its own theory of soul. We made but a scanty reference to Cārvākism in the first volume, and we have generally omitted the discussions against Cārvākism in which other systems usually indulged. The most important of the doctrines held by the Cārvākas is that there is no self other than the body; some of them, however, regarded the senses as the self, and others as *Manas*. They held that there were only four elements and that out of them life and consciousness sprang forth. Our notion of self also referred to the body, and there was no separate soul, apart from the body. The Cārvāka literature

has, however, vanished from India, and we can know only from references in other works that their original writings were also in the form of *sūtras*¹.

Yāmuna's philosophy was directly opposed to the doctrine of the Cārvākas. It is best therefore that we should deal here with Yāmuna's theory of soul in connection with the pretensions of the Cārvākas. Yāmuna takes his stand on the notion of self-consciousness. He says that our preception "I know" distinctly points to the self as the subject, as distinguished from the perception of the body as "this is my body," which is closely akin to other objective perceptions such as "this is a jug," "this is a piece of cloth." When I restrain my senses from external objects and concentrate myself on myself, I have still the notion of my self as "I," which arises in me without the least association of my hands or feet or any other parts of the body. The body as a whole cannot be said to be indicated by my perception, when none of the parts of the body shine forth in it. Even when I say "I am fat," "I am lean," the notion of "I" does not refer to the external fat or lean body, but to some mysterious entity within me with which the body is wrongly associated. We should not forget that we also say "this is my body" as we should say "this is my house," where the body is spoken of as being different from the self as any external object. But it may be objected that we also say "my self" (*mamātmā*); but this is only a linguistic usage which expresses that difference, whereas the entity perceived is just the same and identical. The confusion which is felt in the fact that the notion of "I" refers to the body is due to this, that the self has no perceivable shape or form as have ordinary external objects (such as jug, cloth, etc.), by virtue of which they are distinguished from one another. Those who are not sufficiently discriminating cannot rest content with the formless self, and consequently confuse the soul with the body, more particularly because they find that corresponding to any and every desire of the soul there is a corresponding change of the body. They think that, since, corresponding to any mental change, such as new feeling, thought, or desire, there is a corresponding physical or physiological change of the body, there is no other soul different from the body. But, if

¹ The first *sūtra* of Bṛhaspati is *atha tattvaṃ vyākhyāsyāmaḥ*; the second is *prithivy-ap-tejo-vāyur iti tattvāni* and the third is *tebhyas caitanyaṃ kṛtvādibhyo mada-śaktivat*.

we try to find out by a deeper self-introspection what we mean by "I," we find that it is an entity, as the subject, as the "I," as distinct from the objects which are not self and which are indicated as this or that. Had the notion "I know" referred to the body, the bodily parts would surely have been manifested in the notion, as external objects shine forth in all external perception as this or that. But it is not so; on the contrary, by introspection I find that the self is an entity which is independent in itself, and all other things of the world are for the sake of my self; I am the enjoyer; whereas everything else is the object of my enjoyment; I am not for the sake of any body; I am an end in myself and never a means for anything else (*a-parārtha*). All combinations and collocations are for the sake of another, whom they serve; the self is neither the result of any collocation nor does it exist for the sake of serving another.

Moreover, consciousness cannot be regarded as being a product of the body. Consciousness cannot be thought to be like an intoxicating property, the product of the four elements; for the combination of the four elements cannot produce any and every sort of power. There is a limit to the effects that a certain cause can produce; in the production of the intoxicating property it is the atoms which happen to possess that property; intoxication is not to be compared with consciousness; nor has it any similarity to any physical effect; nor can it be thought that there are atoms in which the property of consciousness is generated. Had consciousness been the result of any chemical change, such as we find in the production of the red colour by the combination of lime with catechu, there would have been particles of consciousness (*caitanya*) produced, and our consciousness would then have been the sum total of those particles of consciousness, as in the case of any material chemical product; the red colour produced by the combination of lime with catechu belongs to an object every particle of which is red; so, if consciousness had been a chemical product of the material of this body, there would have been generated some particles of consciousness, and thus there would have been perceptions of many selves in accordance with each particle of consciousness, and there would be no identity of consciousness and experience. Thus it must be admitted that consciousness belongs to an entity, the soul, which is different from the body.

Nor can consciousness belong to the senses; for, if it belonged

to each of the senses, then that which was perceived by one sense (e.g. the eye) could not be perceived by another sense (e.g. the touch), and there would not rise the consciousness "I touch that which I had seen before." If all the senses together produced consciousness, then we could not perceive anything with one sense (e.g. the eye), nor could we have any consciousness, or the memory of the object of any particular sense after that sense was lost; when a man was blinded, he would lose all consciousness, or would never remember the objects which he had seen before with his eyes.

Nor can the *manas* be regarded as *ātman*; for it is only an organ accepted as accounting for the fact that knowledge is produced in succession and not in simultaneity. If it is said that the *manas* may be regarded as being a separate organ by which it can know in succession, then practically the self, or *ātman*, is admitted; the only difference being this, that the Cārvākas call *manas* what we (Yāmuna and his followers) call *ātman*.

The *Vijñānavādin* Buddhists held that knowledge, while self-manifesting, also manifested the objects and so knowledge should be regarded as the self (*ātman*). Against these Buddhists Yāmuna held that, if any permanent seat of knowledge was not admitted, then the phenomenon of personal identity and recognition could not be explained by the transitory states of self-manifesting knowledge; if each knowledge came and passed, how could one identify one's present experiences with the past, if there were only flowing states of knowledge and no persons? Since there was no permanence, it could not be held that any knowledge persisted as an abiding factor on the basis of which the phenomenon of self-identity or recognition could be explained. Each knowledge being absent while others came, there was no chance of even an illusion of sameness on grounds of similarity.

The doctrine of the Śāṅkara school, that there is one qualityless permanent pure consciousness, is regarded by Yāmuna as being against all experience. Thus, consciousness is always felt as belonging to a person and as generated, sustained for a time, and then lost. At the time of deep sleep we all cease to possess knowledge, and this is demonstrated by our impression on waking that we have slept for so long, without consciousness. If the *antaḥkaraṇa*, which the Advaitins regard as the substratum of the notion of "I," had been submerged during the sleep, then there could not have been

on waking the notion that "I slept so long." Nobody has ever experienced any pure knowledge. Knowledge as such must belong to somebody. The Śāṅkarites say that the rise of knowledge means the identity of the knowledge with the objects at the time. But this is not so; for the truth of the knowledge of an object is always with reference to its limitations of time and space and not to the intrinsic quality of the thing or the knowledge. The assertion also that knowledge is permanent is without any foundation; for whenever any knowledge arises it always does so in time and under the limitations of time. Nobody has ever experienced any knowledge divested of all forms. Knowledge must come to us either as perception or as inference, etc.; but there cannot be any knowledge which is absolutely devoid of any forms or modifications and absolutely qualityless. The Śāṅkarites regard the self as pure consciousness or *anubhūti*, but it is apparent that the self is the agent of *anubhūti*, or the knower, and not knowledge or pure consciousness. Again, as in Buddhism, so in Śāṅkarism, the question of recognition remains unsolved; for recognition or personal continuity of experience means that the knower existed in the past and is existing even now—as when we say, "I have experienced this"—but, if the self is pure consciousness only, then there cannot be any perceiver persisting in the past as well as in the present, and the notion "I have experienced this" is not explained, but only discarded as being illusory. The consciousness of things, however, is never generated in us as "I am consciousness," but as "I have the consciousness of this"; if all forms were impure impositions on pure consciousness, then the changes would have taken place in the consciousness, and instead of the form "I have consciousness" the proper form of knowledge ought to have been "I am consciousness." The Śāṅkarites also hold that the notion of the knower is an illusory imposition on the pure consciousness. If that be so, the consciousness itself may be regarded as an illusory imposition; if it is said that the pure consciousness is not an imposition, since it lasts till the end—the stage of emancipation—then, since the result of right knowledge (*tattva-jñāna*) is this, that the self ceases to be a knower, false knowledge should be welcomed rather than such a right knowledge. The notion "I know" proves the self to be a knower and apart from a knower so manifested no pure consciousness can be experienced. The notion "I" at once distinguishes the knower from the body,

the senses, the *manas*, or even the knowledge. Such a self is also called a *sākṣī* (perceiver), as all objects are directly perceived by it.

The *Sāṃkhya* view is that it is the *ahaṅkāra* or *buddhi* which may be regarded as the knower; for these are but products of *prakṛti*, and thus non-intelligent in themselves. The light of pure consciousness cannot be regarded as falling on them and thereby making them knowers by the reflection of its light; for reflection can only happen with reference to visible objects. Sometimes it is held by the Śāṅkarites that true consciousness is permanent and unchangeable, that the ego (*ahaṅkāra*) derives its manifestation from that and yet reveals that in association with itself, just as a mirror or the surface of water reflects the sun; and, when these limitations of *ahaṅkāra*, etc., are merged during deep sleep, the self shines forth in its own natural light and bliss. This also is unintelligible; for if the *ahaṅkāra*, etc., had all been manifested by the pure consciousness, how can they again in their turn manifest the consciousness itself? Actually it cannot be imagined what is the nature of that manifestation which pure consciousness is made to have by the *ahaṅkāra*, since all ordinary analogies fail. Ordinarily things are said to be manifested when obstructions which veil them are removed, or when a lamp destroys darkness, or when a mirror reflects an object; but none of these analogies is of any use in understanding how consciousness could be manifested by *ahaṅkāra*. If, again, consciousness requires something else to manifest it, then it ceases to be self-manifesting and becomes the same as other objects. It is said that the process of knowledge runs on by successive removals of *ajñāna* from the consciousness. *Ajñāna* (*na-jñāna*—not knowledge) may be understood as absence of knowledge or as the moment when some knowledge is going to rise, but such an *ajñāna* cannot obstruct consciousness; the Śāṅkarites hold, therefore, that there is an indefinable positive *ajñāna* which forms the stuff of the world. But all this is sheer nonsense. That which manifests anything cannot make that thing appear as a part of itself, or as its own manifestation. The ego, or *ahaṅkāra*, cannot also manifest another consciousness (which is different from it) in such a way that that consciousness shall appear as its own manifestation. So it has to be admitted that the self is not pure consciousness, but the self-conscious ego which appears in all our experience. The state of deep sleep (*suṣupti*) is often put forward as an example of pure

consciousness being found unassociated with other limitations of ego, etc. But this is not possible, as we have already seen. Moreover, when the later experience of the waking moment testifies that "I did not know anything," it can well be urged that there was no pure consciousness during deep sleep; but that the ego existed is proved by the fact that at the waking moment the perception which identifies the ego (*ahankāra*) as the self, also testifies that the ego as the self had persisted during deep sleep. The self which shines forth in us as the ego therefore remains the same during deep sleep; but it has no knowledge at that time. After rising from deep sleep we feel "I did not know anything, I did not know even myself." The Śāṅkarites assert the experience that during deep sleep there is no knowledge even of the ego. This, however, is hardly true; for the perception "I did not know even myself" means that during deep sleep all the personal associations (e.g. as belonging to a particular family, as occupying a particular position, etc.) were absent, and not that the ego itself was absent. When the self is conscious of itself, there is the notion of the "I," as in "I am conscious of myself." During deep sleep also, when no other objects are manifested, there is the self which is conscious of itself as the ego or the "I." If during emancipation there was no consciousness as the self, the ego, the "I," then it is the same almost as the absolute nihilism of the Buddhists. The sense of "I," the ego, is not a mere quality extraneously imposed on the self, but the very nature of the self. Even knowledge shines forth as a quality of this ego or "I," as when we say "I know it." It is the "I" who possesses the knowledge. Knowledge thus appears to be a quality of the "I." But no experience of ours ever demonstrates that "I" is a quality of pure knowledge. We say "I have this knowledge" and not that the knowledge has the "I." If there is no "I," no one who experiences, no subject who is existent during emancipation, who would strive to attain emancipation? If even the "I" is annihilated after emancipation, who would care to take all the trouble, or suffer the religious restraints, etc., for such an undesirable state? If even "I" should cease to exist, why should I care for such a nihilistic state? What am I to do with pure consciousness, when "I" ceases to exist? To say that "I" is such an object as "you" or "he" or "this" or "that," and that this "I" is illuminated by pure consciousness, is preposterously against all experience. The "I" manifests of itself

without the help of any other manifesting agency, now as well as during emancipation; for the manifestation of the self has always the sole form of "I"; and, if during emancipation the self manifests, it must do so as "I." From the sacred texts also we find that the emancipated sages, Vāmadeva and Manu, thought of their own selves as the "I." Even God is not devoid of this notion of His personality as "I," as is attested by the Upaniṣad sayings, in which He declares: "I have created this world." The notion of "I" is false when it is identified with the body and other extraneous associations of birth, social rank, etc., and when it gives rise to pride and boastfulness. It is this kind of *ahaṅkāra* which has been regarded as false in the scriptures. The notion "I," when it refers to the self, is, indeed, the most accurate notion that we can have.

All our perceptions of pleasure and pain also are manifested as qualities of the "I," the self. The "I" manifests itself to itself and hence must be regarded as being of non-material stuff (*ajāda*). The argument, that since the notion of "I" is taken along with knowledge (*sahopalambha*), knowledge alone exists, and that "I" is not different from it, may well be repudiated by turning the table and with the same argument declaring that "I" alone exists and that there is no knowledge. All persons experience that knowledge is felt to be as distinct from the "I," the knower, as the known object. To say that self is self-manifesting by nature is not the same thing as to say that the self is knowledge by nature; for the self is independent of knowledge; knowledge is produced as a result of the perceptual process involving sense-contact, etc.; the self is the knower, the "I," which knows things and thereby possesses knowledge.

The "I," the knower, the self, manifests itself directly by self-consciousness; and hence those who have attempted to demonstrate the self by inference have failed to do so. Thus, the Naiyāyikas think that the self is proved as that in which qualities such as knowledge, desire, pleasure, pain, etc., inhere. But, even though by such an inference we may know that there is something in which the qualities inhere, it cannot be inferred therefrom that this thing is the self in us. Since nothing else is found in which knowledge, willing, etc., might inhere, it may as well be argued that knowledge, etc., are not qualities at all, or that there is no law that qualities must necessarily inhere in a thing. They are regarded as *guṇas* (qualities) only by their technical definition; and the Naiyāyikas can accept these

as *guṇas*, and on that ground infer that there must be some other entity, self (which is not testified by any other proof), as the basis in which the aforesaid *guṇas* may inhere. It is hardly justifiable to accept a new substance, soul (which cannot be obtained by any other proof), simply on the ground that there must be some basis in which *guṇas* must inhere; it is the maxim of the opponents that *guṇas* must exist in some substance and that there are knowledge, willing, etc., which they are pleased to call *guṇas*; one cannot take further advantage in holding thereby that, since there is no other substance in which these so-called *guṇas* (knowledge, willing, etc.) might inhere, the existence of some other substance as the self must be inferred.

The Sāṃkhyaists also make the same mistake, when they hold that all the movements of this non-intelligent *prakṛti* must be for the sake of the *puruṣa*, for whom the *prakṛti* is working. The objection to such a view is this, that even though such entities for which the *prakṛti* is working may be inferred, yet that cannot prove that those entities are not themselves also combinations of many things and objects requiring further superintendents for themselves; or that the *puruṣas* should be the same pure intelligence as they are required to be. Moreover, that alone can be the end of a certain combination of events or things, which can be in some way benefited, moved or affected by those combinations. But the *puruṣas*, as the passive pure intelligence, cannot in any way be affected by the *prakṛti*. How then can they be regarded as the end for which the *prakṛti* works? The mere illusion, the mere semblance on the part of the *puruṣa* of being affected or benefited cannot be regarded as a reality, so that by it the purposes of the movements of the *prakṛti* might be realized. Moreover, these so-called affections, or illusions of affection, themselves belong to *prakṛti* and not to the *puruṣas*; for the *puruṣas*, as pure intelligences, are without the slightest touch of modifications of the *guṇas*. All mental modifications are, according to the *Sāṃkhya*, but modifications of the *buddhi*, which, being unintelligent, cannot be subject to illusion, error, or mistake. Moreover, no explanation can be found in the supposition that the reflection of the *puruṣas* falls upon the *buddhi*; for, as the *puruṣa* is not a visible object, it cannot be reflected in the *buddhi*. If it is said that there is no real reflection, but the *buddhi* becomes like the pure intelligence, the *puruṣa*, then that also is not possible; for, if the *buddhi* is to become as qualityless as the *puruṣas*, then all

mental states have to be abrogated. If it is said that the *buddhi* does not become like pure intelligence, but as if it was as intelligent as the *puruṣa*, then that also is not possible; for *puruṣa* is according to the *Sāṃkhya* pure intelligence, not intelligent. There is no intelligent knower in the *Sāṃkhya*, and that is its trouble. If it is said that what is meant by the belief that *puruṣa* is the end of all *guṇa*-movements is simply this, that, though it is absolutely incapable of any change or transformation, yet by its very presence it sets the *guṇas* in motion and is thus the end for which all the *guṇa* modifications take place, just as if the *puruṣa* were a king for whom the whole dominion works and fights. But since the *puruṣa*, unaffected by them, is only the seer of them all, this also is not possible; for the analogy does not hold, since the king is really benefited by the movements of the people of his dominions but the *puruṣa*, which merely implies seeing, cannot be regarded as a seer.

The nature of the self, as we have described it, is also attested by the verdict of the *Upaniṣads*. This self is directly revealed in its own notion as "I," and pleasure, pain, attachment, antipathy are but its states, which are also revealed along with the revelation of its own self as the "I." This self is not, however, perceived by any of the senses or even by the organ *manas*, as Kumārila supposed. For the question arises as to when, if the self is believed to be perceived by the *manas*, that takes place? It cannot take place precisely at the moment when the knowledge of an object arises; for then the notions of the self and the objects, as they occur at the same moment, could not so appear that one (the self) was the cognizer or determiner, and the others (the objects) were the cognized or the determined. If the knowledge of the objects and the self arose at two different moments as separate acts, it would be difficult to conceive how they could be related as cognizer and cognized. So it cannot be held that the self, though it always manifests itself to us in self-consciousness, could yet be perceived by any of the senses or the *manas*. Again, Kumārila held that knowledge was a new product, and that when, as a result of certain sense activities, knowledge or the *jñāna* movement was generated in us, there was also produced an illumination (*jñātatā* or *prākāṣya*) in objects in association with the self, and that from such an illumination the *jñāna-kriyā* or knowledge movement could be inferred, and the self, as being the possessor of this knowledge, could be perceived by the *manas*. But such

a theory that the self is conscious not by itself, but by an extraneous introduction of knowledge, is hardly acceptable; for no one imagines that there exists in him such a difference when he perceives a thing which he had not before that perception. Moreover, since the act of knowledge did not directly reveal the self, there might also be doubts as to whether the self knew things or not, and the self would not shine forth directly in all conscious experience, as it is found to do.

Again, some hold that the self is known from the objective consciousness and not directly by itself. It is easy to see that this can hardly be accepted as true; for how can objective consciousness, which refers to the objects, in any way produce the consciousness of the self? According to this view it is difficult to prove even the existence of knowledge; for this, since it 'is not self-manifested, requires something else to manifest it; if it is thought that it is self-manifesting, then we should expect it to be manifested to all persons and at all times. It may be said that, though knowledge is self-manifesting, yet it can be manifested only in connection with the person in whom it inheres, and not in connection with all persons. If that be so, it really comes to this, that knowledge can become manifested only through its connection with a someone who knows. If, in answer to this, it is said that knowledge does not require its connection with a person for its own existence, but only for its specific illumination as occurring with reference to a certain subject and object, then that cannot be proved. We could have accepted it if we had known any case in which pure consciousness or knowledge had been found apart from its specific references of subject and object. If it is still asserted that consciousness cannot be separated from its self-manifesting capacities, then it may also be pointed out that consciousness is never found separated from the person, the subject, or the knower who possesses it. Instead of conceding the self-manifesting power to the infinite number of states of consciousness, is it not better to say that the self-manifestation of consciousness proceeds from the self-conscious agent, the subject and determiner of all conscious experiences? Even if the states of consciousness had been admitted as self-manifesting, that would not explain how the self could be self-manifesting on that account. If, however, the self, the knower of all experiences, be admitted as self-manifesting, then the manifestation of the con-

scious experiences becomes easily explained; for the self is the perceiver of all experiences. All things require for their manifestation another category which does not belong to their class; but since also there is nothing on which the self can depend for its consciousness, it has to be admitted that the self is a self-manifesting intelligent entity. Thus the jug does not require for its manifestation another jug, but a light, which belongs to an altogether different class. The light also does not require for its manifestation another light, or the jug which it manifests, but the senses; the senses again depend on consciousness for the manifestation of their powers. Consciousness, in its turn, depends upon the self; without inhering in the self it cannot get itself manifested. The self, however, has nothing else to depend upon; its self-manifestation, therefore, does not depend on anything else.

The states of consciousness have thus to be regarded as being states of the self, which by its connection with different objects manifests them as this or that consciousness. Knowledge of this or that object is thus but different states of consciousness, which itself again is a characteristic of the self.

If consciousness had not been an inseparable quality or essential characteristic of the self, then there might have been a time when the self could have been experienced as being devoid of consciousness; a thing which is so related with another thing that it never exists without it must necessarily be an essential and inseparable characteristic thereof. It cannot be said that this generalization does not hold, since we are conscious of our self in connection with the body, which is not an essential characteristic of the self; for the consciousness of the self as "I," or as "I know," is not necessarily connected with a reference to, or association with, the body. Again, it cannot be said that, if consciousness were an essential and inseparable characteristic of the self, then the states of unconsciousness in deep sleep and swoon could not be explained; for there is nothing to prove that there is no consciousness of the knowing self during those so-called stages of unconsciousness. We feel on waking that we had no consciousness at the time because we cease to have any memory of it. The reason therefore why states of unconsciousness are felt in the waking stage to be so is this, that we have no memory of those states. Memory is only possible when certain objects are apprehended and the impression of these ob-

jects of consciousness is left in the mind, so that through them the object of memory may be remembered. During deep sleep no objects are perceived, and no impressions are left, and, as a result, we cease to have any memory of those states. The self then remains with its characteristic self-consciousness, but without the consciousness of anything else. The self-conscious self does not leave any impression on the organs of the psychosis, the *manas*, etc., as they all then cease to act. It is easy to understand that no impression can be made upon the self; for, if it could and if impressions had been continually heaped on the self, then such a self could never manage to get rid of them and could never attain emancipation. Moreover, it is the characteristic of the phenomenon of memory that, when a perception has once been perceived, but is not being perceived continually, it can be remembered now, when those past impressions are revived by association of similar perceptions. But the self-conscious self has always been the same and hence there cannot be any memory of it. The fact that on waking from deep sleep one feels that one has slept happily does not prove that there was actually any consciousness of happiness during deep sleep; it is only a happy organic feeling of the body resulting from sound sleep which is interpreted or rather spoken of as being the enjoyment of happiness during deep sleep. We say, "I am the same as I was yesterday," but it is not the self that is remembered, but the particular time association that forms the content of memory.

Perception of objects is generated in us when consciousness comes in contact with the physical objects in association with this or that sense of perception. It is on that account that, though the self is always possessed of its self-consciousness, yet it is only when the consciousness of the self is in touch with an external object in association with a sense-organ that we get that particular sense-perception. This self is not all-pervading, but of an atomic size; when it comes in association with any particular sense, we acquire that particular sense-perception. This explains the fact that no two perceptions can be acquired simultaneously: where there is an appearance of simultaneity, there is only a succession of acquirement so rapid that changes cannot be noticed. Had the soul been all-pervading, we should have had the knowledge of all things at once, since the soul was in touch with all things. Thus it is proved that the self has consciousness as its essential characteristic; knowledge

or consciousness is never produced in it, but when the obstructions are removed and the self comes into touch with the objects, the consciousness of these objects shines forth.

God and the World.

As we have already noted, the Mīmāṃsists do not admit the existence of *Īśvara*. Their antitheistic arguments, which we have not considered, can be dealt with here in contrast to Yāmuna's doctrine of *Īśvara*. They say that an omniscient *Īśvara* cannot be admitted, since such an assumption cannot be proved, and there are, indeed, many objections to the hypothesis. For how can such a perception of omniscience be acquired? Surely it cannot be acquired by the ordinary means of perception; for ordinary perception cannot give one the knowledge of all things present and past, before and far beyond the limits of one's senses. Also the perception of *Īśvara* generally ascribed to the Yogins cannot be admitted; for it is impossible that the Yogin should perceive past things and things beyond the limits of his senses, by means of his sense-organs. If mind (*antaḥkāraṇa*) be such that it can perceive all sense-objects without the aid of the senses, then what is the use at all of the senses? Of course it is true that by great concentration one can perceive things more clearly and distinctly; but no amount of concentration or any other process can enable a man to hear by the eye or to perceive things without the help of the senses. Omniscience is therefore not possible, and we have not by our senses seen any such omniscient person as *Īśvara*. His existence cannot be proved by inference; for, since He is beyond all perceptible things, there cannot be any reason (*hetu*) which we could perceive as being associated with Him and by reason of which we could make Him the subject of inference. It is urged by the Naiyāyikas that this world, formed by collocation of parts, must be an effect in itself, and it is argued that, like all other effects, this also must have taken place under the superintendence of an intelligent person who had a direct experience of world materials. But this is not necessary; for it may very well be conceived that the atoms, etc., have all been collocated in their present form by the destinies of men (*adr̥ṣṭa*)—according to the *karma*, of all the men in the world. The *karmas* of merit and demerit exist in us all, and they are moulding the world-

process, though these cannot be perceived by us. The world may thus be regarded as a product of the *karmas* of men and not of *Īśvara*, whom no one has ever perceived. Moreover, why should *Īśvara*, who has no desire to satisfy, create this world? This world, with all the mountains, rivers and oceans, etc., cannot be regarded as an effect produced by any one.

Yāmuna follows the method of the *Nyāya* and tries to prove that the world is an effect, and, as such, must have been produced by an intelligent person who had a direct knowledge of the materials. He also has a direct knowledge of the *dharma* (merit) and *adharma* (demerit) of men, in accordance with which He creates the whole world and establishes an order by which every man may have only such experiences as he deserves. He, by His mere desire, sets all the world in motion. He has no body, but still He carries on the functioning of His desire by His *manas*. He has to be admitted as a person of infinite knowledge and power; for otherwise how could He create this world and establish its order?

The Śāṅkarites had held that, when the Upaniṣads say that nothing exists but one Brahman, it means that Brahman alone exists and the world is false; but that is not the sense. It means simply that there is no other *Īśvara* but *Īśvara*, and that there is none else like Him. When the Upaniṣads declare that Brahman is all that we see and that He is the sole material of the world, it does not mean that everything else does not exist and that the qualityless Brahman is the only reality. If I say there is one sun, it does not mean that He has no rays; if I say there are the seven oceans, it does not mean that the oceans have no ripples, etc. The only meaning that such passages can have is that the world has come out of Him, like sparks from fire, and that in Him the world finds its ultimate rest and support; from Him all things of the world—the fire, the wind, the earth—have drawn their powers and capacities, and without His power they would have been impotent to do anything. If, on the contrary, it is held that the whole world is false, then the whole experience has to be sacrificed, and, as the knowledge of Brahman also forms a part of this experience, that also has to be sacrificed as false. All the Vedānta dialectic employed to prove that the perception of difference is false is of very little use to us; for our experience shows that we perceive differences as well as relations. We perceive the blue colour, the lotus, and also that the lotus has

the blue colour; so the world and the individuals may also be conceived in accordance with the teaching of the Upaniṣads as being inseparably related to Him. This meaning is, indeed, more legitimate than the conception which would abolish all the world manifestation, and the personality of all individual persons, and would remain content only to indicate the identity of their pure intelligence with the pure intelligence of Brahman. There is not any pure, all-absorbing, qualityless intelligence, as the Śāṅkarites assert; for to each of us different and separate ideas are being directly manifested, e.g. our feelings of individual pleasures and pains. If there were only one intelligence, then everything should have shone forth simultaneously for all times. Again, this intelligence is said to be both Being (*sat*), intelligence (*cit*), and bliss (*ānanda*). If this tripartite form be accepted, it will naturally destroy the monistic doctrine which the Śāṅkarites try to protect so zealously. If, however, they assert that these are not separate forms or qualities, but all three represent one identical truth, the Brahman, then that also is not possible; for how can bliss be the same as intelligence? Pleasure and intelligence are experienced by all of us to be entirely different. Thus, in whichever way we try to scrutinize the Śāṅkarite doctrines, we find that they are against all experiences and hardly stand the strain of a logical criticism. It has, therefore, to be admitted that our notions about the external world are correct and give us a true representation of the external world. The manifold world of infinite variety is therefore not merely an illusory appearance, but true, as attested by our sense-experience.

Thus the ultimate conclusion of Yāmuna's philosophy demonstrates that there are, on the one side, the self-conscious souls, and, on the other, the omniscient and all powerful Īśvara and the manifold external world. These three categories are real. He hints in some places that the world may be regarded as being like sparks coming out of Īśvara; but he does not elaborate this thought, and it is contradicted by other passages, in which Īśvara is spoken of as the fashioner of the world system, in accordance with the Nyāya doctrine. From the manner in which he supports the Nyāya position with regard to the relation of Īśvara and the world, both in the *Siddhi-traya* and in the *Āgama-prāmāṇya*, it is almost certain that his own attitude did not differ much from the Nyāya attitude, which left the duality of the world and Īśvara absolutely unre-

solved. It appears, therefore, that (so far as we can judge from his *Siddhi-traya*) Yāmuna's main contribution consists in establishing the self-consciousness of the soul. The reality of the external world and the existence of *Īśvara* had been accepted in previous systems also. Yāmuna thus gives us hardly any new ideas about *Īśvara* and His relation to the souls and the world. He does not make inquiry into the nature of the reality of the world, and rests content with proving that the world-appearance is not false, as the Śāṅkarites supposed. He says in one place that he does not believe in the existence of the partless atoms of the Naiyāyikas. The smallest particle of matter is the *trasareṇu*, the specks of dust that are found to move in the air when the sun's rays come in through a chink or hole. But he does not say anything more than this about the ultimate nature of the reality of the manifold world or how it has come to be what it is. He is also silent about the methods which a person should adopt for procuring his salvation, and the nature and characteristics of that state.

Yāmuna, in his *Āgama-prāmāṇya*, tried to establish that the *Pañca-rātra-saṃhitā* had the same validity as the Vedas, since it was uttered by *Īśvara* himself. Viṣṇu, or Vāsudeva, has been praised in the *Purusa-sūkta* and in other places of the Vedas as the supreme Lord. The *Pāśupata-tantra* of the Śaivas is never supported by the Vedas, and thus the validity of the *Pāśupata-tantra* cannot be compared with that of the *Pañcarātra-saṃhitā*.

God according to Rāmānuja, Veṅkaṭanātha and Lokācārya.

Bhāskara had said that, though *Īśvara* is possessed of all good qualities and is in Himself beyond all impurities, yet by His *Śakti* (power) He transformed Himself into this world, and, as all conditions and limitations, all matter and phenomena are but His power, it is He who by His power appears as an ordinary soul and at last obtains emancipation as well. Rāmānuja holds that on this view there is no essential form of Brahman which transcends the limits of all bonds, the power (*Śakti*) which manifests itself as all phenomena. Brahman, being always associated with the power which exists as the world-phenomena, becomes necessarily subject to all the defects of the phenomenal world. Moreover, when a *Śakti*, or power of Brahman, is admitted, how can Brahman be said

to suffer any transformation? Even if the *Śakti* (power) be regarded as its transformation, even then it cannot be accepted that it (*Brahman*) should combine with its *Śakti* to undergo a worldly transformation.

Another Vedāntist (probably Yādavaprakāśa, the Preceptor of Rāmānuja in his early days) held that Brahman, in its own essence, transformed itself into the world; this theory also is open to the objection that the Brahman, being transformed into the world, becomes subject to all the impurities and defects of the world. Even if it is held that in one part it is transcendent and possesses innumerable good qualities and in another suffers from the impurities associated with its transformation into the world, then also that which is so impure in one part cannot have its impurity so counter-balanced by the purity of its other half that it can be called *Īśvara*.

Rāmānuja, therefore, holds that all the changes and transformations take place in the body of the *Īśvara* and not in His essence. So *Īśvara*, in His pure essence, is ever free from all impurities, and the possessor of all the best qualities, untouched by the phenomenal disturbances with which His body alone is associated. The matter which forms the stuff of the external world is not what the *Sāṃkhya* calls the *guṇa* substances, but simply the *prakṛti* or the primeval causal entity, possessing diverse qualities which may be classified under three different types—the *sattva*, the *rajas* and the *tamas*. This *prakṛti*, however, in its fine essence, forms the body of *Īśvara* and is moved into all its transformations by *Īśvara* Himself. When He withholds *prakṛti* from all its transformations and annuls all its movement, we have the state of *pralaya*, in which *Īśvara* exists in the *kāraṇa* or causal state, holding within Him the *prakṛti* in its subtle state as His body. *Prakṛti* is a body as well as a mode (*prakāra*) of *Īśvara*, and, when it is in a manifested condition, we have the state of creation. *Prakṛti* undergoes its transformations into *tan-mātra*, *akaṅkāra*, etc.; but these are yet the subtle substance forming parts of *Īśvara*'s body. The transformations through which *prakṛti* passes in the origination of *tan-mātra*, *akaṅkāra*, etc., are not the results of the collocation of the *guṇa* reals, as we saw in the case of the *Sāṃkhya*, but may be regarded as the passing of *prakṛti* through different stages, each stage being marked out by the special character of the *prakṛti* while passing through that stage. The word *guṇa* here has then its ordinary meaning of quality; and it is supposed that the *prakṛti*, as it is moved by *Īśvara*, continues to ac-

quire new qualities. The present state of the world also represents *prakṛti* in a particular state wherein it has acquired the qualities which we note in the phenomenal world of ours.

We have seen before that the existence of *Īśvara* was inferred by Yāmuna on Nyāya lines. But Rāmānuja thinks that there is as much to be said in favour of the existence as against it. Thus he says that, even supposing that the hills, etc., are effects, it cannot be said that they were all created by one person; for even all jugs are not made by the same person; *Īśvara* may also be denied, after the *Sāṃkhya* mode, and it may be imagined that in accordance with the *Karma* of men the world arose out of a combination of the original *guṇas*. There is thus as much to be said against the existence of *Īśvara* as in favour of it. Rāmānuja holds that *Īśvara* cannot be proved by inference, but is to be admitted on the authority of the sacred texts¹. The Nyāya and Yoga, moreover, conceived *Īśvara* to be only the *nimitta-kāraṇa*, or instrumental cause; but according to Rāmānuja *Īśvara* is all-pervading in all space and in all time. This all-pervasiveness of God does not mean that His reality is the only reality everywhere, or that He is identical with the world-reality, and all else is false. It means, as Sudarśanācārya has said in his *Śruta-prakāśikā* on the *Rāmānuja-bhāṣya*, 2nd *sūtra*, that there is no measure with which He may be limited by any spatial relation. Varada and Nārāyaṇa, however, and Veṅkaṭanātha, agree in interpreting all-pervasiveness as the absence of any limit to His good qualities (*īyad-guṇaka iti pariccheda-rahitaḥ*)². There is nothing else than *Īśvara*'s body, so by His body also he may be conceived as pervading the whole world. Thus, *Īśvara* is not only *nimitta-kāraṇa* but also *upādāna-kāraṇa*, or material cause as well. Veṅkaṭa establishes in some detail that the highest *Īśvara* is called Nārāyaṇa and His power, as presiding over matter and souls, is called *Lakṣmī*. *Īśvara* has His *manas*, and His eternal senses do not require any body or organs for their manifestation. Veṅkaṭa also mentions three modified forms of manifestation of Lord Vāsudeva, namely Saṃkarṣaṇa, Pradyumna and Aniruddha. This *vyūha* doctrine of the *Pañcarātra* has been briefly discussed in Varavara's *bhāṣya* on the *Tattva-traya* of Lokācārya. These three, Saṃkarṣaṇa, Pradyumna, and Aniruddha,

¹ See Rāmānuja's *Bhāṣya*, 3rd *sūtra*.

² See *Nyāya-siddhāntajana* of Veṅkaṭanātha.

are said to be the three different forms of Vāsudeva, by which He controls the individual souls (*jīva*), the *manas* and the external world. That form of activity by which the *jīvas* were separated from the *prakṛti* at the beginning of the creation is associated with a form of *Īśvara* called Saṁkarṣaṇa. When this separating activity passes and dominates over men as their *manas* and ultimately brings them to the path of virtue and good, it is said to be associated with a form of *Īśvara* called Pradyumna. Aniruddha is that form of *Īśvara* by which the external world is generated and kept in order, and in which our experiences and attempts to attain right knowledge are fulfilled. These forms are not different *Īśvara*, but are imagined according to the diversity of His function. *Īśvara*'s full existence is everywhere; He and His forms are identical. These forms are but manifestations of the power of Vāsudeva and are therefore called *Vibhava*. Such manifestations of His power are also to be found in great religious heroes such as Vyāsa, Arjuna, etc. Lokācārya, in describing Him further, says that in His real essence *Īśvara* is not only omniscient, but this omniscience is also associated with complete and eternal joy. His knowledge and powers do not suffer any variation or comparison, as they are always the very highest and the most inconceivable by any one else. He moves us all to action and fulfils our desires according to our *karmas*. He gives knowledge to those who are ignorant, power to those who are weak, pardon to those who are guilty, mercy to the sufferers, paternal affection and overlooking of guilt to those who are guilty, goodness to those who are wicked, sincerity to the crooked, and goodness of heart to those who are wicked at heart. He cannot bear to remain separated from those who do not want to be separated from Him, and puts Himself within easy reach of those who want to see Him. When he sees people afflicted, He has mercy on them and helps them. Thus all His qualities are for the sake of others and not for Himself. His affection for us is of a maternal nature, and out of this affection He neglects our defects and tries to help us towards the ideal of good. He has created this world in Himself, not in order to satisfy any wants but in a playful manner, as it were through mere spontaneity (*līlā*). As in creation, so in keeping the created world in order, and in dissolution, His playful spontaneity upholds everything and brings about everything. Dissolution is as much of His play as creation. All this is created in Himself and out of Himself.

**Viśiṣṭā-dvaita doctrine of Soul according to
Rāmānuja and Veṅkaṭanātha.**

The existence of souls as separate self-conscious entities, in contradistinction to the doctrines of other systems, had been established by Yāmuna, as we have shown in some detail in our section on his doctrine of soul. The soul is atomic in its size, as we have already found stated by Yāmuna. Barada, Viṣṇu Miśra and Veṅkaṭanātha held that in the ordinary phenomenal state its knowledge expands and contracts. At the time of emancipation it has its highest expansion in which it pervades the whole world. The cause of its contraction and expansion is its *karma*, which is also called *avidyā*. Rāmānuja, in his *Vedānta-dīpa*, indulged in the simile of the ray of a lamp in explaining the rise of knowledge in different parts of the body, despite the atomic soul being located in only one part. The soul exists in one part of the body and spreads out its knowledge over all other parts of the body, like the rays of a lamp. Rāmānuja says that *Īśvara* allows the individual self-conscious souls to perform whichever action they have a desire to attempt. Movement is possible only through the approval by *Īśvara* of the desires of individual souls. The self-conscious souls desire things according to their own free will, and in this they are not hampered by *Īśvara*; *Īśvara* always allows the individual souls to act, i.e. to move their limbs according to their desires. This is a sort of occasionalism, which holds that, in every action which I am performing, I am dependent on *Īśvara*'s will. I can move my limbs because He wishes it. Apart from this general law that *Īśvara* is a supporter of all actions, there are some exceptions of particular favour and disfavour. To those who are particularly attached to Him He is more favourably disposed, and by His grace generates in them such desires that they adopt actions by which they may easily win Him. Into those who are particularly opposed to Him He imports such desires that they are led farther away from Him¹. *Īśvara* exists in us all as the inner controller. This inner controller is represented by our individual soul. This individual soul is free in all its desires, knowledge, and attempts². This freedom of will, knowledge, etc., is given to us all by *Īśvara*, and He also arranges that the movements in the material world may take place in ac-

¹ See Varavara's commentary on the *Tattva-traya*.

² See Rāmānuja's *Bhāṣya*, II. 3. 40, 41.

cordance with our desires. Thus He not only gives us freedom of will, but also helps the realization of that will in the external world, and ultimately grants good and evil fruits according to our good and evil deeds¹. Thus *Īśvara*'s control over us does not rob us of our freedom of will. Even His favour and disfavour consist in the fulfilment of a devotee's eager desire to be associated with Him, and His disfavour consists in fulfilling the desire of a confirmed sinner, leading him away into worldly pleasures farther from Him. The self is often called *jñāna*, or consciousness, because of the fact that it is as self-revealing as consciousness². It reveals all objects, when it comes in touch with them through its senses. The souls are, however, all held in *Īśvara*. Rāmānuja had spoken of the souls only as being the body of *Īśvara*; but Lokācārya and Varavara further hold that, as the external material objects exist for the sake of the souls, so the souls exist for the *Īśvara*; as Man is the end for which the external objects of enjoyment exist, so *Īśvara* is the end (*śeṣa*) for which Man exists as the object of His control and support (*śeṣī*).

The self, though pure in itself, becomes associated with ignorance and worldly desires through coming into touch with matter (*acit*). *Avidyā*, or ignorance, here means want of knowledge, misapplication of characteristics, false knowledge, etc. This ignorance, or *avidyā*, which is the cause of many worldly desires and impure instincts, is generated by the association of the souls with matter; when this association is cut away, the self becomes divested of the *avidyā* and emancipated³.

Rāmānuja says in his *Vedārtha-saṃgraha* that *Īśvara* grants emancipation from worldly bonds to a person, when he, after acquiring true knowledge from the *śāstras* according to the instruction of good teachers, engages himself every day in self-control, penance, purity; practises forgivingness, sincerity, charity, non-injury; performs all the obligatory and ceremonial duties; refrains from prohibited actions, and afterwards surrenders himself completely to the Lord; praises Him, continually thinks of Him, adores Him, counts His names, hears of His greatness and goodness, speaks of it, worships Him, and has all the darkness of his soul removed

¹ See Rāmānuja's *Bhāṣya*, XI. 3. 40, 41.

² See Rāmānuja's *Bhāṣya*, II. 111. 29, 30.

³ See Varavara's commentary on the *Tattva-traya*, *Cit-prakaraṇa*.

by His grace. The ordinary obligatory and ceremonial duties have to be performed; all the highest ethical virtues have to be practised and a true knowledge attained from the *śāstras*. It is only when a man has thus qualified himself that he can ultimately attain emancipation from all worldly bonds by supreme self-surrender and *bhakti* to the Lord. *Bhakti*, or devotion, with Rāmānuja means continual thinking of Him. Without it pure knowledge cannot give us emancipation. The special feature of *bhakti* is this, that by it a man loses all interest in everything else than that which is done for the sake of the dearest. Finally *bhakti* is not with Rāmānuja feeling, but a special kind of knowledge (*jñāna-viśeṣa*) which seeks to ignore everything that is not done for the sake of *Īśvara*, the dearest to us all¹.

Veṅkaṭanātha says that the performance of *karmas* makes a man fit to inquire into true knowledge, and the acquirement of true knowledge makes a man fit to attain devotion, or *bhakti*. When a man is fit to inquire after true knowledge, he may give up the *karmas*. *Bhakti* is, according to Veṅkaṭanātha, the feeling of joy (*prīti*) in the adorable, and not mere knowledge. Emancipation as *sāyujya* (sameness of quality) with *Īśvara* is the result of such *bhakti*. In this state of *sāyujya*, the human soul participates in the qualities of omniscience, bliss, etc., of *Īśvara*. The human soul cannot, of course, wholly participate with *Īśvara*, and such of His qualities as the power of creating and controlling the world, or of granting emancipation to human souls, remain ever with *Īśvara* alone. Human souls can participate only in His knowledge and bliss and can be as omniscient and as blissful as He. In this state of emancipation Man remains in an eternal and infinite blissful servitude to *Īśvara*. This servitude to *Īśvara* is not painful in the least, like other services. When a man forgoes all his personal vanity and merges all his independence in His service, and considers himself as His servant whose only work is to serve Him, this is indeed the state of bright joy. Veṅkaṭanātha, however, further differentiates this *Vaiṣṇava* emancipation, as the thinking of the *Īśvara* as the most supreme, and thereby deriving infinite joy, from the other type of *kaivalya*, in which Man thinks of himself the Brahman and attains *kaivalya*. There also the association with *avidyā* and the world is indeed destroyed, and the man is reduced to oneness; but

¹ See *Vedārtha-saṃgraha*, p. 146.

this is hardly a desirable state, since there is not here the infinite joy which the *Vaiṣṇava* emancipation can bring. Rāmānuja has written of *mukti* as a state which a man can acquire when he is divested of all *avidyā*, and has the natural intuition of the Supreme Soul and his relations with Him. He had distinguished this state from that *mukti* in which a man is divested of all *karmas* and realizes himself in himself, as obstructing the qualities of *Īśvara* from him. This *kaivalya*, or realization of one's own self as the highest, is thus distinctly a lower emancipation. It is not out of place to say that Veṅkaṭanātha had pushed *bhakti* and the human goal of *mukti* distinctly further on to the side of feeling, by defining *bhakti* as a feeling of joy and *mukti* as servitude to *Īśvara*.

Acit or Primeval Matter: the *Prakṛti* and its modifications.

Proceeding to describe the nature of matter, Veṅkaṭanātha tries to disprove the Nyāya-Vaiśeṣika theory of atoms. The smallest particle of matter is that which is visible in the sun's rays coming in through a chink or hole. The imagination of still finer particles, which may be called dyads or atoms, is not attested by experience; for these cannot be perceived. They cannot be compared to the small invisible pollen of flowers which makes the air carrying it fragrant; for these small particles possess the quality of smell, whereas atoms are subtle particles which do not possess any perceivable characteristic. Even inference cannot establish these atoms; for, if we suppose that particles when divided could be further divided until we could arrive at the limit of division, beyond which no division was possible, and that these subtlest particles could be called atoms, this would be impossible, for the atoms of Nyāya and Vaiśeṣika are not only the smallest particles but they are considered to have a special kind of measure (*pārimāṇḍalya*) as their characteristic, and this we have no data for inferring. If only the smallness is the criterion, we may better stop at the *trasa-reṇu* (the dust particles in the air). There are also other objections against the atomic theory, such as have been propounded by Śaṅkarācārya, that the partless atoms cannot come into touch with other atoms or form together into one whole, or that the *pārimaṇḍalya* measure of the *paramāṇu* should not generate a different kind of measure in the dyad (*devy-aṇuka*), or that the dyad ought not to

generate quite another kind of measure in the *trasa-reṇu*. The world cannot thus be accepted as due to the conglomeration of atoms or *trasa-reṇus*. *Prakṛti* containing the three qualities of *sattva*, *rajas* and *tamas* has thus to be admitted as the primal matter. The state of it just preceding *ahaṅkāra* and just following its state as *prakṛti* (the state in which, all its three qualities being the same, there is no manifestation of any particular quality) is called *mahat*. The next state, which follows *mahat* and precedes the senses, is called *ahaṅkāra*. The *mahat* and *ahaṅkāra* are not subjective states of *buddhi* or ego, as some Sāṃkhyists would think, but are two successive cosmic stages of the *prakṛti*, the primeval cosmic matter. The *ahaṅkāra* is of three kinds, *sāttvika*, *rājasa* and *tāmasa*. The senses are not products of elements, as the Vaiśeṣika supposed, but represent the functional cognitional powers in association with the eye, nose, skin, etc. It is *manas* whose states are variously called imagination, determination, etc. Lokācārya describes *prakṛti* as being of three kinds, namely (1) that which contains the purest *sattva* characters and forms the material of the abode of *Īśvara*; (2) that which contains the threefold characters of *sattva*, *rajas* and *tamas* and forms the ordinary world for us. This is the field of *Īśvara*'s play. It is called *prakṛti* because it produces all transformations, *avidyā* because it is opposed to all true knowledge, and *māyā* because it is the cause of all diverse creations. As we have mentioned before, the *guṇas* of *prakṛti* are its qualities, and not the Sāṃkhya reals. Creation is produced by the rise of opposite qualities in the *prakṛti*. The *tan-mātras* are those states of matter in which the specific elemental qualities are not manifested. The order of the genesis of the *tan-mātras* is described by some as follows: first the *bhūtādi*, from it *śabda-tan-matra*, and from that the *ākāśa*; again, from *ākāśa* comes *sparsa-tan-mātra* (vibration-potential), followed by *vāyu*; from *vāyu* comes the *rūpa-tan-mātra* (light-potential) and from that *tejas* (light and heat); from *tejas* comes *rasa-tan-mātra* (taste-potential), and thence water; from water comes *gandha-tan-mātra* (smell-potential), and from that earth. Other theories of the genesis of the *bhūtas* are also described, but we omit them here, as they are not of much value. Varavara says that time is regarded as the *prakṛti* without its *sattva* quality, but Veṅkaṭa-nātha speaks of time as existing in the nature of *Īśvara* as a special form of His manifestation. Space (*dik*) is not an entity different

from *ākāśa*, which offers room for the movement of things. *Ākāśa* is not a mere vacuity or non-occupiedness, but a positive entity.

Thus it is seen that the indeterminate matter of *prakṛti*, with its three qualities, passes through many stages and at last exhibits the phenomenal world, which produces happiness and misery in accordance with a man's destiny (*adr̥ṣṭa*) and good or bad deeds. The force of *adr̥ṣṭa* is not a separate entity, but the favour and disfavour of *Īśvara*, which works in accordance with the good or bad deeds of men.

CHAPTER XX

PHILOSOPHY OF THE RĀMĀNUJA SCHOOL OF THOUGHT

Śaṅkara and Rāmānuja on the nature of Reality as qualified or unqualified.

ŚAṆKARA says that Brahman, as pure intelligence (*cin-mātram*) entirely divested of any kind of forms, is the ultimate reality (*paramārtha*), and that all differences of the knower, the known, and the diverse forms of cognition are all imposed on it and are false. Falsehood with him is an appearance which ceases to exist as soon as the reality is known, and this is caused by the defect (*doṣa*), which hides the true nature of reality and manifests various forms. The defect which produces the false world appearance is ignorance or nescience (*avidyā* or *māyā*), which can neither be said to be existent nor non-existent (*sad-asad-anirvacanīyā*), and this ceases (*nivṛtta*) when the Brahman is known. It is, indeed, true that in our ordinary experience we perceive difference and multiplicity; but this must be considered as faulty, because the faultless scriptures speak of the one truth as Brahman, and, though there are the other parts of the Vedas which impose on us the performance of the Vedic duties and therefore imply the existence of plurality, yet those texts which refer to the nature of Brahman as one must be considered to have greater validity; for they refer to the ultimate, whereas the Vedic injunctions are valid only with reference to the world of appearance or only so long as the ultimate reality is not known. Again, the scriptures describe the Brahman as the reality, the pure consciousness, the infinite (*satyaṃ jñānam anantaṃ brahma*); these are not qualities which belong to Brahman, but they are all identical in meaning, referring to the same differenceless identical entity, absolutely qualityless—the Brahman.

Rāmānuja, in refuting the above position, takes up first the view of Śaṅkara that the Brahman as the ultimate reality is absolutely unqualified (*nirviśeṣa*). He says that those who assert that reality can be unqualified have really no means of proving it; for all proofs are based on the assumption of some qualified character. This unqualifiedness could not be directly experienced, as they believe;

for there can be no experience without the assumption of some qualified character, since an experience, being my own unique experience, is necessarily qualified. Even if you tried to prove that one's own experience, which is really qualified in nature, is unqualified, you would have to pick up some special trait in it, in virtue of which you would maintain it was unqualified; and by that very fact your attempt is defeated, for that special trait would make it qualified. Intelligence is itself self-revealing, and by it the knower knows all objects. It may also be shown that even during sleep, or swoon, the experience is not characterless. Even when the Brahman is said to be real, pure consciousness, and infinite, it means that these are the characters of Brahman and it is meaningless to say that they do not indicate some character. The scriptures cannot testify to the existence of any characterless reality; for they are a collection of words arranged in order and relation, and each word is a whole, comprising a stem and a suffix, and the scriptures therefore are by nature unable to yield any meaning which signifies anything that is characterless. As regards perception, it is well established that all determinate perception (*sa-vikalpa-pratyakṣa*) manifests an entity with its characters; but even indeterminate perception (*nirvikalpa-pratyakṣa*) manifests some character for its indeterminateness means only the exclusion of some particular character; and there can be no perception which is absolutely negative regarding the manifestation of characters. All experiences are embodied in a proposition—"This is so"—and thus involve the manifestation of some characters. When a thing is perceived for the first time, some specific characters are discerned; but, when it is perceived again, the characters discerned before are revived in the mind, and by comparison the specific characters are properly assimilated. This is what we call determinate perception, involving the manifestation of common characters or class characters as distinguished from the perception of the first moment which is called indeterminate perception. But it does not mean that indeterminate perception is not the perception of some specific characters. Inference is based on perception and as such must necessarily reveal a thing with certain characteristics; and so not one of the three sources of our knowledge, perception, scriptures and inference, can reveal to us any entity devoid of characteristics.

It is urged by Śaṅkara and his followers that perception refers

to pure being and pure being alone (*san-mātra-grāhī*); but this can never be true, since perception refers to class-characters and thus necessarily involves the notion of difference; even at that one particular moment of perception it grasps all the essential characteristic differences of a thing which distinguish it from all other objects. If perception had reference only to pure being, then why should it manifest to us that "here is a jug," "here is a piece of cloth"; and, if the characteristic differences of a thing are not grasped by perception, why are we not contented with a buffalo when we need a horse? As pure being they are all the same, and it is being only which, it is urged, is revealed by perception. Memory would not then distinguish one from the other, and the cognition of one thing would suffice for the cognition of everything else. If any distinctive differences between one cognition and another is admitted, then that itself would baffle the contention of the characterlessness of perception. Moreover, the senses can grasp only their characteristic special feature, e.g. the eye, colour, the ear, sound, and so on, and not differencelessness. Again, Brahman is said to be of the nature of pure being, and, if the same pure being could be experienced by all the senses, then that would mean that Brahman itself is experienced by the senses. If this were so, the Brahman would be as changeable and destructible as any other objects experienced by the senses, and this no one would be willing to admit. So it has to be granted that perception reveals difference and not pure characterlessness.

Again, it has been argued that, since the experience of a jug, etc., varies differently with different space and time, i.e. we perceive here a jug, there a piece of cloth, and then again at another moment here a toy and there a horse, and we have not the one continuous experience of one entity in all space and time, these objects are false. But why should it be so? There is no contradiction in the fact that two objects remain at the same place at two different points of time, or that two objects remain at two different places at one and the same point of time. Thus there is nothing to prove that the objects we perceive are all false, and the objects are by nature pure being only.

Again, it has been urged that experience or intuition (e.g. as involved in perception) is self-revealing (*svayaṁ-prakāśa*); but this is true only with reference to a perceiver at the particular time of

his perception. No intuition is absolutely self-revealing. The experience of another man does not reveal anything to me, nor does a past experience of mine reveal anything to me now; for with reference to a past experience of mine I only say "I knew it so before," not "I know it now." It is also not true that no experience can be further experienced; for I can remember my own past experience or can be aware of it, as I can be aware of the awareness of other persons; and, if the fact that one awareness can be the object of another would make it cease from being an experience or intuition (*saṁvid* or *anubhūti*), then there would be no *anubhūti* or experience at all. If a man could not be aware of the experiences of others, he could use no speech to express himself or understand the speech of other people, and all speech and language would be useless. That jug, etc., are not regarded as intuition or experience is simply because their nature is altogether different therefrom and not because they can be objects of cognition or experience; for that would be no criterion at all.

It is again urged that this intuition or experience (*anubhūti* or *saṁvid*) is never produced, since we do not know any stage when it was not in existence (*prāg-abhāvādy-abhāvād utpattir nirasate*). It is also urged that any experience or awareness cannot reveal any state in which it did not exist; for how can a thing reveal its own absence, since it cannot exist at the time of its absence? Rāmānuja, in reply to such a contention on Śāṅkara's side, debates why it should be considered necessary that an experience should reveal only that which existed at the same time with it; for, had it been so, there would be no communication of the past and the future. It is only sense-knowledge which reveals the objects which are existing at the time when the senses are operating and the sense-knowledge is existing; but this is not true with regard to all knowledge. Memory, inference, scriptures, and intuitive mystic cognition (*yogi-pratyakṣa*) of sages can always communicate events which happened in the past or will happen in the future. Arguing in the same way, one could say that even in the case of the experience of ordinary objects such as jug, etc., it can be said that the perception which reveals their presence at any particular time does not reveal their existence at all times. That they are not so revealed means that the revelation of knowledge (*saṁvid* or *anubhūti*) is limited by time. If revelation of knowledge were not itself limited in time, then the objects re-

vealed by it would also not be limited in time, which would be the same thing as to say that these objects, such as jug, etc., are all eternal in nature; but they are not. This sort of argument may also be applied to the revelation of knowledge in inference; and it may well be argued that, since the objects must be of the same type as the knowledge which reveals them, then, if the knowledge is not limited in time and is eternal, the objects also will be eternal. For there can be no knowledge without an object. It cannot be said that at the time of sleep, drunkenness, or swoon, the pure experience is experienced as such without there being an object. If the pure experience were at that time experienced as such, one would remember this on waking; for except in the case of experiences at the time of universal destruction (*pralaya*), and in the period when one's body is not in existence, all that is experienced is remembered. No one, however, remembers having experienced an experience at the time of sleep or swoon, so that no such pure revelation of knowledge exists at that time. What Rāmānuja maintains here, as will be shown later on, is that during sleep or swoon we have a direct experience of the self and not the pure formless experience of the revelation of pure consciousness. Thus there cannot be any state in which knowledge is pure revelation without an object. Hence it cannot be argued that, because knowledge does not reveal the state in which it did not exist, it must always be in existence and never be produced; for as each cognition is inseparably associated with its object, and as all objects are in time, knowledge must also be in time.

Again, the argument that, since knowledge is unproduced, it cannot suffer any further modification or change, is false. Granting for the sake of argument that knowledge is unproduced, why should it on that account be necessarily changeless? The negation preceding a particular production (*prāga-bhāva*) is beginningless, but it is destroyed. So is the *avidyā* of the Śāṅkarites, which is supposed to be beginningless and yet to be suffering all kinds of changes and modifications, as evidenced by its false creations of the world-appearance. Even the self, which is beginningless and destructionless, is supposed to be associated with a body and the senses, from which it is different. This apprehension of a difference of the self from *avidyā* means a specific character or a modification, and if this difference is not acknowledged, the self would have to be considered

identical with *avidyā*. Again, it is meaningless to say that pure intelligence, consciousness, experience or intuition (*anubhūti* or *saṁvid*), is pure self-revelation; for, were it so, why should it be called even self-revelation, or eternal, or one? These are different characters, and they imply a qualified character of the entity to which they belong. It is meaningless to say that pure consciousness is characterless; for at least it has negative characters, since it is distinguished from all kinds of material, non-spiritual or dependent objects which are considered to be different from this pure consciousness. Again, if this pure consciousness is admitted to be proved as existing, that must itself be a character. But to whom is it proved? It must be to the self who knows, and in that case its specific character is felt by the self who is aware of it. If it is argued that the very nature of the self-revelation of consciousness is the self, then that would be impossible; for knowledge implies a knower who is different from the knowledge which reveals certain objects. The knower must be permanent in all his acts of knowledge, and that alone can explain the fact of memory and recognition. The consciousness of pleasure, pain and of this or that object comes and goes, whereas the knower remains the same in all his experiences. How then can the experience be identified with the person who experiences? "I know it," "just now I have forgotten it"—it is in this way that we all experience that our knowledge comes and goes and that the phases are different from ourselves. How can knowledge or consciousness be the same as the knower or the self?

It is held that the self and ego or the entity referred to by "I" are different. The entity referred to by "I" contains two parts, a self-revealing independent part as pure consciousness, and an objective, dependent non-self-revealed part as "myself," and it is the former part alone that is the self, whereas the latter part, though it is associated with the former, is entirely different from it and is only expressed, felt, or manifested by virtue of its association with the former. But this can hardly be admitted. It is the entity referred to by "I" which is the subjective and individual self and it is this which differentiates my experience from those of others. Even in liberation I am interested in emancipating this my individual self, for which I try and work and not in a so-called subject-object-less consciousness. If "I" is lost, then who is interested in a mere consciousness, whether that is liberated or not? If there is

no relation with this ego, the self, the "I," no knowledge is possible. We all say "I know," "I am the knower"; and, if this individual and subjective element were unsubstantial and false, what significance would any experience have? It is this ego, the "I," which is self-luminous and does not stand in need of being revealed by anything else. It is like the light, which reveals itself and in so doing reveals others as well. It is one whole and its intelligent nature is its self-revealing character. So the self-luminous self is the knower and not a mere revelation. Revelation, cognition or knowledge means that something is revealed to someone, and so it would be meaningless to say that the self and the knowledge are identical. Again, it has been maintained that self is pure consciousness; for this pure consciousness alone is what is non-material (*ajāda*) and therefore the spirit. But what does this non-materiality mean? It means with the Śāṅkarites an entity whose nature is such that its very existence is its revelation, so that it does not depend on anything else for its revelation. Therefore, pleasures, pain, etc., are also self-revealing. There cannot be a toothache which is present and yet is not known; but it is held that pleasures and pains cannot be revealed, unless there is a knower who knows them. Well the same would be true for knowledge even. Can consciousness reveal itself to itself? Certainly not; consciousness is revealed always to a knower, the ego or the self. As we say "I am happy," so we say "I know." If non-materiality (*ajādatva*) is defined as revealing-to-itself in the above sense, such non-materiality does not belong to consciousness even. It is the ego, the "I," that is always self-revealed to itself by its very existence, and it must therefore be the self, and not the pure consciousness, which stands as much in need of self-revelation as do the pains and pleasures. Again, it is said that, though pure consciousness (*anubhūti*) is in itself without any object, yet by mistake it appears as the knower, just as the conch-shell appears by illusion as silver. But Rāmānuja contends that this cannot be so; for, had there been such an illusion, people would have felt "I am consciousness" as "this is silver." No one makes such a mistake; for we never feel that the knowledge is the knower; but, as a matter of fact, we always distinguish the two and feel ourselves different from the knowledge—as "I know" (*aḥam anubhavāmi*).

It is argued that the self as changeless by nature cannot be the

agent of the act of cognition and be a knower, and therefore it is only the changeful modifications of *prakṛti*, the category of *ahaṅkāra*, to which can be ascribed the capacity of being a knower. This *ahaṅkāra* is the inner organ (*antaḥkaraṇa*) or mind, and this alone can be called a knower; for the agency of an act of cognition is an objective and dependent characteristic, and, as such, cannot belong to the self. If the agency and the possibility of being characterized by the notion of ego could be ascribed to the self, such a self would have only a dependent existence and be non-spiritual, like the body, since it would be non-self-revealing. Rāmānuja, in answer to such an objection, says that, if the word *ahaṅkāra* is used in the sense of *antaḥkaraṇa*, or the mind, as an inner organ, then it has all the non-spiritual characteristics of the body and it can never be considered as the knower. The capacity of being a knower (*jñātṛtva*) is not a changeful characteristic (*vikriyātma*), since it simply means the possession of the quality of consciousness (*jñāna-guṇāśraya*), and knowledge, being the natural quality of the eternal self, is also eternal. Though the self is itself of the nature of consciousness (*jñāna-svarūpa*), yet, just as one entity of light exists both as the light and as the rays emanating from it, so can it be regarded both as consciousness and as the possessor of consciousness (*maṇi-prabhṛtīnām prabhāśrayatvam iva jñanāśrayatvam api aviruddham*). Consciousness, though unlimited of itself (*śvayam aparicchinnam eva jñānam*), can contract as well as expand (*saṅkoca-vikāśārham*). In an embodied self it is in a contracted state (*saṅkucita-svarūpam*) through the influence of actions (*karmanā*), and is possessed of varying degrees of expansion. To the individual it is spoken of as having more or less knowledge¹, according as it is determined by the sense-organs. Thus one can speak of the rise of knowledge or its cessation. When there is the rise of knowledge, one can certainly designate it as the knower. So it is admitted that this capacity as knower is not natural to the self, but due to *karma*, and therefore, though the self is knower in itself, it is changeless in its aspect as consciousness. But it can never be admitted that the non-spiritual *ahaṅkāra* could be the knower by virtue of its being in contact with consciousness (*cit*); for consciousness as such can never be regarded as a knower. The *ahaṅkāra* also is not the knower, and therefore the notion of the knower could not be explained on such a

¹ *Śrī-bhāṣya*, p. 45.

view. It is meaningless to say that the light of consciousness falls on the non-spiritual *ahaṅkāra* through contiguity; for how can the invisible consciousness transmit its light to the non-spiritual *ahaṅkāra*?

Even in sleep one feels the self as "I"; for on waking one feels "I have slept happily." This also shows that during sleep it is the "I" that both knew and felt happy. It has to be admitted that there is a continuity between the "I" before its sleep, the "I" during its sleep, and the "I" after its sleep; for after waking the "I" remembers all that it had experienced before its sleep. The fact that one also feels "I did not know anything all this time" does not mean that the "I" had no knowledge at all; it means only that the "I" had no knowledge of objects and things which it knows on waking. There can be no doubt that the "I" knew during the sleep, since even a Śāṅkarite would say that during dreamless sleep the self (*ātman*) has the direct intuitive perception (*sākṣi*) of ignorance (*ajñāna*), and no one can have any direct intuitive perception without also being a knower. Thus, when after sleep a man says "I did not know even myself, I slept so well," what he means is that he did not know himself with all the particulars of his name, caste, parentage, etc., as he knows when he is awake. It does not mean that he had absolutely no knowledge at all. Even on liberation the entity denoted by "I" (*aham-artha*) remains; for it is the self that is denoted. If there is no one to feel or to know in the state of liberation, who is it that is liberated, and who is to strive for such a liberation? To be revealed to itself is self-consciousness and implies necessarily the knower as the "I" that knows, and therefore the notion of "I" denotes the self in its own nature as that which knows and feels. But the entity denoted by the notion of "I" (*aham-artha*) should be distinguished from the non-spiritual category of mind or the *antaḥkaraṇa*, which is but a modification of *prakṛti* or the false feeling of conceit, which is always regarded as bad and is the cause of the implication of insult towards superior persons and this is clearly due to ignorance (*avidyā*).

The next point of discussion raised by Rāmānuja in this connection, to prove his point that there is no reality which can be regarded as characterless and unqualified in any absolute sense, is in the attempt that he makes to refute Śāṅkara's contention that the scriptures give us sufficient ground for acknowledging such a

reality, and their authority is to be considered as the highest and as absolutely irrefutable. Śaṅkara had urged that the testimony of the scriptures was superior to that of perception. But the scriptures are based on the assumption of plurality, without which no language is possible. These are for that reason false. For the superiority that is ascribed to the scriptures was due to their teaching of the doctrine that all plurality and difference are false, and that the reality is absolutely differenceless; but yet since the meaning and the expressions of the scriptures are themselves based on the assumption of difference, how can the teaching of the scriptures be anything but false? Again, since they are as faulty as perception on account of their assumption of plurality, why should they be regarded as having an authority superior to perception? When the scriptures are based on error, what is communicated by them must likewise be erroneous, though it may not be directly contradicted by experience. If a man who is absolutely out of touch with all men has an eye-disease which makes him see things at a great distance double, then his vision of two moons in the sky, though it may not be contradicted by his or any one else's experience, is yet false. So, when there is defect, the knowledge produced by it must be false, whether it is contradicted or not. Hence, *avidyā* being false, the Brahman communicated by it through its manifested forms, the scriptures, must also be false. And one may well argue, that, since Brahman is the object of knowledge produced by means tainted by *avidyā*, it is false, just as the world is false (*Brahma mithyā avidyādy-utpanna-jñāna-viśayatvāt prapañcavat*). In anticipation of such objections Śaṅkara urges that even false dreams can portend real good or bad happenings, or an illusory sight of a snake may cause real death. Rāmānuja's answer to this is that what is meant by saying that dreams are false is that there is some knowledge, corresponding to which there are no objects; so there is knowledge in illusion and real fear due to such knowledge, but the corresponding external object does not exist. So in these cases also the communication of truth, or a real thing, or a real fact, is not by falsehood, but real knowledge; for no one doubts that he had knowledge in his dream or in his illusion. So far as the fact that there was knowledge in dream is concerned, dreams are true, so that it is useless to say that in dreams falsehood portends real fact.

Thus, from whatever point of view it may be argued, it is im-

possible to prove that the reality is characterless and differenceless, whether such a reality be pure being, or a unity of being, intelligence and bliss, or pure intuitional experience, and such a contention will so much cripple the strength of the scriptures that nothing can be proved on their authority and their right to supersede the authority of perception can hardly be established. But the scriptures also do not speak of any characterless and unqualified reality. For the texts referring to Brahman as pure being (*Ch.*, vi. 2. 1), or as transcendent (*Mund.*, i. 1. 5), or where the Brahman is apparently identified with truth and knowledge (*Tait.*, ii. 1. 1), can actually be proved to refer to Brahman not as qualityless, but as possessing diverse excellent qualities of omniscience, omnipotence, all-pervasiveness, eternity and the like. The denial of qualities is but a denial of undesirable qualities (*heya-guṇān pratiṣidhya*). When Brahman is referred to in the scriptures as one, that only means that there is no second cause of the world to rival him; but that does not mean that His unity is so absolute that He has no qualities at all. Even where Brahman is referred to as being of the essence of knowledge, that does not mean that such an essence of knowledge is qualityless and characterless; for even the knower is of the essence of knowledge, and, being of the essence of knowledge, may as well be considered as the possessor of knowledge, just as a lamp, which is of the nature of light, may well be regarded as possessing rays of light¹.

Refutation of Śaṅkara's *avidyā*.

It is urged by Śaṅkara that the self-luminous differenceless one reality appears as the manifold world through the influence of defect (*doṣa*). This defect, called *avidyā*, hides its own nature and produces various appearances and can neither be described as being nor as non-being: for it cannot be being, since then the illusion and the realization of its being an error would be inexplicable, and it cannot be non-being since then the world-appearance, as well as its realization as being wrong, would be inexplicable.

¹ *jñāna-svarūpasyaiva tasya jñānā-śrayatvaṃ maṇi-dyumaṇi-pradīpā-divad ity uktam eva. Śrī-bhāṣya*, p. 61.

The above is based on the discussions in the *Śrī-bhāṣya* known as *mahā-pūrva-pakṣa* and *mahā-siddhānta. Śrī-bhāṣya*, p. 10 et seq.

Rāmānuja, in refuting *avidyā*, says that this *avidyā* is impossible since it must lean on some other thing for its support (*āśraya*), and it is clear that individual souls cannot be its support, since they themselves are regarded as being the products of *avidyā*. The Brahman also cannot be its support; for it is self-luminous consciousness and is hence opposed to *avidyā*, which is regarded as being liable to be recognized as illusory as soon as the true knowledge dawns. It cannot be argued that it is only the knowledge that Brahman is of the nature of pure knowledge, and not pure knowledge forming the essence of Brahman, that destroys *avidyā*; for there is no difference between these two, between knowledge as the essence of Brahman and knowledge as removing *avidyā*. The nature of Brahman that is revealed by the knowledge that Brahman is of the nature of pure knowledge is already present in His pure self-luminous nature, which must necessarily on that account destroy *avidyā*¹. Moreover, in accordance with Śaṅkara's view, Brahman, being of the nature of pure intuition, cannot further be the object of any other knowledge, and hence the nature of Brahman should not be further the object of any other concept. So, if knowledge is to be opposed to ignorance or *avidyā*, it must be in its own essence as it is, in itself, and so Brahman, as pure knowledge, ought to be opposed to *avidyā*. Moreover, to say that Brahman, which is of the nature of pure self-illumination, is hidden by *avidyā* is to say that the very nature of Brahman is destroyed (*svārūpa-nāśa*); for, since pure self-illumination is never produced, its concealment can only mean that it is destroyed, since it has no other nature than pure self-illumination. Again, if the contentless pure self-luminous intuition is said to assume diverse forms on account of the defect of *avidyā*, which is supported by it, then the question may be asked, whether this defect is real or unreal. If it is real, then the monism fails, and, if it is unreal, then the question arises, how is this unreal defect brought about? If it is brought about by some other defect, then, that also being unreal, the same question will again arise, and hence there will be a vicious infinite (*anavasthā*). If it is held that even without any real basis one unreal defect may be the cause of another unreal defect and so on in a beginningless series, then we

¹ Sudarśana Sūri says here that, if there is such a difference between Brahman as essence and Brahman as destroying *avidyā*, that would mean that one form of Brahman is different from its other form, or, in other words, that it is qualified. *Śruta-prakāśikā*, Pandit edition, Benares, vol. IX, p. 658.

virtually have nihilism (*Mādhyaṃika-pakṣa* or *Śūnya-vāda*)¹. If, to escape these criticisms, it is held that the defect is the very essence of intuition (*anubhūti*) or Brahman, then, Brahman being eternal, the defect also will be eternal, and emancipation, or the cessation of the world-appearance, will never take place. Again, this *avidyā* is said to be indefinable, being different from both the existent and the non-existent (*sad-asad-vilakṣaṇa*). But how can this be? A thing must be either existing or not existing; how can there be anything which is neither existing nor not-existing?

Referring to the arguments of the Śaṅkarites in favour of the existence of *ajñāna* (nescience) as a positive entity and as directly perceived in such perceptions as "I am ignorant," "I do not know myself or any others," Rāmānuja says that such perceptions refer only to the non-existence of the knowledge of an object prior to its apprehension (*prāga-bhāva*). Rāmānuja argues that the ignorance perceived cannot refer to its specific and determinate object; for, if it did, then the object would be known and there would be no ignorance at all; and if the *ajñāna* does not refer to any specific object, how can the *ajñāna* or ignorance, standing by itself, be perceived or realized? If it is urged that *ajñāna* refers to indistinct (*a-viśada-svarūpa*) knowledge, then also it may be said that this

¹ Sudarśana Sūri here points out that the Śaṅkarites try to evade the vicious infinite in three ways: firstly, those who think that ignorance (*avidyā*) is associated with *jīva* (*jīva-jñāna-vādi*) explain it by affirming it so as to involve an infinite series like the seed-and-the-shoot (*vijāṅkura*), but not a vicious infinite; since on their view *jīva* is produced by *avidyā* and *avidyā* is again produced by *jīva* (*avidyāyām jīvaḥ jīvāda vidyā*). Those again who think that *avidyā* belongs to Brahman (*Brahmā-jñāna-vādi*) hold that *avidyā* is by nature beginningless and the irrationality or unreasonableness of its nature is nothing surprising. As regards the beginninglessness of *avidyā* in an infinite series (*pravāha-nāditva*) of *jīva* and *avidyā* and *avidyā* and *jīva* as propounded in the first view of the *jīva-jñāna-vādins*, the refutation of it by those who hold that the *ajñāna* belongs to Brahman is enough. For they have pointed out that such a view goes against the universally accepted doctrine of the eternity of souls, since it held that the souls came out through *avidyā* and *avidyā* through souls. The other view, that the illusory series is by itself beginningless, is no better; for, if one illusion were the basis of another illusion in a beginningless series, this would be practically identical with the nihilistic philosophy. Moreover, even if the illusion is admitted to be beginningless in nature, then also that must await some other root primary cause (*mūla-doṣāpekṣā*) from which this successive series of illusions springs, and from that another, and so there will arise the vicious infinite. If no such root cause is awaited, the world-appearance may itself be regarded as *avidyā*, and there will be no need to suppose the existence of any root cause as *avidyā*. Again, if *avidyā* is held to be irrational in nature, why should it not affect the emancipated souls and also Brahman? If it is answered that it does not do so because the emancipated souls and Brahman are pure, then that means that this *avidyā* is rational and wise and not irrational. *Śrūta-prakāśikā*, in Pandit, vol. IX, pp. 636-665.

may be regarded as the absence of the rise of distinct knowledge. Thus, even if a positive ignorance is admitted, it must somehow be related to something else to which it refers. In whatever way one may attempt to explain *ajñāna* (ignorance), either as want of knowledge, or as other than knowledge, or as opposed to knowledge, it can be made possible only by a knowledge of the very fact of which it will be the opposite. Even darkness has to be conceived as being opposed to light; and hence one must have knowledge of light in order to understand darkness, as being opposed to it. But the *ajñāna* (ignorance) of the Śāṅkarites cannot stand by itself, and so must show its content by a reference to the object or entity of which there is ignorance. Therefore, in the aforesaid experiences, "I am ignorant," "I do not know myself or any one else," it should be admitted that what is felt is this want of rise of knowledge and not any positive ignorance, as the latter is equally found to be relative to the object and the subject and has no advantage over the former. Moreover, the Brahman, which is ever free and ever the same pure self-luminous intelligence, cannot at any time feel this ignorance or *avidyā*. It cannot hide Brahman; for Brahman is pure intelligence, and that alone. If it is hidden, that amounts to the destruction of Brahman. Again, if Brahman can perceive *ajñāna*, it can as well perceive the world appearance; if by hiding Brahman the *ajñāna* makes itself perceived by Brahman, then such *ajñāna* cannot be removed by true knowledge, since it has the power of concealing knowledge and of making itself felt by it. Further, it cannot be said that *avidyā* hides the Brahman only partially; for Brahman has no part. So the above experience of "I did not know anything," as remembered in the awakened state and referring to experiences of deep sleep, is not the memory of *ajñāna* or ignorance directly experienced in deep sleep (*suṣupti*), but an inference during the awakened state of not having any knowledge during deep sleep on account of there being no memory¹. Inference also is unavailing for proving the existence of any *ajñāna*; for not only would such premises of inference involve a faulty reason, but no proper example could be found which could satisfy the claim of reason by a reference to any known case where a similar thing happens. More-

¹ *ato na kiñcid avidiṣam iti jñānam na smaraṇam kintu asmaraṇa-līṅgakaṃ jñānā-bhāva-viśayam anumiti-rūpam. Śrūta-prakāśikā*, p. 178. (Nirṇayasāgar ed. (916).)

over, it is quite easy to formulate other series of inferences to disprove the possibility of such *ajñāna* as is accepted by the Śāṅkarites¹.

Rāmānuja's theory of Illusion—All knowledge is Real.

Rāmānuja says that all illusion may briefly be described as perception in which a thing appears to be different from what it is (*anyasya anyathāvabhāsaḥ*). It is unreasonable to imagine that the illusory content of perception must be due to no cause, or is something wholly unperceived or wholly unknown (*atyantā-paridṛṣṭā-kāraṇaka-vastu-kalpanā-yogāt*). If such a wholly chimerical thing is imagined to be the content of illusory perception, then it must be inexpressible or indescribable (*anirvacanīya*); but no illusory object appears as indescribable; it appears as real. If it appeared as an inexpressible entity, there would be neither illusion nor its correction. So it has to be admitted that in all illusions (e.g. in conch-shell-silver illusion) one thing (e.g. the conch-shell) appears in another form (e.g. silver). In all theories of illusion, whatever may be the extent of their error, they have ultimately to admit that in all illusions one thing appears in the form of another. Speaking against the Śāṅkarites, it may be asked, he urges, how is their inexpressible (*anirvacanīya*) silver produced? The illusory perception cannot be the cause; for the perception follows only the production of the indescribable silver and cannot precede it to be its cause. It cannot be due to the defects in our sense-organs; for such defects are subjective and therefore cannot affect the nature of objective reality or object. Moreover, if it is inexpressible and indescribable, why should it appear under certain circumstances in the specific form of a particular kind of appearance, silver? If it is urged that this is due to the fact of there being a similarity between silver and conch-shell, it may again be asked whether this similarity is real or unreal. It cannot be real, since the content is illusory; it cannot be unreal since it has reference to real objects (e.g. the real silver in a shop). So such a theory of illusion is open to many criticisms.

Rāmānuja seems to have himself favoured the *anyathā-khyāti* theory of illusion, and says that there will be no explanations of contradiction of knowledge involved in illusory knowledge, or of consequent failure of behaviour as suggested by such knowledge,

¹ *Śruti-prakāśikā*, pp. 178-180.

unless error is ultimately explained as the wrongful appearance of one thing as another. He also says that all the other theories of illusion (except possibly the *yathārtha-khyāti* view, as suggested in the *Śrūta-prakāśikā* commentary—*yathārtha-khyāti-vyatirikta-pakṣeṣu anyathā-khyāti-pakṣaḥ prabalaḥ*) would ultimately have to accept the analysis of error as the wrongful appearance of one thing as another (*khyāty-antarāṇām tu sudūram api gatvā anyathāva-bhāsaḥ āśrayanīyaḥ—Rāmānujabhāṣya*). Rāmānuja further points out that even the *akhyāti* theory of illusion (i.e. illusion considered as being due to the non-apprehension of the difference between the presentation of the “this” of the conch-shell and the memory of silver) is a form of *anyathā-khyāti*; for ultimately here also one has to accept the false identification of two characters or two ideas. Veṅkaṭanātha, commenting on this point in his *Nyāya-pariśuddhi*, says that the appearance of one thing as another is the indispensable condition of all errors, but the non-apprehension of difference must always be granted as an indispensable condition which must exist in all cases of false identification and has therefore the advantage of a superior simplicity (*lāghava*); yet the *anyathā-khyāti* theory gives the proper and true representation of the nature of illusion, and no theory of illusion can do away with the need of admitting it as a correct representation of the phenomenon of illusion. So Veṅkaṭanātha says that Rāmānuja, while he agrees with the *anyathā-khyāti* view as a theory of illusion, yet appreciates the superior simplicity of the *akhyāti* view as giving us the indispensable condition of all forms of illusion.

But, though Rāmānuja himself prefers the *anyathā-khyāti* view of illusion, he could not very well pass over the *yathārtha-khyāti* view, as advocated by the senior adherents and founders of the school of thought which he interpreted, viz. Bodhāyana, Nāthamuni and Varada Viṣṇu Miśra. Rāmānuja is thus faced with two different theories, one that he himself advocated and the other that was advocated by his seniors. Fortunately for him, while his own theory of *anyathā-khyāti* was psychological in character, the other theory of *yathārtha-khyāti* was of an ontological character, so that it was possible for one to hold the one view psychologically and the other view ontologically. Rāmānuja, therefore, offers the *yathārtha-khyāti* view as an alternative. Veṅkaṭanātha says that this *yathārtha-khyāti* view can only be put forward as a theory based on scriptural

evidence, but cannot be supported as a philosophical theory which can be experienced and therefore as a scientific theory of illusion. We have to make up our minds between the two plausible alternative theories of *anyathā-khyāti* and *akhyāti*.

Rāmānuja, to distinguish the *yāthārtha-khyāti* theory of his seniors, whom he refers to by the term "Vedic school" (*veda-vidām matam*), develops this view in a number of verses and says that he understands on the strength of the scriptural texts that the material world was created by the intermingling of the three elements, fire, water and earth, so that in each object there are all the three elements. When a particular element predominates in any material object, it is found to possess more qualities of that element and is designated by its character, though it still holds the qualities of other elements in it. Thus it may in some sense be said that all things are in all things. A conch-shell possesses also the qualities of *tejas*, or silver, and it is on that account that it may be said to resemble silver in some sense. What happens in the case of illusion is that through defects of organs, etc., the qualities or characters in a conch-shell representing other elements are not noticed and hence the perception can only grasp the qualities or characters of silver existing in the conch-shell, and the conch-shell is perceived as silver. So the knowledge of silver in a conch-shell is neither false, nor unreal, but is real, and refers to a real object, the silver element existing in the conch-shell¹. In this view of illusion all knowledge is regarded as referring to a real object (*yāthārtha-khyāti*)². The difference between this view and that of Prabhākara is this, that, while Prabhākara was content with the negative condition of non-apprehension of the difference between the present perception of a glittering conch-shell and the memory of silver in the shop as the cause of the illusion, and urges that knowledge is real either as perception or as the memory, and that illusion has been the result of non-apprehension of the distinction of the two, Rāmānuja is more radical, since he points out that the perception of silver in a

¹ See *Śrūta-prakāśikā*, pp. 183-6.

² According to Sudarśana Sūri this view is the traditional view (*sāmpṛadāyika*) accepted by Bodhāyana, Nāthamuni, Rāma Miśra and others, which Rāmānuja, as a faithful follower of that school, had himself followed. Thus, Rāmānuja says:

*yathā-rtham sarva-vijñānam iti veda-vidām matam
śruti-smṛtibhyaḥ sarvasya sarvā-tmatva-pratītiḥ.*

Bhāṣya and *Śrūta-prakāśikā*, p. 183.

conch-shell is due to the real perception of the element of silver in a conch-shell and the non-apprehension owing to defects (*doṣa*) of the other elements present in it which would have shown its difference from silver. So what is called the illusory perception of silver in the conch-shell has a real objective basis to which it refers.

Dreams are explained by Rāmānuja as being creations of God, intended to produce corresponding perceptions in the minds of the dreamers. The case of the appearance of a conch-shell as yellow to a person with jaundiced eyes is explained by him as due to the fact that yellow colour emanates from the bile of his eyes, and is carried to the conch-shell through the rays of the eyes which turn the white shell yellow. The appearance of the conch-shell as yellow is therefore a real transformation of the conch-shell, noticed by the eye of a jaundiced person, though this transformation can be noticed only by him and not by other persons, the yellow being very near his eyes¹.

The *akhyāti* and the *yathārtha-khyāti* views agree in holding that the imposed idea has a real basis as its object. But, while the former holds that this real basis is a past presentation, the latter holds that it is given as a presentation along with the object, i.e. the silver element, being mixed up with the conch-shell element, is also presented to the senses, but owing to some defects of circumstances, organs of sight, etc., the conch-shell, which ought to be the main part, is not perceived. Thus, it is only the silver part that forms the presentation, and hence the error. So non-perception of the conch-shell part is common to both the views; but, while the *akhyāti* view holds that the silver part is only a reproduced image of past experience, the *yathārtha-khyāti* view grounds itself on the *trivṛt-karaṇa* texts of the Upaniṣads and holds that the silver part is perceived at the time. But Sudarśana Sūri refers to the views of other teachers (*kecid ācāryāḥ*) and says that the *trivṛt-karaṇa* view may well explain the misapprehension of one element (*bhūta*) for another; but in the cases of misapprehension due to similarity *trivṛt-karaṇa* is not of much use, for *trivṛt-karaṇa* and *pañci-karaṇa*

¹ Other types of errors or illusions are similarly explained by Rāmānuja as having a real objective existence, the error being due to the non-apprehension of other elements which are objectively existent and associated with the entity which is the object of illusory perception, but which owing to defects are not perceived. See *ibid.* pp. 187, 188.

can explain the intermixture of *bhūtas*, but not of the *bhautikas*, or the later modifications of the five elements into the varied substances such as conch-shell and silver, which are mutually misapprehended for each other on account of their similarity. It has, therefore, to be maintained that in these *bhūta*-modifications also the *trivṛt-karaṇa* principle applies to a certain extent; for here also the molecules or atoms of things or substances are made up of large parts of some *bhūta*-modification and smaller parts of one or more of other *bhūta*-modifications. The conch-shell molecules are thus made up of large parts of conch-shell material and smaller parts of the silver material, and this explains the similarity of the one element to the other. The similarity is due to the real presence of one element in the other, and is called the *pratidinidh-nyāya*, or the maxim of determining similarity by real representation. So in all cases of misapprehension of one thing as another through similarity there is no misapprehension in the strict sense, but a right apprehension of a counterpart in the other object constituting the basis of the similarity, and the non-apprehension of the bigger and the larger part which held the counterpart coeval with it. It is because the conch-shell contains a major part of conch-shell element (*śukty-amśa*) and only a minor part of silver that it passes as conch-shell and not as silver. Conch-shell cannot serve the purpose of silver, despite the silver element in it, on account of the obstruction of the major part of the conch-shell element; and it is also on account of this that under normal circumstances the silver element in it is hidden by the conch-shell element, and we say that we perceive conch-shell and not silver. When it is said that this is conch-shell and not silver (*nedaṃ rajataṃ*), the "not silver" has no other meaning than that of the conch-shell, the apprehension of which dispelled the idea of silver. It is the conch-shell that is designated in its negative aspect as "not silver" and in its positive aspect as conch-shell.

Rāmānujācārya, alias Vādihaṃsāmbuvāhācārya, the maternal uncle of Veṅkaṭanātha, seems to support the Rāmānuja method of *sat-khyāti* by showing that all the other three rival theories of illusion, such as that of *anyathā-khyāti*, *akhyāti*, and the *anirvacanīya-khyāti*, cross each other and are therefore incompatible. But he takes great pains to show that the *sat-khyāti* theory may be supported on the basis of the logical implications involved in both the

anyathā-khyāti and the *akhyāti* types of realism. He starts the discussion by taking for granted the *akhyāti* type of realism and its logical implications. He holds that it also would ultimately lead to *anyathā-khyāti*, and that therefore (excepting the *sat-khyāti*), of all the *khyātis*, *anyathā-khyāti* is perhaps the best. He says in his *Nyāya-kulīśa* that, since the way of knowledge requires that the sense-organs should reach their objects, even in illusory perception there must be some objects which they reach; for they could not convey any knowledge about an object with which they were not in contact¹. The defect (*doṣa*) cannot account for the production of new knowledge, for it only serves to obstruct anything from being perceived or known. Defects only obstruct the course of the natural sequence of cause and effect², just as fire would destroy the natural shooting powers of seeds¹. Moreover, taking the old example of the conch-shell-silver, it may be asked how, if there was no silver at all objectively present, there could be any knowledge of such an absolutely non-existing thing? Since our awareness cannot refer to non-existing entities, all forms of awareness must guarantee the existence of corresponding objects. What happens in the case of the illusion of conch-shell-silver is that there is memory of silver previously experienced and the “this,” which is experienced at the time of the illusion; and it is on account of the defects (*doṣa*) that it is not grasped that the silver is only a memory of past experience, while it is only the “this” in front of us that is experienced at the time (*doṣāt pramuṣita-tadavamarśaḥ*)³.

Vādihaṃsāmbuvāha, weighing the various arguments of the rival theories of *anyathā-khyāti* and *akhyāti*, deals with the arguments of the *anyathā-khyāti* view which holds that it is the conch-shell that appears as silver. As against the objections raised by such a view in opposition to the *akhyāti* view, viz., if each thing is different from every other thing, how can an illusion be explained as being due to the non-apprehension of the difference between the silver remembered and the “this” perceived directly in experience? Arguing in its favour, he says that the difference which is not

¹ *indriyānām prāpya-kāritvena aprāptā-rtha-prakāśana nuṣapatteḥ. Nyāya-kulīśa*, Madras Govt. Oriental MS. No. 4910.

² *doṣānām kārya-viṣhāta-mūtra-hetutvena kāryā-ntaro-pājanakatvā-yogāt, na hy agni-saṃspṛṣṭasya kalama-vijasya āṅkuro-tpādane sāmāthyam asti. Ibid.*

³ *idam iti puro-vastuṇi anubhavaḥ rajatam iti ca pūrā-nubhūta-rajata-viśayā smṛtiḥ. Ibid.*

apprehended here consists of that characteristic which exists in things by virtue of which one thing is not confused with or misapprehended as another thing, and it is the non-apprehension of this differentiating characteristic that causes the misapprehension of the conch-shell as silver (*saṃsarga-virodhi-vaidharmya-viśeṣa-rūpa-bhedā-grahaḥ pravṛtti-hetuḥ*)¹. But the real objections to holding this *akhyāti* view of illusion to be ultimately sufficient consists in the fact that it cannot do away with the necessity of the synthetic operation (*saṃsarga-vyāpāra*) consisting of a thing being regarded as such-and-such, as found in all discussions of disputants, in all our behaviours and concepts of error and illusion. This forces us to accept the *anyathā-khyāti* view as an unavoidable and ultimate explanation². Vādihaṃsāmbuvāha urges that, since the silver is felt to be in that which is only a piece of conch-shell, this must imply the imposition of the one on the other (which is the essential part of *anyathā-khyāti*). Just as in the real perception of a piece of silver the object before us is experienced as silver, so in the conch-shell-silver illusion, the object before us is experienced as silver,

¹ Madras Govt. MS. No. 4910.

² Like the seniors referred to by Rāmānuja, Prabhākara also considers all knowledge to be valid (*yathārthaṃ sarvaṃ eve'ha vijñānam iti, Prakaraṇa-pañcikā*, p. 32), though the former does so on ontological grounds and the latter on psychological and experiential grounds. Śālikanātha, representing Prabhākara's view, says that, whatever is the content of awareness, that alone is known, and at the time of the conch-shell-silver illusion, what is known is "this is silver," but there is no knowledge of conch-shell, since it is not the content of awareness at the time. Thus it cannot be said that the illusory knowledge consists of knowing the conch-shell as silver, but of the "this" as silver; for, when there is the knowledge of illusory silver, there is no knowledge of conch-shell. What happens in illusory perception is that through defects the differentiating characteristics of the conch-shell are not apprehended and the conch-shell is perceived only in its general character as an object. Then there is memory of silver, and through a defect in the mental process (*mano-doṣāt*) the silver is not remembered with its original association of time and place as that silver which was perceived there, but is simply remembered as an image of silver (*tad-ity-amśa-parāmarśa-vivarjitaṃ*). Though there is no such definite experience that I remember silver, yet the idea of silver has to be admitted to be due to memory; for it cannot be due either to perception or to inference or to any other source of knowledge. Thus, through the elimination of all other sources of knowledge, silver has to be admitted to be due to memory (*ananya-gatitāḥ smṛtir atrā'vagamya*). On account of the absence of a feeling that I remember a past experience, the memory of silver cannot be distinguished from a percept; for it is only these facts that distinguish a present percept from a reproduced image; and so we fail to differentiate between this memory and the actual perception of some object before us (the differentiating characteristics of which are entirely lost to us through defects of sense-organs or the like). On account of the non-apprehension of the distinction, these two different kinds of awareness themselves produce the illusion of a direct and immediate perception of silver which is not there at the time, and even tempt us to

and here also it is the conch-shell that appears as silver. When the illusion is dispelled, we say that “this is not silver”; this cannot mean the mere presence of the conch-shell, but it must mean the denial of the imposition that was made previously. For, if negations could be treated as positive entities, then there would be no difference between positives and negatives (*bādhyasya vidhirūpatve vidhi-niṣedha-vyatyāsaṃ ca niṣedhe bādha iti tulyārthatvāt*)¹. The *akhyāti* view speaks of non-apprehension of absence of association (e.g. of conch-shell-silver, *asamsargāgraha*) to be the cause of illusion. It may well be asked, What is this absence of association? It cannot be the mere thing itself; for, had it been so, we should expect that the thing itself (say the conch-shell) is not perceived and this alone constitutes error, which is impossible. Moreover, the silver is felt to be in front of us as the object we perceive and not as something which we remember. We know that, when we perceive illusorily that “this is silver,” there is the perception of a false association (*bādhaka-samsarga-grahaṇam*); but the concept of non-apprehension of difference (*bhedāgraha*) never seems to be practically realized in experience. If we inquire into the nature of what constitutes falsity or contradiction (e.g. in conch-shell-silver), we find that it is not the fact that a conch-shell when burnt becomes ash while silver, when burnt, may be made into a finger-ring that constitutes error, but the fact that what was believed to be capable of being rendered into a finger-ring by being put into fire cannot be so done (*yadi tv-aṅgulīyakādi-hetutayābhīmatasya vyavahārasya bhasma-hetutvako hy atra viśeṣaḥ*). If this is what is really meant by falsehood, it is nothing but the apprehension of the cause of one kind of action as being another cause (*anya-hetu-vyavahāro 'nya-hetutayāvagataḥ*). This will be *anyathā-khyāti*; for, if even here it is urged to be non-apprehension of difference, then

stretch our hands to pick it up, as if there were a real piece of silver before us. (See *Prakarāṇa-pāñcikā*, Ch. iv, *Naya-vīthi*.)

Sudarśana Sūri, commenting on the *akhyāti* view in his *Śruta-prakāśikā* in connection with his commentary on the *yathārtha-khyāti* view of Rāmānuja's seniors, says that the *akhyāti* view has the advantage of superior simplicity or the minimum assumption, viz. that in illusion only an indefinite object is seen, and the distinction between this and the image roused in memory by it is not apprehended. This has to be admitted in all theories of illusion, and in addition other assumptions have to be made.

¹ *Nyāya-kulīśa* of Vādihaṃsāmbuvāha Rāmānujācārya, Govt. Oriental MS. No. 4910.

the experience in such cases of the belief of one thing as another is not explained¹. In all such cases the final appeal must be made to experience, which attests all cases of illusion as being the appearance of one thing as another².

But though Vādihaṃsāmbuvāhacārya thus tries to support the *anyathā-khyāti* view of illusion, yet he does not dismiss the *akhyāti* view of error curtly, but admits that it may also properly explain facts of illusion, when looked at from another point of view. For, if there was not the non-apprehension of difference between silver and conch-shell, the conch-shell could not be mistaken as silver. So, even in *anyathā-khyāti*, there is one element of *akhyāti* involved; for in order that one may behave towards a piece of conch-shell in the same way as one would do to a piece of silver, it is necessary that one should not be able to distinguish between what one sees before one and what one remembers. But, though the negative fact of *akhyāti*, i.e., non-apprehension of difference, may be regarded in many cases as a necessary stage, yet the positive fact of association (*saṃsarga*) or synthesis has to be admitted as an indispensable process, connecting the different elements constituting a concrete perception. The root-cause of all our behaviour and action, being of the nature of synthetic association, it would be wrong to suppose that non-apprehension of difference could by itself be made a real cause of our actions (*na ca mūla-bhūte saṃsarga-jñāne pravṛtti-kāraṇe siddhe tad-upajīvino niranantara-jñānasya pravṛttihetutvam iti yuktaṃ vaktum*)³. Although Vādihaṃsāmbuvāha spends all his discussions on the relative strength of *akhyāti* and *anyathā-khyāti* as probable theories of illusion, yet he refers to the view of illusion mentioned by Rāmānuja that all things are present in all things and that therefore no knowledge is illusory. He considers this view as the real and ultimately correct view. But, if this were so, all his discussions on the *akhyāti* and *anyathā-khyāti* theories of illusion would be futile. Vādihaṃsāmbuvāha does not, however, attempt to show how, if this theory be admitted, the other theories of *akhyāti* or *anyathā-khyāti* could be sup-

³ *Ibid.*

ported¹. He further criticizes the *anirvacanīya-khyāti* (illusion as the indescribable creation of, say, the appearance of silver in the conch-shell-silver illusion), a view of illusion as held by the Śaṅkarites, in the stereotyped form with which we are already familiar.

Anantācārya, a writer of the nineteenth century, laid stress on the view of illusion which held that all things were contained in all things, and hence the perception of conch-shell as silver was neither false knowledge nor non-apprehension of the difference between what is perceived and what is remembered; for the perception “this is silver” is a complex of two perceptions, “this” and “silver.” Had not this been a case of actual perception, we should not have felt as if we perceived the “this” before us as “silver.” The function of *doṣa* (defect) was only to hide the conch-shell part (mixed up with the silver part) from perception. To say that all perceptions have objective entities corresponding to them (*yathārtha*) does not mean that things are as they are perceived, but it means that it is not true that what is perceived has not an objective basis corresponding to it². That sort of *tejas*-substance which forms the material cause of silver certainly exists in the elemental *tejas*, and, the earth-particles forming the material cause of conch-shells being present in the elemental earth-substances, these substances get mixed in the primitive stage of compounding by *trivṛt-karaṇa*, and this explains the presence of the objective substratum of silver in the illusory perception of silver³. It is evident, argues Anantācārya, that conch-shell cannot appear as silver; for, since conch-shell is not silver, how can it appear as silver? In order properly to account for the perceptual experience “this is silver,” it is necessary to assume that the two constituents, “this” and “silver,” of the complex “this is silver” are both perceptually determined; for it is only in this way that one can justify the perception “I perceive this silver.”

This is an answer to the already noted objection raised by the *Śruta-prakāśikā*.

Failure of theistic proofs.

The existence of God can be known by the testimony of the scriptures (*śāstra-pramāṇaka*), and by that alone. All other proofs which seem to demonstrate the existence of God ultimately fail to do so, since suitable counter-arguments may always be successfully arrayed to destroy the efficacy of such arguments.

God cannot be perceived either by any of the sense-organs or by the mind; for the former can make known only those objects with which they have come in contact, and the latter (excepting in the direct communication of feelings like pleasure, pain, etc.) cannot make external objects known to us without depending on the sense-organs. Further, God cannot be perceived by the special perception of saints (*yogi-pratyakṣa*); for these are of the nature of memory, and do not convey any facts previously unknown through the senses. The saints can perceive only what has been already perceived, though these may not be present to the senses at the time. Objects too small for the senses cannot be perceived; for there cannot be any sense-contact with them. No reason can be perceived by means of which a necessary inference could be drawn regarding the existence of a supreme person who has a direct acquaintance with all things and the power of making them all. The ordinary argument that is offered is from effect to cause—since the world is “effect” (*kārya*), it must have a cause, a maker, who has direct acquaintance with all its materials and their utility and enjoys them. The world is “effect” because, like all effects, it is made up of parts (*sāvayava*); like a healthy human body, therefore, it is under the guidance and superintendence of one person and one alone. But the point is that the two cases are not analogous. The human body is neither produced nor maintained in existence by its superintendent, the soul. The production of the body of a person is due to the *adrṣṭa* (unseen effects of deeds) not only of that person, but also of beings who are benefited or in some way connected with it. Its existence as connected parts is due to the union of its parts, and does not depend for that on the living person who superintends it. Its existence as living is wholly unique and cannot be found in the case of the world as a whole. The superintendence of one person need not be considered as the invariable cause of all movements; for it is well known that many persons unite their

efforts to move some heavy object which could not otherwise be moved.

Moreover, if such a maker of the universe is to be admitted, could not the making of the world be better ascribed to one or more individual souls? They have a direct acquaintance with the materials of the world. It is not necessary that the maker should be acquainted with the inner efficiencies or power of things; for it is enough if the objects containing those powers are directly known. We see also that in all examples of making, such as the making of a jug, a cloth, or the like, the maker is an ordinary human being. Since the inference of the existence of a cause of the world is inspired by these examples, it will be only fair to assume that the maker of the universe belongs to the same class of beings as the makers of the ordinary mundane effects, such as a jug or a cloth. Thus, instead of assuming a supreme being to be the maker of the universe, we might as well assume an individual soul to be the maker of the universe. Hence it is difficult to prove the existence of God by inference. Ordinarily inferences are applied for the knowing of an object which may also be known in other ways, and in all such cases the validity of any inference is tested by these. But in the case of the application of inference for the knowing of God this is not possible; for God cannot be known by any other direct or indirect method. So the application of inference is not of any use here, since there is nothing which can test the validity of the inference or can determine that inference in a particular way and in that way alone. Therefore, since all sorts of inferences can be made from diverse propositions, it is not possible to determine that any particular kind of inference would be more acceptable than any other.

There are some who would still want to support the cosmological argument on the ground that no less than a supreme person, entirely different from the individual persons, could be regarded as the maker of this vast universe; for the individuals cannot have the power of perceiving subtle things, or things which are obstructed from our view, or things which are far away. Thus it is necessary to hold that the maker of the universe must be a being of unlimited powers. From the effect we infer its cause; and again from the nature of the effect we infer the nature of the cause. So, if the cause of the universe is to be inferred, then only such a cause

can be inferred as really has the unlimited powers required for producing such an effect. It is irrelevant to infer such a cause as cannot produce it. Also the unessential conditions of ordinary causes need not be imported by suggesting that, just as in the case of ordinary human beings there must be a body and also instruments by which they can operate and produce the effect, so also in the case of the supreme cause it might be expected that He should have a body and should have instruments by which He could operate. This cannot be; for we know that many effects are wrought by sheer force of will and desire (*saṅkalpa*) and neither will nor desire needs a body for its existence, since these are generated not by body, but by mind (*manas*). The existence of *manas* also is independent of the existence of body; for the mind continues to exist even when it is dissociated from body. Since limited beings, who are under the sway of virtue and vice, are unable to produce this manifold universe of such wonderful and diverse construction, it has to be admitted that there exists a supreme person who has done it. Moreover, since the material cause is seen in all known examples to be entirely different from the cause as agent or doer, there cannot be a Brahman which is both the material cause (*upādāna-kāraṇa*) and the cause as agent (*nimitta-kāraṇa*) of this universe.

To this, however, it may be replied that it is admitted that the world is effect and that it is vast, but it is not known that all parts of this vast world originated at one time and from one person. Not all jugs are made at one time and by one person. How can any room be made for an unknown supreme person and the possibility be ruled out that different individual souls, by virtue of special merit and special powers, should at different times create the different parts of the world, which now appear as one unified whole created by one person at one time? It is quite possible that the different parts of the world were created at different times and will similarly be destroyed at different times. To imagine the existence of one such supreme person who could create all this manifold may well be regarded as almost chimerical. From the fact that the world is effect all that can be argued is that it must have been produced by an intelligent being, but there is nothing to infer that it is necessarily the creation of *one* intelligent being. This infinite universe could not have sprung into being at any one moment, and there is no proof that it did so. And, if it came into being gradually, it may

well be supposed that there were many intelligent beings who brought it into being gradually. Moreover, God, being absolutely complete in Himself, could not be conceived as having any need to effect such a creation, and He has neither body nor hands with which He could create. It is true that mind does not die with the body, but it is not found in any active state when it is not associated with the body. If it is admitted that God has a body, then He cannot be eternal. If His body could be eternal, though having parts, then on the same grounds the world too might be regarded as eternal. If the world is admitted to have come into being by His mere wish, that would be so strange as to be entirely dissimilar to all known cases of cause and effect. So, if one has to argue the existence of God as cause of the world on the basis of the analogy of known causes and effects as experienced by us, and if such a God is endowed with all the attributes with which He is generally associated, and with strange ways of creating this world, He must be such a cause as could never be inferred on the basis of the similarity of known causes and their modes of creating the effect. Thus, God can never be proved by inference. His existence has to be admitted on the testimony of scriptural texts and of that alone.

Bhāskara and Rāmānuja.

Every careful reader of Bhāskara and Rāmānuja must have noticed that Rāmānuja was largely indebted for his philosophical opinions and views to Bhāskara, and on most topics their doctrines are more or less the same. It is possible that Rāmānuja was indebted for his views to Bodhāyana or other Vaiṣṇava writers, but, however that may be, his indebtedness to Bhāskara also was very great, as a comparative study of the two systems would show. However, the two systems are not identical, and there is an important point on which they disagree. Bhāskara believed that there is Brahman as pure being and intelligence, absolutely formless, and the causal principle, and Brahman as the manifested effect, the world. According to Bhāskara there is no contradiction or difficulty in such a conception, since all things have such a dual form as the one and the many or as unity and difference. "Unity in difference" is the nature of all things. Rāmānuja, however, holds that difference and unity cannot both be affirmed of the same thing. Thus, when we affirm "this is like this," it is not true that the same

entity is both the subject and the predicate. For example, when "this" in the above proposition stands for a cow, the predicate "like this" stands for its particular and unique description of bodily appearance. The latter is only the attribute of the former and determines its nature and character. There is no meaning in asserting the identity of the subject and the predicate or in asserting that it is the same entity that in one form as unity is "subject" and in another form as difference is the predicate. Bhāskara argues that the conditions and the conditioned (*avasthā-taadvasthas' ca*) are not wholly different; nor are the substance and its attributes, the cloth and the whiteness, entirely different. There are no qualities without substance and no substance without qualities. All difference is also unity as well. The powers or attributes of a thing are not different from it; the fire is the same as its power of burning and illuminating. So everything is both unity and difference, and neither of them may be said to be wholly reducible to the other. But Rāmānuja maintains that all propositions are such that the predicate is an attribute of the subject. The same attributive view is applicable to all cases of genus and species, cause and effect, and universals and individuals. The "difference" and the "unity" are not two independent forms of things which are both real; but the "difference" modifies or qualifies the nature and character of the "unity," and this is certified by all our experience of complex or compound existence¹. According to Rāmānuja the affirmation of both unity and difference of the same entity is self-contradictory. The truth of "difference" standing by itself is not attested by experience; for the difference of quality, quantity, etc., always modifies the nature and character of the subject as "unity," and it is this alone that is experienced by us.

Bhāskara urges that, though there is the twofold Brahman as the manifested many and as the unmanifested formless identity of pure being and intelligence, it is only the latter that is the object of our highest knowledge and worship. Rāmānuja, however, denies this formless and differenceless Brahman and believes in the qualified complex Brahman as the transcendent and immanent God holding within Him as His body the individual souls and the world of matter. Regarding the relation of Brahman and the individual souls (*jīva*) Bhāskara says that a *jīva* is nothing but Brahman

¹ *Vādi-traya-khaṇḍana.*

narrowed by the limitations of the mind substance (*antaḥkaraṇopādhy-avacchinna*). When it is said that *jīva* is a part (*aṁśa*) of Brahman, it is neither in the sense of part or of cause that the word “*aṁśa*” is used, but in the technical sense of being limited by the limitation of mind. This limitation is not false or unreal, and it is on account of it that the individual souls are atomic. According to Rāmānuja “difference” is felt as a result of ignorance and the difference is therefore unreal. With Rāmānuja the identity of Brahman with the individual souls is the last word. The apparent difference of imperfection, finiteness, etc., between the individual souls and the perfection and infiniteness of Brahman is due to ignorance (*avidyā*), and is found to be false as soon as the souls realize themselves to be forming the body of Brahman itself. “Difference” as such has no reality according to Rāmānuja, but only modifies and determines the character of the identical subject to which it refers. The subject and its character are identical. Bhāskara considers identity and difference as two modes, both of which are alike independently true, though they are correlated to each other. In criticism of Bhāskara it is said that, if the limitations of Brahman were also true, then they would wholly limit Brahman, since it has no parts, and thus it would be polluted in its entirety. This objection to Bhāskara’s view in some of its subtle aspects is made with dialectical skill by Rāmānuja¹. But it does not appear that it has much force against Bhāskara, if we admit his logical claim that unity and plurality, cause and effect, are two modes of existence of the same reality and that both these forms are equally real. It does not seem that the logical position of Bhāskara has been sufficiently refuted.

Rāmānuja also speaks of Brahman as being identical with individual souls or the material world and yet different therefrom, but only in the sense in which a character or a part may be said to be at once identical with and different from the substance possessing the character or the whole to which the part is said to belong. The individual souls and the inanimate creation cannot stand by themselves independently, but only as parts of Brahman. So from the fact that they are parts of Brahman their identity (*abheda*) with Brahman becomes as primary as their difference (*bheda*), inasmuch

¹ Rāmānuja’s *Bhāṣya*, pp. 265, 266, with the *Śrūta-prakāśikā*, Nirṇayasāgara Press, Bombay, 1916.

as the substance may be considered to be different from its attributes¹. The main difference that remains on this point between Bhāskara and Rāmānuja is this, that Bhāskara does not think it necessary to introduce the conception of body and parts, or substance and attributes. According to his doctrine Brahman is immanent and transcendent at the same time, identity and difference can be affirmed of a thing at one and the same time; and this can be illustrated from the cases of cause and effect, or substance and attributes, etc.

Ontological position of Rāmānuja's Philosophy.

The entire universe of wondrous construction, regulated throughout by wonderful order and method, has sprung into being from Brahman, is maintained by Him in existence, and will also ultimately return to Him. Brahman is that to the greatness of which there is no limitation. Though the creation, maintenance and absorption of the world signify three different traits, yet they do not refer to different substances, but to one substance in which they inhere. His real nature is, however, His changeless being and His eternal omniscience and His unlimitedness in time, space and character. Referring to Śaṅkara's interpretation of this *sūtra* (I. 1. 2), Rāmānuja says that those who believe in Brahman as characterless (*nirviśeṣa*) cannot do justice to the interpretation of this attribute of Brahman as affirmed in *Brahma-sūtra* I. 1. 2; for instead of stating that the creation, maintenance and absorption of the world are from Brahman, the passage ought rather to say that the illusion of creation, maintenance, and absorption is from Brahman. But even that would not establish a characterless Brahman; for the illusion would be due to *ajñāna*, and Brahman would be the manifest of all *ajñāna*. This it can do by virtue of the fact that it is of the nature of pure illumination, which is different from the concept of materiality, and, if there is this difference, it is neither characterless nor without any difference².

This raises an important question as regards the real meaning

¹ *jīva-vat-prthak-siddhy-anarha-viśeṣaṇatvena acid-vastuno brahmnā-mśatvam; viśiṣṭa-vastu-eka-deśatvena abheda-vyavahāro mukhyaḥ, viśeṣaṇa-viśeṣayayoḥ svarūpa-svabhāva-bhedena bheda-vyavahāro'pi mukhyaḥ. Śrī-bhāṣya, III. 2. 28.*

² *jagaj-janmādi-bhramo yatas tad brahme' ti svot-prekṣā-pakṣe'pi na nirviśeṣa-vastu-siddhiḥ, etc. Ibid. I. 1. 2.*

of Śaṅkara's interpretation of the above *sūtra*. Did he really mean, as he is apparently stated by Rāmānuja to have said, that that from which there is the illusion of creation, etc., of the world is Brahman? Or did he really mean Brahman and Brahman by itself alone is the cause of a real creation, etc., of the world? Śaṅkara, as is well known, was a commentator on the *Brahma-sūtras* and the Upaniṣads, and it can hardly be denied that there are many passages in these which would directly yield a theistic sense and the sense of a real creation of a real world by a real God. Śaṅkara had to explain these passages, and he did not always use strictly absolutist phrases; for, as he admitted three kinds of existence, he could talk in all kinds of phraseology, but one needed to be warned of the phraseology that Śaṅkara had in view at the time, and this was not always done. The result has been that there are at least some passages which appear by themselves to be realistically theistic, others which are ambiguous and may be interpreted in both ways, and others again which are professedly absolutist. But, if the testimony of the great commentators and independent writers of the Śaṅkara school be taken, Śaṅkara's doctrine should be explained in the purely monistic sense, and in that alone. Brahman is indeed the unchangeable infinite and absolute ground of the emergence, maintenance and dissolution of all world-appearance and the ultimate truth underlying it. But there are two elements in the appearance of the world-phenomena—the ultimate ground, the Brahman, the only being and truth in them, and the element of change and diversity, the *māyā*—by the evolution or transformation of which the appearance of “the many” is possible. But from passages like those found in Śaṅkara's *bhāṣya* on the *Brahma-sūtra*, I. 1. 2, it might appear as if the world-phenomena are no mere appearance, but are real, inasmuch as they are not merely grounded in the real, but are emanations from the real: the Brahman. But, strictly speaking, Brahman is not alone the *upādāna* or the material cause of the world, but with *avidyā* is the material cause of the world, and such a world is grounded in Brahman and is absorbed in Him. Vācaspati, in his *Bhāmātī* on Śaṅkara's *bhāṣya* on the same *sūtra* (*Brahma-sūtra*, I. 1. 2), makes the same remark¹. Prakāśātman, in his *Pañcapādikā-vivaraṇa*, says that the creative functions here spoken of do

¹ *avidyā-sahita-brahmo'pādānaṃ jagat brahmaṇy evāsti tatraiva ca līyate. Bhāmātī*, I. 1. 2.

not essentially appertain to Brahman and an inquiry into the nature of Brahman does not mean that he is to be known as being associated with these qualities¹. Bhāskara had asserted that Brahman had transformed Himself into the world-order, and that this was a real transformation—*pariṇāma*—a transformation of His energies into the manifold universe. But Prakāśātman, in rejecting the view of *pariṇāma*, says that, even though the world-appearance be of the stuff of *māyā*, since this *māyā* is associated with Brahman, the world-appearance as such is never found to be contradicted or negated or to be non-existing—it is only found that it is not ultimately real². *Māyā* is supported in Brahman; and the world-appearance, being transformations of *māyā*, is real only as such transformations. It is grounded also in Brahman, but its ultimate reality is only so far as this ground or Brahman is concerned. So far as the world-appearances are concerned, they are only relatively real as *māyā* transformations. The conception of the joint causality of Brahman and *māyā* may be made in three ways; that *māyā* and Brahman are like two threads twisted together into one thread; or that Brahman, with *māyā* as its power or *śakti*, is the cause of the world; or that Brahman, being the support of *māyā*, is indirectly the cause of the world³. On the latter two views *māyā* being dependent on Brahman, the work of *māyā*—the world—is also dependent on Brahman; and on these two views, by an interpretation like this, pure Brahman (*śuddha-brahma*) is the cause of the world. Sarvajñātma muni, who also thinks that pure Brahman is the material cause, conceives the function of *māyā* not as being joint material cause with Brahman, but as the instrument or the means through which the causality of pure Brahman appears as the manifold and diversity of the universe. But even on this view the stuff of the diversity is the *māyā*, though such a manifestation of *māyā* would have been impossible if the ground-cause, the Brahman, had been absent⁴. In discerning the nature of the causality of Brahman, Prakāśātman says that the monistic doctrine of Vedānta is upheld by the fact that apart from

¹ *na hi nānā-vidha-kārya-kriyāveśātmakatvaṃ tat-prasava-śakty-ātmakatvaṃ vā jñānasya-viśuddha-brahmāntargataṃ bhavītum arhati. Pañca-pādikā-vivaraṇa*, p. 205.

² *sṛṣṭeś ca svopādhanā abhāva-vyāvṛttatvāt sarve ca sopādhanika-dharmāḥ svāśrayopādhanā abādhyatayā satyā bhavanti sṛṣṭir api svarūpeṇa na bādhyate kintu paramā-rthā-satyatvā-ṃśena. Ibid.* p. 206.

³ *Ibid.* p. 212.

⁴ *Saṅkṣepa-śārīra*, I. 332, 334, and the commentary *Anvayārtha-prakāśikā* by Rāmātīrtha.

the cause there is nothing in the effect which can be expressed or described (*upādāna-vyatirekeṇa kāryasya anirūpaṇād advitīyatā*)¹. Thus, in all these various ways in which Śaṅkara's philosophy has been interpreted, it has been universally held by almost all the followers of Śaṅkara that, though Brahman was at bottom the ground-cause yet the stuff of the world was not of real Brahman material, but of *māyā*; and, though all the diversity of the world has a relative existence, it has no reality in the true sense of the term in which Brahman is real². Śaṅkara himself says that the omniscience of Brahman consists in its eternal power of universal illumination or manifestation (*yasya hi sarva-viśayāvabhāsa-kṣamaṃ jñānam nityam asti*). Though there is no action or agency involved in this universal consciousness, it is spoken of as being a knowing agent, just as the sun is spoken of as burning and illuminating, though the sun itself is nothing but an identity of heat and light (*pratatauṣṇya-prakāśepi savitari dahati prakāśayati svātantrya-vyapadeśa-darśanāt...evam asaty api jñāna-karmaṇi Brahmanas tad aikṣata iti kartṛtva-vyapadeśa-darśanāt*). Before the creation of the world what becomes the object of this universal consciousness is the indefinable name and form which cannot be ascertained as "this" or "that"³. The omniscience of Brahman is therefore this universal manifestation, by which all the creations of *māyā* become the knowable contents of thought. But this manifestation is not an act of knowledge, but a permanent steady light of consciousness by which the unreal appearance of *māyā* flash into being and are made known.

Rāmānuja's view is altogether different. He discards the view of Śaṅkara, that the cause alone is true and that all effects are false.

¹ *Pañca-pādikā-vivaraṇa*, p. 221.

² Prakāśātman refers to several ways in which the relation of Brahman and *māyā* has been conceived, e.g. Brahman has *māyā* as His power, and the individual souls are all associated with *avidyā*; Brahman as reflected in *māyā* and *avidyā* is the cause of the world (*māyā-vidyā-pratibimbam brahma jagat-kāraṇam*); pure Brahman is immortal, and individual souls are associated with *avidyā*; individual souls have their own illusions of the world, and these through similarity appear to be one permanent world; Brahman undergoes an apparent transformation through His own *avidyā*. But in none of these views is the world regarded as a real emanation from Brahman. *Pañca-pādikā-vivaraṇa*, p. 232.

Regarding the question as to how Brahman could be the cause of beginningless Vedas, Prakāśātman explains it by supposing that Brahman was the underlying reality by which all the Vedas imposed on it were manifested. *Ibid.* pp. 203, 231.

³ *kim punas tat-karma? yat prāg-utpatter īśvara-jñānasya viśayo bhavattī. tattvānyatvābhyāṃ anirvacanīye nāma-rūpe avyākṛte vyācikṛṣite iti brūmah. Śaṅkara-bhāṣya*, 1. 1. 5.

One of the reasons adduced for the falsity of the world of effects is that the effects do not last. This does not prove their falsehood, but only their destructible or non-eternal nature (*anityatva*). When a thing apparently existing in a particular time and space is found to be non-existing at that time or in that space, then it is said to be false; but, if it is found to be non-existing at a different place and at a different time, it cannot be called false, it is only destructible or non-eternal. It is wrong to suppose that a cause cannot suffer transformation; for the associations of time, space, etc., are new elements which bring in new factors which would naturally cause such transformation. The effect-thing is neither non-existent nor an illusion; for it is perceived as existing in a definite time and place after its production from the cause until it is destroyed. There is nothing to show that such a perception of ours is wrong. All the scriptural texts that speak of the world's being identical with Brahman are true in the sense that Brahman alone is the cause of the world and that the effect is not ultimately different from the cause. When it is said that a jug is nothing but clay, what is meant is that it is the clay that, in a specific and particular form or shape, is called a jug and performs the work of carrying water or the like; but, though it does so, it is not a different substance from clay. The jug is thus a state of clay itself, and, when this particular state is changed, we say that the effect-jug has been destroyed, though the cause, the clay, remains the same. Production (*utpatti*) means the destruction of a previous state and the formation of a new state. The substance remains constant through all its states, and it is for this reason that the causal doctrine, that the effect exists even before the operation of causal instruments, can be said to be true. Of course, states or forms which were non-existent come into being; but, as the states have no existence independently from the substance in which they appear, their new appearance does not affect the causal doctrine that the effects are already in existence in the cause. So the one Brahman has transformed Himself into the world, and the many souls, being particular states of Him, are at once one with Him and yet have a real existence as His parts or states.

The whole or the Absolute here is Brahman, and it is He who has for His body the individual souls and the material world. When Brahman exists with its body, the individual souls and the material world in a subtler and finer form, it is called the "cause" or Brah-

man in the causal state (*kāraṇāvasthā*). When it exists with its body, the world and souls in the ordinary manifested form, it is called Brahman in the effect state (*kāryāvasthā*)¹. Those who think that the effect is false cannot say that the effect is identical with the cause; for with them the world which is false cannot be identical with Brahman which is real². Rāmānuja emphatically denies the suggestion that there is something like pure being (*san-mātra*), more ultimately real than God the controller with His body as the material world and individual souls in a subtler or finer state as cause, as he also denies that God could be regarded as pure being (*san-mātra*); for God is always possessed of His infinite good qualities of omniscience, omnipotence, etc. Rāmānuja thus sticks to his doctrine of the twofold division of matter and the individual souls as forming parts of God, the constant inner controller (*antar-yāmin*) of them both. He is no doubt a *sat-kārya-vādin*, but his *sat-kārya-vāda* is more on the Sāṃkhya line than on that of the Vedānta as interpreted by Śaṅkara. The effect is only a changed state of the cause, and so the manifested world of matter and souls forming the body of God is regarded as effect only because previous to such a manifestation of these as effect they existed in a subtler and finer form. But the differentiation of the parts of God as matter and soul always existed, and there is no part of Him which is truer or more ultimate than this. Here Rāmānuja completely parts company with Bhāskara. For according to Bhāskara, though God as effect existed as the manifested world of matter and souls, there was also God as cause, Who was absolutely unmanifested and undifferentiated as pure being (*san-mātra*). God, therefore, always existed in this His tripartite form as matter, soul and their controller, and the primitive or causal state and the state of dissolution meant only the existence of matter and souls in a subtler or finer state than their present manifest form. But Rāmānuja maintains that, as there is difference between the soul and the body of a person, and as the defects or deficiencies of the body do not affect the soul, so there is a marked difference between God, the Absolute controller, and His body, the individual souls and the world of matter, and the defects

¹ *Śrī-bhāṣya*, pp. 444, 454, Bombay ed., 1914.

² This objection of Rāmānuja, however, is not valid; for according to it the underlying reality in the effect is identical with the cause. But there is thus truth in the criticism, that the doctrine of the "identity of cause and effect" has to be given a special and twisted meaning for Śaṅkara's view.

of the latter cannot therefore affect the nature of Brahman. Thus, though Brahman has a body, He is partless (*niravayava*) and absolutely devoid of any *karma*; for in all His determining efforts He has no purpose to serve. He is, therefore, wholly unaffected by all faults and remains pure and perfect in Himself, possessing endless beneficent qualities.

In his *Vedārtha-saṃgraha* and *Vedānta-dīpa*, Rāmānuja tried to show how, avoiding Śaṅkara's absolute monism, he had also to keep clear of the systems of Bhāskara and of his own former teacher Yādavaprakāśa. He could not side with Bhāskara, because Bhāskara held that the Brahman was associated with various conditions or limitations by which it suffered bondage and with the removal of which it was liberated. He could also not agree with Yādavaprakāśa, who held that Brahman was on the one hand pure and on the other hand had actually transformed itself into the manifold world. Both these views would be irreconcilable with the Upaniṣadic texts.

Veṅkaṭanātha's treatment of *pramāṇa*.

As the nihilistic Buddhists (*śūnya-vādī* or *mādhyamika*) are supposed to deny the valid existence of any fact or proposition, so the Śaṅkarites also may be supposed to suspend their judgment on all such questions. In the preliminary portions of his *Khaṇḍana-khaṇḍa-khāḍya*, in answer to the question whether all discussions (*kathā*) must presuppose the previous admission of validity and invalidity as really referring to facts and propositions, Śrīharṣa says that no such admission is indispensable; for a discussion can be conducted by the mutual agreement of the contending persons to respect certain principles of reality or unreality as decided by the referee (*madhyastha*) of the debate, without entering into the question of their ultimate validity. Even if validity or invalidity of certain principles, facts, or propositions, were admitted, then also the mutual agreement of the contending persons to these or other principles, as ruled by the referee, would be an indispensable preliminary to all discussions¹. As against these views Veṅkaṭanātha,

¹ *na ca pramāṇādinām sattā'pi ittham eva tābhyām aṅgikartum ucitā; tādyśa-vyavahāra-niyama-mātreṇaiva kathā-pravyṛtti-upapattēh. pramāṇādi-sattām abhyupetyā'pi tathā-vyavahāra-niyama-vyatireke kathā-pravyṛttiṃ vinā tattva-nirṇayasya jayasya vā abhilaṣitasya kathakayor aparyavasānāt, etc. Khaṇḍana-khaṇḍa-khāḍya, p. 35.*

the best-reputed philosopher of the Rāmānuja school, seeks to determine the necessity of the admission of validity (*prāmānya*) or invalidity (*a-prāmānya*) as naturally belonging to certain proportions or facts, as a preliminary to our quest of truth or objective and knowable facts. If the distinction of valid and invalid propositions is not admitted, then neither can any thesis be established, nor can practical affairs run on. But, though in this way the distinction between valid and invalid propositions has to be admitted on the basis of its general acceptance by people at large, yet their real nature has still to be examined. Those who deny such a distinction can have four alternative views, viz. that all propositions are valid, that all propositions are invalid, that all propositions mutually contradict one another, or that all propositions are doubtful. If all propositions are valid, then the negation of such a proposition is also valid, which is self-contradictory; if they are all invalid, then even such a proposition is invalid and hence no invalidity can be asserted. As to the third alternative, it may be pointed out that invalid propositions can never contradict the valid ones. If one valid proposition restricts the sphere of another valid proposition, this does not mean contradiction. A valid proposition has not to depend on other propositions for making its validity realized; for a valid proposition guarantees its own validity. Lastly, if you doubt everything, at least you do not doubt that you doubt; so then you are not consistent in saying that you doubt everything; for at least in one point you are certain, viz. that you doubt everything¹. Thus it has to be admitted that there are two classes of propositions, valid and invalid. But, though the general distinction between valid and invalid propositions be admitted, yet proper inquiry, investigation, or examination, is justified in attempting to determine whether any particular proposition is valid or invalid. That only is called a *pramāṇa* which leads to valid knowledge.² In the case of perception, for example, those which would lead to valid knowledge would be defectless eyes, mind-contact as attention, proper proximity of the object, etc., and these would jointly constitute *pramāṇa*. But in the

¹ This remark naturally reminds one of Descartes—*sarvaṃ sandigdham iti te nipuṇasyāsti niścayaḥ, saṃśayaś ca na sandigdhaḥ sandigdhadvāita-vādinah. Nyāya-pariśuddhi. p. 34. Chowkhamba s.s.*

² A distinction is here made between *karāṇa-prāmānya* and *āśraya-prāmānya* (*pramāśrayasya īśvarasya prāmānyam aṅgīkṛtam*). *Nyāya-sāra* commentary on *Nyāya-pariśuddhi* by Śrīnivāsa, p. 35.

case of testimony it is the faultlessness of the speaker that constitutes the validity of the knowledge. The scriptures are valid because they have been uttered by God, Who has the right knowledge of things. The validity of the Vedas is not guaranteed by absence of defect in our instruments of knowledge. Whatever that may be, the ultimate determination of *pramāṇa* is through *pramā*, or right knowledge. That by which one can have right knowledge is *pramāṇa*. Vedas are valid, because they are uttered by God, Who has right knowledge. So it is the rightness of knowledge that ultimately determines the validity of *pramāṇa*¹.

Vātsya Śrīnivāsa, a successor of Veṅkaṭanātha of the Rāmānuja school, defines *pramāṇa* as the most efficient instrument amongst a collocation of causes forming the immediate, invariable and unconditional antecedents of any right knowledge (*pramā*). Thus, in the case of perception, for example, the visual organ is a *pramāṇa* which leads to right visual knowledge, through its intermediary active operation (*avāntara-vyāpāra*)—the sense-contact of the eye with its objects². Jayanta, the celebrated Nyāya writer, had, however, expressed a different view on the point in his *Nyāya-mañjarī*. He held that no member in a collocation of causes producing the effect could be considered to be more efficient or important than the other members. The efficiency (*atiśaya*) of the causal instruments means their power of producing the effect, and that power belongs to all the members jointly in the collocation of causes; so it is the entire collocation of causes producing right knowledge that is to be admitted as its instrument or *pramāṇa*³. Even subject and object cannot be regarded as more important; for they manifest themselves only through the collocating causes producing the desired relation between the subject and the object⁴. With Nyāya this

¹ *kāraṇa-prāmāṇyasya āśraya-prāmāṇyasya ca jñāna-prāmāṇyā-dhātva-jñānavat tad ubhaya-prāmāṇya-siddhy-artham api jñāna-prāmāṇyam eva vicāranīyam. Nyāya-sāra*, p. 35.

⁴ *sākalya-prasāda-labdha-pramiti-sambandha-nibandhanah pramāṭṛ-prameyayor mukhya-svarūpa-lābhah. Ibid.* p. 14.

collocation of causes consists of ideational and non-ideational (*bodhābodha-svabhāva*) factors¹.

If the view of the *Vedānta-paribhāṣā* is to be accepted, then the Śāṅkarite view also is very much like the Rāmānuja view on this point; for both Dharmarājādhvarindra and Rāmakṛṣṇa agree in defining *pramāṇa* as the instrument of right knowledge. In the case of visual perception or the like the visual or the other sense organs are regarded as *pramāṇa*; and the sense-contact is regarded as the operation of this instrument.

The difference between the Nyāya view and the Rāmānuja view consists in this, that, while the Nyāya gives equal importance to all members of the collocation, the Rāmānuja view distinguishes that only as the instrumental cause which is directly associated with the active operation (*vyāpāra*). Even the Śāṅkarites agree with such a productive view of knowledge; for, though they believe consciousness to be eternal and unproduced, yet they also believe the states of consciousness (*vyṛtti-jñāna*) to be capable of being produced. Both the Rāmānuja and the Śāṅkara beliefs accept the productive view of knowledge in common with the Nyāya view, because with both of them there is the objective world standing outside the subject, and perceptual knowledge is produced by the sense-organs when they are in operative contact with the external objects. A distinction, however, is made in the Rāmānuja school between *kāraṇa* (cause) and *kaṛaṇa* (important instrument), and that cause which is directly and intimately associated with certain operations leading to the production of the effect is called a *kaṛaṇa*². It is for this reason that, though the Rāmānuja view may agree regarding the *sāmagrī*, or collocation as causes, in some sense it regards only the sense-organ as the chief instrument; the others are accessories or otherwise helpful to production.

There are Buddhists also who believe that it is the joint collocation of mental and extra-mental factors of the preceding moment which produce knowledge and external events of the later moment; but they consider the mental factors to be directly producing knowledge, whereas the extra-mental or external objects are mere accessories or exciting agents. Knowledge on this view is determined

¹ *bodhā-bodha-svabhāva sāmagrī pramāṇam*. Nyāya-mañjarī, p. 15.

² *tat-kāraṇānām madhye yad atīṣayena kāryotpādayakam tat kaṛaṇam*. Rāmānuja-siddhānta-saṃgraha. Govt. Oriental MS. No. 4988.

a priori from within, though the influence of the external objects is not denied. With reference to the operation of causality in the external world, they believe that, though the mental elements of the present moment influence them as accessories, immediate causal operation is to be sought among the external objects themselves. The mental and extra-mental elements of the preceding moment jointly determine every phenomenon of the later moment in the world, whether mental or physical; but in the determination of the occurrence of knowledge, the mental factors predominate, and the external factors are accessories. In the determination of external phenomena mental elements are accessories and the external causes are immediate instruments. Thus, in the production of knowledge, though the specific external objects may be regarded as accessory causes, their direct and immediate determinants are mental elements¹.

The idealistic Buddhists, the *viññāna-vādins*, who do not distinguish between ideas and their objects, consider that it is the formless ideas that assume different forms as "blue," "red," etc.; for they do not believe in any external objects other than these ideas, and so it is these ideas in diverse forms and not the sense-organs or other collocations which are called *pramāṇas*. No distinction is here made between *pramāṇa* and *pramāṇa-phala* or the result of the process of *pramāṇa*². They, however, fail to explain the difference that exists between the awareness and its object.

The *Mīmāṃsaka* school of Kumārila thinks that, following the soul-sense-mind-object contact, there is a process or an act (*jñāna-vyāpāra*) which, though not directly perceived, has to be accepted as an operation which immediately leads to the manifestation of objects of knowledge (*artha-dṛṣṭatā* or *viśaya-prakāśatā*). It is this unperceived, but logically inferred, act of knowledge or *jñāna-*

¹ *jñāna-janmani jñānam upādāna-kāraṇam arthaḥ sahakāri-kāraṇam artha-janmani ca artha upādāna-kāraṇam jñānam sahakāri-kāraṇam. Nyāya-mañjarī, p. 15.*

The objection against this view as raised by Jayanta is this, that, if both mental and physical entities and events are determined by the joint operation of mental-physical entities of the preceding moments, we ask what determines the fact that one is mental and the other physical, that one is perceiver and the other perceived.

² *nirākārasya bodha-rūpasya nīla-pītādy-aneke-viśaya-sādhāranatvād jana-katvasya ca cakṣur-ādāv api bhāvenā'tiprasaṅgāt tad-ākāratva-kṛtam eva jñāna-karma-niyamam avagacchantāḥ sākāra-viññānam pramāṇam... arthas tu sākāra-jñāna-vādinō na samasty eva. Ibid. p. 16.*

vyāpāra that is called *pramāṇa*¹. Jayanta, of course, would not tolerate such an unperceived operation or act of knowledge; for, according to Nyāya, the only kind of action that is accepted is the molecular motion or vibration (*parispanda* or *calana*) produced by a collocation of causes (*kāraka-cakra*)².

The Jains, however, repudiate the idea of the combined causality of the collocation, or of any particular individual cause such as any sense-organ, or any kind of sense-contact with reference to sense-knowledge, or of any other kind of knowledge. Thus Prabhācandra contends in his *Prameya-kamala-mūrtanḍa* that none of the so-called individual causes or collocations of causes can lead to the production of knowledge. For knowledge is wholly independent and self-determined in leading us to our desired objects or keeping us away from undesirable objects, and in no sense can we attribute it to the causal operation of the sense-organs or collocations of sense-organs and other entities. Thus knowledge (*jñāna*) should itself be regarded as *pramāṇa*, leading us to our desired objects³.

The whole point in these divergent views regarding *pramāṇas* consists in the determination of the nature of the relation of the sense-organs, the objects and other accessory circumstances to the rise of knowledge. As we have seen, knowledge is in the Rāmānuja view regarded as the product of the operation of diverse causal entities, among which in the case of sense-perception the sense-organs play the most important, direct and immediate part. Both the Jains and the idealistic Buddhists (though they have important and most radical differences among themselves) agree in holding the view of self-determination of knowledge independent of the sense-organs or the operation of objective entities which become the objects of knowledge and are revealed by it.

Veṅkaṭanātha's treatment of Doubt.

Veṅkaṭanātha defines doubt as the appearance of two or more alternatives (which are in themselves incompatible) owing to the non-perception of their specific contradictory qualities and the perception of some general characteristics common to them both; e.g. when a tall thing only is seen, which may be either a man or a stump, both of which it could not be, they being entirely different from one another. So the two alternatives are not to be entirely different, and from what is seen of the object it cannot be known that it must be the one and not the other, and this causes the doubt. Veṅkaṭanātha tries to justify this analysis of doubt by referring to other earlier authorities who regarded doubt as an oscillating apprehension in which the mind goes from one alternative to another (*dolā-vegavad atra sphuraṇa-kramah*), since it would be contradictory that the same object should be two different things at the same time. The author of the *Ātma-siddhi* has therefore described it as the loose contact of the mind with two or more things in quick succession (*bahubhir-yugapad a-dṛḍha-saṃyogah*). Doubt may arise either from the apprehension of common characteristics—such as from tallness, whether the object perceived be a tree-stump or a man—or from not having been able to decide between the relative strength of the various opposite and different possibilities suggested by what is perceived or otherwise known (*a-grhyamāna-bala-tāratamya-viruddhā-neka-jñāpako-pasthāpanam iha-vipratipattiḥ*). So, whenever there are two or more possibilities, none of which can be ruled out without further verification, there is doubt¹.

¹ The Nyāya analysis of doubt, as found in *Vātsyāyana's bhāṣya*, 1. 11. 23, is as follows: When the common characteristics of two possible things are noticed, but not the specific quality which would decide for the one or the other, the anguish of the mind in determining or deciding in favour of the one or the other is called doubt. Doubt may also arise from conflicting opinions (*vipratipatteḥ*), e.g., some say that there is a soul, while others hold that there is no soul. Doubt may also arise from the perception of determining qualities (production through division, *vibhāgaśatva*) which a thing (e.g. sound) has in common with other things (e.g. substance, attributes, and actions). Doubt may arise from perception of things which may be illusorily perceived even when non-existent (e.g. water in mirage), out of a desire for certainty and also from a non-perception of things (which may yet be there, though non-evident), out of a desire to discover some traits by which one could be certain whether the thing was there or not. The special contribution of Veṅkaṭanātha consists in giving a general analysis of doubt as a state of the mind instead of the specification of the five specific forms of doubt. Veṅkaṭanātha points out that doubt need not be of five kinds only but

Thus, doubt arises between a true and a false perception as when I perceive a face in the mirror, but do not know whether it is a real face or not until it is decided by an attempt to feel it by touch. So, between valid and invalid inference, when I judge from smoke that the hill is on fire, and yet through not perceiving any light doubt that it is on fire; between opposition of scriptural texts, “*jīva* has been said to be different from Brahman and to be one with it,” whether then the *jīva* is different from Brahman or one with it; between conflicting authorities (e.g. the *Vaiśeṣika* philosophers and the Upaniṣadic doctrines) such as “are the senses material or are they the products of the ego?” Between perception and inference (e.g. in the case of the illusory perception of yellow conch-shell, the perceiving of it as yellow and the inferring that it could not be yellow because it is a conch-shell and hence the doubt, whether the conch-shell is white or yellow, and so forth).

In referring to the view of Varadanārāyaṇa in his *Prajñā-paritrāṇa*, Veṅkaṭanātha says that the threefold division of doubt that he made, due to perception of common characteristics, apprehension of different alternatives, and the opposition of scholars and authorities, is in imitation of the Nyāya ways of looking at doubt¹, for the last two forms were essentially the same. Veṅkaṭanātha further refutes the Nyāya view of doubt in which Vātsyāyana, in explaining *Nyāya-sūtra*, 1. 11. 23, says that there can be doubt even from special distinguishing qualities. Thus, earth has smell as a distinctive characteristic which is not possessed either by eternal substances, such as self, or by non-eternal substances, such as water, etc.; and there can naturally be a doubt whether earth, being different from eternal substances, is non-eternal, or whether, being different from non-eternal substances, it is eternal. Veṅkaṭanātha points out that here doubt does not take place owing to the fact that earth possesses this distinguishing quality. It is simply because the possession of smell is quite irrelevant to the determination of eternity or non-eternity, as it is shared by both eternal and non-

can be of many kinds which, however, all agree in this, that in all states of doubt there is an oscillation of the mind from one alternative to another, due to the indetermination of the relative strength of the different possible alternatives on account of the perception of merely certain common characteristics without their specific determining and decisive features.

¹

*sādhāraṇā-kṛter dṛṣṭyā'nekā-kāra-grahāt tathā
vipāścitiṃ vivādāc ca tridhā saṁśaya īsyate.*

Prajñā-paritrāṇa, quoted in *Nyāya-pariśuddhi*, p. 62.

eternal substances. Doubt would continue until a distinguishing characteristic, such as is possessed by eternal or non-eternal substances alone, is found in earth (*vyatireki-nirūpaṇa-vilambāt*), on the strength of which it could be determined whether it is eternal or not. Venkaṭanātha, in various illustrations, shows that doubt consists essentially of an oscillation of the mind, due to indecision between two possible alternatives. He would admit even such inquiries as "What may be the name of this tree?" as doubt, and not mere indecision or want of knowledge (*an-adhyavasāya*). Such inquiries can rightly be admitted as doubts; for they involve doubt regarding two or more alternative names, which are vaguely wavering in the mind and which are followed by a desire to settle or decide in favour of one or the other. So here also there is a want of settlement between two alternatives, due to a failure to find the determining factor (*avacchedakā-darśanāt an-avacchinna-koṭi-viśeṣaḥ*). Such a state of oscillation might naturally end in a mental reckoning in favour of or against the possible or probable alternatives, which is called *ūha* (but which must be distinguished from *ūha* as *tarka* in connection with inference), which leads to the resolution of doubt into probability¹. However, Anantārya, a later writer of the Rāmānuja school, further described doubt as being a state of mind in which one perceived only that something lay before him, but did not notice any of its specific features, qualities or characters (*puro-vṛtti-mātram a-grhīta-viśeṣaṇam anubhūyate*). Only the two alternatives (e.g. "a tree stump or a man"—*sthāṇu-puruṣau*) are remembered. According to the *Sarvārtha-siddhi*, the imperfect observation of something before us rouses its corresponding subconscious impression (*saṃskāra*), which, in its turn, rouses the subconscious impressions leading to the simultaneous revival in one sweep of memory of the two possible alternatives of which neither could be decided upon². The point disputed in this connection is between a minority party of interpreters, who think that the perception of something in front of us rouses an impression which in its turn rouses two different subconscious impressions leading to

¹ *ūhas tu prāyaḥ puruṣeṇā'nena bhavitavyam ity-ādi-rūpa eka-koṭi-saha-carita-bhūyo-dharma-darśanād anudbhūtā-nya-koṭikaḥ sa eva.*

one memory joining up the two alternative entities (e.g. tree-stump and man), and a majority party, who think that the perception of something in front of us leads directly to the memory of two different alternatives, which is interpreted as doubt. The former view, by linking up the two memories in one act of knowledge, supposes the oscillating movement to be one act of judgment and so holds the opinion that in doubt also there is the false substitution of one judgment for another, which is in accordance with the *anyathā-khyāti* (illegitimate substitution of judgments) theory of illusion. The latter view, which holds that there are two separate memories of the two possible alternatives, interprets Rāmānuja as an upholder of realism of knowledge (*jñāna-yāthārthya-vāda*), or the view that whatever is known or perceived has an objective and a real basis.

Error and Doubt according to Veṅkaṭanātha.

Error is defined by Veṅkaṭanātha as occurring when one or more incompatible characters are predicted of an entity without any notion of their incompatibility or contradictions. It is generally due to a wrong psychological tendency in association with other vicious perceptual data, as in the case of the perception of the conch-shell as yellow, the perception of one big moon as small and two, the relativistic (*anekānta*) assertion of contradictory predicates with reference to one thing or the predication of both reality and unreality in regard to world-appearance by the Śāṅkarites¹. Doubt, on the other hand, occurs when a perceived characteristic is not incompatible in predication with regard to two or more entities which are felt to be exclusive and opposed to one another, and which therefore cannot both at the same time be affirmed. This state is therefore described by some as an oscillatory movement of the mind from one pole to another. Decision results from a uni-polar and firm direction of mind to one object; doubt results from a multipolar oscillation, as has been set forth in the *Ātma-siddhi*. Absence of firmness of the direction of the mind is due to the natural constitution of mind, which has necessarily to reject a particular alternative before it can settle down in its opposite. Bhaṭṭārakaguru repeats the same idea in his *Tattva-ratnākara*, when he defines

¹ See *Nyāya-parisuddhi*, pp. 54-5.

doubt as the association of two contrary or contradictory qualities with any particular entity. Doubt, according to Veṅkaṭanātha, is of two kinds: from *samāna-dharma* and from *vipratipatti*, i.e. when different indications point to two or more conclusions and the relative strength of these indications cannot be conclusively decided. The condition of doubt in the first case is the uncertainty caused by the fact that two contrary possibilities, the relative strength of which cannot be determined on account of certain similar traits (*samāna-dharma-vipratipattibhyām*), claim affirmation. Thus, when we see something tall before us, two possibilities may arise—the tall object may be a man or a post, since both these are tall. When the relative strength of the different sources of knowledge, e.g. perception, illusion, inference, testimony, etc., leading to different conclusions (*a-grhyamāṇa-bala-tāratamya*) cannot be determined, both claim affirmation with regard to the same object or conclusion, and doubt arises as to which is to be accepted. Thus, when one sees in the mirror the image of one's face, which is not corroborated by touch, there arises the doubt as to the reality of the reflection. Again, there may be a doubt arising from two possible inferences regarding the existence of fire in the hill from smoke, and its possible non-existence from the existence of light. Again, as there are texts in the Upaniṣads some of which are monistic and others dualistic, a doubt may arise as to which is the right view of the Upaniṣads, and so forth. Doubt may also arise from two opposing contentions, such as those of the atomists and the Upaniṣadists regarding the question as to whether the senses have sprung from matter or from the ego. It may also arise regarding the opposing assertions of two ordinary individuals; between perception (e.g. illusory perception of conch-shell as yellow) and inference which indicates that the conch-shell cannot be yellow; between perception of the self as an embodied being and the scriptural testimony concerning the self as atomic.

Doubt may also arise between inferential knowledge of the world as atomic and the scriptural knowledge of the world as having Brahman as its substance. The Naiyāyikas, however, think that doubt can also arise regarding the two different contentions of opposing parties¹. Veṅkaṭanātha points out that both the *Nyāya*-

¹ *samānā-neka-dharmo-pāpatter vipratipatter upalabdhya-anupalabdhya-avyavasthātāś ca viśeṣā-pekṣo vimarśaḥ saṁśayaḥ. Nyāya-sūtra*, I. 1. 23. The in-

sūtra and the *Prajñā-paritrāṇa* are wrong in giving the perception of similar traits (*samāna-dharma*) and of special characteristics (*aneka-dharma*) as two independent reasons for the origin of doubt¹. The explanation given with regard to the doubt arising from a special characteristic such as odorousness is that, as this characteristic is not possessed by non-eternal substances, one may be led to think of including earth under eternal substances; and, again, as this characteristic is not to be found in any of the eternal substances, one may be led to include earth under non-eternal substances. But the doubt here is due not to the perception of a special characteristic, but to the delay of the mind in determining the ultimate differentia (*vyatireki-nirupana-vilambāt*) which may justify one in including it under either of them. Odorousness as such is not an indispensable condition of either eternity, or non-eternity; so naturally an inquiry arises regarding such common features in eternal or non-eternal substances as may be possessed by the odorous earth and may lead to a classification. The doubt here is due not to the fact that odorousness is a special characteristic of earth, but to the fact that earth possesses such characteristics as are possessed by eternal things on the one hand and by non-eternal things on the other. Even when it is urged that the odorous character distinguishes earth from eternal and non-eternal

interpretation given by Uddyotakara is that in all cases of doubt there are three factors, viz. knowledge of the (1) common or (2) special features, (3) opposite assertions and contending persons associated with a non-determinate state of mind due to the want of definite realization of any of the contrary possibilities, and a hankering to know the differentia. Uddyotakara thinks that doubt can arise not only from a conflict of knowledge, but also from a conflict of opinions of contending persons, *vipratipattiḥ* being interpreted by him as *vādi-vipratipattiḥ*. This view is also held by the *Prajñā-paritrāṇa* by Varadaviṣṇu Miśra, as is evident from the following śloka:

*sādhāraṇā-kṛter dṛṣṭyā-nekā-kāra-grahāt tathā,
vipāścītām vivādāc ca tridhā saṁśaya īsyate.*

Prajñā-paritrāṇa, quoted in the *Nyāya-parisuddhi*, p. 61.

This view is criticized by Veṅkaṭanātha as a blind acceptance of the *Nyāya* view.

¹ As an example of doubt arising from perception of similar traits, Vātsyāyana gives the example of man and post, in which the common traits (viz. height, etc.) are visible, but the differentia remains unnoticed. The example given by him of doubt arising from perception of special characteristics is that odorousness, the special character of earth, is not characteristic of *dravya* (substance), *karma* (action), and *guṇa* (quality), and this may rouse a legitimate doubt as to whether earth is to be classed as substance, quality, or action. Similarly, from the special characteristic of odorousness of earth a doubt may arise as to whether earth is eternal or non-eternal, since no other eternal or non-eternal thing has this characteristic.

substances and that this is the cause of doubt, it may be pointed out that doubt is due not to this distinguishing characteristic, but to the fact that earth possesses qualities common to both eternal and non-eternal substances. There are some who think that doubt through *vipratipatti* (i.e. through uncertainty arising from reasoned assertions of contending persons) may also be regarded as a case of doubt from *samāna-dharma* (i.e. perception of similar traits), because the opposed assertions have this similarity amongst themselves that they are all held as true by the respective contending persons. Venkaṭanātha, however, does not agree with this. He holds that doubt here does not arise merely on the strength of the fact that the opposed assertions are held as true by the contending persons, but because of our remembering the diverse reasons in support of such assertions when the relative strength of such reasons or possibilities of validity cannot be definitely ascertained. Thus, *vipratipatti* has to be accepted as an independent source of doubt. Doubt arises generally between two possible alternatives; but there may be cases in which two doubts merge together and appear as one complex doubt. Thus, when it is known that one or other of two persons is a thief, but not which of them, there may be a doubt—"this man or that man is a thief". In such a case there are two doubts: "this man may or may not be a thief" and "that man may or may not be a thief," and these merge together to form the complex doubt (*saṁśaya-dvaya-samāhāra*). The need of admitting a complex doubt may, however, vanish, if it is interpreted as a case where the quality of being a thief is doubted between two individuals. Doubt, however, involves in it also an assertory aspect, in so far as it implies that, if one of the alternatives is ruled out, the other must be affirmed. But, since it cannot be ascertained which of them is ruled out, there arises the doubt. There is, however, no opposition between doubt and the assertory attitude; for all doubts imply that the doubtful property must belong to one or other of the alternatives¹.

But there may be cases in which the two alternatives may be such that the doubtful property is not in reality affirmable of either of them, and this is different from those cases in which the alternatives are such that, if the doubtful property is negated of the one,

¹ *sarvasmim api saṁśaye dharmy-aṁśādaḥ nirṇayasya dustyajatvāt. Nyāya-parisuddhi*, p. 66.

it is in reality affirmable of the other. From these two points of view we have further twofold divisions of doubt. Thus, when a volume of smoke arising from a heap of grass on fire is subject of doubt as being either an elephant or a hill, in this case negation of one alternative does not imply the actual affirmation of the other. Uncertainty (*an-adhyavasāya*, e.g. "what may be the name of this tree?") cannot be regarded as an independent state of mind; for this also may be regarded as a case of doubt in which there is uncertainty between a number of possible alternative names with which the tree may be associated. It seems, however, that Vēṅkaṭanātha has not been able to repudiate satisfactorily the view of those who regard uncertainty or inquiry as a separate state of mind. *Ūha* (in the sense of probability such as "that must be a man") does not involve any oscillation of the mind between two poles, but sets forth an attitude of mind in which the possibility of one side, being far stronger, renders that alternative an object of the most probable affirmation and so cannot be classed as doubt. Where such a probable affirmation is brought about through perception, it is included under perception, and when through inference it is included under inference.

Vēṅkaṭanātha, following Rāmānuja, admits only three *pramāṇas*, viz. perception, inference, and scriptural testimony. Rāmānuja, however, in his commentary on the *Gītā*¹, includes intuitive yogic knowledge as a separate source of knowledge; but Vēṅkaṭanātha holds that intuitive yogic knowledge should be included under perception, and its separate inclusion is due to the fact that the yogic perception reveals a special aspect of perception². Correct memory is to be regarded as a valid *pramāṇa*. It should not be classed as an independent source of knowledge, but is to be included within the *pramāṇa* which is responsible for memory (e.g. perception)³.

Meghanādāri, in discussing the claim of memory to be regarded as *pramāṇa*, says that memory satisfies the indispensable condition of *pramāṇa* that it must not depend upon anything else for its self-manifestation; for memory, being spontaneous, does not depend

¹ *jñānam indriya-līṅgā-gama-yogajo vastu-niścayaḥ. Gītā-bhāṣya*, 15. 15.

² Viṣṇucitta also, in his *Prameya-saṃgraha*, holds that Rāmānuja admitted only three *pramāṇas*.

³ This view has been supported by Bhaṭṭārakaguru in his *Tattva-ratnākara*. Varadaviṣṇu Miśra, in his *Prajñā-paritrāṇa*, includes *divya* (i.e. intuitive knowledge through the grace of God) and *svayam-siddha* (natural omniscience) as separate sources of knowledge, but they are also but modes of perception.

upon anything else for its manifestation. It is true, no doubt, that the revelation of objects in memory depends upon the fact of their having been perceived before, but the functioning of memory is undoubtedly spontaneous¹. But it may be argued that, since the objects revealed in memory can never be manifested if they were not perceived before, memory, though partly valid in so far as its own functioning is concerned, is also invalid so far as the revelation of the object is concerned, since this depends on previous perception and cannot, therefore, be regarded as spontaneous manifestation, which is the indispensable condition of a *pramāṇa*. To this Meghanādāri's reply is that the criticism is not sound; for the spontaneous manifestation is also at the same time revelation of the object remembered, and hence the revelation of the remembered object does not depend on any other condition. Memory, therefore, is valid both in its own manifestation and in the revelation of its object. It may be pointed out in this connection that the revelation of knowledge necessarily implies the revelation of the object also. The revelation of the object should not, therefore, be regarded as depending on any other condition, it being spontaneously given with the revelations of knowledge².

In many other systems of philosophy the definition of a *pramāṇa* involves the condition that the object apprehended should be such that it was not known before (*an-adhigatā-rtha-gaṇṭṛ*), since in these systems memory is excluded from the status of *pramāṇa*. Meghanādāri objects to this. He says that the condition imposed does not state clearly whether the apprehension of the object which is intended to be ruled out should be of the perceiver or of other persons. In the case of permanent objects such as the self or the sky these have all been perceived by many persons, and yet the validity of the perception or inference of the present knower is not denied³. It also cannot be said that the object of valid perception or inference should be such that it has not been perceived before by the present perceiver; for when a person seeks to find out an object which he knew before and perceives it, such a perception would be invalid; and similarly, when an object perceived by the eye is re-perceived

¹ *sva-sphuraṇe pramāṇā-ntara-sā-peksatvā-bhāvāt viśaya-sphuraṇa eva hi smṛteḥ pūrvā-nubhūta-bhāvā-peksā*. Meghanādāri's *Naya-dyu-maṇi*.

² *jñāna-sphūrtivād viśayasāpi sphūrtiḥ*. *Ibid*.

³ *sthāyitvenā-bhimatā-kāśā-deḥ pūrvair avagatatva-sambhavāt tad-viśayā-numānāder aprāmānya-prasaṅgāt*. *Ibid*.

by touch, the tactile perception will be invalid¹. The reply is often given (e.g. Dharmarājādhvarindra in his *Vedānta-pari-bhāṣā*) that, when an object known before is again perceived, it has a new temporal character, and so the object may be regarded as new and thus its later perception may be regarded as valid. Meghanādārī's criticism against this is that, if the new temporal character can constitute the newness of the object, then all objects will be new, including memory. Hence there will be nothing which would be ruled out by the condition that the object must be new (*an-adhigatārtha-gaṇṭr*).

There are others who hold that the validity of a *pramāṇa* of any particular sense-knowledge, or of inference, is conditioned by the fact of its being attested by the evidence of other senses, as in the case where a visual perception is corroborated by the tactile. These philosophers regard corroboration (*a-viśaṃvāditva*) as an indispensable condition of the validity of *pramāṇa*. Meghanādārī criticizes this by pointing out that on such a view the validity of each *pramāṇa* would have to depend upon others, and thus there would be a vicious circle². Moreover, the determinate knowledge of the Buddhists, which is corroborative, would, under the supposition, have to be regarded as a *pramāṇa*.

Unlike Veṅkaṭanātha, Meghanādārī holds that Rāmānuja admitted five *pramāṇas*, viz. perception, inference, analogy, scripture and implication.

Perception is defined by Veṅkaṭanātha as direct intuitive knowledge (*sākṣātkāri-pramā*). This may be regarded either as a special class of cognition (*jāti-rūpa*) or knowledge under special conditions (*upādhi-rūpa*). It is indefinable in its own nature, which can only be felt by special self-consciousness as perception (*jñāna-svabhāva-viśeṣaḥ svātma-śākṣikaḥ*). It may be negatively defined as knowledge which is not generated by other cognitions, as in the case of inference or verbal knowledge and memory³. Varadaviṣṇu also, in his *Māna-yāthātmya-nirṇaya*, has defined perception as clear and

¹ *sva-viditasyā'rthasya sattvā-nveṣaṇe pratyakṣā-der a-prāmāṇya-prasaṅgāc cakṣuṣā dṛṣṭa-viśaye dravye sparsanasyā'prāmāṇya-prasaṅgāt*. Meghanādārī's *Nāya-dyu-maṇi*.

² *pramāṇā-ntarasyā-pyavisamvā'dā-rthaṃ pramāṇā-ntarā-nveṣaṇenā-navasthā*. *Ibid*.

³ *jñāna-karaṇaja-jñāna-smṛti-rahitā matir aparokṣam*. Veṅkaṭanātha's *Nyāya-parisuddhi*, pp. 70-71. This view has also been supported in the *Prameya-saṃgraha* and *Tattva-ratnākara*.

vivid impression (*pramāyā āparokṣyaṃ nāma viśadā-vabhāsatvam*). Clearness and vividness with him mean the illumination of the special and unique features of the object, as different from the appearance of generic features as in the case of inference or verbal knowledge.

Meghanādāri also defines perception as direct knowledge of objects (*artha-paricchedaka-sākṣāj-jñānam*). The directness (*sākṣāttva*) consists in the fact that the production of this knowledge does not depend on any other *pramāṇas*. It is, no doubt, true that sense-perception depends upon the functioning of the senses, but this is no objection; for the senses are common causes, which are operative as means in the perception of the *hetu*, even in inference¹. The directness of perceptual knowledge, as distinguished from inference, is evident from the fact that the latter is produced through the mediacy of other cognitions². Meghanādāri criticizes the definition of perception as vivid impression (*viśadā-vabhāsa*), as given by Varadaviṣṇu Miśra, on the ground that vividness is a relative term, and even in inference there are different stages of vividness. Clearness of awareness, "*dhī-sphuṭatā*," also cannot be regarded as defining perception; for all awarenesses are clear so far as they are known. The definition of perception as sense-knowledge is also open to criticism; for in that case it would only apply to indeterminate (*nirvikalpa*) knowledge, in which certain specific characters of the object are imprinted through the functioning of the senses, but which it did not carry further for the production of determinate knowledge (*savikalpa*).

Both Veṅkaṭanātha and Meghanādāri hold that the pure objective substance without any character or universals is never apprehended by sense-perception. Following Rāmānuja, they hold that objects are always apprehended with certain characters at the very first instance when they are grasped by the visual sense; otherwise it is difficult to explain how in the later instance they are apprehended in diverse characters. If they were not apprehended in the first instance, they could not have been known in the later

¹ *indriyāṇām sattā-kāraṇatvena kāraṇatvā-bhāvāt. Naya-dyu-maṇi.*

² The word *sākṣāttva* is explained by some as *svatūpa-dhī* (its own awareness). But such an explanation is exposed to criticism; for even inferential knowledge reveals some features of the object. If *svatūpa* is taken to mean "nothing but the nature of the object," then the definition would not be applicable even to perception; for perception reveals not merely the object, but also its relation to other objects, and thereby transcends the limit of the object merely as it is.

instance in their fullness in a related manner. So it has to be admitted that they were all grasped in the first instance, but could not manifest themselves in their fullness in the short span of the first moment. In the *Īedārtha-saṃgraha* of Rāmānuja the determinateness of all perceptions has been illustrated by the case of their apprehension of universals at the first moment of perception. This has led some interpreters to think that the apprehension of determinate characters in the first moment of perception applies only to the universals on account of the fact that it involves the assimilation of many individuals in one sweep which must be started at the very first moment in order that it may be manifested in its full form in the second moment. But Meghanādāri holds that the apprehension of other characters also, such as colours, etc., has specific differences when the object is near or at a distance. This involves the grasping of diverse shades of colour in one colour-perception, and thus they also are apprehended at the first moment of perception, on the same grounds which led to the affirmation of the apprehension of universals at the first moment of perception.

It is objected that the concept of determinateness or relatedness (*viśiṣṭatva*) of all knowledge is incomprehensible and indefinable. What exist are the two relata and the relation. The relatedness cannot be identical with them or different; for we do not know "relatedness" as an entity different from the two relata and the relation. Also relatedness cannot be defined either as the manifestation of two entities in one cognition or the appearance of two cognitions without any break or interval; for in a concrete specific illustration, as in such awareness as "jug-and-pot," though two different cognitions have appeared without any break, they have not lost their unique separateness, as may well be judged by the duality implied in such awareness. Thus, there is no way in which the concept of determinateness, as distinguished from that of the relata and the relation, can be arrived at.

To this Meghanādāri's reply is that, in such a sentence as "bring a white cow," the verb refers to a qualified being, the "white cow," and not to the separate elements, "the whiteness" and "the cow." Both the relation and the relata are involved in the determinate conception, the "white cow." In contactual perception, such as "a man with a stick," the contactual relation is directly perceived. The conception of a determinate being is not thus dif-

ferent from the relation and the relata, but implies them. The relations and the relata thus jointly yield the conception of a determinate being¹. The unifying trait that constitutes determinateness is not an extraneous entity, but is involved in the fact that all entities in this world await one another for their self-manifestation through relations, and it is this mutual awaitedness that constitutes their bond of unity, through which they appear connectedly in a determinate conception². It is this mutual awaitedness of entities that contributes to their apprehension, as connected in experience, which is simultaneous with it, there being no mediation or arresting of thought of any kind between the two³. The fact that all our perceptions, thoughts and ideas always appear as related and connected is realized in universal experience. All linguistic expressions always manifest the purport of the speech in a connected and related form. Had it not been so, communication of ideas through our speech would have been impossible.

Nirvikalpa knowledge is a cognition in which only some fundamental characters of the object are noted, while the details of many other characters remain unelaborated⁴. *Savikalpa* knowledge, on the other hand, is a cognition of a number of qualities and characters of the object, together with those of its distinctive features by which its differentiation from other objects is clearly affirmed⁵.

On the analogy of visual perception, the perception of other senses may be explained. The relation of *samavāya* admitted by the Naiyāyikas is discarded by the Rāmānuja view on account of the difficulty of defining it or admitting it as a separate category. Various relations, such as container and contained, contact and the like, are revealed in experience in accordance with the different directions in which things await one another to be related; and

¹ *na ca pratyekaṃ viśiṣṭatā-pātaḥ militānām eva viśiṣṭatvāt. Naya-dyu-maṇi.*

³ *viśiṣṭatva-dhī-viśayatve ca teṣāṃ sāpekṣatvaṃ ca yaugapadyāt tatra virāmā-pratīteḥ sāpekṣatā siddhā ca. Ibid.*

⁴ *nirvikalpakaṃ ca ghaṭā-der anullekhītā-nūrtti-dharma-ghaṭatvā-di-katipaya-viśeṣaṇa-viśiṣṭatayā-rthā-vacchedakaṃ jñānam. Ibid.*

⁵ *ullekhītā-nūrtty-ādi-dharmakā-neka-viśeṣaṇa-viśiṣṭatayā sākṣād-vastu-vya-vacchedakaṃ jñānam savikalpakam. Ibid.*

Veṅkaṭanātha however defines *savikalpa* and *nirvikalpa* knowledge as “*sa pratyavamarśa-pratyakṣam savikalpakam*” and “*tad-rahitam pratyakṣam nirvikalpakaṃ.*” *Nyāya-pariśuddhi*, p. 77.

these determine the nature of various relations which are perceived in sense-experience¹. Veṅkaṭanātha also points out that the very same collocations (*sāmagrī*) that manifest the awareness of substance and attribute also manifest the awareness of relations; for, if the relations were not grasped at the first moment of perception, they could not originate out of nothing at the later moment. The relatedness being a character of entities, the awareness of entities necessarily means the awareness of relations.

Perception in the light of elucidation by the later members of the Rāmānuja School.

Rāmānuja and his followers admitted only three kinds of *pramāṇas*: perception, inference and scriptural testimony. Knowledge, directly and immediately experienced, is perception (*sākṣāt-kāriṇī pramā pratyakṣam*). The special distinguishing feature of perception is that it is not knowledge mediated by other knowledge (*jñānā-karaṇaka-jñānatvam*). Perception is of three kinds: God's perception, perception of yogins, and perception of ordinary persons. This perception of yogins includes intuitive perception of the mind (*mānasa-pratyakṣa*) or perception of sages (*ārṣu-pratyakṣa*), and the *yogi-pratyakṣa* is due to the special enlightenment of *yoga* practice. Ordinary perception is said to be of two kinds, *savikalpa*, or determinate, and *nirvikalpa*, or indeterminate. *Savikalpa pratyakṣa* is the determinate perception which involves a spatial and temporal reference to past time and different places where the object was experienced before. Thus, when we see a jug, we think of it as having been seen at other times and in other places, and it is this reference of the jug to other times and other places, and the

¹ *atas tat-smbandhād vastuta upādrito vā'dhārā-dheya-bhāva-vastu-antaram eva. evaṃ ca kalpanā-lāghavam. sa ca guṇā-di-bhedād anekah na ca tat-sambandha-smbadhiṇos sambandhā-ntara-kalpanāyām anavasthā. anyo-nya-sāpekṣa-svarūpatva-rūpo-pādhi-vyatirekenā'rthā-ntarā-bhāvāt. Naya-dyu-maṇi MS.*

The *nirvikalpaka* is the knowledge involving the notion of certain positive features and rousing the subconscious memory resulting in the first moment of perception through the direct operation of the sense. *Savikalpaka* knowledge involves the noting of differences consequent upon the operation of memory. They are thus defined by Viṣṇucitta:

saṃskāro-dbodha-sahakṛte-ndriya-janyam jñānam savikalpakam iti ekajātiyeṣu prathama-piṇḍa-grahanam dvitīyā-di-piṇḍa-grahaneṣu prathamā-kṣa-sannipātajam jñānam nirvikalpakam iti.

And in the *Tattva-ratnākara*:

*viśeṣaṇānām svā-yoga-vyāvṛttir avikalpake
savikalpe'nya-yogasya vyāvṛttiḥ samjñānā tathā.*

Nyāya-parisuddhi, p. 82.

associations connected with it as involved in such reference, that constitutes the determinate character of such perceptions, by virtue of which they are called *savikalpa*¹. A perception, however, which reveals the specific character of its object, say a jug as a jug, without involving any direct references to its past associations, is called indeterminate perception or *nirvikalpa jñāna*². This definition of *nirvikalpa* perception distinguishes the Rāmānuja conception of *nirvikalpa* knowledge from the types formulated by many other systems of Indian philosophy.

It is now obvious that according to Rāmānuja philosophy both the *savikalpa* and the *nirvikalpa* knowledges are differentiated and qualified in their nature, referring to objects which are qualified in their nature (*ubhaya-vidham api etad viśiṣṭa-viśayam eva*)³. Veṅkaṭa says that there is no evidence whatsoever of the existence of indeterminate and unqualified knowledge, at even its first stage of appearance, as is held by the Naiyāyikas; for our experience is entirely against them, and even the knowledge of infants, dumb persons, and the lower animals, though it is devoid of concepts and names, is somehow determinate since the objects stand as signs of things liked or disliked, things which they desire, or of which they are afraid⁴. For if these so-called indeterminate perceptions of these animals, etc., were really absolutely devoid of qualitative colouring, how could they indicate the suitable attractive or repulsive behaviour? The Naiyāyikas urge that all attribute-substance-complex or determinate knowledge (*viśiṣṭa-jñāna*) must first be preceded by the knowledge of the simpler element of the attribute; but this is true only to a limited extent, as in the case of acquired perception. I see a piece of sandal to be fragrant; fragrance cannot be seen, but the sight of the colour, etc., of a piece of sandal and its recognition as such suggest and rouse the nasal impressions of fragrance, which is then directly associated with

¹ *tatrā'nuvṛtti-viśayakam jñānam savikalpakam anuvṛttiś ca saṁsthāna-rūpa-jāty-āder aneka-vyakti-vṛttiṭā, sā ca kālato deśataś ca bhavati. Rāmānuja-siddhānta-saṁgraha, MS. No. 4988.*

vision. Here there must first be the perception of the attributes of the sandal as perceived by the visual organ, as rousing sub-conscious impressions of fragrance associated with the nasal organ and giving rise to its memory, and finally associating it with the attributes perceived by the visual organ. But in the perception of attribute and substance there is no necessity of assuming such a succession of the elements constituting a complex; for the data which give rise to the perception of the attribute and those which give rise to the perception of substance are presented to the senses simultaneously and are identically the same (*eka-sāmagrī-vedya-viśeṣaṇeṣu tan-nirapekṣatvāt*)¹. The main point of this discussion consists in our consideration of the question whether relations are directly perceived or not. If relations are regarded as being the very nature of the things and attributes that are perceived (*svarūpa-sambandha*), then, of course, the relations must necessarily be perceived with the perceived things and attributes at the first moment of sight. If the relation of attributes to things be called an inherent inseparable relation (*samavāya*), then this, being an entity, may be admitted to be capable of being grasped by the eye; and, since it constitutes the essence of the linking of the attributes and the thing, the fact that it is grasped by the eye along with the thing and the attribute ought to convince us that the relatedness of attribute and thing is also grasped by the eye. For, if it is admitted that *samavāya* is grasped, then that itself makes it unexceptionable that the attribute and things are grasped, as the former qualifying the latter. Like the attribute and the thing, their relation as constituting their relatedness is also grasped by the senses (*dharmavād dharmīvac ca tat-sambandhasyā'py aindriyakatvā-viśeṣeṇa grahaṇa-sambhavāt*)². For, if the relation could not be grasped by the senses at the time of the perception of the thing and the object, it could not be grasped by any other way at any other time.

In the *saṁkalpa* perception, the internal impressions are roused in association with the visual and other senses, and they co-operate with the data supplied by the sense-organs in producing the inner act of analysis and synthesis, assimilation and differentiation, and

¹ *Nyāya-parīśuddhi*, p. 78: *surabhi-candanam so'yaṁ ghaṭa ity-ādi-jñāneṣu saurabhatā-mīse cakṣuṣaḥ sva-vijñāna-saṁskāra-jānyāyāḥ smṛter viśeṣaṇa-praty-āśattitayā apekṣane'pi cakṣur-mātra-janye ghaṭa-jñāne tad-apekṣāyā abhāvāt. Nyāya-sāra*, p. 78.

² *Ibid.* p. 79.

mutual comparison of similar concepts, as involved in the process of *savikalpa* perception. What distinguishes it from memory is the fact that memory is produced only by the rousing of the sub-conscious impressions of the mind, whereas *savikalpa* perception is produced by the subconscious impressions (*saṃskāra*) working in association with the sense-organs¹. Though the roused sub-conscious impressions co-operate with sense-impressions in *savikalpa* perception, yet the *savikalpa* can properly be described as genuine sense-perception.

It may be pointed out in this connection that difference is considered in this system not as a separate and independent category, but as apprehended only through the mutual reference to the two things between which difference is realized. It is such a mutual reference, in which the affirmation of one makes the affirmation of the other impossible, that constitutes the essence of "difference" (*bheda*)².

Veṅkaṭanātha strongly controverts the Śāṅkarite view of *nirvikalpa pratyakṣa* in the case where a perception, the materials of which are already there, is made on the strength of auditory sensation in the way of scriptural instructions. Thus, when each of ten persons was counting upon leaving himself out of consideration, and counting nine persons instead of ten, another observer from outside pointed out to the counting person that he himself was the tenth. The Śāṅkarites urge that the statement or affirmation "thou art the tenth" is a case of direct *nirvikalpa* perception. But Veṅkaṭanātha points out that, though the entity indicated by "thou" is directly perceived, the proposition itself cannot be directly perceived, but can only be cogitated as being heard; for, if whatever is heard can be perceived, then one can also perceive or be directly acquainted with the import of such propositions as "thou art virtuous"—*dharmavāms tvam*. So the mental realization of the import of any proposition does not mean direct acquaintance by perception. It is easy to see how this view controverts the Śāṅkarite position, which holds that the realization of the import of the proposition "thou art that"—*tat tvam asi*—constitutes direct ac-

quaintance with the identity of self and Brahman by perception (*pratyakṣa*)¹.

It has already been pointed out that *nirvikalpa* perception means a determinate knowledge which does not involve a reference to past associations of similar things (*anuvṛtti-aviśayaka-jñāna*), and *savikalpa* perception means a determinate knowledge which involves a reference to past association (*anuvṛtti-viśayaka*). This *anuvṛtti*, or reference to past association, does not mean a mere determinateness (e.g. the perception of a jug as endowed with the specific characteristics of a jug—*ghaṭatva-prakāraṇam ayam ghaṭaḥ*), but a conscious reference to other similar objects (e.g. jugs) experienced before. In *savikalpa* knowledge there is a direct perception by the visual organ of the determinate characters constituting a complex of the related qualities, the thing and the relatedness; but that does not mean the comprehension or realization of any universals or class concepts involving a reference to other similar concepts or things. Thus, the visual organs are operative equally in *savikalpa* and *nirvikalpa*, but in the former there is a conscious reference to other similar entities experienced before.

The universals or class concepts are not, however, to be regarded as a separate independent category, which is comprehended in *savikalpa* perception, but a reference or assimilation of similar characteristics. Thus, when we refer to two or more cows as possessing common characteristics, it is these common characteristics existing in all individual cows that justify us in calling all these animals cows. So, apart from these common characteristics which persist in all these individual animals, there is no other separate entity which may be called *jāti* or universal. The commonness (*anuvṛtti*) consists in similarity (*susadṛśatvam eva gotvā-dīnām anuvṛttih*)². Similarity is again defined as the special cause (*asādhāraṇa-kāraṇa*) which justifies our regarding two things as similar which exist separately in these things and are determined by each other. The application of a common name is but a short way of signifying the fact that two things are regarded as similar. This similarity is of two kinds: similarity of attributes (*dharma-sādṛśya*) as in substances, and similarity of essence (*svarūpa-sādṛśya*)

¹ *ata eva tat tvam-asy-ādi-śabdaḥ sva-viśaya-gocara-pratyakṣa-jñāna-janakah ... ity-ādy-anumānāni nirastāni. Nyāya-pravīṇaśūddhi, p. 89.*

² *ayam sāsānādīmān ayam api sāsānādīmān iti sāsānādir eva anuvṛtta-vyavahāra-viśayo dṛśyate. Rāmānuja-siddhānta-saṃgraha, MS. No. 4988.*

as in all other categories of qualities which are not substance (*a-dravya*)¹.

In perception two kinds of sense-contact are admitted: sense-contact with the object (*saṃyoga*) and sense-contact with the qualities associated with the object (*saṃyuktā-śraya*). Thus, the perception of a jug is by the former kind of contact, and the perception of its qualities is by the latter².

Venkaṭanātha's treatment of Inference.

Inference according to the Rāmānuja school is very much the same as inference according to the Naiyāyikas. Inference is the direct result of *parāmarśa*, or knowledge of the existence of reason (associated with the knowledge of its unblemished and full concomitance with the probandum) in the object denoted by the minor term³. Inference is a process by which, from a universal proposition which includes within it all the particular cases, we can make an affirmation regarding a particular case.⁴ Inference must therefore be always limited to those cases in which the general proposition has been enunciated on the basis of experience derived from sensible objects and not to the affirmation of ultra-sensual objects—a reason which precludes Rāmānuja and his followers from inferring the existence of Īśvara (God), who is admitted to be ultra-sensual (*atīndriya*) (*ata eva ca vāyam atyantā-tīndriya-vastv-anumānaṃ necchāmaḥ*)⁵.

As formulated by the traditional view of the school, the principle of concomitance (*vyāpti*) holds that what in the range of time or space is either equal or less than another is called the "per-vaded" (*vyāpya*) or the *hetu*, while that which in the range of time or space is either equal or greater than it, is called *vyāpaka* or the probandum⁶. But this view does not cover all cases of valid con-

¹ MSS. No. 4988.

² The sense-contact with remote objects can take place in the case of the visual and the auditory organs by means of a mysterious process called *vytti*. It is supposed that these senses are lengthened as it were (*āpyāyamāna*) by means of their objects. *Ibid*.

Ibid. p. 100.

comitance. The example given for spatial and temporal co-existence is that between date-juice (*rasa*) and sweetness (*guḍa*), or between the shadow thrown by our bodies and the specific position of the Sun. But such spatio-temporal co-existences do not exhaust all cases, as, for example, the sunset and the surging of the sea. This led the later Rāmānujas to adopt a stricter definition of concomitance as unconditional and invariable association (*nirupādhikatayā niyataḥ sambandho vyāptih*)¹.

Regarding the formation of this inductive generalization or concomitance, we find in *Tattva-ratnākara*, an older authority, that a single observation of concomitance leading to a belief is sufficient to establish a general proposition². But Veṅkaṭanātha urges that this cannot be so and that a wide experience of concomitance is indispensable for the affirmation of a general proposition of concomitance.

One of the important points in which Rāmānuja logic differs from the Nyāya logic is the refusal on the part of the former to accept *kevala-vyatireki* (impossible-positive) forms of inference, which are admitted by the latter. Thus, in the *kevala-vyatireki* forms of inference (e.g. earth is different from other elements on account of its possession of smell) it is argued by the Nyāya logic that this difference of earth with other elements, by virtue of its possession of the specific property of smell not possessed by any other element, cannot be proved by a reference to any proposition which embodies the principle of agreement in presence *anvaya*. This view apparently seems to have got the support of the earlier Rāmānuja logicians such as Varadaviṣṇu Mīśra and Bhaṭṭārakaguru (in his *Tattva-ratnākara*); but both Veṅkaṭanātha (in his *Nyāya-pariśuddhi*) and the author of the *Rāmānuja-siddhānta-saṃgraha* point

¹ *Nyāya-pariśuddhi*.

² *sambandho'yaṃ sakṛd grāhyaḥ pratīti-sva-rasāt tathā
pratītayo hi sva-rasād dharma-dharmy-avadhān viduḥ.*

Tattva-ratnākara MS.

The author of the *Tattva-ratnākara* urges that, since the class-concept (e.g. of *dhūma-dhūmatva*) is associated with any particular instance (e.g. of smoke), the experience of any concomitance of smoke and fire would mean the comprehension of the concomitance of the class-concept of smoke with the class-concept of fire. So through the experience of any individual and its class-concept as associated with it we are in touch with other individuals included within that class-concept — *samniḥita-dhūmādi-vyakti-saṃyuktasya indriyasya tad-āśrita-dhūmatvādiḥ saṃyuktā-śritah, tad-āśrayatvena vyakty-antarāṇi saṃyuktāni*, etc. *Nyāya-pariśuddhi*, p. 105. (Chowkhamba.)

out that, since Yāmuna rejects the *kevala-vyatireki* form of argument in his lecture on *Ātma-siddhi*, it is better to suppose that, when the previous authors referred to spoke of *kevala-vyatireki* as a form of inference, it was not admission of their acceptance of it, but only that they counted it as being accepted by the Nyāya logicians¹. The author of the *Rāmānuja-siddhānta-saṃgraha* points out that it may very well be brought under *anvaya-vyatireki*. Thus we may argue "body is earthly by virtue of its possession of smell; for whatever possesses smell is earthly and whatever does not possess smell is not earthly." So in this form it may be put forward as a *anvaya-vyatireki* form of argument. The possession of smell (*gandhavattva*) may very well be put forth as "reason" or *hetu*, the presence of which determines earthiness and the absence of which determines non-earthiness or difference from non-earthiness.

Rāmānuja logic admits the necessity of "*tarka*" (cogitation regarding the relative possibilities of the alternative conclusions by a dialectic of contradictions) as an indispensable means of inferential conclusions. Regarding the number of propositions, Veṅkaṭanātha says that there is no necessity of admitting the indispensable character of five propositions. Thus it must depend on the way in which the inference is made as to how many propositions (*avacyava*) are to be admitted. It may be that two, three, four or five propositions are deemed necessary at the time of making an inference. We find it said in the *Tattva-ratnākara* also that, though five propositions would make a complete statement, yet there is no hard and fast rule (*anīyama*) regarding the number of propositions necessary for inference¹.

Veṅkaṭanātha urges that inference is always limited to perceptible objects. Things which entirely transcend the senses cannot be known by inference. Inference, though irrefragably connected with perception, cannot, on that account, be regarded as a mode of perception; for the knowledge derived from perception is always indirect (*a-parokṣa*). Inference cannot also be regarded as due to memory; for it always reveals new knowledge. Further, it cannot be said to be a form of mental intuition, on account of the fact that inference works by rousing the subconscious impressions of the mind; for such impressions are also found to be active in percep-

¹ *Nyāya-parīśuddhi* and *Rāmānuja-siddhānta-saṃgraha*.

² *Ibid.*

tion, and on that analogy even perception may be called mental intuition.

Vyāpti (concomitance) may be defined as that in which the area of the probandum (*sādhya*) is not spatially or temporally less than (*a-nyūna-deśa-kāla-vṛtti*) that of the reason, *hetu*—and reason is defined as that, the area of which is never wider than that of the probandum (*a-nadhik-deśa-kāla-niyataṃ vyāpyam*). As an illustration of spatial and temporal co-existence (*yaugapadya*) Veṅkaṭanātha gives the instance of sugar and sweetness. As an illustration of temporal co-existence (*yaugapadya*) he gives the example of the measure of the shadow and the position of the sun. As a case of purely spatial co-existence he gives the instance of heat and its effects. Sometimes, however, there is concomitance between entities which are separate in space and time, as in the case of tides and their relation to the sun and the moon¹.

Such a concomitance, however, between the probandum and the reason can be grasped only by the observation of numerous instances (*bhūyo-darśana-gamyā*), and not by a single instance, as in the case of Śāṅkara Vedānta as expounded by Dharmārājādhvarīndra. Bhaṭṭārakaguru, in his *Tattva-ratnākara*, in explaining the process by which the notion of concomitance is arrived at, says that, when in numerous instances the concomitance between the probandum and the reason is observed, the result of such observation accumulates as subconscious impressions in favour of the universal concomitance between all cases of probandum and all cases of the reason, and then in the last instance the perception of the concomitance rouses in the mind the notion of the concomitance of all probandum and all reason through the help of the roused subconscious impressions previously formed. Veṅkaṭanātha admits concomitance through joint method of Agreement and Difference (*anvaya-vyatireki*) and by pure Agreement (*kevalā-nvayi*), where negative instances are not available. Ordinarily the method of difference contributes to the notion of concomitance by demonstrating that each and every instance in which the probandum does not occur is also an instance in which the reason does not occur. But in the case of *kevalā-nvayi* concomitance, in which negative instances

¹ *vyāpti* is thus defined by Veṅkaṭanātha—*atre'daṃ tattvaṃ yādṛg-rūpasya yad-deśa-kāla-vartinō yasya yādṛg-rūpeṇa yad-deśa-kāla-vartinā yenā'vinā-bhāvaḥ tad idam avinā-bhūtaṃ vyāpyam. tat-pratisambandhi-vyāpakam iti. Nyāya-parisuddhi*, pp. 101-102.

are not available, the non-existence of the reason in the negative instance cannot be shown. But in such cases the very non-existence of negative instances is itself sufficient to contribute to the notion of *kevalā-nvayi* concomitance. The validity of *kevalā-nvayi* concomitance is made patent by the fact that, if the reason remains unchanged, the assumption of a contrary probandum is self-contradictory (*vyāhata-sādhya-viparyayāt*), and this distinguishes it from the forms of *kevalā-nvayi* arguments employed by Kulārka in formulating his *Mahā-vidyā* doctrines.

Rāmānuja's own intention regarding the types of inference that may be admitted seems to be uncertain, as he has never definitely given any opinion on the subject. His intention, therefore, is diversely interpreted by the thinkers of his school. Thus, Meghanādāri gives a threefold classification of inference: (1) of the cause from the effect (*kāraṇā-numāna*); (2) of the effect from the cause (*kāryā-numāna*); and (3) inference by mental association (*anubhavā-numāna*—as the inference of the rise of the constellation of Rohiṇī from the Kṛttikā constellation). As an alternative classification he gives (1) the joint method of agreement and difference (*anvaya-vyatireki*); (2) inference through universal agreement in which no negative instances are found (*kevalā-nvayi*); and (3) inference through exclusion, in which no positive instances are found (*kevala-vyatireki*). Bhaṭṭarakaguru and Varadaśiṣṇu Miśra, who preceded Venkaṭanātha in working out a consistent system of Rāmānuja logic, seem also to admit the three kinds of inference, viz. *anvayi*, *kevalā-nvayi*, and *kevala-vyatireki*, as is evident from the quotation of their works *Tattva-ratnākara* and *Māna-yāthātmya-nirṇaya*. Venkaṭanātha, however, tries to explain them away and takes great pains to refute the *kevala-vyatireki* form of argument¹. His contention is that there can be no inference through mere negative concomitance, which can never legitimately lead to the affirmation of any positive character when there is no positive proposition purporting the affirmation of any character. If any such positive proposition be regarded as implied in the negative proposition, then also the contention that there can be inference from purely negative proposition fails. One of the conditions of validity

¹ Venkaṭanātha points out that Yāmunācārya, also the accredited teacher of Rāmānuja, did not admit the *kevala-vyatireki* form of inference in his *Siddhī-traya*.

of inference is that the *hetu* or reason must exist in the *sa-pakṣa* (that is, in all such instances where there is the *sādhya*), but in the *vyatireki* form of inference, where there are no positive instances of the existence of the *hetu* and the *sādhya* excepting the point at issue, the above condition necessarily fails¹. The opponent might say that on the same analogy the *kevalā-nvayi* form of argument may also be denied; for there negative instances are found (e.g. *idaṃ vācyaṃ prameyatvāt*). The reply would be that the validity of a *kevalā-nvayi* form of argument is attested by the fact that the assumption of a contrary conclusion would be self-contradictory. If the contention of the opponent is that the universal concomitance of the negation of the *hetu* with the negation of the *sādhya* implies the absolute coincidence of the *hetu* and the *sādhya*, then the absolute coincidence of the *hetu* and the *sādhya* would imply the absolute coincidence of the opposites of them both. This would imply that from the absolute coincidence of the *hetu* and the *sādhya* in a *kevalā-nvayi* form of inference the absolute coincidence of their opposites would be demonstrable. This is absurd². Thus, the Naiyāikas, who admit the *kevalā-nvayi* inference, cannot indulge in such ways of support in establishing the validity of the *kevala-vyatireki* form of argument. Again, following the same method, one might as well argue that a jug is self-revealing (*sva-prakāśa*) because it is a jug (*ghaṭatvāt*); for the negation of self-revealing character (*a-sva-prakāśatva*) is found in the negation of jug, viz. the cloth, which is impossible (*yan naivam tan naivam yathā patah*). Thus, merely from the concomitance of two negations it is not possible to affirm the concomitance of their opposites. Again, in the above instance—*anubhūtir ananubhāryā anubhūtitvāt* (immediate intuition cannot be an object of awareness, because it is immediate intuition)—even the existence of *an-anubhāryatva* (not being an object of awareness) is doubtful; for it is not known to exist anywhere else than in the instance under discussion, and therefore, from the mere case of

¹ The typical forms of *vyatireki* inference are as follows: *anubhūtir an-anubhāryā anubhūtitvāt, yan naivam tan naivam yathā ghaṭah. prthivī itarebhyo bhidyate gandharvatvāt yan naivam tan naivam yathā jalam*. In the above instance *an-anubhāryatva* (non-cognizability) belongs only to immediate intuition. There is thus no *sa-pakṣa* of *anubhūti* where *an-anubhāryatva* was found before.

² *idaṃ vācyaṃ prameyatvāt* (this is definable, because it is knowable) would, under the supposition, imply that the concomitance of the negation of *vācya* and *prameyatva*, viz. *avācya* (indefinable) and *aprameyatva* (unknowable), would be demonstrable; which is absurd, since no such cases are known.

concomitance of the negation of *an-anubhāvyatva* with the negation of *anubhūti* the affirmation of *an-anubhāvyatva* would be inadmissible. Moreover, when one says that that which is an object of awareness (*anubhāvyā*) is not immediate intuition, the mere affirmation of the negative relation makes *anubhūti* an object of awareness in a negative relation, which contradicts the conclusion that *anubhūti* is not an object of awareness. If, again, the character that is intended to be inferred by the *vyatireki anumāna* is already known to exist in the *pakṣa*, then there is no need of inference. If it is known to exist elsewhere, then, since there is a *sa-pakṣa*¹, there is no *kevala-vyatireki* inference. Even if, through the concomitance of the negation of the *hetu* and the *sādhya*, the *sādhya* is known to exist elsewhere outside the negation of the *hetu*, its presence in the case under consideration would not be demonstrated. Again, in the instance under discussion, if, from the concomitance of the negation of not being an object of awareness and the negation of immediate intuition, it is argued that the character as not being an object of awareness (*a-vedyatva*) must be present somewhere, then such conclusion would be self-contradictory; for, if it is known that there is an entity which is not an object of awareness, then by that very fact it becomes an object of awareness. If an existent entity is ruled out from all possible spheres excepting one, it necessarily belongs to that residual sphere. So it may be said that "willing, being an existent quality, is known to be absent from all spheres excepting the self; it, therefore, necessarily belongs thereto." On such an interpretation also there is no necessity of *vyatireki anumāna*; for it is really a case of agreement (*anvaya*); and it is possible for us to enunciate it in a general formula of agreement such as "an existent entity, which is absent from all other spheres excepting one must necessarily belong to that residual sphere." Again, in such an instance as "all-knowingness (*sarva-vittva*), being absent in all known spheres, must be present somewhere, as we have a notion of it, and therefore there must be an entity to which it belongs, and such an entity is God," we have the well known ontological argument which is of *vyatireki* type. Against such an inference it may well be contended with justice that the notion of

¹ *sa-pakṣa* are all instances (outside the instance of the inference under discussion) where the *hetu* or reason is known to co-exist with the *sādhya* or probandum.

a hare's horn, which is absent in all known spheres, must necessarily belong to an unperceived entity which is obviously false.

It may be contended that, if the *vyatireki* inference is not admitted, then that amounts to a denial of all defining characters; for a defining character is that which is absent everywhere except in the object under definition, and thus definition is the very nature of *vyatireki* inference. The obvious reply to this is that definition proceeds from the perception of special characteristics which are enunciated as the defining characteristics of a particular object, and it has therefore nothing to do with *vyatireki* inference¹. It may also be urged that defining characteristics may also be gathered by joint method of agreement and difference, and not by a *vyatireki* inference as suggested by the opponents. In such an instance as where knowability is defined as that which is capable of being known, no negative instances are known but it still remains a definition. The definition of definition is that the special characteristic is existent only in the object under definition and nowhere else (*a-sādhāraṇa-vyāpako dharmo lakṣaṇam*)². In the case where a class of objects is defined the defining class-character would be that which should exist in all individuals of that class, and should be absent in all other individuals of other classes. But when an individual which stands alone (such as God) is defined, then we have no class-character, but only unique character which belongs to that individual only and not to a class. Even in such cases, such a defining character differentiates that entity from other entities (*Brahmā, Śiva*, etc.) with which, through partial similarity, He might be confused. Thus, the definition is a case of agreement of a character in an entity, and not a negation, as contended by those who confuse it with *vyatireki* inference. Therefore, the *kevala-vyatireki* form of inference cannot be supported by any argument.

On the subject of propositions (*avayava*) Veṅkaṭanātha holds that there is no reason why there should be five propositions for all inference. The dispute, therefore, among various logicians regarding the number of propositions that can be admitted in an inference is meaningless; for just so many propositions need be admitted for an inference as are sufficient to make the inference appeal to the

¹ *arthā-sādhāraṇā-kāra-pratipatti-nibandhanam*
sajātīya-vijātīya-vyavachcheda lakṣaṇam.

Tattva-ratnākara, quoted in *Nyāya-parīśuddhi*, p. 143.

² *Nyāya-parīśuddhi*, p. 145.

person for whom it may be intended. Thus, there may be three, four, or five propositions, according to the context in which the inference appears.

In addition to inference Veṅkaṭanātha also admits *śabda*, or scriptural testimony. No elaboration need be made here regarding the *śabda-pramāṇa*, as the treatment of the subject is more or less the same as is found in other systems of philosophy. It may be remembered that on the subject of the interpretation of words and sentences the Naiyāikas held that each single element of a sentence, such as simple words or roots, had its own separate or specific sense. These senses suffer a modification through a process of addition of meaning through the suffixes of another case-relation. Viewed from this light, the simple constituents of sentences are atomic, and gradually go through a process of aggregation through their association with suffixes until they grow into a total meaning of the sentence. This is called the *abhihitā-nvaya-vāda*. The opposite view is that of *anvitā-bhīdhāna-vāda*, such as that of Mīmāṃsaka, which held that no sentence could be analysed into purely simple entities of meaning, unassociated with one another, which could go gradually by a process of aggregation or association. Into however simple a stage each sentence might be capable of being analysed, the very simplest part of it would always imply a general association with some kind of a verb or full meaning. The function of the suffixes and case-relations, consists only in applying restrictions and limitations to this general connectedness of meaning which every word carries with itself. Veṅkaṭanātha holds this *anvitā-bhīdhāna-vāda* against the *abhihitā-nvaya-vāda* on the ground that the latter involves the unnecessary assumption of separate specific powers for associating the meaning of the simplest word-elements with their suffixes, or between the suffixed words among themselves and their mutual connectedness for conveying the meaning of a sentence¹. The acceptance of *anvitā-bhīdhāna* was conducive to the philosophy of Rāmānuja, as it established the all-connectedness of meaning (*viśiṣṭā-rtha*).

Rāmānuja himself did not write any work propounding his views of logic consistent with his system of philosophy. But Nāthamuni had written a work called *Nyāya-tattva*, in which he criticized

¹ *abhihitā-nvaye hi padānām padā-rthe padā-rthānaṃ vākyā-rthe padānām ca tatra iti śakti-traya-kalpanā-gauravaṃ syāt. Nyāya-parisuddhi*, p. 369.

the views of Gotama's logic and revised it in accordance with the *Viśiṣṭā-dvaita* tradition. Viṣṇucitta wrote his *Saṅgati-mālā* and *Prameya-saṃgraha*, following the same lines, Bhaṭṭāarakaguru wrote his *Tattva-ratnākara*, and Varadaviṣṇu Miśra also wrote his *Prajñā-paritrāṇa* and *Māna-yāthātmya-nirṇaya*, working out the views of *Viśiṣṭā-dvaita* logic. Veṅkaṭanātha based his *Nyāya-pariśuddhi* on these works, sometimes elucidating their views and sometimes differing from them in certain details. But, on the whole, he drew his views on the *Viśiṣṭā-dvaita* logic from the above writers. His originality, therefore, in this field is very limited. Meghanādāri, however, seems to differ very largely from Veṅkaṭanātha in admitting *Upamāna* and *arthāpatti* as separate *pramāṇas*. He has also made some very illuminating contributions in his treatment of perception, and in his treatment of inference he has wholly differed from Veṅkaṭanātha in admitting *vyatireki anumāna*.

Meghanādāri admits *upamāna* as a separate *pramāṇa*. With him *upamāna* is the *pramāṇa* through which it is possible to have the knowledge of similarity of a perceived object with an unperceived one, when there was previously a knowledge of the similarity of the latter with the former. Thus, when a man has the knowledge that the cow which he perceives is similar to a bison, and when later on, roaming in the forest, he observes a bison, he at once notes that the cow which he does not perceive now is similar to a bison which he perceives. This knowledge, Meghanādāri contends, cannot be due to perception, because the cow is not before the perceiver; it also cannot be due to memory, since the knowledge of similarity dawns before the reproduction of the cow in the mind. Meghanādāri holds that no separate *pramāṇa* need be admitted for the notion of difference; for the knowledge of difference is but a negation of similarity. This interpretation of *upamāna* is, however, different from that given in *Nyāya*, where it is interpreted to mean the association of a word with its object on the basis of similarity, e.g. that animal is called a bison which is similar to a cow. Here, on the basis of similarity, the word "bison" is associated with that animal. Meghanādāri tries to explain this by the function of recognition, and repudiates its claim to be regarded as a separate *pramāṇa*¹. He also admits *arthāpatti* as a separate *pramāṇa*. *Arthāpatti* is generally translated as "implication," where a certain hypothesis, without the

¹ See MS. *Naya-dyu-maṇi*. Chapter on *Upamāna*.

assumption of which an obscured fact of experience becomes inexplicable, is urged before the mind by the demand for an explanation of the observed fact of experience. Thus, when one knows from an independent source that Devadatta is living, though not found at his house, a natural hypothesis is urged before the mind that he must be staying outside the house; for otherwise either the present observation of his non-existence at his house is false or the previous knowledge that he is living is false. That he is living and that he is non-existent at his house can only be explained by the supposition that he is existing somewhere outside the house. This cannot be regarded as a case of inference of the form that "since somewhere-existing Devadatta is non-existent at his house, he must be existent somewhere else; for all somewhere-existing entities which are non-existent at a place must be existent elsewhere like myself." Such an inference is meaningless; for the non-existence of an existing entity in one place is but the other name of its existing elsewhere. Therefore, the non-existence of an existing entity in one place should not be made a reason for arriving at a conclusion (its existence elsewhere) which is not different from itself. *Arthāpatti* is thus to be admitted as a separate *pramāṇa*.

Epistemology of the Rāmānuja School according to Meghanādāri and others.

Veṅkaṭanātha, in his *Nyāya-pariśuddhi*, tries to construct the principles of Logic (*Nyāya* or *Nīti*) on which Rāmānuja's system of philosophy is based. He was not a pioneer in the field, but he followed and elaborated the doctrines of *Viśiṣṭā-dvaita* logic as enunciated by Nāthamuni, the teacher of Yāmuna, in his work called *Nyāya-tattva*, and the works of Parāśara Bhaṭṭa on the subject. Regarding the system of *Nyāya* propounded by Gotama, Veṅkaṭa's main contention is that though Gotama's doctrines have been rejected by Bādarāyaṇa as unacceptable to right-minded scholars, they may yet be so explained that they may be made to harmonize with the true Vedantic doctrines of *Viśiṣṭā-dvaita*. But the interpretations of Gotama's *Nyāya* by Vātsyāyana take them far away from the right course and have therefore to be refuted. At any rate Veṅkaṭa, like Viṣṇucitta, is not unwilling to accept such doctrines of Gotama as are not in conflict with the Vedānta view. Thus, there may be a divergence of opinion regarding the sixteenfold classi-

fication of logical categories. There can be no two opinions regarding the admission of the fact that there are at least certain entities which are logically valid; for if logical validity is denied, logic itself becomes unfounded. All our experiences assume the existence of certain objective factors on which they are based. A general denial of such objective factors takes away the very root of experience. It is only when such objective factors are admitted to be in existence in a general manner that there may be any inquiry regarding their specific nature. If everything were invalid, then the opponent's contention would also be invalid. If everything were doubted, then also it would remain uncontradictory. The doubt itself cannot be doubted and the existence of doubt would have to be admitted as a decisive conclusion. So, even by leading a full course of thoroughgoing doubt, the admission of the possibility of definite conclusion becomes irresistible¹. Therefore, the contention of the Buddhists that there is nothing valid and that there is nothing the certainty of which can be accepted, is inadmissible. If, therefore, there are things of which definite and valid knowledge is possible, there arises a natural inquiry about the means or instruments by which such valid knowledge is possible. The word *pramāṇa* is used in two senses. Firstly, it means valid knowledge; secondly, it means instruments by which valid knowledge is produced. *pramāṇa* as valid knowledge is defined by Veṅkaṭa as the knowledge which corresponds to or produces a behaviour leading to an experience of things as they are (*yathā-vasthita-vyavahārā-nugunam*)². The definition includes behaviour as an indispensable condition of *pramāṇa* such that, even though in a particular case a behaviour may not actually be induced, it may yet be *pramāṇa* if the knowledge be such that it has the capacity of producing a behaviour which would tally with things as they are³. The definition

¹ *vyavahāro hi jagato bhavaty ālmbane kvacit
na tat sāmānyato nāsti kathantā tu parikṣyate

of *pramāṇa* as knowledge leading to a behaviour tallying with facts naturally means the inclusion of valid memory within it. An uncontradicted memory is thus regarded as valid means of knowledge according to the Rāmānuja system¹. Veṅkaṭa urges that it is wrong to suppose the illicit introduction of memory as the invariable condition of illusion, for in such illusory perception as that of yellow conch-shell, there is manifestly no experience of the production of memory. The conch-shell directly appears as yellow. So in all cases of illusions the condition that is invariably fulfilled is that one thing appears as another, which is technically called *anyathā-khyāti*. But it may as well be urged that in such an illusion as that of the conch-shell-silver, the reason why the conch-shell appears as the silver is the non-apprehension of the distinction between the sub-conscious image of the silver seen in shops and the perception of a shining piece before the eyes, technically called *akhyāti*. Thus, in all cases of illusion, when one thing appears as another there is this condition of the non-apprehension of the distinction between a memory image and a percept. If illusions are considered from this point of view, then they may be said to be primarily and directly due to the aforesaid psychological fact known as *akhyāti*. Thus, both these theories of illusion have been accepted by Rāmānuja from two points of view. The theory of *anyathā-khyāti* appeals directly to experience, whereas the *akhyāti* view is the result of analysis and reasoning regarding the psychological origin of illusions². The other theory of illusion (*yathārtha-khyāti*), which regards illusions also as being real knowledge, on the ground that in accordance with the *pañcī-karaṇa* theory all things are the result of a primordial admixture of the elements of all things, is neither psychological nor analytical but is only metaphysical, and as such does not explain the nature of illusions. The illusion in such a view consists in the fact or apprehension of the presence of such silver in the conch-shell as can be utilized for domestic or ornamental purposes, whereas the metaphysical explanation only justifies the perception of certain primordial elements of silver in the universal admixture of the elements of all things in all things.

In refuting the *ātma-khyāti* theory of illusion of the Buddhists, Veṅkaṭa says that if the idealistic Buddhist can admit the validity of the different awarenesses as imposed on the one fundamental consciousness, then on the same analogy the validity of the perceived objects may also be admitted. If the different subjective and objective awarenesses are not admitted, then all experiences would be reduced to one undifferentiated consciousness, and that would be clearly against the Buddhistic theory of knowledge. The Buddhist view that entities which are simultaneously apprehended are one, and that therefore knowledge and its objects which are apprehended simultaneously are one, is wrong. Knowledge and its objects are directly apprehended as different, and therefore the affirmation of their identity is contradicted in experience. The Mādhyamika Buddhists further hold that, just as in spite of the falsehood of the defects (*doṣa*), illusions happen, so in spite of the falsehood of any substratum or any abiding entity, illusions may appear as mere appearances without any reality behind them. Against such a view, Veṅkaṭa says that whatever is understood by people as existent or non-existent has always a reference to a reality, and mere phenomena without any basis or ground on reality are incomprehensible in all our experience. Hence the pure phenomenalism of the Mādhyamika is wholly against all experience¹. When people speak of non-existence of any entity, they always do it with some kind of spatial or temporal qualification. Thus, when they say that the book does not exist, they always qualify this non-existence with a “here” and a “there” or with a “now” or a “then.” But pure unqualified non-existence is unknown to ordinary experience². Again all positive experience of things is spatially limited (e.g. there is a jug “here”); if this spatial qualification as “here” is admitted, then it cannot be held that appearances occur on mere nothing (*nir-adhiṣṭhāna-bhramā-nupapattiḥ*). If, however, the limitation of a “here” or “there” is denied, then no experience is possible (*pratīter apahnava eva syāt*).

Criticizing the *a-nirvacanīya* theory of illusion of the Vedāntists Veṅkaṭanātha says that when the Śāṅkarites described all things as

¹ *loke bhāvā-bhāva-śabdayos tat-pratītyoś ca vidyumānasyai'eva vastunaḥ avasthā-viśeṣa-gocaratvasya pratipāditatvāt. prakārā-ntarasya ca loka-siddha-pramāṇā-viśayatvād ity-arthaḥ. Nyāya-sāra*, p. 46.

² *sarvo'pi niṣedhaḥ sa-pratītyogiko niyata-deśa-kālaśca pratyate. Nīrūpa-dhir niyata-deśa-kāla-pratītyogi-viśeṣaṇa-rahito niṣedho na pratyate iti. Ibid.* p. 46.

indefinable (*a-nirvacanīya*), the word “indefinable” must mean either some definite trait, in which case it would cease to be indefinable, or it might mean failure to define in a particular manner, in which case the Śāṅkarites might as well accept the Rāmānuja account of the nature of the universe. Again when the Śāṅkarites are prepared to accept such a self-contradictory category as that which is different both from being and non-being (*sad-asad-vyatirekaḥ*), why cannot they rather accept things as both existent and non-existent as they are felt in experience? The self-contradiction would be the same in either case. If, however, their description of the world-appearance as something different from being and non-being is for the purpose of establishing the fact that the world-appearance is different both from chimerical entities (*tuccha*) and from Brahman, then Rāmānujists should have no dispute with them. Further, the falsity of the world does not of itself appeal to experience; if an attempt is made to establish such a falsity through unfounded dialectic, then by an extension of such a dialectic even Brahman could be proved to be self-contradictory. Again the assertion that the world-appearance is non-existent because it is destructible is unfounded; for the Upaniṣads speak of Brahman, the individual souls and the *prakṛti* as being eternal. The Śāṅkarites also confuse destruction and contradiction (*na cai'kyam nāśa-bādhayoḥ*)¹.

The followers of Patañjali speak of an illusory comprehension through linguistic usage in which we are supposed to apprehend entities which have no existence. This is called *nirviśaya-khyāti*. Thus, when we speak of the head of Rāhu, we conceive Rāhu as having an existence apart from his head, and this apprehension is due to linguistic usage following the genitive case-ending in Rāhu, but Veṅkaṭa urges that it is unnecessary to accept a separate theory of illusion for explaining such experience, since it may well be done by the *akhyāti* or *anyathā-khyāti* theory of illusion, and he contends that he has already demonstrated the impossibility of other theories of illusion.

Meghanādāri, however, defines *pramāṇa* as the knowledge that determines the objects without depending on other sources of knowledge such as memory².

¹ *Nyāya-parisuddhi*, pp. 48-51.

² “*tatrā'nya-pramāṇā-napekṣam artha-paricchedakam jñānam pramāṇam, artha-paricchede'nya-pramāṇa-sāpekṣa-smṛtāv ativyāpti-parihāre'nya-pramāṇa-napekṣam iti.*” *Naya-dyu-maṇi*, Madras Govt. Oriental MS.

Though knowledge is self-revealing (*sva-mūrtāv api svayam eva hetuḥ*), and though there is a continuity of consciousness in sleep, or in a state of swoon, yet the consciousness in these stages cannot reveal objects of cognition. This is only possible when knowledge is produced through the processes known as *pramāṇa*. When we speak of the self-validity of knowledge, we may speak of the cognition as being determined by the objects that it grasps (*artha-paricchinnam pramāṇam*). But when we speak of it from the perceptual point of view or from the point of view of its determining the objects of knowledge, we have to speak of knowledge as determining the nature of objects (*artha-paricchedaka*) and not as being determined by them. Knowledge may thus be looked at from a subjective point of view in self-validity of cognition (*svataḥ-prāmāṇya*). Then the self-validity refers to its content which is determined by the objects of comprehension. It has also to be looked at from the objective point of view in all cases of acquirement of knowledge and in our behaviour in the world of objects, and then the knowledge appears as the means by which we determine the nature of the objects and measure our behaviour accordingly. The definition of knowledge as that which measures the nature of objects (*artha-pariccheda-kāri jñānam pramāṇam*), as given by Meghanādāri is thus somewhat different from that given by Veṅkaṭa, who defines it as that which corresponds to or produces a behaviour leading to an experience of things as they are (*yathā-vasthita vyavahārā-nugūṇam*). In the case of Veṅkaṭa, knowledge is looked at as a means to behaviour and it is the behaviour which is supposed to determine the nature of correspondence. In Meghanādāri's definition the whole question of behaviour and of correspondence is lost sight of, or at least put in the background. The emphasis is put on the function of knowledge as determining the objects. The supposition probably is that in case of error or illusion also the real object is perceived, and the illusion is caused through the omission of other details, a correct perception of which would have rendered the illusion impossible. We know already that according to the *yathārtha-khyāti* theory of Rāmānuja there are elements of all things in all things, according to the Upaniṣadic theory of "*trivṛt-karaṇa*" and its elaboration in the *pañcī-karaṇa* doctrine. What happens therefore in illusion (e.g. the conch-shell-silver) is that the visual organ is in contact with the element of

silver that forms one of the constituents of the conch-shell. This element of silver no doubt is infinitesimally small as compared with the overwhelmingly preponderating parts—the conch-shell. But on account of the temporary defect of the visual organ or other distracting circumstances, these preponderating parts of the conch-shell are lost sight of. The result is that knowledge is produced only of the silver elements with which the sense-organ was in contact; and since the conch-shell element had entirely dropped out of comprehension, the silver element was regarded as being the only one that was perceived and thus the illusion was produced. But even in such an illusion the perception of silver is no error. The error consists in the non-perception of the preponderating part—the conch-shell. Thus, even in illusory perception, it is undoubtedly a real object that is perceived. The theory of *anyathā-khyāti* is that illusion consists in attributing a quality or character to a thing which it does not possess. In an indirect manner this theory is also implied in the *yathārtha-khyāti* theory in so far that here also the characters attributed (e.g. the silver) to the object of perception (*purovartī vastu*) do not belong to it, though the essence of illusion does not consist in that, and there is no real illusion of perception. Meghanādāri thus holds that all knowledge is true in the sense that it has always an object corresponding to it, or what has been more precisely described by Anantācārya that all cognitive characters (illusory or otherwise) universally refer to real objective entities as objects of knowledge¹. We have seen that Veṅkaṭa had admitted three theories of illusion, namely, *anyathā-khyāti*, *akhyāti* and *yathārtha-khyāti*, from three different points of view. This does not seem to find any support in Meghanādāri's work, as he spares no effort to prove that the *yathārtha-khyāti* theory is the only theory of illusion and to refute the other rival theories. The main drift of Meghanādāri's criticism of *anyathā-khyāti* consists in the view that since knowledge must always refer to an object that is perceived, it is not possible that an object should produce a knowledge giving an entirely different content, for then such a content would refer to no object and thus would be chimerical (*tuccha*). If it is argued that the object is present elsewhere, then it might be contended that since the presence of the object can be determined

¹ "Tat-tad-dharma-prakāra-*jñānatva-vyāpakam tat-tad-dharmavad-viśeṣ-yakatvam iti yathārtham sarva-vijñānam iti."* Anantācārya, *Jñāna-yāthārthya-vāda* (MS.).

only by the content of knowledge, and since such an object is denied in the case of illusory perception where we have such a knowledge, what is the guarantee that the object should be present in other cases? In those cases also it is the knowledge that alone should determine the presence of the object. That is to say, that if knowledge alone is to be the guarantor of the corresponding object, it is not right to say in two instances where such knowledge occurs that the object exists in one case and not in the other¹.

In refuting the *anirvacanīya-khyāti* Meghanādāri says that if it is supposed that in illusions an indefinable silver is produced which is mistaken for real silver, then that is almost the same as the *anyathā-khyāti* view, for here also one thing is taken as another. Moreover, it is difficult to explain how the perception of such an indefinable silver would produce the real desire for picking it up which is possible only in the case of the perception of real silver. A desire which can be produced by a real object can never be produced by a mere illusory notion. Nor can there be any similarity between a mere illusory notion and the real shining entity, viz. silver². The so-called indefinable silver is regarded either as being of the nature of being and non-being, or as different from being and non-being, both of which are impossible according to the Law of Contradiction and the Law of Excluded Middle. Even if it be admitted for the sake of argument that such an extra-logical entity is possible, it would be difficult to conceive how it could have any similarity with such a positive entity as ordinary silver. It cannot be admitted that this complex of being and non-being is of the nature of pure vacuity, for then also it would be impossible to conceive any similarity between a vacuum entity and real silver³.

¹ *na ca tadbajjñāne'strviti vācyam. tad-ākārasya satyatve bhrāntitvā-nupapattiḥ asattve tu na tasya jñānā-kāratā. tucchasya vastr-ākāratā-nupapatteḥ. tad-ākāratve ca khyātir eva tucche'ti sūktikādaḥ na rajatā-rthi-pravṛttiḥ.* Meghanādāri, *Naya-dyu-maṇi* (MS.).

The general drift of Meghanādāri's theme may be summed up in the words of Anantācārya in his *Jñāna-yāthārthya-vāda* (MS.) as follows: "tathā ca rajatatam sūkti-niṣṭha-viśayatā-vacchedakatvā-bhāvavat sūkty-avṛttitvāt yo yad-avṛttiḥ sa tan-niṣṭha-dharma-nirūpitā-vacchedakatvā-bhāvavān iti sāmānya-vyūptau daṇḍa-niṣṭha-kāraṇatā-vacchedakatvā-bhāvavad daṇḍā-vṛtti ghaṭatvādikaṃ drṣṭāntah."

² "tasyā'nirvācyā-rajatatayā grahaṇād viparita-khyāti-pakṣa-pātaḥ... sam-yaḥ-rajata-dhīr hi pravṛtti-hetuḥ... tasya pratity-ātmaka-vastr-ātmakayor bhāvaratvā-di-sādrśyā-bhāvāt." Ibid.

³ *ekasya yugapat sad-asadā-tmaka-viruddha-dharmavattvā-nupapatteḥ. tad-upapattāv api sādrśyā-nupapatteśca... śūnya-vastuni pramānā-bhāvāt. tat-sad-bhāve'pi tasya rajata-sādrśyā-bhāvācca tato na pravṛttiḥ.* Ibid.

Again it is said that the illusory silver is called indefinable (*anirvacanīya*) because it is different from pure being such as the self which is never contradicted in experience (*ātmano bādhā-yogāt*) and from non-being such as the chimerical entities like the hare's horn which can never be objects of knowledge (*khyāty-ayogāt*). But in reply to this it may very well be urged that the being of the self cannot itself be proved, for if the self were the object of knowledge it would be as false as the world appearance; and if it were not it could not have any being. It cannot also be said to have being because of its association with the class concept of being, for the self is admitted to be one, and as such cannot be associated with class concept¹. Again want of variability cannot be regarded as a condition of reality, for if the cognitive objects are unreal because they are variable, the knower himself would be variable on account of his association with variable objects and variable relations, and would therefore be false. Again being (*sattā*) is not as universal as it is supposed to be, for it is different from the entities (jug, etc.) to which it is supposed to belong and also from negation in the view that holds negation to be a positive category². If the self is regarded as self-luminous, then it may also be contended that such self-luminosity must be validly proved; and it may also be urged that unless the existence of the self has already been so proved its character cannot be proved to be self-luminous.³

Again the *akhyāti* view is liable to two different interpretations, in both of which it may be styled in some sense as *yathārtha-khyāti*. In the first interpretation the illusion is supposed to be produced in the following manner: the visual organ is affected by the shining character of something before the eyes, and this shining character, being of the same nature as that of the silver, the shining character of the silver is remembered, and since it is not possible to dis-

¹ *tasya drīyatvā-nabhyupagame śāśa-viśāṇā-dī-sāmyam. ātmanah prameyatā ca ne'ste'ti, na tatas tat-sattā-siddhiḥ. tad-abhyupagatau ca prapañcavanmithyātvaṃ... ātma-vyakter ekatvā-bhimānāt tad-vyatirikta-padārthasyā'sattvā-bhimān-ācca sattā-samavāyitvā-nupapatteḥ. Meghanādāri, Naya-dyu-maṇi.*

³ *na ca tasya svayam-prakāśatvān na pramāṇā-pekṣe'ti svayam-prakāśatvasyā'pi pramāṇā-dhīnatvāt pramāṇā-ntara-siddhā-tmanah svayam-prakāśatvasya sādhyatvācca. na hi dharmy-aprasidhau dharma-sādhyatā. Ibid.*

tinguish whether this shining character belongs to silver or to something else, and since the object in front is associated with such an undiscriminated shining character, the shining character cannot be treated as a mere self-ejected idea, but has to be taken as having its true seat in that something before the eye; thus, the notion of silver is a result of a true perception. It would have been a false perception if the conch-shell had been perceived as silver, but in such a perception it is not the conch-shell, but “this” in front, that is perceived as silver. The general maxim is that the idea which corresponds to any particular kind of behaviour is to be regarded as a true representation of the object experienced in such a behaviour (*yad-artha-vyavahārā-nugunā ya dhīḥ sā tad-arthā*). This maxim has its application here inasmuch as the “this” in front can be experienced in practical behaviour as such, and the silvery character has also a true reference to real silver. So the notion “this silver” is to be regarded as a complex of two notions, the “this” and the “silver.” Thus, the perception involved in the above interpretation is a true perception according to the *akhyāti* view. In the above explanation it is contended that just as the two different notions of substance and quality may both appear in the same concept, so there cannot be any difficulty in conceiving of a legitimate unity of two different notions in one illusory perception as “this silver.” Such a fusion is possible on account of the fact that here two notions occur in the same moment and there is no gap between them. This is different from the *anyathā-khyāti* view, in which one thing is supposed to appear as another. The objections against this view are: firstly, that a defect cannot possibly transmute one thing into another; secondly, if illusions be regarded as the appearance of one thing as another, then there is scope for such a fear, even in those cases which are regarded as correct perception; for all knowledge would be exposed to doubt, and this would land us in scepticism. If, therefore, it is suggested that illusion is due to a non-comprehension of the difference between the presence of a conch-shell and the memory-image of silver, that also would be impossible. For if “difference” means only the different entities (*bhedo vastu-svarūpam-eva*), then non-comprehension of difference (which is regarded as the root-cause of illusion in the present view) would mean the comprehension of the identity of the memory-image and the percept, and that would not account for the qualified concept where

one notion (e.g. the silver) appears as qualifying the other notion (the “this” before the eye). Moreover, if two independent notions which are not related as substance and quality be miscomprehended as one concept, then any notion could be so united with any other notion, because the memory-images which are stored in our past experiences are limitless. Again the silver that was experienced in the past was experienced in association with the space in which it existed, and the reproduction of the silver and memory would also be associated with that special spatial quality. This would render its mis-association with the percept before the perceiver impossible on account of the spatial difference of the two. If it is contended that through the influence of defects the spatial quality of the memory-image is changed, then that would be the *anyathā-khyāti* theory, which would be inadmissible in the *akhyāti* view. Again since all sensible qualities must be associated with some kind of spatial relation, even if the original spatial quality be transmuted or changed, that would be no reason why such a spatial image should be felt as being in front of the perceiver. It must also be said that the distinctive differences between the memory-image and the percept are bound to be noted; for if such a distinctive difference were not noted, the memory-image could not be distinguished as “silver-image.” It cannot also be said that though the percept can be distinguished from the memory-image the latter cannot be distinguished from the former, for the discriminative character is a constituent of both, and it is nothing but the white shining attribute. If it is urged that the spatial and other distinctive qualities are not noted in the memory-image and it appears merely as an image, then it may well be objected that any and every memory-image may be confused with the present percept, and even a stone may appear as silver.

Since both the *a-nirvacaniya-khyāti* and the *akhyāti* are in some sense *yathārtha-khyāti*, Meghanādāri refuted these two theories of illusion and attempted to show that the *yathārtha-khyāti* would be untenable in these views. Now he tries to show that all other possible interpretations of *yathārtha-khyāti* are invalid. The fundamental assumption of *yathārtha-khyāti* is that all knowledge must correspond to a real object like all right knowledge¹. Thus, in other

¹ *vipratipannaḥ pratyayo yathā-rthaḥ pratyatvāt, sampratipanna-pratyaya-vaditi. Naya-dyu-maṇi*, p. 140 (MS.).

interpretations, the *yathārtha-khyāti* or the correspondence theory, might mean that cognition is produced by a real object or by the objective percept or that it means uncontradicted experience. The first alternative is untenable because even in the illusion of the conch-shell-silver the notion of silver has been produced by a real object, the conch-shell; the second view is untenable, for the object corresponding to the illusory percept of silver is not actually present in the conch-shell according to other theories; and so far as the operation of the memory impression of the silver as experienced in the past is concerned (*pūrvā-nubhūta-rajata-saṃskāra-dvārā*) its instrumentality is undeniable both in right and in illusory cognitions. The third alternative is untenable because contradiction refers to knowledge or judgment and not to things themselves. If it is said that the cognition refers to the illusory appearance and hence it is the illusory entity existing outside that is the object of perception, the obvious objection would be that perception refers to a non-illusory something in front of the perceiver, and this cannot be obviated. If non-illusory something is a constituent in the cognition, then it would be futile to say that the mere illusory perceptual form is all that can be the object of perception.

It cannot also be said that the illusory perception has no object (*nirviṣaya-khyāti*) and that it is called cognition, because, though it may not itself be amenable to behaviour as right cognitions are, it is similar to them by producing an impression that it also is amenable to behaviour, just as autumn clouds, which cannot shower, are also called clouds. The illusory cognition has for its content not only the illusory appearance but also the non-illusory "this" to which it objectively and adjectively refers. The truth, however, is that it is not indispensable for constituting the objectivity of a cognition that all the characters of the object should appear in the cognition; if any of its characters are manifested, that alone is sufficient to constitute the objectivity of an entity with regard to its cognition. The position, therefore, is that all cognitions refer and correspond to certain real entities in the objective world, and this cannot be explained on any other theory than on the supposition of a metaphysico-cosmological theory akin to the theory of *homoimeriae*.

Anantācārya, in his *ĵñāna-yāthārthya-vāda*, more or less repeats the arguments of Meghanādāri when he says that no cognition can

be possible without its being based on a relation of correspondence to an objective entity. The content of knowledge must therefore have a direct correspondence with the objective entity to which it refers. Thus, since there is a perception of silver (in the illusory perception of conch-shell-silver), it must refer to an objective substratum corresponding to it¹. The Mīmāṃsā supposition that errors are produced through non-discrimination of memory-image and perception is also wrong, because in that case we should have the experience of remembering silver and not of perceiving it as an objective entity before us². Both Meghanādāri and Anantācārya take infinite pains to prove that their definition of error applies to all cases of illusions of diverse sorts, including dreams, into the details of which it is unnecessary for our present purposes to enter³.

The Doctrine of Self-validity of Knowledge.

Pramāṇa, or valid knowledge, is defined as the cognition of objects as they are (*tathā-bhūtā-rtha-jñānam hi pramāṇam ucyate*), and *apramāṇa*, or invalid knowledge, is described as cognition representing a wrong notion of an object (*a-tathā-bhūtā-rtha-jñānam hi a-pramāṇam*). Such a validity, it is urged by Meghanādāri, is manifested by the knowledge itself (*tathātvā-vadhāraṇā-tmakam pramāṇyam ātmanai'va niścīyate*). This does not expose it to the criticism that knowledge, being passive, cannot at the same moment be also regarded as active, determining its own nature as valid (*na ca karma-kartṛtā-virodhaḥ*); for since it is of the nature of a faithful representation of the object, the manifestation of its own nature as such is an affirmation of its validity. If knowledge had no power by itself of affirming its own validity, there would be no way by which such a validity could be affirmed, for the affirmation of its validity by any other mediate process, or through any other instrumentality, will always raise the same question as to how the testimony of those processes or instruments can be accepted. For on such a supposition, knowledge not being self-valid, each such testimony has to be

¹ *tathā ca rajatatvaṃ śukti-niṣṭha-viśayatā-vacchedakatvā-bhāvavat śukty-avyttivāt yo yad-avyttiḥ sa tan-niṣṭha-dharma-nirūpitā-vacchedakatvā-bhāvavāniti. Jñāna-yāthārthya-vāda (MS.).*

² *rajata-smaraṇe idaṃ-padārtha-grahaṇa-rūpa-jñāna-dvaya-kalpane rajataṃ smaromīti tatrā'rubhava-prasaṅgaḥ, na tu rajataṃ paśyāmīti, sākṣāt-kāratva-vyañjaka-viśayatāyāḥ smaraṇe'bhāvāt. Ibid.*

³ (a) *Ibid.* (b) Meghanādāri, *Naya-dyu-maṇi*.

corroborated by another testimony, and that by another, and this will lead us to infinite regress.

In repudiating other views Meghanādāri points out that if validity is admitted as belonging to the collocative causes of knowledge (involving the self, the senses, and the object), then even the object would have to be regarded as a *pramāṇa*, and there would be no *prameya* or object left. Again, if affirmation is regarded as being of the nature of awareness, then even memory-knowledge has to be regarded as valid, since it is of the nature of awareness. Further, if affirmation of validity be of the nature of power, then such power, being non-sensible, has to be manifested by some other means of knowledge. If, again, validity is supposed to be produced by the causes of knowledge, then the dictum of the self-manifestation of validity would have to be given up. Uncontradicted behaviour also cannot be regarded as a definition of validity, for in that case even memory has to be regarded as valid by itself. It cannot also be defined as merely knowledge as such, for knowledge, not being able to turn back on itself to apprehend its own validity, would have to depend on something else, and that would imply the affirmation of validity through extraneous reference (*parataḥ-prāmāṇya*). Again in those cases where the cause of error is known, the cognition, though known as erroneous, irresistibly manifests itself to us (e.g. the movement of the sun). The assumption that all knowledge is associated with its validity is inapplicable to such cases. If, again, it is held that, whenever a later cognition rejects the former, we have a clear case as to how the invalidity of the previous cognition is demolished by the valid knowledge of a later moment; it may be urged that, when the generic knowledge of an object is replaced by a cognition of details, we have a case when one cognition replaces another, though it does not involve any criticism of the former knowledge.

In the Bhātṭa view, where it is supposed that when the object attains its specific cognized character its knowledge as an internal operation is inferred, both validity and invalidity ought to depend upon the objects. If, however, it is urged that the notion of validity shows itself in the faultless character of the instruments and condition of cognition, that would also imply the notion of validity as of extraneous origin. In the Prābhākara view, where knowledge is supposed to reveal the knower, the object and knowledge in one

sweep, we have a much better case in so far that here knowledge has not to depend on anything extraneous. In this case self-invalidity may apply only to memory which has to depend on previous perception. To this the Nyāya objection is that since memory is also knowledge, and since all knowledge is self-revealing, the Prābhākaras ought consistently to admit the self-validity of memory.

Meghanādāri holds that all these objections against the self-validity of knowledge are invalid; for if the knowledge of the validity of any cognition has to depend on other *pramāṇas*, then there is an infinite regress. If, however, an attempt is made to avoid the regress by admitting the self-validity of any later *pramāṇa*, then it virtually amounts to the admission of self-validity (*anavasthā-parihārāya kasyacit svatastvā-ṅgikāre ca na parataḥ-prāmāṇyam*). It may be urged that we are not necessarily prompted to action by a consciousness of validity, but through the probability of the same which is sought to be tested (*ajñātatayā jñātatayai'va*) by our efforts in the direction of the object. But in such a supposition there is no meaning in the attempt of our opponents in favour of the doctrine of the validity of cognition through extraneous means (*parataḥ-prāmāṇya*), for such a supposition is based on the view that our efforts are produced without a previous determination of the validity of cognition. When we see that a person, having perceived an object, makes an effort towards it, our natural conclusion is that he has, as the basis of the effort, a knowledge of the validity of his perception, for without it there can be no effort. It is hopeless to contend that there is validity of cognition in such cases without the knowledge of validity, for validity of knowledge always means the consciousness of such validity. The fact is that what constitutes a *pramāṇa* constitutes also its validity. It is wrong to think that validity appertains to anything else outside the cognition in question. When we see fire, its validity as a burning object is grasped with the very notion of fire and does not wait for the comprehension of any super-sensible power or burning capacity of fire. The comprehension of fire as a burning object involves the knowledge of its association with its burning capacity. The knowledge of the burning capacity by itself cannot induce any action on our part, for we are always led to act by the comprehension of objects and not by their capacities. It is, therefore, wrong to separate the capacity from the object and speak of it as the cause of our effort. So the cognition of a *pramāṇa*

involves with it its validity. Thus validity cannot be dissociated from the cognition of the object¹. Further, validity cannot be defined as uncontradictedness, for if that test is to be applied to every knowledge it would lead to infinite regress. If, however, the knowledge of the validity of any cognition has to depend upon the knowledge of the defectlessness or correctness of the means and conditions of cognition, then, since validity of such knowledge has to depend upon another knowledge for the correctness of the means and condition, and that upon another, there is obviously an infinite regress. Since knowledge normally corresponds to the object, ordinarily there should not be any fear of any error arising from the defects of the causes and conditions of such knowledge; it is only in specific cases that such doubts may arise leading to special inquiries about the correctness or incorrectness of the means and conditions of knowledge. If there is an inquiry as to the validity of every knowledge, we should be landed in scepticism. Thus, validity means the manifestation of any form of content not awaiting the confirmation by other means of knowledge (*pramāṇā-ntarā-ṇapekṣayā'rthā-vacchinnattvam*), and such a conviction of validity is manifested along with the cognition itself. Memory, however, depends upon a prior cognition, and as such the conviction of its validity depends upon the validity of a prior knowledge, and hence it cannot be regarded as self-valid.

Rāmānujācārya, the teacher and maternal uncle of Veṅkaṭanātha, anticipates the objection that if self-validity of cognition is to be

¹ Rāmānujācārya, the maternal uncle of Veṅkaṭanātha, anticipates an objection that perceptual cognition reveals only the content (*vastu*). The revelation of such a content does not also involve the knowing relation which must necessarily be of a very varied nature, for a knowledge may refer to a content in infinitely diverse relation. The revelation of the mere content, therefore, without the specific knowing relation, does not involve the judgmental form, though the truth of this content may be ascertained at a later moment when it is reduced to a judgmental form as "I know it." There is no possibility of the affirmation of any validity at the moment of the revelation of the content. In reply to this, Rāmānujācārya says that the revelation of a content necessarily implies all its knowing relations in a general manner; and therefore, by the mode of its revelation at any particular moment, the mode of its specific knowing relation at any particular moment is grasped along with the content. Thus, since the revelation of the content implies the specific knowing relation, all cognitions may be regarded as implicitly judgmental, and there cannot be any objection to the self-validity of such knowledge.

If the content and knowledge were regarded as entirely distinct, as they must be, and if the knowing relation were not given implicitly along with the content, then all knowledge would be contentless, and as such any future attempt to relate them would be impossible. *Nyāya-kulīśa* (MS.).

admitted, then no doubt could arise with reference to any cognition¹. The reply of Rāmānujācārya is that all cognitions are associated with a general conviction of their self-validity, but that does not prevent the rise of doubt in a certain specific direction. Self-validity in this view means that all cognitions produce by themselves a general conviction regarding their validity, though it does not rule out misapprehension in a specific direction².

The Ontological categories of the Rāmānuja School according to Veṅkaṭanātha.

(a) *Substance.*

Veṅkaṭanātha in his *Nyāya-siddhāṇṇana* and *Tattva-muktā-kalāpa*, tries to give a succinct account of the different categories, admitted or presumed, in the philosophy of Rāmānuja which the latter did not bring prominently to the view of his readers. The main division is that of the substance (*dravya*) and that which is non-substance (*adravya*). Substance is defined as that which has states (*daśāvat*) or which suffers change and modification. In admitting substance he tries to refute the Buddhist view that there is no substance, and all things are but a momentary conglomeration of separate entities which come into being and are destroyed the next moment. The Vaibhāṣika Buddhists say that there are four ultimate sense-data, viz. colour, taste, touch, and smell, which are themselves qualities and are not themselves qualities of anything. These can be grasped by our specific senses³. The Vātsīputriya school includes sound as a separate sense-data which can be perceived by the ear. Against this Veṅkaṭa urges that in all perception we have a notion that we touch what we see; such a perception cannot be false, for such a feeling is both invariable and undicted in experience (*svārasika-bādhā-dṛṣter anānyathā-siddheśca*). Such a perception implies recognition (*pratyabhijñā*) involving the notion that it is a permanent entity in the objective field which is perceived by a constant and unchangeable perceiver, and that the two sense-qualities refer to one and the same object. This recognition does not refer merely to the colour sensation, for the colour

¹ *sāmānyasya svato-graheṇā'bhyāsa-daśo-tṛanna-jñāne tat-saṁśayo na syāt. Tattva-cintā-maṇi* (A.S. B), p. 184.

² *Nyāya-kulīśa*, p. 27 (MS.).

³ *evam āhur vaibhāṣikāḥ nirādhārā nirdharmakāśca rūpādayaś catvāraḥ padārthāḥ. Tattva-muktā-kalāpa, Sarvārtha-siddhi*, p. 8.

sensation does not involve the tactile; nor does it refer merely to the tactile, as that does not involve colour. Perception, therefore, refers to an entity to which both the colour and the tactile qualities belong. Such a perception of recognition also repudiates the Buddhist view of the conglomeration of entities. For such a view naturally raises the question as to whether the conglomeration is different from or the same as the entities that conglomerate. In the latter case there cannot be any recognition of the object as one entity to which both the colour and the tactile quality belong. In the former case, when conglomeration is regarded as extraneous to the conglomerated entities, such a conglomeration must either be positive or negative. In the first alternative it amounts virtually to an admission of substances, for the assumption of the existence of merely the complex characters is inadmissible, since there cannot be anything like that which is neither a substance, nor quality, nor a qualifying relation. In the second alternative, if the conglomeration (*saṃghāta*) is non-existent, then it cannot produce the recognition. If conglomeration be defined as absence of interval between the perceived qualities, then also, since each sense quality has an appeal only to its own specific sense-organ, it is impossible that the perception of two different sense-qualities by two different organs should point to a common entity. Conglomeration cannot also be defined as spatial identity, for it must also involve temporal identity in order to give the notion of conglomeration. It cannot also be said that time and space are identical, for such a view which is true of momentariness, will be shown to be false by the refutation of momentariness. Space cannot also be of the nature of *ākāśa*, which in the Buddhist view means unobstructedness and is not a positive concept. Space cannot also be regarded as material identity with the sense-qualities, for the different sense-qualities are regarded as the unique nature of different moments¹. If it means that the different sensible qualities have but one material behind them, that amounts to the admission of substance². If the sensible qualities be regarded as a conglomeration on account of their existence in the same material object, then the material object would have to be described as a conglomeration by virtue of the existence of its elemental entities

¹ *na co'pādāna-rūpaḥ sparśa-rūpādinām bhinna-svalakṣaṇo-pādānatvā-bhy-upagamāt. Tattva-muktā-kalāpa, Sarvārtha-siddhi*, p. 9.

² *eko-pādānatve tu tad eva dravyam. Ibid.*

in some other entity and that again in some other entity, and thus we have a vicious infinite. It cannot also be urged that the tactile sensation is inferred from the colour sensation, for such an inference would involve as its pre-condition the knowledge of the concomitance of the colour datum and the tactile, which is not possible unless they are known to belong to the same object. Neither can it be urged that the tactile and the colour-data are mutually associated; this gives rise to the notion that what is seen is touched, for the two sensations are known to be different in nature and originate through different sense-organs. It cannot also be said that our apperception that we touch what we see, being due to the operation of our instinctive root-desire (*vāsanā*), is false, for proceeding on the same analogy and following the *Yogācāra* view, one may as well deny all external data. If it is said that the sense-data are never contradicted in experience and thus that the idealistic view is wrong, then it may as well be pointed out that our notion that we experience an object to which colour and the tactile sensations belong is also never contradicted in experience. If it is urged that such an experience cannot be proved to be logically valid, then it may be proved with equal force that the existence of external sense-data cannot be logically proved. Therefore, our ordinary experience that the object as a substance is the repository of various sense-qualities cannot be invalidated. The view that all the other four elements, excepting air (*vāyu*), are themselves of diverse nature and are hence perceived as coloured, as touchable, etc., and that they are capable of being grasped by different senses is also false, as it does not necessarily involve the supposition that they are the repository of different sense-qualities; for experience shows that we intuit the fact that the objects are endowed with qualities. No one perceives a jug as being merely the colour-datum, but as an object having colour. It is also impossible that one neutral datum should have two different natures; for one entity cannot have two different natures. If it is said that two different qualities can abide in the same object, then that amounts to the admission of a substance in which different qualities inhere. It is also wrong to suppose that since the colour-datum and the tactile are grasped together they are identical in nature, for in the case of one error where a white conch-shell appears as yellow, the conch-shell is grasped without its white character, just as the yellow colour is grasped without its

corresponding object. And it cannot be said that a separate yellow conch-shell is produced there; for such a view is directly contradicted in experience when we perceive the yellow colour and assert its identity with the conch-shell by touch. So, by the simultaneity of perception, coherence of qualities in an object is proved and not identity.

Moreover, even the Buddhists cannot prove that the tactile and the colour sensations occur simultaneously. If this were so, the testimony of the two different senses naturally points to the existence of two different characters. When an object is near we have a distinct perception of it, and when it is at a distance perception is indistinct. This distinctness or indistinctness cannot refer merely to the sense-character, for then their difference as objects would not be perceived. It cannot also refer to the size (*parimāṇa*), for the notion of size is admitted to be false by the Buddhists. Under the circumstances, it is to be admitted that such perceptions should refer to the objects.

The Buddhists are supposed to urge that if qualities are admitted to be separate from the substance, then it may be asked whether these qualities (*dharma*) have further qualities themselves or are without quality. In the latter alternative, being qualitiless, they are incapable of being defined or used in speech. In the former alternative, if qualities have further qualities, then the second grade qualities would have to be known by further qualities adhering to it, and that again by another, and thus we have a vicious infinite. Again, qualitiness (*dharmatva*) would itself be a quality. And it cannot be said that qualitiness is the very nature of quality, for a thing cannot be explained by having reference to itself. If qualitiness is something different from the quality, then such a concept would lead us in infinite regress. To this Veṅkaṭa's reply is that all qualities are not qualitiless. In some cases quality appears as itself qualified, as testified by experience. In those cases where a quality is not demonstrable with particularizing specification, such as "this quality is so and so" (*ittham-bhāva*), it does not depend for its comprehension on any other quality. Such qualities may be illustrated in the case of all abstract qualities and universals, and the opposite may be illustrated in the case of adjectival qualities such as the word "white" in the case of "white horse." There may be further specification regarding the nature of whiteness in the

white horse, whereas when the word “whiteness” stands by itself any inquiry regarding its further specification becomes inadmissible. Logically, however, there may be a demand of further specification in both the cases and the fear of an infinite regress, but it is not felt in experience¹. Moreover, one might imagine a vicious infinite in the necessity of having an awareness of an awareness, and then another and so on, but still this is only hyper-logical; for the awareness, in manifesting itself, manifests all that needs be known about it, and there is actually nothing gained by continuing the series. Thus a quality may be supposed to have further qualities, but whatever could be manifested by these may be regarded as revealed by the quality itself². Again the assertion that if qualities are themselves without quality then they are unspeakable would involve the Buddhists themselves in a great difficulty when they described the nature of all things as unique; for obviously such a uniqueness (*svalakṣaṇya*) is without quality, and if that which has no quality cannot be described, then its specification as unique or *svalakṣaṇa* is impossible³.

It may be urged that a quality may belong to that which has no quality or to that which has it. The former alternative would imply the existence of an entity in its negation which is impossible; for then everything could exist everywhere, and even the chimerical entities, which are not regarded as existing anywhere, would be regarded as existing. In the other alternative a quality would exist in a quality, which is an absurd conception, being only a circular reasoning (*ātmāśraya*). The reply of Veṅkaṭa to this is that he does not hold that the quality belongs to the locus of its negation or to that which has it already, but he holds that a qualified entity possesses the quality not as a qualified entity but as taken apart from it⁴. It cannot be urged that this virtually implies the old objection of the existence of a quality in the locus of its negation. To this Veṅkaṭa's reply is that the special feature of a qualified entity does

¹ *udāhṛteṣu nīyatā-nīyata-niṣkarṣaka-śabdeṣu jāti-guṇādeḥ pradhānatayā nirdeśe'pi santi kecit yathā-pramāṇam ittham-bhāvāḥ tvayā'pi hetu-sādhya-dīdharmānām pakṣa-dharmatva-dīdharmāḥ svikāryā anavasthā ca kathaṅcid upaśamanīyā. Tattva-muktā-kalāpa, Sarvārtha-siddhi, p. 16.*

² *svikṛtaṅca samavedana-samvedane śabda-śabdātau sva-para-nirvāhakatvam. Ibid.*

³ *kīṅca sva-lakṣaṇā-dīnām jātyā-dīnāṅca samvṛti-siddhānām nirdharmakatve'pi kathaṅcid abhilāpārhatvaṁ tvayā'pi grāhyam. Ibid.*

⁴ *vastutas' tad-viśiṣṭe viśeṣye tad viśiṣṭa-vṛty-abhāve tac-chūnye vṛtti syād eva. Ibid. p. 17.*

not belong to any of its constituents, and qualities of any of the constituents may not belong to the constituted entity¹. If by the hyper-logical method the manner of the subsistence of a quality in a qualified entity is criticized, then it might lead to the view that the conception of qualified entity is without any sufficient ground, or self-contradictory, or that such a conception is itself inadmissible. All such views are meaningless, for the wildest criticism of opponents would involve the very notion of qualified entity in the use of their logical apparatus. So it has to be admitted that qualities adhere in qualified entities and that such an adherence does not involve infinite regress.

(b) *Criticism of the Sāṃkhya Inference for Establishing the Existence of Prakṛti.*

Venkaṭanātha admits the doctrine of *prakṛti* as the theory of materiality, but he thinks that such a doctrine can be accepted only on the testimony of scriptures and not on inference. He therefore criticizes the Sāṃkhya inference as follows. Neither *prakṛti* nor any of its evolutes such as *mahat*, *ahamkāra*, *tanmātras*, etc., can be known through perception. Neither *prakṛti* nor any of its evolutes can also be known by inference. The Sāṃkhyists hold that the effect has the same qualities as the cause. The world of effects, as we find it, is pleasurable, painful or dulling (*mohātmaka*); so its cause also must have, as its nature, pleasure, pain and a feeling of dullness. To this the question naturally arises regarding the relation of the causal qualities with the effects. They cannot be identical – the whiteness of the cloth is not identical with the thread of which it is made; the effect as a substance is not identical with causal qualities, for the white and the cloth are not identical. Further it cannot be said that the identity of the cause and the effect means merely that the effect is subordinate to the cause, as when one says that the effect, cloth, exists only in the *samavāya* relation in the cause and in no other form (*adr̥ṣṭer eva tantu-samavetate'vāt paṭasya tantu-guṇatvoktiḥ*), for the obvious reply is that the Sāṃkhya itself does not admit the *samavāya* relation or any ultimate distinction between the whole and the part. If it is said that all that is intended is that the effect exists in the cause, then it may be pointed out that merely by such an affirmation nothing is gained; for that would not explain

¹ *na ca ghaṭavati bhūtaḥ vartamānānāṃ guṇādīnāṃ ghaṭe'pi vṛtter adr̥ṣṭeḥ. Tattva-muktī-kalāpa, Sarvārtha-siddhi*, p. 18.

why the causal matter (*prakṛti*) should have the nature or qualities as the effect substance (*na kāraṇā-vasthasya sukha-duḥkhā-dyā-tmakatva-siddhiḥ*). If it is held that the effect shares the qualities of the cause, then also it is against the normal supposition that the effect qualities are generated by the cause qualities; and, moreover, such a supposition would imply that the effect should have no other quality than those of the cause. It cannot also be said that the effect is of the same nature as the cause (*sajātīya-guṇavattvam*), for the Sāṃkhyaists admit the *mahat* to be a different category existent in the *prakṛti* as its cause (*vilakṣaṇa-mahatvā-dy-adhikaraṇatvād*). If it is held that the effect must have only qualities similar to the cause, then they may be admitted with impunity; if the effect has all its qualities the same as those of the cause, then there will be no difference between the effect and the cause. If, again, it is held that only certain specific traits which are not inappropriate in the cause can be supposed to migrate to the effect, and that the relation of the transmission of qualities from cause to the effect can thus be limited by a specific observation of the nature of the essential trait of the cause, then such cases in which living flies are produced from inanimate cow-dung would be inexplicable as cases of cause and effect¹.

The Sāṃkhyaists are supposed to argue that if pure intelligence were supposed naturally to tend to worldly objects, then there would be no chance of its attaining liberation. Its association, therefore, must needs be supposed through the intermediary of some other category. This cannot be the senses, for even without them the mind alone may continue to imagine worldly objects. Even when the mind is inactive in sleep, one may dream of various objects. And this may lead to the assumption of the category of ego or *ahaṃkāra*; and in dreamless sleep, when the operation of this category of *ahaṃkāra* may be regarded as suspended, there is still the functioning of breathing, which leads to the assumption of another category, viz. *manas*. But as this has a limited operation, it presupposes some other cause; if that cause is also regarded as limited, then there would be an infinite regress. The Sāṃkhyaists, therefore, rest with the assumption that the cause of *mahat* is unlimited, and this is *prakṛti* or *avyakta*. The reply of Veṅkaṭa

¹ *mṛt-suvarṇā-divat-kārya-viśeṣa-vyavasthāpaka-kāraṇa-svabhāva-sājātya-vivakṣāyām gomaya-makṣikā-dy-ārabdha-vṛścikā-diṣu vyabhicārāt. Tattva-muktā-kalāpa, Sarvārtha-siddhi, p. 22.*

to this is that the association of pure intelligence with worldly objects is through the instrumentality of *kurma*. It is also not possible to infer the existence of *Manas* as a separate category through the possibility of the thinking operation, for this may well be explained by the functioning of the subconscious root-impressions; for even the assumption of mind would not explain the thinking operation, since *manas*, by itself, cannot be regarded as capable of producing thought. *Manas*, being merely an instrument, cannot be regarded as playing the role of a substance of which thought may be regarded as a modification. In the state of dream also it is not necessary to assume the existence of a separate category of *ahamkāra* to explain dream experiences, for this may well be done by mind working in association with subconscious root-impression. The breathing operation in deep, dreamless sleep may also be explained by ordinary bio-motor functions, and for this there is no necessity for the assumption of *mahat*.

It is also wrong to suppose that the cause must be of a more unlimited extent than the effect, for it is not testified in ordinary experience, in which a big jug is often found to be made out of a lump of clay of a smaller size. It is also wrong to suppose that whatever is found to abide in an effect must also be found in its cause (*na hi yad yenā'nugatam tat tasya kāraṇam iti niyamah*), for the various qualities that are found in a cow are never regarded as its cause. Following the same assumption, one would expect to find a separate cause of which the common characteristics of the *prakṛti* and its evolutes are the effects, and this would involve the admission of another cause of the *prakṛti* itself (*vyaktā-vyakta-sādhāraṇa-dharmāṇām tad-ubhaya-kāraṇa-prasaṅgāt tathā ca tattvā-dhikya-prasaṅgah*). Thus, the argument that an effect must have as its cause qualitative entities that inhere in it is false. The earthiness (*mṛttva*) which inheres in the jug is not its cause, and the earthy substance (*mṛd-dravya*) which shows itself in its unmodified form or its modified form as jug cannot be said to be inherent in the jug. Again the argument that things which are related as cause and effect have the same form is also false; for if this sameness means identity, then no distinction can be made between cause and effect. If this sameness means the existence of some similar qualities, then there may be such similarity with other things (which are not cause and effect) as well. Again applying the same analogy to the Sāṃkhya doctrine

of *puruṣas* (which are admitted to have the common characteristic of intelligence), the Sāṃkhyists may well be asked to hold a new category as the cause of the *puruṣas*. Further, two jugs which are similar in their character are not for that reason produced from the same lump of clay; and, on the other hand, we have the illustration of production of effects from an entirely different cause, as in the case of production of insects from cow-dung. Thus, from our experiences of pleasure, pain, and dullness it does not follow that there is a common cause of the nature of pleasure, pain, and dullness, for these experiences can in each specific instance be explained by a specific cause, and there is no necessity to admit a separate common cause of the nature of three *guṇas*. If for the explanation of the ordinary pleasurable and painful experiences a separate pleasure-and-pain complex be admitted as the cause, then there may be further inquiry regarding this pleasure-and-pain complex and this will lead to infinite regress. Again if the three *guṇas* are regarded as the cause of the world, then that would not lead to the affirmation that the world is produced out of one cause; for though the three *guṇas* may be in a state of equilibrium, they may still be regarded as having their special contribution in generating the varied types of effects. Thus, the *triṅguṇa* or the *prakṛti* of the Sāṃkhya can never be proved by inference. The only mode of approach to the doctrine of *prakṛti* is through the scriptures. The three *guṇas* rest in the *prakṛti*, and in accordance with the gradual prominence of *sattva*, *rajas*, and *tamas*, three kinds of *mahat* are produced. From these three types of *mahat* three kinds of *ahamkāras* are produced. Out of the first type (i.e. *sāttvika ahamkāra*) the eleven senses are produced. Out of the last type (viz. the *tāmasa ahamkāra*) the *tanmātras* (also called the *bhūtādi*) are produced. The second type of *ahamkāra* (called *rājasa ahamkāra*) behaves as an accessory for the production of both the eleven senses and the *bhūtādi*. There are some who say that the conative senses are produced by *rājasa ahamkāra*. This cannot be accepted, as it is against the scriptural testimony. The *tanmātras* represent the subtle stage of evolution between the *tāmasa ahamkāra* and the gross elemental stage of the *bhūtas*¹. The *śabda-tan-mātra* (sound-

¹ *bhūtānām avyavahita-sūkṣmā-vasthā-viśiṣṭam dravyam tanmātram dadhirūpeṇa pariṇamamānasya payaso madhyamā-vasthāvad bhūta-rūpeṇa pariṇamamānasya dravyasya tataḥ pūrvā kācid avasthā tanmātrā. Nyāya-siddhānta, p. 25.*

potential) is produced from *bhūtādi*, and from it the gross elemental sound is produced. Again the *rūpa-tanmātra* (light-heat-potential) is produced from the *bhūtādi* or the *tāmasa ahaṃkāra*, and from the *rūpa-tanmātra* (light-heat-potential) gross light-heat is produced, and so on. Lokācārya, however, says that there is another view of the genesis of the *tanmātra* and the *bhūta* which has also the support of the scriptures and cannot therefore be ignored. This is as follows: *śabda-tanmātra* is produced from the *bhūtādi* and the *ākāśa* is produced from the *śabda-tanmātra* (sound-potential); the *ākāśa* again produces the *sparsa-tanmātra* (the touch-potential) and air is produced from the touch-potential. Again from air heat-light-potential (*rūpa-tanmātra*) is produced and from heat-light-potential *tejas* (heat-light) is produced; from *tejas*, *rasa-tanmātra* (taste-potential) is produced, and from it water. From water again the *gandha-tanmātra* (smell-potential) is produced, and from it the earth¹.

The view is explained by Varavara on the supposition that just as a seed can produce shoots only when it is covered by husks, so the *tanmātras* can be supposed to be able to produce further evolutes only when they can operate from within the envelope of the *bhūtādi*².

The process of evolution according to the said interpretation is as follows. *Śabda-tanmātra* is produced from *bhūtādi* which then envelops it, and then in such an enveloped state *ākāśa* is produced. Then from such a *śabda-tanmātra*, *sparsa-tanmātra* is produced which

¹ This view seems to be held in the *Viṣṇu-purāṇa*, I. 3. 66, etc. where it is distinctly said that the element of *ākāśa* produces *sparsa-tanmātra* (touch-potential). Varavara, however, in his commentary on the *Tattvatraya* of Lokācārya, wishes to point out that according to Parāśara's commentary this has been explained as being the production of *tanmātras* from *tanmātras*, though it clearly contradicts the manifest expressions of the *Viṣṇu-purāṇa* when it states that *tanmātras* are produced from the *bhūtādi*. He further points out that in the *Mahābhārata* (*Sāntiparva Mokṣadharmā*, Ch. xxx) the *vikāras* or pure modifications are described as sixteen and the causes (*prakṛti*) as eight. But in this counting the sixteen *vikāras* (eleven senses and the five categories—*śabda*, etc.), the distinction between the five *tanmātras* and the five elements has not been observed on account of there not being any essential difference, the grosser stages being only modified states of the subtler ones (*tanmātrāṇām bhūtebhyah svarūpa-bhedā-bhāvāt avasthā-bhedā-mātrattvāt*). According to this interpretation the eight *Prakṛtis* mean the *prakṛti*, the *mahat*, the *ahaṃkāra* and five categories of *ākāśa*, etc., in their gross forms. The five categories included under the sixteen *vikāras* are the *tanmātras* which are regarded as modifications of the elemental states of the *bhūtas*.

envelops the *śabda-tanmātra*. The *sparsa-tanmātra*, as enveloped by the *śabda-tanmātra*, produces the *vāyu* through the accessory help of *ākāśa*. Then from this *sparsa-tanmātra* the *rūpa-tanmātra* is produced. The *rūpa-tanmātra* in its turn envelops the *sparsa-tanmātra* and then from the *rūpa-tanmātra*, as enveloped by the *sparsa-tanmātra*, *tejas* is produced through the accessory help of *vāyu*. Again the *rasa-tanmātra* is produced from the *rūpa-tanmātra*, which again envelops the *rasa-tanmātra*. From the *rasa-tanmātra* enveloped by the *rūpa-tanmātra* water is produced through the accessory help of *tejas*. From the *rasa-tanmātra* the *gandha-tanmātra* is produced which again, enveloped by *rasa-tanmātra*, produces earth through the accessory help of water¹.

Varavara points out that in the *Tattva-nirūpaṇa* another genesis of creation is given which is as follows. *Śabda-tan-mātra* is produced from *bhūtādi* and as a gross state of it *ākāśa* is produced. The *bhūtādi* envelops the *śabda-tanmātra* and the *ākāśa*. From the transforming *śabda-tan-mātra*, through the accessory of the gross *ākāśa* as enveloped by *bhūtādi*, the *sparsa-tanmātra* is produced and from such a *sparsa-tanmātra* *vāyu* is produced. The *śabda-tan-mātra* then envelops both the *sparsa-tanmātra* and the *vāyu*, and from the transforming *sparsa-tanmātra*, through the accessory of *vāyu* as enveloped by *śabda-tanmātra*, the *rūpa-tanmātra* is produced. From the *rūpa-tanmātra*, similarly, *tejas* is produced, and so on. In this view, in the production of the *sparsa* and other *tanmātras* the accessory help of the previous *bhūtas* is found necessary.

As Veṅkaṭanātha accepts the view that the gross *bhūta* of *ākāśa* acts as accessory to the production of the later *bhūtas*, he criticizes the Sāṃkhya view that the gross *bhūtas* are produced from the synthesis of *tanmātras*². The Sāṃkhyists, again, think that the evolution of the different categories from *prakṛti* is due to an inherent teleology and not to the operation of any separate agent. Veṅkaṭa, however, as a true follower of Rāmānuja, repudiates it and asserts that the evolving operation of the *prakṛti* can only proceed through the dynamic operation of God Himself.

(c) *Refutation of the Atomic Theory of Nyāya in relation to Whole and Part.*

In refuting the *Nyāya* view that the parts attach themselves to each other and thereby produce the whole, and ultimately the partless atoms combine together to form a molecule, Veṅkaṭa introduces the following arguments. So far as the association of the wholes through their parts (beginning from the molecules) through the association of the parts are concerned, Veṅkaṭa has nothing to object. His objection is against the possibility of an atomic contract for the formation of molecules. If the atoms combine together through their parts, then these parts may be conceived to have further parts, and thus there would be infinite regress. If these parts are regarded as not different from the whole, then the different atoms could well be regarded as occupying the same atomic space, and thus they would not produce a conglomeration bigger in size than the constituent atoms. Further, it is not possible to imagine that there should be wholes without the parts also being present. Proceeding in this way, if the atomic combination cannot account for the origin of bigger measures, the possibility of objects of different magnitude through conglomeration (e.g. a hill or a mustard seed) would be inexplicable. If it is said that parts refer to the different sides of an atom, then also it might be urged that a partless atom cannot have sides.

It is held that knowledge, though one, can refer to many, though it is partless. It may also be urged in this connection that if it refers to all objects in their entirety, then the constituent entities would not be referred to separately, and it cannot also refer to the objects separately in parts, for then intelligence itself would not be partless. The Naiyāyika may also, on this analogy, urge that any solution that the idealist may find to his difficulty also applies to the atomic theory. To this the obvious answer of the idealist is that in the case of intelligence, experience testifies that though one and partless it can refer to many, and the Naiyāyikas have no such advantage to show in their favour, for the Naiyāyikas do not admit that in any case wholes may combine except through their parts. The objection cannot be laid against the Buddhist theory of conglomeration (*saṅghāta*), for there such conglomeration is not due to contact. The Naiyāyikas may be supposed to raise an objection regarding the association of all-pervasive entities (*vibhu*) with finite

objects; such an association has to be admitted, for otherwise the association of the self or the *ākāśa* with objects cannot be explained; it is not also possible to hold that all pervasive entities have parts. So ultimately it has to be admitted that the partless all-pervasive entities have contact with finite objects, and if their procedure is accepted, then the same might explain the contact of partless atoms. To this Veṅkaṭa's reply is that the illustration of the contact of all-pervasive entities with finite objects might well be thrown in our face, if we had attempted to refute the view that wholes had no specific qualities; but our main object is to show the inconsistency to which the Naiyāyikas are exposed when they apply their theory that all combinations of wholes must be through parts to the combination of the supposed partless atoms. As a matter of fact, the error lies in the assumption that the atoms are partless. If it is supposed that division of particles must ultimately take us to partless atoms, the obvious reply is that from the division of parts we could not go to the partless, the better way being the acceptance of the smallest visible particles called the *trasareṇu*. If it is urged that if *trasareṇu* is the atom, then it must be invisible, the obvious reply is that there is no such general concomitance between atomic nature and invisibility. The better course, therefore, is to accept the *trasareṇu* as ultimate particles of matter. There is, therefore, no necessity to admit *dvyanuṅka* also.

Veṅkaṭanātha further objects to the Nyāya doctrine of the formation of wholes (*avayavī*) from parts (*avayava*) and points out that if this is to be admitted, then the weight of an object must be due to the weight of the atoms; but the Naiyāyikas hold that the atoms have no weight. The proper view therefore is that the effect, or the so-called whole, is to be regarded as being only a modified condition of the parts. The causal operation in such a view is justified in producing the change in the condition of the causal object and not in producing a new object in the effect or the whole as is supposed by the Naiyāyikas. Again in the consideration of the production of the wholes from parts, when the thread is regarded as the cause of the production of the whole, the cloth, it may be observed that in the process of the production we find various accretions through the gradual addition of one thread after another. In each such addition we have separate wholes, since the process may easily be stopped anywhere; and in such a view we have the

addition of a part to a whole for the production of another whole. This is obviously against the Nyāya view, which would not lend any support to the doctrine that the addition of parts to wholes would produce other wholes. The Naiyāyikas urge that if a whole as a different entity from the parts be not admitted, and if a whole be regarded as nothing more than a collection of atoms, then, the atoms being invisible, the wholes would be invisible. The production of gross wholes not being admitted, the supposed explanation that there is an illusion of grossness in the atoms would also be inadmissible¹. The question now is what is meant by grossness. If it means a new measure, then it is quite admissible in the Rāmānuja view in which the production of separate wholes is not admitted; for just as the atomists would think of the production of the new wholes from atoms, so the Rāmānujist may also agree to the production of a new measure (*parimāṇa*). If the Naiyāyikas object to this and urge that the production of a new measure from the atomic is inadmissible, then they may as well be asked how they would also account for the notion of plurality in a collection of separate entities, each of which may be regarded as one in itself. If it is said that the conception of number as plurality proceeds from a mental oscillation incorporating the diversity, then it may also be argued that from the absence of any such oscillation there may be a failure in noting the separateness which may give rise to a notion of gross measure. Moreover, there is nothing incongruous in the fact that if individuals are not visible the collection may be visible. If the grossness is supposed to mean the occupation of more spatial units than the individual entities, then also it is not inadmissible; for in a collection of small particles they are cognized as occupying different spatial units. If it is urged that since no separate wholes are admitted to be produced the gross dimension cannot be perceptible, the obvious reply is that the perception of grossness has no connection with the perception of wholes. Even before the dyad is produced the combining atoms have to be admitted as occupying more space in their totality than in their individual capacity; for otherwise they in their totality could not produce a bigger dimension. Thus, there is no reason for admitting the production of wholes separate from the parts. Under the same specific

¹ *sthūla-dravyā-bhāve cā'nu-saṁhatau sthūlatvā-dhyāso na siddhyet. Sarvārtha-siddhi*, p. 46.

kind of combination of threads in which the Naiyāyikas think that a cloth could be produced, the Rāmānujists think that the threads under the selfsame condition are the cloth and there is no separate production of cloth¹. But it should not be thought that any slight change in the condition of an object would mean that thereby there is a new object so long as the object remains sufficiently unchanged to be recognized as the same for all practical purposes. The causal operation, according to the Rāmānujists, only brings about new changes of conditions and states in the already existent causal substance. This is thus different from the Sāṃkhya theory of *sat-kārya-vāda*, according to which the effect is already existent in the cause even before the causal operation is set in motion. Veṅkaṭa, therefore, criticizes the Sāṃkhya theory of *sat-kārya-vāda*.

(d) *Criticism of the Sāṃkhya Theory of Sat-kārya-vāda.*

The Sāṃkhya is wrong in supposing that the effect (e.g. the jug) was pre-existent in its cause (e.g. earth), for had it been so the causal operation would have been fruitless. The Sāṃkhya may, however, say that the causal operation serves to manifest what was potentially existing in the cause; the function of causal operation is thus manifestation and not production. This, however, is wrong, for manifestation (*vyāṅga*) and production (*kārya*) are two different words having two different concepts. Manifestation can occur only in the operation of a manifesting agent with the help of its accessories in making an object manifested with regard to a particular sense-organ in a particular place where the manifesting agent exists². It would first be proved that the pre-existent effect is manifested and not produced; only then would it have been worth while to inquire into the conditions of the causal operation to see whether it satisfied the necessary conditions of a manifesting agent. But the Sāṃkhya can hardly succeed in showing that it is so. The Sāṃkhyist says that the effect is pre-existent before the causal

operation; but the causal operation is itself an effect, and if their previous assertion is correct then it was non-existent when the effect was non-manifested. If the causal operation was also existent at the time of the existence of the cause, then the effect would also have been present in the cause in a manifested state. The Sāṃkhya says that what is non-existent cannot be produced, and this implies that a thing is existent because it can be produced, which is, on the face of it, self-contradictory. The theory that the effect is pre-existing in the cause could have been admitted as a last resort if there were no other theory available, but the ordinary notion of causality as invariable and immediate antecedent is quite sufficient to explain the phenomenon of production. Therefore, there is no necessity for such a chimerical theory. Again instead of holding that the effect is nothing more than the potential power in the cause, it is much better to say that the cause has such power by which it can produce the effect under certain conditions¹. Again it may be thought about the instrumental and other accessory agents that if they lead to the generation of effort, as indeed they do, they should also be accepted as subtle potential states of the effect. But this is not admitted by the Sāṃkhyist, for according to him it is only the material cause which is regarded as the potential effect. Otherwise even the *puruṣa*, which, teleologically, is to be regarded as the instrumental cause of the world phenomenon, has to be regarded as a part of *prakṛti*. Again consider the destructive agents. Are the destructible effects already present in the destructible agent? It cannot be so, for they are entirely opposed to each other. If it were not so, it could not destroy it². If it were not so and yet if it would be destroyed by the destructive agent, then everything could be destroyed by everything.

Turning to the function of the material cause, it may be pointed out that it cannot be defined as that from which an effect is produced (*tajjanyatva*); for then even an instrumental cause would be included in the material cause. Nor can it be regarded as a modification (*tadvikāratva*), for then the effect would be only the quality of the cause, and there would be no difference between the cause

¹ *yathā sarveṣu draveṣu tilā eva taila-garbhāḥ s'va-kāraṇa-śaktiṃ sṛjyante tathā tat-tat-kārya-niyata-pūrva-bhāvitayā tat-tad-utpādaka-svabhāvas te te bhāvās tathai've'ti svikāryam. Sarvārtha-siddhi*, p. 59.

² *nāśakeṣu ca nāśya-vṛttir asti na vā. asti cet bahnav tūlavau virodhaḥ na cet katham tadeva tasya nāśakam. Ibid.* p. 60.

and the effect. But we see that the cloth is different from threads¹. If the effect is regarded as identical with the cause on the ground that though there cannot be any contact between the effect and the cause yet the former is never outside the latter, the obvious reply is that in the view that the effect is not a substance there need not be any contact, and if it is a property of the cause it is never beside it². On the view that the effect is a manifestation, it may be asked whether such a manifestation is eternal or itself an effect. In the former case no causal operation is necessary for the manifestation. In the latter case, if the manifestation be regarded as a separate effect, then it virtually amounts to a partial sacrifice of *sat-kārya-vāda*. If for the manifestation of a manifestation causal operation is necessary, then that will lead to a vicious infinite. Moreover, if manifestation is itself regarded as an effect, then since it did not exist before, its coming into being would involve the sacrifice of *sat-kārya-vāda*.

It may be urged that the production of an effect is not of the nature of the effect itself, for one always speaks of an effect as being produced. Thus the effect is different from production. If this is admitted, then what is the difficulty in accepting the view that the effect may be manifested? If the word production be considered more logical, then with regard to it also there may be the same question, whether a production is produced or manifested, and in the former case there would be infinite regress, and in the latter no necessity for the causal operation. With regard to the manifestation also there would be the same difficulty as to whether it is produced or manifested, and in both cases there would be vicious infinite. The reply to this is that production means the operation of the causal agents, and if this operation be again admitted to be produced by the operation of its own causal constituent, and that by another, there is no doubt an infinite regress, but it is not vicious and is admitted by all. When there is a movement of a specific nature in the thread, we say a cloth is produced, or rather at the very first moment of such a movement involving the cloth-state of the thread

¹ *tad-dharmatva-hetū-ktā-doṣād eva ubhayatra paṭā-vasthā tantvā-tmā na bhavati tantubhyo bhinnatvāt ghaṭavad iti prati-prayogasya śakyatvācca. Sarvārtha-siddhi*, p. 60.

we say that a cloth is produced¹. It is for this reason that we can speak of an effect as being produced. Such a production has no further production.

(e) *Refutation of the Buddhist Doctrine of Momentariness.*

The Buddhists hold that the theory of causal efficiency proves that whatever is existent must be momentary; for the same efficiency cannot be produced again and again. So, in accordance with each efficiency or the production of effects, a separate entity has to be admitted. Since the efficiency at two different moments cannot be identical, the entities producing them also cannot be identical. Since the different characters that are supposed to belong to the same object represent different efficiencies, their attribution to the same object is also erroneous. Therefore, there are as many different entities as there are different character points in a particular moment (*yo yo viruddha-dharmā-dhyāsavān sa sa nānā*). To this Venkaṭanātha's reply is that things are not associated with diverse opposite characters, and that though in certain cases, e.g. the flowing river or the flame of a lamp, changing entities may show the appearance of an unchanging whole, there are undeniable cases of true recognition in all such cases where we perceive that it is the same thing which we both see and touch. The fact that in such cases subconscious impressions may also be working should not be exaggerated to such an extent as to lead us to believe that recognition is a mere affair of memory. Recognition is a case where perception predominates, or at the worst it may be said to be a joint complex of memory and perception. The objection that the presence of memory falsifies recognition is wrong, for not all memory is false. It is also wrong to think that memory is only subjective and as such cannot lead us to an objective determination; for memory is not only subjective but has also an objective reference involving the time character of the objects as past. Again the Buddhists say that the association of many characters to an object is wrong, for each character-point represents the efficiency of a momentary unit, and that, therefore, the association of many characters in recognition is false. To this Venkaṭa's reply is that if each momentary unit

¹ *yadā hi tantvā-dayaḥ vyāprijante tadā paṭa utpadyate iti vyavaharanti ādya-kṣaṇā-vacchinna-paṭatvā-vasthai-va vā paṭo'tpattir ucyate sai'va tadava-sthasyo'tpattir iti bhāṣyam api tad-abhiprāyam eva. Sarvārtha-siddhi, p. 62.*

is by itself capable of producing any effect, it ought to do it by its own nature, and it ought not to wait for the assistance of other accessories. Following the same analogy, even the unique nature of any momentary unit would not be the same with any other unique nature of any other moment, and thus the idea of identity would be impossible and would land us in nihilism. It is, therefore, wrong to suppose that there is a separate entity corresponding to each and every character unit¹. The Buddhists are supposed to urge further that the experience of recognition identifies a past moment with a present, which is impossible. The reply of Venkaṭa is that though it would be absurd to connect a past moment with the present, there is no incongruity in associating them with an entity which has lived through the past and is also persisting in the present moment². It is true that the affirmation of a past time in the present is contradictory, but the real mystery of the situation is that one time appears as many under diverse conditions (*upādhi*). In such cases the contradiction arises in associating the different conditions in each other's conditioned time unit, but this does not imply that the reference to the different conditions and time is inadmissible; for had it been so, even the concept of a successive series of moments would be inadmissible, since the notion of successive moments implies a reference of before and after, and hence in some way or other it brings together the past, the present and the future. If this be not admitted, the very concept of momentariness would have to be sacrificed³. If it is urged that momentariness (*kṣaṇa-sambandhitva*) means the unique self-identity of any entity, then that leads us to no new knowledge. Thus, the mere association of the past with the present leads us to no temporal self-contradiction.

Again the Buddhists are supposed to urge that perception refers

¹ *viruddhānām deśa-kālā-dya-samāhita-virodhatvena sva-lakṣaṇasyā'pi viruddha-śata-kṣuṇmatayā nānātve tat-kṣodānām ca tathā tathā kṣode kiñcid apy ekam na siddhyet tad-abhāve ca kuto nai'kam iti mādhyamika-matā-pātaḥ. Sarvārtha-siddhi*, p. 66.

³ *pūrvā-para-kāla-yogo hi viruddhaḥ sveno'pādhinā'vacchinnaśyāi'kasya kāla-syā'vāntaro-pādhibhir nānātve'pi tat-tad-upādhinām eva tat-tad-avāntarakāladvayānvaya-virodhaḥ anyā-pekṣayā pūrvā-para-kālayor anyasya viruddhatve kṣaṇa-kālasyā'py anyā-pekṣayā paurvāparyāt tat-kāla-vartitvam api vastuno viruddhyeta. Ibid.*

only to the present moment. It can never lead us to the comprehension of the past. Our notion, therefore, that things existent in the past are persistent in the present is an illusion due to the operation of the subconscious root-impressions which ignore difference between the past and the present, and impose the former on the latter, as silver is imposed on conch-shell. The reply of Veṅkaṭa to this is that perception demonstrates only the presence of an object in the present moment as against its absence; but it does not on that account deny its existence in the past. Just as "this" indicates the presence of an object in the present moment, the perceptual experience "that is this" demonstrates the persistence of the object in the past and in the present¹. If it is urged that perception reveals its object as a present entity, then the Buddhist theory of perception as indeterminate (*nirvikalpa*), which cannot reveal the object as qualified by the temporal character as present, falls to the ground. If it is urged that perception reveals the existence of the object at the moment of the perceptual revelation, then also it is impossible in the Buddhist view, for the momentary object with which the sense-organ was in touch has ceased to exist by the time knowledge was produced. So, in whichever way the Buddhist may take it, he cannot prove that perception reveals an object only as present; whereas in the Rāmānuja view, since the sense-contact, the object as associated with it, and the temporal element associated with them, are continuous, the mental state is also continuous and as such the perception reveals the object as that with which the sense was in contact. Even after the cessation of the sense-contact, the mental state, indicating the perception of the object with which the sense was in contact, is comprehended².

Again if it is argued that whatever is invariably produced from anything must also be produced unconditionally without awaiting any causal operation, then it must be said that when leaves and flowers grow from a plant they do so unconditionally, which is absurd. Moreover, when in a series of momentary entities one entity follows another, it must do so without awaiting any cause; then, on the one hand, since each of the preceding entities has no

¹ *yathā idam iti tat-kāla-sattā grhyate tathā tad idam iti kāla-dvaya-sattvam api pratyakṣeṇai'va grhītam. Sarvārtha-siddhi*, p. 69.

² *asman-mate tv indriya-samprayogasya tad-viśiṣṭa-vastunas tad-upahita-kālā-mśasya ca sthāyitvena dhī-kṣaṇānūvṛttau tad-viśayatayā pratyakṣo-dayāt samprayogā-nantara-kṣaṇe dhīr api nirvartyate. Ibid.* p. 70.

special function to fulfil, it is without any causal efficiency and as such is non-existent; and, on the other hand, since each succeeding entity rises into being without waiting for any cause, it may rise into being in the preceding moment as well, and if this is so there would be no series at all. Again it is argued that since whatever is produced must necessarily be destroyed, destruction as such is unconditioned and takes place without awaiting any cause. Negation can be unconditioned only when it is an implication of position which as such is never produced but is always associated with any and every position (e.g. cow implies the negation of a horse). But negations which are produced always depend on certain causes which can produce them just as much as any positive entity, as in the case of the destruction of a jug by the stroke of a stick. If it is argued that the stroke of a stick does not produce any destruction but only starts a new series of existence in the form of the particles of the jug, then also there are many other illustrations (e.g. the blowing out of a flame) in which the explanation of the starting of a new series is not available. If it is argued that negation is mere nothing and as such does not depend on a cause like chimerical entities, e.g. the lotus of the sky, such an explanation would be meaningless; for negations or destructions are conditioned in time just as are any positive entities, and as such are different from chimerical entities (*pratiyogivād eva niyata-kālatayā pramītasya atyantā-tucchatā-yogāt*). If negations be regarded as similar to chimerical entities, then the former would be as beginningless as the latter, and, if this were so, then there would be no positive entities, all being beginningless negations. If negation were chimerical, then even at the time of negation there could be the positive entities, for negation being chimerical could not condition anything and this would amount to the persistence of all entities and cannot be acceptable to momentarists like the Buddhists. If negations were devoid only of certain specific characters, then they would be like the unique-charactered entities (*svalakṣaṇa*) which are also devoid of certain specific characters. If they were devoid of all characters (*sarva-svabhāva-viraha*), then they could have no place in a proposition which must affirm some predicate of them. If it is said that negation has a character as such, then that being its character it would not be devoid of any character. If such negations were not pre-existent, then their coming into being must depend on some

causal operation. If they were pre-existent, then there would not be any positive entities (*prāk-sattve tu bhāvā-pahnavah*).

If it is urged that the effect-moment as destruction is simultaneous with the cause-moment, then the positive entity and its destruction would occur at the same moment; and if this were so, there is no reason why the destruction should not precede the positive entity. If destruction is admitted to appear at a moment succeeding that of the production of the positive moment, then the destruction would not be unconditioned. If the sequence of the positive entity and its destruction be with reference to the positive entity itself and not to its production, then the positive entity would be the cause of the destruction. It cannot be said that destruction is conditioned only by the position, for its dependence on other accessory agents cannot be repudiated. It cannot be argued that the production of a moment is also its destruction, for that would be self-contradictory. It is sometimes maintained that difference does not constitute destruction, and hence the rise of a different-charactered moment does not imply the destruction of the previous moment. The destruction of a moment has thus to be regarded as a separate fact, and as such it is involved and inherent in the very production of a moment¹. To this the reply is that a different-charactered entity must also be regarded as the destruction of the previous entity, for otherwise it would be impossible to assign any cause to the rise of such a different-charactered entity. If, again, the destruction be the very essence of an entity, then such an essence might as well manifest itself at the time of the rise of the present entity, and thus reduce it to the negation which would mean the universal negation of all things. If it is urged that an entity produces its own destruction by itself, then it would be meaningless to hold that destruction is unconditional; and if it is thus conditioned by itself, it would be idle to suppose that it does not depend on any other condition, for there is no means of knowing it. If it is admitted that an entity produces its own destruction with the help of other accessories, then the doctrine of momentariness fails. It has also been shown before that the affirmation of momentariness is distinctly contradicted by the phenomenon of recognition

¹ *yad yato bhidyate na tat tasya dhvamsaḥ yathā rūpasya rasaḥ. dhvamsas tu kasyacid eva bhavati iti tad-ātmakaḥ. ataḥ sva-tpattāu eva svātmani dhvamse sannihite katham kṣaṇā-ntaram prāpnuyāt. Sarvārtha-siddhi*, p. 72.

as elaborated above. Again when the momentarist says that all things are momentary, how does he explain the fact that the effect-moment is caused by the cause-moment? If causation means nothing more than immediate succession, then the universe at a particular moment is caused by the universe at the preceding moment. The problem is whether such immediacy of succession is by itself competent to produce the effect-moment or needs the accessories of space and time. If such accessories are not necessary, then spatial co-existence or concomitance (as in the case of smoke and fire) ought not to lead to any inference. If such accessories are awaited, then it would mean that whatever is produced at any unit of space has also its cause in that unit of space and that unit of time. On such a view the effect-moment would be in the space and time of the cause, and thus the cause-space or cause-time would be co-extensive in two moments. If this were admitted, then the momentarist might as well admit that the cause persists in two moments. So, the momentarist who does not admit persisting time and space cannot also admit that any sequence should be conditioned by them. If it is said that a cause-moment starts its effect in the very space or time in which it exists, then there would be no unity of the series between the cause and the effect; and, by supposition, they are regarded as having different sets of moments for themselves. There might be superimposition but no unity of the series. If the unity of the series be not admitted, then the expectation that just as when a cotton-seed is dyed there is redness in the cotton, so in the moral sphere whenever there is the *vāsanā* or root-inclination there is also its fruit, fails. The co-existence of the causal-moment and the effect-moment does not imply the unity that is expected in a normal cause and effect relation, and it would therefore be difficult to say that such an effect has such a cause, for the momentaristic theory cannot establish the bond between cause and effect.

Let us now analyse the concept of momentariness. It may mean the fact that (1) an entity is associated with a moment (*kṣaṇa-sambandhavattva*), or (2) association with a momentary unit of time (*kṣaṇa-kāla-sambandhatvam*), or (3) existence for only one moment (*kṣaṇa-mātra-varitva*), or (4) absence of relation with two moments (*kṣaṇa-dvaya-sambandha-śūnyatva*), or (5) identity with the moment of time (*kṣaṇa-kālatvam*), or (6) being determinant of the moment-

character (*kṣaṇa-pādhitvam*). The first alternative is inadmissible, for even those who believe in persistent entities admit that such entities, since they persist in time, are associated with a moment. The second alternative is inadmissible because the Buddhists do not believe in any separate category of time apart from the *kṣaṇa*¹. On such an admission, again, an entity as time which is beyond a *kṣaṇa* has to be virtually accepted, which contradicts the doctrine of momentariness. The third alternative is directly contradicted in the experience of recognition which testifies to the fact that we touch what we see. The fourth view is also for the same reason contradicted in experience; and if any supposed entity which is not itself a *kṣaṇa* is not associated with two time-moments, then it can have only a chimerical existence, and, curiously enough, the Buddhists often compare all existent entities with chimerical objects². The fifth alternative is also inadmissible, for just as an entity exists in a unit of space and cannot be identical with it, so also it cannot be identical with the time in which it exists, and it is directly contradicted in experience. The sixth alternative is also inadmissible for the reason that if objects were in their own nature determinants of moments, then there would be nothing to explain our notion of temporal succession³; and all our experiences depending on such a succession would be contradicted. If things did not persist in time and were absolutely destroyed without leaving any trace (*nīranvaya-vināśah*), then the ordinary experience of the world in which things are done for the purpose of reaping their benefits could not be explained. The man who had done some work would not wait a moment for his reward. In the Rāmānuja view persistence of the self is well explained in self-consciousness. The theory that such a self-consciousness refers only to the succeeding terms produced in the series of the *ālaya-vijñāna* is only a theory which has no verification, and such a theory is directly contradicted by the well attested maxim that the experience of one individual cannot be remembered by another (*nānya-dṛṣṭam smaraty anyah*). There is also no way in which the

terms of the *ālaya-vijñāna* series may be associated with volitional notions.

If the momentariness of entities means that they are modified or conditioned by moments, then also the question arises if they are not themselves momentary, how can they be conditioned by moments? If the conditioning by moments means that causal collocations represent only the previous moment of the effect (*kārya-prāga-bhāva-samanvita*), then it may be urged by the opponent that it would be difficult to refute such momentariness. On the side of the opponent it may be further said that the criticism that the conglomeration of the causes is something different from, or identical with the conglomerating entities, cannot be made; for, in either case, since such an entity would, according to the Rāmānujists, be a persisting one, it would not condition a moment. The reply is that conglomeration can neither mean relation nor the related entities; for the word "conglomeration" cannot apply specifically to each of the entities, and as such it is to be admitted that the causal entities, collected together by some condition, represent the conglomeration. If such entities are regarded as determining the moment, then they must necessarily be persistent. If it is held that the combining condition is the condition of the *kṣāṇa*, then the reply is that the production must be due to the joint operations of the combining conditions and the specific collocating entities. Of these the combining condition is not momentary, and since the collocating entities would stay till they were combined, they are also not momentary. The condition of the *kṣāṇa* seems, therefore, to be the last accessory agent or operation which associates with it the previous entities or operations and thereby behaves as the condition of the moment immediately antecedent to the effect. There is thus nothing momentary in it. Time being unlimited in its nature cannot be parcelled out in moments. The supposed moments can be attributed to an operation or an existing entity only for specifying particular states or conditions for practical purposes; but an entity that exists, exists in time, and thus outgrows the limits of a previous or later moment. So, though a specific unit of time may be regarded as momentary, the entity that exists, therefore, is not momentary in the nature of its own existence. Since the Buddhists do not admit time, they are not justified in speaking of momentary time in which things are sup-

posed to exist. Nor are they justified in holding that nature in itself suffers change in every moment, for that virtually amounts to the existence of a persisting entity which suffers modification¹.

The Buddhist assumption that things are destroyed entirely, and there are no elements in them that persist (*nirāṇvaya-vināśa*), on the analogy that flames are destroyed without leaving any trace of their existence, is false. For, from various other instances, e.g. the case of jugs, cloth, etc., we find that their destruction means only a change of state and not entire annihilation; and from this analogy it is reasonable to suppose that the elements of the flame that are destroyed are not completely annihilated but persist in invisible forms. Even when a flame is destroyed, the tip of the wick is felt to be slightly warm, and this is certainly to be interpreted as a remnant of the heat possessed by the flame. If the last stage in the destruction of an entity be regarded as lapsing into entire annihilation, it would have no causal efficiency and as such would be non-existent. If the last stage is non-existent, then its previous stage also would have no causal efficiency and would be non-existent, and so on. This would lead to universal non-existence.

(f) *Refutation of the Cārvāka criticism against
the Doctrine of Causality.*

The problem of causality naturally brings in the question of time relation between the cause and the effect, i.e. whether the effect precedes the cause, or whether the cause precedes the effect, or whether they are simultaneous. If the effect precedes the cause, then it would not depend upon causal operation for its existence and it would then be an eternally existent entity like space. If it is not existent, then it cannot be brought into existence by any means, for a non-existent entity cannot be produced. If the effect were produced before the cause, then the so-called "cause" could not be its cause. If the cause and effect were simultaneous, then it would be difficult to determine which is the cause and which the effect. If the cause precedes the effect, then, again, it may be asked whether the effect was already existent or beside it. If it is already existent, there is no need of causal operation, and that which is to happen

¹ *sarva-kṣaṇikatvaṃ sādhayitum upakramya sthira-dṛavya-vṛtti-kṣanika-vikāravād iti katham dṛṣṭāntayema teṣu ca na tvad-abhimatam kṣaṇikatvaṃ pradīpā-di vād āśutara-vināśitva-mātreṇa kṣaṇikato-kteḥ. Sarvārtha-siddhi*, p. 77.

later cannot be considered to be co-existent with that which was at a prior moment. If the effect was not co-existent with the cause, then what would be the bond which would determine why a particular cause should produce a particular effect and not others? Since production cannot be synonymous with what is produced, it must be different from it. Being a different entity, it may be demanded that production should have a further production, and that another, and this will lead to infinite regress.

To these objections Veṅkaṭanātha's reply is that the opposition of negation with position can hold good only with reference to the same unit of time and space. Therefore, the non-existence of the effect at a prior moment has no opposition to its existence at a later moment. That there is a relation between the cause of a prior moment and the effect of a later moment can be directly experienced. Such a relation is, of course, not contact, but one of dependence, of one another, as prior and later, as is perceived in experience. The dialectical criticism that production, being a separate entity, demands a further production and so forth cannot be applied to the Rāmānuja view; for here the effect is regarded as only a modified condition or state of the cause. The effect depends upon the cause in the sense that it is identical with it as being its state¹. Identity here, of course, does not mean oneness but identity in difference. The objection that no bond can be established in difference is found contradicted in our experience of cause and effect, and in many other cases, e.g. in the instance where a speaker tries to produce a conviction in his hearers who are different from him. The objection that a cause can be called a cause only by virtue of its doing some operation (*kiñcit-kara*) and that its causality towards that operation must again involve the effectuation of some other operation, and thus there is an infinite regress, is invalid; for the existence of a number of operations (as given in experience) in producing an effect cannot lead to a vicious infinite, for only those operations which are revealed in experience can be accepted as having happened. In the case of spontaneous production (*dvārā-n-tara-nirapekṣa*), there is no necessity to admit any series of operations as the causality as invariable antecedent is directly given in

¹ *na hi vāyam abhivṛyaktim vā kāraṇa-samavāyā-dikam vā janme'ti brūmah. kintū'pādānā-vasthā-viśeṣaṃ tasya kāryā-vasthā-sāmānādhikarānya-vyapadeśaḥ tādātmyena tad-āśraya-vṛttech. Sarvārtha-siddhi*, p. 80.

experience. The objection that a cause is a cause because it produces the effect involves the previous existence of the effect, and hence the futility of the causal operation is invalid; for causality means the happening of an operation suitable to the becoming of the effect¹. This does not involve the prior existence of the effect, since the happening of the operation leading to the effect refers to the effect not as an existing fact but as anticipated in the mind of the observer (*kurvattva-nirūpaṇam tu bhāvinā'pi kāryeṇa buddhyā-rohiṇā siddheḥ*). The objection that if effect was a nature of the cause then it would be already there, and if it was not it could not come into being at any time, is also invalid on the supposition that there is an invariable uniformity of relationship (*niyata-pratisambandhika-svabhāvatā eva*). The effect entity is numerically and characteristically different from the cause entity, but yet the former and the latter are related to one another as mutually determining each other (*anyo-nya-nirūpyatayā*). The objection, that since the separate entities in a causal conglomeration cannot produce the effect, the conglomeration as a whole could not produce the effect, is invalid; for the capacity of the individual entities is defined in terms of their capacity in joint production (*samuditānām kārya-karatvam eva hi pratyekam api hi śaktiḥ*). The further objection that since the cause is destroyed on its way to produce the effect, it (cause) itself being destroyed, ought not to be able to produce the effect, is not valid; for the production of the effect requires only the existence of the cause at a prior moment (*pūrva-kṣaṇa-sattvam eva hi kāraṇasya kāryo-payogi*).

Again it is urged that the concept of invariable priority which determines causation is itself indeterminable, for time as duration has no quality in itself. Priority and posteriority therefore have to be determined by other imposed conditions (*upādhi*), and the causal phenomena could be regarded as such an imposed condition. If this is so, priority and posteriority, which are in this view supposed to originate from causal conditions, cannot be regarded as determining causality. Again if conditions are supposed to split up time as pure duration into succession, then, since time is not regarded as discrete, the supposed conditions would have to refer to the whole of time, in which case there would be no succession.

¹ *bhāvi-kāryā-nuṅuṇa-vyāpāratattvam eva kāraṇasya kurvattvam. Sarvārtha-siddhi*, p. 81.

Moreover, if the conditions were to refer to certain parts, discrete time has first to be accepted¹. The reply to the above objection is that if by the force of the above argument time as succession is not admitted, then if things are in time they are eternal, and if they are not, they are chimerical; which is absurd. The objector is again supposed to urge that, all universals being eternally existing, priority and posteriority can never be referred mutually among them, or between them and individuals. Where the rise of the constellation Rohiṇī is inferred from the rise of the constellation Kṛttikā, priority and posteriority are not between the two. The reply is to be found in the experience that such a qualified entity is produced from such other qualified entity where the universal and the individual merge together in a complex whole—a qualified entity². Definite causal relations with definite effects are known from large experience of invariable antecedence between them, and this repudiates the idea of any denial of the uniformity of causal relation relating specific cause to specific effect. The notion of the plurality of causes is also therefore repudiated for the same reason. Where the same effect seems to be produced by different causes it is due to mal-observation and non-observation. A closer observation by experts reveals that though certain effects may be apparently similar yet they have specificity in their individual nature. By virtue of such specificity, each one of them can be referred to its own determinate cause. The negation-antecedent-to-being (*prāga-bhāva*) cannot by itself be regarded as determining the effect, for such negations in themselves, being beginningless, could not explain the occasion of an effect's coming into being. Moreover, such negations involve in some form or other the effect to which it would give rise as its constituent; for, otherwise it could not be referred to or defined as a negation-antecedent-to-being of the effect. If an effect, being existent, be without any cause, it would be eternal; and if it be non-existent without any cause, then it would be chimerical. If the effect could happen by fits and starts, then its uniform dependence upon the immediate and invariable ante-

¹ *kāle ca pūrvattvam upādhi-kṛtaṃ sa ca upādhir yady ayam eva tadā tad-adhīnam kālasya pūrvattvam kālā-dhīnaṅco'pādher ity anyonyā-śrayaḥ. anyā-pekṣāyām cakrakam anavasthā'pi kālasya kramavad upādhi-sambandha-bhedād bhedaśca kṛtsnai-ka-deśa-vikalpa-duḥṣṭha iti. Sarvārtha-siddhi*, p. 82.

cedents could not be explained. Thus the doctrine of causality stands unimpeached by any of the objections brought forward by the Cārvākas.

(g) *The Nature of the Senses according to Veṅkaṭanātha.*

The Naiyāyikas think that the visual organ has for its material cause the eight elements, for though it cannot perceive any other sense-data it can grasp colours like a lamp; and, following a similar course of argument, they hold that the tactile organ is made up of air, the gustatory organ, of water, the smell-organ, of earth, and the auditory organ, of space-element (*ākāśa*). Veṅkaṭanātha's main objection is directed against viewing the senses as the specific and most important instruments of the corresponding perceptions on the ground that in the act of perception many accessories, such as the subject, object, light, sense-organ, sense-contact, absence of obstruction, and other accessories participate in such a manner that it is impossible to single out the sense-organ as being the most important instrument (*karana*). Even if the sense-faculties be regarded as different from the sense-organs, they may be considered as the special ways of the ego-hood (*ahaṃkāra*), and this is testified by scriptural texts. Merely on the ground that the visual sense-faculty can perceive colours, it would be wrong to argue that this sense-faculty is made up of the same element as colour; for the visual sense-faculty is not by itself responsible for the colour-perception. The special predominance of the visual organ over other accessories in colour-perception, by which its affinity with the colour element may be shown, cannot be established.

Veṅkaṭa urges that the same reasons that lead to the acceptance of the five cognitive senses lead also to the admission of the five conative senses and *manas* (mind). The function of the cognitive senses is believed to be of a special kind by which the senses can operate only in a special manner and under special conditions, and the same applies also to the conative senses. These are as much associated with the subtle body as the cognitive senses, and the view of Yādavaprakāśa that the conative senses came into being with this body and were destroyed with its destruction is regarded as false¹. *Manas*, being a part of the evolution of *prakṛti*, cannot be regarded as all-pervasive. The ordinary argument that that which,

¹ *Nyāya-siddhāntajana*, p. 24.

being eternal, is not the material constituent of any other thing is all-pervasive, is faulty, for this is directly contradicted by the testimony of the scriptures, and according to the Rāmānuja view atoms are not the ultimate constituent of things. Again the argument that that which is devoid of specific qualities, like time, is all-pervasive is also untenable, for according to the Rāmānuja view there is nothing which is devoid of specific quality. The argument that since mind can remember very distant experiences it is all-pervasive is also faulty, for such remembrances are due to the contact of mind with specific subconscious root-impressions.

The senses are to be regarded as subtle (*sūkṣma*) or atomic, and yet by their functioning or in association with other things they may behave as being spread out¹. It is for this reason that in the bodies of animals of different dimensions the same senses may spread over smaller or larger areas through such functions without which they have to be admitted as becoming larger or smaller according to the dimensions of the bodies in which they may operate. If *manas* is all-pervasive, or if it occupies the span of the body, then the cognition by all the five senses may arise at one moment. The senses are regarded by Veṅkaṭa as abiding in the heart, whence they move through respective nerves to the particular sense-organs.

The sense operates by its function called *vyrtti*, which moves almost with the speed of light and grasps its object. There is thus a gradual operation of the sense-function passing from one place to another which, on account of its high speed, seems to be operative with regard to the object near at hand and also at a distance. This produces the appearance of simultaneous perception. The same process also holds good in the case of auditory perception. Since, according to the Rāmānuja school, senses are immaterial, their functions also are to be described as immaterial².

¹ *siddhe'pi hy aṇutve vikāsatayā vyrtti-viśeṣa-dvārā'pyāyaka-pracayād vā prthutvam aṅgikāryam. Sarvārtha-siddhi*, p. 98.

² According to the Sāṃkhya view, where also the senses are regarded as immaterial, the *vyrtti* is regarded as their transformation in the form of the object and not contact. The Yoga view, however, as explained by Bhikṣu, is that the *citta* passes through the senses and comes in contact with the object and is transformed into its form in association with the senses. The transformation, therefore, is not of the *citta* alone but of the *citta* together with the senses.

(h) *The Nature of ākāśa according to Veṅkaṭanātha.*

Veṅkaṭa tries to establish in some detail the supposed fact that the *ākāśa* is perceived by the visual organ, as in our well attested experience in perceiving the blue sky or the scarlet sky in the evening and also the movement of the birds through the sky. He denies the position that the existence of *ākāśa* can only be inferred through movements, for the *ākāśa* exists even in thick walls where no movement is possible. *Ākāśa* is not its pure vacuity; its existence is manifested by its non-obstruction to the movements of animals. Some of the Buddhists and the Cārvākas argue that there are only four elements and that *ākāśa* is only the negation (*āvaraṇā-bhāva*). We do not perceive any *ākāśa* in a wall, but when it is split up we say that we perceive *ākāśa*. Such an *ākāśa* cannot be anything but a negation of obstruction; for if this is not admitted, then there is no negation of obstruction anywhere, all such cases being explainable on the supposition of *ākāśa*. It is this negation of obstruction, pure vacuity, which produces the illusion of some positive entity like a mirage. Such experiences may well be illustrated in those instances where the negation of pain is experienced as pleasure and negation of light as blue darkness. We are all familiar with the fact that mere linguistic usage sometimes produces an idea without there being an entity behind it, when someone says "the sharp horn of a hare."

To this Veṅkaṭa's reply is that the existence of categories can only be justified by an appeal to experience, and we all have a positive experience of *ākāśa*. What we call negation is also a positive entity. The very negative concept can well be regarded as a positive notion. It is useless to argue that the negative concept differs from all positivity, for each specific category has its own special notion, and it is futile to argue why a particular entity should have its own peculiar concept¹. A negation is always defined as the absence of the positive entity of which the negation is affirmed. The positivity of *ākāśa* is established by its positive experience. The view that there is no *ākāśa* in occupied space is wrong, for when the occupying object is cut asunder we perceive the *ākāśa* and we affirm of it the negation of occupation. Thus the negation of occupation (*āvar-*

¹ *nā'bhāvasya niḥsvabhāvatā abhāva-svabhāvatayai'va tat-siddheḥ svānya-svabhāvatayā siddhis tu na kasyā'pi. na ca svena svabhāvena siddhasya para-svabhāva-virahād asattvam atiprasaṅgāt. Sarvārtha-siddhi*, p. 113.

anā-bhāvā) is the predicate which is affirmed of the positive entity *ākāśa*, for in our experience of *ākāśa* we perceive that there is no occupation (*āvaraṇa*) in the *ākāśa* (*ihā'varaṇam nāsti*). If this is not admitted, then such perceptions as "Here is an object" would be inexplicable, for the word "here" would have no meaning if it were mere absence of negation. If, again, *ākāśa* was absent in an occupying object, it would be unreasonable to define *ākāśa* as the absence of such an object; since nothing exists in itself, everything would on the above analogy become its own negation¹. The fact that *ākāśa* sometimes seems to show the false appearance of a surface is due also to the fact that it is an entity on which certain qualities are illusorily imposed. If it were mere nothing, there could have been no predication of false qualities to it. When it is said that the negation of pain is falsely conceived as pleasure, the fact is that the so-called negation is only another kind of positivity². In the case of chimerical entities such as the sharp hare's horn there is an affirmation of horn in the hare, and when the horn is known there is a deliberation in our mind whether our notion of sharpness is true or false. The affirmation of sharpness, therefore, is not on mere negation. The falsity of chimerical predication also consists of affirming a predicate to a subject which in the course of nature it does not possess, and there is nothing like pure falsity or non-existence in such notions. When one says that there is no occupation here he must show the locus where the occupation is denied or negated; for a negation implies a locus. The locus of the negation of occupation would be pure space (*ākāśa*). If the negation of occupation meant absolute non-existence, then that would land us in nihilism. If the occupation (*āvaraṇa*) did exist anywhere or did not exist anywhere, then in either case the production or destruction of such occupation would be undemonstrable; for an existent thing is never produced nor destroyed and a non-existent thing is neither produced nor destroyed. Thus, for these and other considerations, *ākāśa*, which is neither eternal nor all-pervasive, has to be regarded as a separate positive entity and not as mere negation of occupation. *Dik* or the quarter of the sky, north, south, etc., should

¹ *na tv ākāśa-mātram āvaraṇeṣv avidyamānatayā tad-abhāvu ākāśa iti cā'yuktaṃ sarveṣāṃ svasminn avidyamānatayā svā-bhāvatva-prasaṅgāt. Sarvārtha-siddhi*, p. 114.

² *duḥkhā-bhāve sukhā-ropāt abhāvasya bhāvā-nyatva-mātram eva hy asatvaṃ siddhaṃ tena ca svarūpa-sann evā'sau. Ibid.*

not be regarded as separate entities, but it is the sky, or *ākāśa*, which appears as different kinds of *dik* on account of its association with different conditions of the perceiver and the perceived space-relations.

(i) *Nature of Time according to Veṅkaṭanātha.*

Time is eternal and beginningless, for any conception in which it might be held that time were produced would involve the view that time was non-existent before its production. This, as it is easy to see, involves a notion of before and after, and as such it may be presumed that without the assumption of time even the production of time cannot be perceived. Time is directly perceived as a quality of all perceived entities. If time is regarded as being only inferable, then since it is intimately associated with all perceptible things the non-apprehension of time by direct perception would mean that the perceived objects also are not directly apprehended but known by inference. Even those who deny the separate existence of time explain it as an unreal notion of things in relation with the movement of the sun. Thus, the category of time, whether it is admitted as real or unreal, is taken as a quality or mode of perceived things and is apprehended along with them. There is no other time than what is conceived as before and after, as modes of our experience. It may be argued that with the exception of recognition all our experiences relate to the present and as such in the apprehension of objects by perception there is no notion of before and after which constitutes time, so there is no direct perception of time. To this the suggested discussion is whether, when objects are apprehended, they are apprehended as present or not, or whether only the notion of "the present" is apprehended without any association of any other object. Such views are directly contradicted in such experience as "I see this," where the object is demonstrated as being perceived at the present time. Perception thus refers both to the object and to its temporal character as present. It cannot be said that the temporal character is only illusorily imposed upon the perceived object; for in that case it must be shown that the temporal character was at least somewhere perceived or known independently by itself. It is argued that the sense-characters are perceived as "present," and this notion of the "present" is illusorily imposed upon time. To this it may be replied that in the passing series of the momentary

sense-characters it is impossible to point out anything as “present,” since these are only perceived as “before” and “after”; by the time anything could be designated as “present” it is already past. Thus the point of time as present is undemonstrable. If the time as present may be affirmed of any sense-character, it may be affirmed of time itself. Again if time were non-existent, what is the use of assuming its imposition? If it is held that there is only the imposition of time-conception without any entity of which it is affirmed, then it would become the blind phenomenalism of the nihilists. In the Rāmānuja view of things it is possible somehow to affirm the notion as “present” of time just as it is affirmed of the sense-characters. It cannot be said that time is merely a character of the sensibles, and that there is no other entity as time apart from these sensibles; for the temporal character of the sensibles as “present” is only possible on the assumption that there is such a thing as “present” time. Again if the “present” is denied, then that would mean universal negation, for the past and future are never perceived by us. Moreover, the present cannot be conceived as something different or unrelated and independent of the past and the future. If the past and the future were regarded as constituting the present, then our experience would only be related to the past and the future and there would be no possibility for any of our present afflictions. “Present” thus may be regarded as that series of operations which has begun but has not as yet ended in fruition.

Though time is one and eternal it can appear as limited and many, like all other objects which, though they may remain as one, may yet be supposed to be many and different in respect of the states through which they may seem to pass by virtue of the various conditional qualities (*upādhi-sambandha*) with which they may be associated. Though this view may be regarded as sufficient in explaining the notion of limited time, yet there are others who think that unless time itself is supposed to be constituted of moments through which time as changeable may be apprehended, the association of conditions to explain the notion of limitation will be impossible; for such an association presupposes the fact of limitation in time to which alone the conditions could be referred. Thus, Yādavaprakāśa holds that time is beginningless and endless, and continually transforms itself through moments by which the divisions of time as hours, days and nights can be spanned; through

which again the transformation of all changeable objects can be measured¹. In this view the conditions are relative from the point of view of each person, who collects the passing time-units and forms his own conceptions of minutes, hours and days from his own point of calculation according to his own needs. A valid objection, however, may be raised against such a view when it is pointed out that the criticism that was made against the association of conditional qualities to partless time may also be raised against the present view in which time is regarded as constituted of parts as moments. For it may well be said that the parts would require further parts for associating the conditional qualities; and if it does, there would be a vicious infinite and if it does not, then it will be admitted that the whole of a moment would not require a specification of parts for the association of conditional qualities. If the whole of a moment does not stand in need of any specification of parts for such association, why should time as a whole require it? The explanation that the association of a conditional quality with a part means its association with the whole on the analogy of the association of qualities in a substance is equally applicable to partless time. Veṅkaṭa points out that though the moments are adventitiously conceived on account of the variety of conditional qualities, time in itself is eternal. "Eternal" means that it is never destroyed. Time is thus co-existent with God. It is a material cause with reference to its own modifications and is the efficient cause with reference to everything else. The scriptural pronouncements that God is all-pervading can be harmonized with the all-pervading character of time by conceiving it to be co-existent with God.

(j) *The Nature of Soul according to Veṅkaṭanātha.*

Veṅkaṭanātha first tries to establish the existence of the soul as different from the body, and in this connection tries to refute the well-known Cārvāka arguments which do not admit the existence of a soul as different from the body to which the former may be supposed to belong. The main emphasis of Veṅkaṭa's arguments lies in the appeal to the testimony of our experience which manifests the body as a whole and its parts as belonging to an "I," as

¹ *yādavaprakāśair apyabhyupagato' yam pakṣaḥ kālo' nādy-ananto' jasra-kṣaṇa-pariṇāmī muhūrta-horātrā-di-vibhāga-yuk sarveṣāṃ pariṇāma-spanda-hetuḥ. Sarvārtha-siddhi*, pp. 148-149.

when we say “my body,” “my head,” etc. He says that though we have various parts of one body and though some of these may be destroyed, yet in spite of such variations they are all supposed to belong to one unchangeable unity, the self, which seems to persist through all changes of time. If the experiences belonged to the different parts of the body, then on the removal of any of the limbs the experiences which are associated with that limb could not be remembered; for it cannot be admitted that there is a transmission of experiences from one limb to another. Even a mother’s experience cannot be shared by the foetus. It cannot also be supposed that the experiences of the different limbs are somehow collected as impressions in the heart or brain; for it can neither be directly perceived, nor is there a datum which can lead to such an inference. Moreover, if there is a continual accumulation of impressions in the heart or brain, such a matter of conglomeration would be different at each moment through dissipation and aggregation of its constituent impressions, and as such it would be impossible to explain the fact of memory through such a changing entity¹.

The unified behaviour of an individual cannot also be regarded as being due to the co-operation of a number of individual units of consciousness; for, in that case there must be individual purposes in each of them, leading to a conflict, and if they have no such purposes, there is no reason why they should co-operate together. If it is assumed that these individual constituent conscious-entities are naturally such that they are engaged in serving one another without any conflict, then the more normal possibility would be that, having no natural attachment or antipathy, they would cease to act, and this would result in a cessation of all activities on the part of the constituted individual as a whole. Again whenever an animal is born it is perceived as endowed with certain instinctive tendencies towards certain action, such as sucking the mother’s breast, which demonstrates its attachment in that direction and necessarily presupposes an experience of that kind in a previous birth. This shows that there is a self which is different and distinct from the body and its parts. The experiences and their root-impressions

¹ *sarva-bodhaiś ca hyt-kośe samskāra-dhānam ityapi
na dr̥ṣṭam na ca tat-kṛptaṁ līṅgaṁ kim api dr̥śyate
na ca samskāra-kośas te saṅghātā-tmā prati-kṣaṇam
pracayā-pacayābhyām syād bhinnah smartā’tra ko bhavet.*

also explain the diversity of intellectual powers, tendencies and inclinations¹.

It cannot also be held that the units of consciousness of the different parts of the body are in themselves too subtle and potential to manifest themselves in their individual capacity, but they may yet co-operate together jointly to manifest the consciousness of the individual as a whole; for even the smallest molecular animals are found to be endowed with behaviouristic action. Moreover, if the units of consciousness emanating from the different parts of the body are admitted to be only potentially conscious, then it is absurd to suppose that they will be able to produce actual consciousness by mere conglomeration.

Again consciousness is a quality and as such it must await a substratum to which it would belong, but in the view in which consciousness is supposed to be material, the fundamental distinction between a quality and a substance is not observed². It cannot also be held that consciousness is but a special modification of certain of the bodily elements, for this would only be a theory, which cannot be attested by any experience. Again to such of the Cārvākas as admit the validity of inference, it may be urged that the body is a matter-complex; and, being but a conglomeration and sensible, is material like any other material object, whereas consciousness, being something entirely different from the body by virtue of its being consciousness, is also entirely distinct from it. The ordinary illusory notion which confuses the self with the body can be explained in diverse ways. The objector may say that if from such notions as "my body," "my hand," etc., it is argued that the self is something different from the body, then from such expressions as "my self" one may as well argue that the self has a further self. To this Veṅkaṭa's reply is that such expressions as "my hand" and "my body" are like such other expressions as "my house" and "my stick," where the distinction between the two things is directly apprehended. In such an expression as "my self" we have a linguistic usage in which the possessive case can be explained only in the sense of ideality, having only such an imaginary distinction between the two terms as may be in the mind of the observer at the

¹ *evaṃ manuṣyā-dī-śarīra-prāpti-daśāyām adṛṣṭa-viśeṣāt pūrva-janmā-nubhava-saṃskāra-bhedair evaṃ abhiruci-bhedāś ca yujyante. Sarvārtha-siddhi*, pp. 153-154.

² *nanu caitanyam iti na kaścid guṇaḥ, yasyā'dhāro'pekṣyaḥ kintu yā'sau yuṣ-mākaṃ caitanya-sāmagrī sai'va caitanya-padārthaḥ syāt. Ibid.* p. 154.

moment and due to his emphasizing a difference from a conditional point of view. Veṅkaṭa holds that further arguments may also be brought forward by the Cārvākas¹, to which effective replies may be given. But instead of going into a big chain of arguments and counter arguments the most effective way is to appeal to the testimony of scripture which in its self-validity affirms both positively and by implication the existence of the permanent self as distinct from the body. The testimony of the scriptures cannot be rebutted or refuted by mere speculative arguments.

There is a view that consciousness belongs to the senses and that cognitions through the different senses are integrated together in the same body, and it is by that means that an object perceived by the eye is also identified as the same entity as that grasped by the tactile apprehension. Another view is that the pleasurable, painful feelings associated with sense-cognitions can themselves attract or repulse an individual to behave as a separate entity who is being attracted or repelled by a sense-object. Veṅkaṭa objects to such a doctrine as being incapable of explaining our psychological experience in which we feel that we have touched the very thing that we have seen. This implies that there is an entity that persists over and above the two different cognitions of the two senses; for the

¹ The additional arguments of the Cārvākas are as follows:

When one says "I, a fat person, know," it is difficult to say that the fatness belongs to the body and the knowledge to some other entity. If the expression "my body" seems to imply that the body is different, the expression "I am fat" demonstrates the identity of the body and the self. What is definitely perceived cannot be refuted by inference, for in that case even fire could be inferred as cold. Perception is even stronger than scriptures and so there is no cause of doubt in our experience; therefore there is no reason to have recourse to any inference for testing the perceptual experience. The Sāṃkhya argument, that those which are the results of aggregation must imply some other entity for which the aggregation has been named (just as a bedstead implies someone who is to lie on the bed), is ineffective; for the second-grade entity for which the first-grade conglomeration is supposed to be intended may itself await a third grade entity, and that another, and this may lead to a vicious infinite. To stop this vicious infinite the Sāṃkhya thinks that the self does not await for any further entity. But instead of arbitrarily thinking the self to be ultimate, it is as good to stop at the body and to think that the body is its own end. The argument that a living body must have a soul because it has life is false, for the supposed self as distinct from the body is not known to us by other means. One might as well say that a living body must have a sky-lotus because it has life. The Cārvāka ultimately winds up the argument and says that the body is like an automatic machine which works by itself without awaiting the help of any other distinct entity presiding over it, and is the result of a specific modification of matter (*ananyā-dhīṣṭhita-svayaṃ-vāhaka-yantra-nyāyād vicitra-bhūta-pariṇati-viśeṣa-sambhavo'yaṃ deha-yantraḥ*). *Sarvārtha-siddhi*, p. 157.

visual and the tactile sense-organs are limited to the apprehension of their own peculiar sense-data or sensibles, and none of them is competent to affirm the identity of the object through two different sense-appearances or sense-characteristics. Veṅkaṭa further says that the view that the impressions of the various senses accumulate in the heart, and that it is through such an integration of experiences in the heart that there is an appearance of one concrete individual, is wrong; for no such centre of integration of impressions inside our bodies is known to us, and if such a centre in the body is to be admitted there is no harm in admitting a separate soul in which these impressions inhere¹.

Consciousness also cannot be regarded as the self, for consciousness is an experience and as such must belong to some individual separate and distinct from it. In the passing conscious states there is nothing that abides and persists which can integrate the past and present states in itself and develop the notion of the person, the perceiver. Therefore, it has to be admitted that there is a conscious ego to which all cognitions and experiences belong. Such an ego is self-luminous in the sense that it is always manifest by itself to itself and not merely the locus of self-knowledge. Such a self-revealing ego is present even in our dreamless sleep, and this is attested by later recollections in which one feels "I slept happily"; and it is not contradicted by any experience. Even when one is referred to by another as "you" or "this," the ego in the latter is all the time self-manifested as "I." Such an ego refers to the soul which is a real agent and experiencer of pleasure and pain and a cognizer of all cognitions and as such is a real moral agent and is therefore distinguished from other kindred souls by its specific efforts leading to specific kinds of deeds and their fruits. The efforts, however, of the individual agents are themselves pre-determined by the resulting fruits of actions in previous births, and those by other actions of other previous births. Those who say that efforts lead to no efforts contradict themselves in all the practical behaviour which presupposes a belief in the efficacy of efforts. Only such of the efforts as are directed towards the attainment of the impossible or towards objects which require no effort are found

¹ *tvad-iṣṭa-saṃskāra-koṣe mānā-bhāvāt, anekeṣāṃ aham-arthānām eka-śarīra-yoge ca tataś ca varam yatho-palambham ekasminn aham-arthe sarvaiṣaṃ saṃskārā-dhānam. Survārtha-siddhi*, p. 160.

to be ineffective, whereas all other efforts are attended with fruition.

Veṅkaṭa urges that the theory which holds that there is but one Brahman which appears as many by its association with different minds is false; for we know that the same individual is associated with different bodies in the series of his transmigrations, and such an association with different bodies cannot produce any difference in the individual. And if this is so, that is, if association with different bodies cannot induce a difference in the individual, there is no reason why one Brahman should become many by its association with different minds. Again the view that holds that the individuals, though really different from one another, are so far identical that they are all but parts of pure Being—the Brahman—is equally false; for if the Brahman is thus one with the individual, it should also be exposed to all its sufferings and imperfections, which is absurd.

Brahmadatta held that Brahman alone is eternal and unborn and the individual souls are born out of it. Veṅkaṭa criticizes this view and propounds the theory that the souls are all uncreated and unborn. They are to be regarded as permanent and eternal; for if they are believed to be changing during the continuance of their body, then the continuity of purposive activity will be inexplicable. If they are destroyed with the death of the body, then the *karma* theory and all theories of moral responsibility have to be given up.

The soul, however, is not all-pervasive; for the Upaniṣads speak of it as going out of the body. The argument for all-pervasiveness of the soul as given by the *Naiyāyikas* is as follows. Virtue and vice are associated with a particular soul and may produce such changes in the material world, even in distant places, as would conduce to the enjoyment or suffering of that particular individual; and since virtue and vice are associated with a particular soul, they could not produce their effects on a distant place unless the soul, their locus, is co-extensive with those places. This, however, does not apply to the Rāmānujists, for according to them virtue and vice are only terms which mean that God has either been pleased or displeased owing to the particular kinds of deeds of an individual, and God's pleasure or displeasure has no limitations of operation¹.

¹ *iha hi dharmā-dharma-śabdaḥ karma-nimitte-śvara-prīti-kopa-rūpa-buddhi-dyotakaḥ. asti hi śubhe tv asau tuṣyati duṣkṛte tu na tuṣyate' sau paramaḥ śarīra-iti. Sarvārtha-siddhi*, p. 179.

From the opponent's point of view, even if the self is regarded as all-pervasive, that would not explain the happening of favourable or unfavourable effects; for though the self may be co-extensive with those distant places, yet its *adṛṣṭa* or unseen merit occurs not throughout the entire pervasive self, but only in a part of it, and as such, since it is not in touch with the place where the effect will happen, it cannot very well explain it.

(k) *The Nature of Emancipation according to Venkaṭanātha.*

Venkaṭanātha says that an objection has been raised by some that if individuals had been in the state of bondage from beginningless time, there is no reason why they should attain emancipation at some future date. To this the reply is that it is admitted by all that there is every hope that at some time or other there will be such a favourable collocation of accessories that our *karma* will so fructify that it will lead us out of bondage, through the production of sight of discrimination and disinclination, to enjoyment of all kinds that it may give God an opportunity to exercise His mercy. Thus, though all are in a state of bondage from beginningless time, they all gradually find a suitable opportunity for attaining their emancipation. Thus, God extends His grace for emancipation only to those who deserve it by reason of their deeds, and it is theoretically possible that there should be a time when all people would receive their salvation and the world process would cease to exist. Such a cessation of the world-process will be due to His own free will, and thus there is not the slightest reason for fear that in such a state there will have been any obstruction to God's free and spontaneous activity from extraneous sources. Man is led to the way of emancipation by his experience of suffering, which nullifies the pleasure of our mundane life. He feels that worldly pleasures are limited (*alpa*) and impermanent (*asthira*) and associated with pain. He thus aspires to attain a stage in which he can get unlimited pleasure unmixed with suffering. Such an emancipation can be brought about only through the love of God (*bhakti*). *Bhakti*, however, is used here in the sense of meditation or thinking with affection¹. Such a *bhakti* also produces knowledge, and such a

¹ *mahānīya-viśaye prītir bhaktiḥ prīty-ādayaś ca jñāna-viśeṣa itī vakṣyate sneha-pūrvam anudhyānam bhaktiḥ. Sarvārtha-siddhi*, p. 190.

knowledge is also included in *bhakti*¹. *Bhakti* is defined here as unceasing meditation (*dhruvā-nusmṛti*), and this therefore has to be continually practised. The Śaṅkarite view that emancipation can be attained by mere knowledge is false. In the Upaniṣads knowledge means unceasing meditation, and this has to be continued and only then can it be regarded as *upāsana*, which is the same as *bhakti*².

The performance of the prescribed duties is helpful to the production of knowledge in the sense of *bhakti* by counteracting the wrong influence of such *karmas* as are antagonistic to the rise of true knowledge. Thus the prescribed duties are not to be performed along with the practice of *bhakti*, and they are not both to be regarded as joint causes of emancipation; but the performance of duties is to be interpreted as helping the rise of *bhakti* only by removing the obstructive influences of other opposing *karmas*³. The performance of scriptural duties including sacrifices is not incompatible with devotional exercises, for the gods referred to in the Vedic sacrifices may also be regarded as referring to Brahman, the only god of the *Vaiṣṇavas*. The absolutely (*nitya*) and the conditionally (*naimittika*) obligatory duties should not be given up by the devotee, for mere cessation from one's duties has no meaning; the real significance of the cessation from duties is that these should be performed without any motive of gain or advantage. It is wrong to suppose that emancipation can be attained only by those who renounce the world and become ascetics, for a man of any caste (*varṇa*) and at any stage of life (*āśrama*) may attain it provided he follows his normal caste duties and is filled with unceasing *bhakti* towards God.

It is well to point out in this connection that duties are regarded as threefold. Those that are absolutely obligatory are called *nitya*. No special good or advantage comes out of their performance, but their non-performance is associated with evil effects. Those that are obligatory under certain circumstances are called *naimittika*. If these duties are not performed under those special circumstances, sin will accrue, but no special beneficial effects are produced by

¹ *bhakti-sādhyaṃ prāpaka-jñānam api bhakti-lakṣaṇo-petam. Sarvārtha-siddhi*, p. 191.

² *ekasmīn eva viśaye vedano-pāsana-śabdayoḥ vyatikareṇo'pakramo-pasaṃhāra-darśanāc ca vedanam eva upāsanatayā viśeṣyate. . . sā mukti-sādhana-tayo'ktā hi vittiḥ bhakti-rūpatva-paryanta-viśeṣaṇa-viśiṣṭā. Ibid.* pp. 191-192.

³ *Ibid.* pp. 194-195.

their performance. Those duties which are to be performed only if the person is desirous of attaining special kinds of pleasurable ends such as residence in Heaven, the birth of a son, and the like, are called *kāmya*. Now a man who wishes to attain emancipation should give up all the *kāmya* duties and refrain from all actions prohibited in the scriptures, but he should perform the *nitya* and the *naimittika* duties. Though the performance of the *nitya* and the *naimittika* duties is associated with some kind of beneficial results, inasmuch as such performance keeps away the evil and the sinful effects which would have resulted from their non-performance, yet these, being fruits of a negative nature, are not precluded for a person who intends to attain emancipation. For such a person only the performance of such actions as bring positive pleasures is prohibited. When it is said that actions of a devotee should have no motive, this does not mean that it includes also actions which are performed with the motive of pleasing God; for actions with motive are only such actions as are performed with motives of one's own pleasure, and these are always associated with harmful effects¹.

It has already been said that the *naimittika* duties should be performed; but of these there are some which are of an expiatory nature, called *prāyaścitta*, by which the sinful effects of our deeds are expiated. A true devotee should not perform this latter kind of expiatory duties, for the meditation of God with love is by itself sufficient to purge us of all our sins and indeed of all our virtues also; for these latter, as they produce heavenly pleasures as their effects, obstruct the path of emancipation as much as do our sins. All that narrows our mind by associating it with narrow ends is to be regarded as sinful. Judged from this point of view even the so-called meritorious actions (*puṇya*) are to be regarded as harmful to a devotee who intends to attain emancipation². Virtue (*dharma*) can be regarded as such only relatively, so that actions which are regarded as virtuous for ordinary persons may be regarded as sinful for a person inspired with the higher ambition of attaining emancipation³. For a true devotee who has attained the knowledge

¹ *anarthā-vinā-bhūta-sukha-kāmanāto niṣṛtaṃ karma niṣkāmaṃ. Sarvārtha-siddhi*, p. 202.

² *tad evaṃ dhī-saṅkocaka-karma-dhvaṃse dhī-vikāśa eva brahmā-nubhūtiḥ. Ibid.* p. 220.

³ *sa eva dharmāḥ so'dharmas taṃ taṃ prati naraṃ bhavet pātra-karma-viśeṣeṇa deśa-kālāvapekṣya ca. Ibid.* p. 221.

of Brahman and is pursuing the meditation of God, sinful or virtuous actions are both inefficacious, the older ones being destroyed by the meditation itself and the new ones incapable of being associated with him—the wise man.

The eschatological conception of the Rāmānuja school as explained by Veṅkaṭa is that the soul of the true devotee escapes by a special nerve in the head (*mūrdhanya-nāḍī*) and is gradually lifted from one stage to another by the presiding deities of fire, day, white fortnight, the vernal equinox, year, wind, the sun, the moon, lightning, Varuṇa, Indra and Prajāpati, who are appointed by God for the conducting of the departed devotee¹.

The state of final emancipation is regarded as the rise of the ultimate expansion of the intellect. But though this is a state which is produced as a result of devotional exercises, yet there is no chance that there would ever be a cessation of such a state, for it is the result of the ultimate dissociation of all causes, such as sins or virtues, which can produce a contraction of the mind. Therefore, there can never be a falling off from this state.

An emancipated person can assume bodies at his own will. His body is not a source of bondage to him, for only those whose bodies are conditioned by their *karma* may be supposed to suffer bondage through them. The state of emancipation is a state of perfect bliss through a continual realization of Brahman, to whom he is attached as a servant. This servitude, however, cannot beget misery, for servitude can beget misery only when it is associated with sins. The emancipated person is omnipotent in the sense that God is never pleased to frustrate the fulfilment of his wishes.

The emancipated person regards all things as being held in Brahman as its parts and as such no mundane affair can pain him, though he may have the knowledge that in the past many things in the world caused him misery.

Veṅkaṭa denied the possibility of attaining emancipation in this life, for the very definition of emancipation is dissociation from life, sense-organs and the body generated by *karma*. So when we hear of *jīvanmukta* or those emancipated in their lifetime, it is to be interpreted to mean a state similar to the state of emancipation. The contention of the Advaitins that the principal *avidyā* vanishes with knowledge, yet that its partial states may still continue binding

¹ *Sarvārtha-siddhi*, pp. 226–227.

the emancipated person with a body, is false. For if the principal *avidyā* has vanished, its states cannot still continue. Moreover, if they do continue in spite of the knowledge, it is impossible to imagine how they will cease at the death of the emancipated person.

God in the Rāmānuja School.

We have seen that according to Rāmānuja the nature and existence of God can be known only through the testimony of the scriptures and not through inference. Veṅkaṭa points out that the Sāṃkhya theory that the world-creation is due to the movement of *prakṛti*, set in operation through its contiguity with the *puruṣas*, is inadequate; for the Upaniṣads definitely assert that just as the spider weaves its net, so does God create the world. The scriptures further assert that God entered into both the *prakṛti* and the *puruṣas*, and produced the creative movement in them at the time of creation¹. The Yoga view of God—that He is only an emancipated being who enters into the body of Hiraṇyagarbha or adopts some such other pure body—is also against all scriptural testimony. It is also idle to think that the world-creation is the result of the co-operative activity of the emancipated spirits, for it is much against the scriptural testimony as also against the normal possibility, since there cannot be such an agreement of wish among the infinite number of emancipated beings that would explain the creation of the world by unobstructed co-operation. Thus, on the strength of the scriptural testimony it has to be admitted that God has engaged Himself in world-creation, either for the good of the created beings or through His own playful pleasurable activity. The enjoyment of playful activity is not to be explained as anything negative, as avoidance of ennui or langour, but as a movement which produces pleasure of itself². When we hear of God's anger, this is not to be regarded as indicating any disappointment on God's part, for He is ever complete in Himself and has nothing to attain or to lose. So God's anger is to be interpreted simply as meaning His desire to punish those who deserve punishment.

¹ *prakṛtiṃ puruṣam caivā praviśyā'tme-cchayā hariḥ.*

According to the Rāmānuja system the individual souls and the material world form the body of God (*śarīra*). Anantārya of the Śeṣārya family, following Veṅkaṭa's treatment of this doctrine in the *Nyāya-siddhā-ñjana*, elaborates upon the same and enters into a critical analysis of the conception and significance of the notion of the body of God, which is not unworthy of our notice. He refuses to accept the view that the notion of body (*śarīra*) involves a class-concept (*jāti*); for though the notion of a body is found applicable in each specific instance of a body, the existence of such a notion is always associated with one or other of those specific instances and as such it does not justify the assumption of the existence of a separate category as a self-existent universal bodiness. All that one can say is that there is a universal notion of bodiness associated with the individual bodies¹. All notions of class-concepts may therefore be explained in the same manner as notions which are associated with particular kinds of groupings in their aggregate characters, and in this way they may be regarded as somewhat similar to collective notions such as an army or assembly². Vātsya Śrīnivāsa, however, in his *Rāmānuja-siddhānta-saṃgraha*, explains the notion of class-concepts as being based upon the notion of close similarity of collocative groupings. He says that when two collocative groupings are both called cow, nothing more is seen than those individual collocative groupings. That they are both called cow is due to the fact of close similarity (*sausādṛśya*) subsisting between those groupings³. Thus there is no other entity apart from

Vātsya Śrīnivāsa defines close similarity as the special character which may be regarded as the cause of the apprehension of generality amidst differences (*pratīyogī-nirūpya-pratīvyakti-vilakṣaṇa-viśaya-niṣṭha-sadṛśa-vyavahāra-sādhāraṇa-kāraṇa-dharma-viśeṣaḥ sausādṛśyam*). This similarity leads to the application of names to similar objects. When it subsists between two substances, we call it similarity of character (*dharma-sādṛśya*). When it subsists between entities other than substances (*a-dṛavya*) we call it similarity of essence (*sva-rūpa-sādṛśya*).

our notion of universality arising from specific similarity of similar groupings (*tāvad-viśayaka-jñana-rūpa-jāti-viśayakatvā-ṅgikāreṇa*).

Anantārya refers to the definition of *śarīra* in the *Rāmānuja-bhāṣya* as that which is liable to be held or controlled in its entirety for the purpose of spirit, and is thus merely a means to its end (*cetanasya yad dravyam sarvā-tmanā svārthe niyantum dhārayitum śakyam tac ceṣṭai-ka-svarūpaṅca tat tasya svarūpam*). Sudarśanācārya, the author of the *Śrūta-prakāśikā*, interprets this definition as meaning that when the movement of anything is wholly determined by the desire or will of any spirit and is thus controlled by it, the former is said to be the body of the latter (*kṛti-prayukta-svīya-ceṣṭā-sāmānyakatva-rūpa-niyāmyatvam śarīra-pada-pravṛtti-nimittam*)¹. When it is said that this body belongs to this soul, the sense of possession (*ādheyatva*) is limited to the fact that the movements in general of that body are due to the will of that spirit or soul². A servant cannot be called the body of his master on the same analogy, for only some of the movements of the servant are controlled by the will of the master. The assumption that underlies the above definition is that the movement in the animal and vegetable bodies presided over by individual souls and in the inanimate objects presided over by God is due to the subtle will-movements in these specific souls, though they may not always be apprehended by us³.

But anticipating the objection that there is no perceptual evidence that the physico-biological movements of bodies are due to subtle volitions of their presiding souls, a second definition of *śarīra* has been suggested in the *bhāṣya* of Rāmānuja. According to this definition a body is said to be that which may as a whole be held fast and prevented from falling by the volitional efforts of a spirit⁴. But an objection may still be raised against such a definition, as it cannot explain the usage which regards the souls as being the

³ *jīva-śarīre vykṣādau īśvara-śarīre parvatādau ca sūkṣmasya tat-tat-kṛti-prayukta-ceṣṭā-viśeṣasya āṅgikārān na śarīra-vyavahāra-viśayatvā-nūpapattiḥ. Ibid.*

⁴ *yasya cetanasya yad dravyam sarvā-tmanā dhārayitum śakyam tat tasya śarīram iti kṛti-prayukta-sva-pratītyogika-patana-pratibandhaka-samyoga-sāmānyavattvam śarīra-pada-pravṛtti-nimittam. Ibid.*

bodies of God (*yasyā'tmā śarīram*). The souls have no weight and as such it is absurd to suppose that God prevents them from falling down, and in that way they are related to Him as bodies. The definition may therefore be modified to the extent that a body is that which is wholly held together in a contactual relation with a particular spirit through its own volition¹. But a further objection may also be raised against this modification, for the definition, even so modified, fails to include time and other entities which are all-pervasive. Now the contactual relation subsisting between two all-pervasive entities is held to be eternal and uncaused. So the contactual relation of God with time and the like cannot be held to be caused by the volition of God, and if this be held to be the connotation of the body, time, etc., cannot be regarded as the body of God. So a different definition has been given which states that a body is a substance which is wholly dependent upon and subservient to a spirit. Dependence and subserviency are to be understood in the sense of productivity of a special excellence. Now, in the present context the special excellence which is produced in the spirit is its determination either as a cause or as an effect. When Brahman is regarded as cause, such causality can be understood only in relation to its association with the subtle constituents of matter and individual souls, and its evolution into the effect-stage as the manifold world is intelligible only through the transformation of the subtle matter-constituents in gross material forms and the spirits as endeavouring towards perfection through their deeds and rebirths. Brahman as such, without its relation to matter and souls, can be regarded neither as cause nor as effect. That it can be viewed as cause and effect is only because it is looked at in association with the causal or the effectuated states of matter and souls. The latter, therefore, are regarded as His body because they by their own states serve His purpose in reflecting Him as cause and effect.

The definition, however, needs a further modification in so far as the determining relation of the body is such that there is never a time when such a relation did not subsist. The relation conceived in this way (*apṛthak-siddha*) is not something extraneous, but is a defining constituent of both the body and the soul, i.e. so long as either of them exists they must have that relation of the

¹ *Patana-pratibandhakatvaṃ parityajya kṛti-prayukta-sva-pratīyogika-saṃyoga-sāmānyasya śarīra-pada-pravṛtti-nimittatva-svīkāre'pi kṣati-virahāt. Śarīra-vāda.*

determiner and the determined (*yāvat sattvam asambandhanārthayor evā'prthak sambandhā-bhyupagamāt*)¹. Thus, even the emancipated souls are associated with bodies, and it is held that with death the body associated with the living soul is destroyed; the so-called dead body is not the body with which the living soul was in association². But it may again be objected that the soul also determines the actions and efforts of the body and being inseparably connected with it, the soul may also be called the body of the body according to the definition. To meet this objection the definition is further modified, and it is held that only such inseparable relation as determines the causality or effectness in association with the production of knowledge can be regarded as constituting the condition of a body. The whole idea is that a body, while inseparably connected with the soul, conditions its cognitive experiences, and this should be regarded as the defining characteristic of a body³. This definition of *Śarīra* is, of course, very different from the Nyāya definition of "body" (*śarīra*) as the support (*āśraya*) of effort (*ceṣṭā*), senses (*indriya*), and enjoyment (*bhoga*)⁴. For in such a definition, since there may be movement in the furthest extremities of the body which is not a direct support of the original volition of the soul, the definition of the notion of support has to be so far extended as to include these parts which are in association with that which was directly moved by the soul. Extending this principle of indirect associations, one might as well include the movement of objects held in the hand, and in that case the extraneous objects might also be regarded as body, which is impossible. The defence of the Naviyāyikas would, of course, be by the

introduction of the relation of inseparable coherence (*samavāya*) in which the parts of a body are connected together in a way different from any other object. But it has already been pointed out that the *samavāya* relation is not admitted by the Rāmānujists.

Brahman may be regarded as the material cause of the world through its body as *prakṛti* and the souls. Though a material cause, it is also the instrumental cause just as the individual souls are the efficient causes of their own experiences of pleasure and pain (through their own deeds), of which, since the latter inhere in the former, they may be regarded as their material causes. On the other hand, God in Himself, when looked at as apart from His body, may be regarded as unchangeable. Thus, from these two points of view God may be regarded as the material and efficient cause and may also be regarded as the unchanging cause.

Bhāskara and his followers hold that Brahman has two parts, a spirit part (*cidamśa*) and a material part (*acidamśa*), and that it transforms itself through its material part and undergoes the cycles of *karma* through the conditions of such material changes. Bhāskara thinks that the conditions are a part of Brahman and that even in the time of dissolution they remain in subtle form and that it is only in the emancipated stage that the conditions (*upādhi*), which could account for the limited appearance of Brahman as individual souls, are lost in Brahman. Veṅkaṭa thinks that the explanation through the conception of *upādhi* is misleading. If the *upādhi* constitutes *jīvas* by mere conjunction, then since they are all conjoined with God, God Himself becomes limited. If the conception of *upādhi* be made on the analogy of space within a jug or a cup, where space remains continuous and it is by the movement of the conditioning jugs or cups that the space appears to be limited by them, then no question of bondage or emancipation can arise. The conception of *upādhi* cannot be also on the analogy of the container and the contained, as water in the jug, since Brahman being continuous and indivisible such a conception would be absurd. The *upādhis* themselves cannot be regarded as constitutive of individual souls, for they are material in their nature. Yādavaprakāśa holds that Brahman is of the nature of pure universal being (*sarvā-tmakam sad-rūpam brahma*) endowed with three distinct powers as consciousness, matter and God, and through these powers it passes through the various phenomenal changes which are held up in it

and at the same time are one with it, just as one ocean appears in diverse forms as foam, billows and waves. Veṅkaṭa says that instead of explaining the world-creation from these makeshift points of view, it is better to follow the scriptures and regard Brahman as being associated with these changes through its body. It is wrong also to regard God, world and spirit as being phenomenal modifications of one pure being as Kātyāyana does¹. For the scriptures definitely assert that God and the changeless Brahman are one and identical. If the transformation is regarded as taking place through the transformation of the powers of Brahman, then the latter cannot be regarded as the material cause of the world, nor can these transformations be regarded as creations of Brahman. If it is said that Brahman is both identical and different from its powers, then such a view would be like the relative pluralism of the Jains. There is a further view that Brahman in His pure nature exists as the world, the souls and God, though these are different and though in them His pure nature as such is not properly and equally evident. Veṅkaṭa holds that such a view is contradicted by our experience and by scriptural texts. There is again another view according to which Brahman is like an ocean of consciousness and bliss, and out of the joy of self-realization undergoes various transformations, a small portion of which he transforms into matter and infuses the spiritual parts into its modifications. Thus, Brahman transforms itself into a number of limited souls which undergo the various experiences of pleasure and pain, and the whole show and procedure becomes a source of joy to Him. It is not a rare phenomenon that there are beings who derive pleasure from performing actions painful to themselves. The case of incarnations (*avatāra*) again corroborates this view, otherwise there would be no meaning in the course of misery and pain which they suffer of their own free will. Veṅkaṭa observes that this view is absolutely hollow. There may be fools who mistake painful actions for sources of pleasure. But it is unthinkable that Brahman, who is all-knowing and all-powerful, should engage in an undertaking which involves for Him even the slightest misery and pain. The misery of even a single individual is sufficient evil and the total miseries of the whole

¹

yat pranṛtya divā bhāti tasmai sad-brahmaṇe namaḥ.*

Kātyāyana-kārikā, quoted in *Sarvārtha-siddhi*, p. 298.

world of individual selves are intolerable in the extreme. Therefore, how can Brahman elect to shoulder all this misery of His own free choice without stultifying Himself? The case of incarnations is to be understood as that of actors on the stage. Further, this view contradicts the testimony of all scriptures. Venkaṭa thinks that the view of his school is free from all these objections, as the relation of the Brahman and individuals is neither one of absolute identity nor one of identity and difference but one of substance and adjuncts. The defects in the adjuncts cannot affect the substance nor can the association between them be a source of pollution to Brahman, the substance, because association becomes so only when it is determined by *karma*¹.

On the theological side Venkaṭa accepts all the principal religious dogmas elaborated in the *Pañcarātra* works. God is, of course, omniscient, omnipotent and all-complete. His all-completeness, however, does not mean that He has no desires. It only means that His desires or wishes are never frustrated and His wishes are under His own control². What we call our virtue and sins also proceed through His pleasure and displeasure. His displeasure does not bring any suffering or discomfort. But the term “displeasure” simply indicates that God has a particular attitude in which He may punish us or may not extend His favour.

The scriptural injunctions are but the commands of God. There is no separate instrumental as *apūrva* or *adṛṣṭa* which stands between the performance of deeds and their fruition and which, while it persists when the deeds are over, brings about the effects of these actions. But God alone abides and He is either pleased or displeased by our actions and He arranges such fruits of actions as He thinks fit³. The scriptures only show which kinds of actions will be pleasing to God and which are against His commands. The object of the scriptural sacrifices is the worship of God, and all the different deities that are worshipped in these sacrifices are but the different names of God Himself. All morality and religion are thus

¹ *asman-mate tu viśeṣaṇa-gatā doṣā na viśeṣyaṃ spr̥santi, aikya-bhedā-bhedā-nangikārāt, akarma-vaśya-saṃsargaja-doṣāṇām asaṃbhavācca. Tattva-muktā-kalāpa*, p. 302.

reduced in this system to obedience to God's commands and the worship of Him. It is by God's grace that one can attain emancipation when there is an ultimate expansion of one's intellect, and by continual realization of the infinite nature of God one remains plunged as it were in an ocean of bliss compared with which the so-called worldly pleasures are but sufferings¹. It is not ultimately given to man to be virtuous or vicious by his own efforts, but God makes a man virtuous or vicious at His own pleasure or displeasure, and rewards or punishes accordingly; and, as has already been said, virtue and vice are not subjective characters of the person but only different attitudes of God as He is pleased or displeased. Whomsoever He wishes to raise up He makes perform good actions, and whomsoever He wishes to throw down He makes commit sinful actions. The final choice and adjudgment rests with Him, and man is only a tool in His hands. Man's actions in themselves cannot guarantee anything to him merely as the fruits of those actions, but good or bad fruits are reaped in accordance with the pleasure or displeasure of God².

Dialectical criticism against the Śāṅkara School.

The readers who have followed the present work so far must have noticed that the chief philosophical opponents of the Śrī Vaiṣṇava school of thought were Śāṅkara and his followers. In South India there were other religious opponents of the Śrī Vaiṣṇavas, Śaivas and the Jainas. Mutual persecution among the Śrī Vaiṣṇavas, Śaivas and the Jainas is a matter of common historical knowledge. Conversion from one faith to another also took place under the influence of this or that local king or this or that religious teacher. Many volumes were written for the purpose of proving the superiority of Nārāyaṇa, Viṣṇu or Kṛṣṇa to Śiva and *vice versa*. Madhva and his followers were also opponents of the Śrī Vaiṣṇavas, but there were some who regarded the philosophy of the Madhvas as more or less akin to the Śrī Vaiṣṇava thought.

¹ *Tattva-muktā-kalāpa*, pp. 663, 664.

² *sa evcinam bhūtiṃ gamayati, sa enam prītaḥ prīnāti eṣa eva sādhu karma kārayati taṃ kṣipāmy aśram aśubhā-nityā-di-bhiḥ pramāṇa-śataih īśvara-pritī-kopābhyāṃ dharmā-dharma-phala-prāptir avagamayate. Ibid.* p. 670.

There were others, however, who strongly criticized the views of Madhva, and Mahācārya's *Pārāśarya-vijaya* and Parakāla Yati's *Vijayindra-parājaya* may be cited as examples of polemical discussions against the Madhvas. The Śrī Vaiṣṇavas also criticized the views of Bhāskara and Yādavaprakāśa, and as examples of this the *Vedārtha-saṃgraha* of Rāmānuja, or the *Vāditraya-khaṇḍana* of Veṅkaṭa may be cited. But the chief opponents of the Śrī Vaiṣṇava school were Śaṅkara and his followers. The *Śata-dūṣaṇī* is a polemical work of that class in which Veṅkaṭanātha tried his best to criticize the views of Śaṅkara and his followers. The work is supposed to have consisted of one hundred polemical points of discussion as the name *Śata-dūṣaṇī* (century of refutations) itself shows. But the text, printed at the Śrī Sudarśana Press, Coṅjeeveram, has only sixty-six refutations, as far as the manuscripts available to the present writer showed. This printed text contains a commentary on it by Mahācārya alias Rāmānujadāsa, pupil of Vādhūla Śrīnivāsa. But the work ends with the sixty-fourth refutation, and the other two commentaries appear to be missing. The printed text has two further refutations—the sixty-fifth and sixty-sixth—which are published without commentary, and the editor, P. B. Anantācārya, says that the work was completed with the sixty-sixth refutation (*samāptā ca Śata-dūṣaṇī*). If the editor's remark is to be believed, it has to be supposed that the word *Śata* in *Śata-dūṣaṇī* is intended to mean "many" and not "hundred." It is, however, difficult to guess whether the remaining thirty-four refutations were actually written by Veṅkaṭa and lost or whether he wrote only the sixty-six refutations now available. Many of these do not contain any new material and most of them are only of doctrinal and sectarian interest, with little philosophical or religious value, and so have been omitted in the present section, which closes with the sixty-first refutation. The sixty-second refutation deals with the inappropriateness of the Śaṅkara *Vedānta* in barring the Śūdras from Brahma-knowledge. In the sixty-third, Veṅkaṭa deals with the qualifications of persons entitled to study *Vedānta* (*adhikāri-viveka*), in the sixty-fourth with the inappropriateness of the external garb and marks of the ascetics of the Śaṅkara school, in the sixty-fifth with the prohibition of association with certain classes of ascetics, and in the sixty-sixth with the fact that Śaṅkara's philosophy cannot be reconciled with the *Brahma-sūtra*.

First Objection. The view that Brahman is qualityless cannot give any satisfactory account of how the word Brahman can rightly denote this qualityless entity. For if it is qualityless it cannot be denoted by the term Brahman either in its primary sense or in any secondary sense of implication (*lakṣaṇā*); for if the former is not possible, the second is also impossible, since an implicative extension of meaning can take place only when in any particular content the primary meaning becomes impossible. We know also from the scriptural testimony that the word Brahman is often used in its primary meaning to denote the Great Being who is endowed with an infinite number of excellent qualities. The fact that there are many texts in which an aspect of qualitylessness is also referred to cannot be pushed forward as an objection, for these can all be otherwise explained, and even if any doubt arises the opponent cannot take advantage of it and assert that Brahman is qualityless. It is also not possible to say that the word Brahman denotes the true Brahman only by implication, for the scriptures declare the realization of the meaning of the word Brahman as being one of direct perception. So in the opponent's view of Brahman, the word Brahman would be rendered meaningless.

Second Objection. There cannot be any inquiry regarding Brahman according to Śāṅkara's interpretation of the term as a qualityless something. Śāṅkara says that Brahman is known in a general manner as the self in us all; the inquiry concerning Brahman is for knowing it in its specific nature, i.e. whether it is the body endowed with consciousness, the overlord, pure self, or some other entity regarding which there are many divergences of opinion. Venkaṭa urges that if the self-revelation of Brahman is beginningless it cannot depend on our making any inquiry about it. All that depends on causes and conditions must be regarded as an effect and in that sense Brahma-revelation would be an effect which is decidedly against Śāṅkara's intention. Thus, therefore, an inquiry regarding the general and specific nature of Brahman cannot deal with its own real pure nature. If, therefore, it is urged by the Śāṅkarites that this inquiry does not concern the real nature of Brahman, but only a false appearance of Brahman (*upahita-svarūpa*), then the knowledge derived from this inquiry would also be of this false appearance and nothing would be gained by this false knowledge. Again, when Brahman is partless and self-re-

vealing, there cannot be any meaning in knowing it in a general manner or in a specific manner, for no such distinction can be made in it. It must be known in its entirety or not known at all; there cannot be any distinction of parts such that there may be scope for different grades of knowledge in it. All inquiry (*jijñāsā*) however must imply that its object is known generally but that greater detail is sought; since Śaṅkara's unqualified homogeneous Brahman cannot be the object of such an inquiry, no such Brahman can be sought. Therefore, an inquiry can only be regarding a qualified object about which general or special knowledge is possible. The Śaṅkarites cannot legitimately urge that a distinction of general and specific knowledge is possible in their view; for it may be maintained that, though the Brahman may be known in a general manner, there is room for knowing it in its character as different from the illusory appearances, since if Brahman has no specific nature it is not possible to know it in a general manner (*nirviśeṣe sāmānya-niṣedhaḥ*). If it is urged that the knowledge of the world-appearance as false is the knowledge of Brahman, then there would be no difference between Vedānta and the nihilism of Nāgārjuna.

Third Objection. Veṅkaṭa here introduces the oft-repeated arguments in favour of the doctrine of the theory of *Jñāna-karma-samuccaya* as against the view of Śaṅkara that a wise man has no duties.

Fourth Objection. Veṅkaṭa here says that all errors and illusions do not vanish merely by the knowledge that all world-appearance is false. The performance of the scriptural duties is absolutely necessary even when the highest knowledge is attained. This is well illustrated in the ordinary experience of a jaundiced person where the illusion of yellow is not removed merely by the knowledge of its falsity but by taking medicines which overcome the jaundice. Ultimate salvation can be obtained only by worshipping and adoring God the supreme Lord and not by a mere revelation of any philosophical wisdom. It is impossible to attain the final emancipation merely by listening to the unity texts, for had it been so then Śaṅkara himself must have attained it. If he did so, he would have been merged in Brahman and would not have been in a position to explain his view to his pupils. The view that the grasping of the meaning of the unity texts is an immediate perception is also untenable, for our ordinary experience shows that scriptural know-

ledge is verbal knowledge and as such cannot be regarded as immediate and direct perception.

Fifth Objection. Śaṅkara's reply to the above objection is that though the final knowledge of the identity of all things with self be attained yet the illusion of world-appearance may still continue until the present body be destroyed. To this Veṅkaṭa asks that if *avidyā* be destroyed through right knowledge, how can the world-appearance still continue? If it is urged that though the *avidyā* be destroyed the root-impressions (*vāsanā*) may still persist, then it may be replied that if the *vāsanā* be regarded as possessing true existence then the theory of monism fails. If *vāsanā* is regarded as forming part of Brahman, then the Brahman itself would be contaminated by association with it. If *vāsanā* is, however, regarded as a product of *avidyā*, then it should be destroyed with the destruction of *avidyā*. Again, if the *vāsanā* persists even after the destruction of *avidyā*, how is it to be destroyed at all? If it can be destroyed of itself, then the *avidyā* may as well be destroyed of itself. Thus there is no reason why the *vāsanā* and its product, the world-appearance, should persist after the destruction of *avidyā* and the realization of Brahman-knowledge.

Seventh Objection. Śaṅkara and his followers say that the utterance of the unity text produces a direct and immediate perception of the highest truth in the mind of a man chastened by the acquirement of the proper qualifications for listening to the Vedāntic instructions. That the hearing of the unity texts produces the immediate and direct perception of the nature of self as Brahman has to be admitted, since there is no other way by which this could be explained. To this Veṅkaṭa replies that if this special case of realization of the purport of the unity texts be admitted as a case of direct perception through the instrumentality of verbal audition only because there is no other means through which the pure knowledge of Brahman could be realized, then inference and the auditory knowledge of other words may equally well be regarded as leading to direct perception, for they also must be regarded as the only causes of the manifestation of pure knowledge. Moreover, if the causes of verbal knowledge be there, how is that knowledge to be prevented, and how is the direct and immediate perception to be produced from a collocation of causes which can never produce it? Any knowledge gained at a particular time cannot be regarded

as the revelation of one individuated consciousness which is identical with all knowledge of all times or of all persons, and therefore the words which may lead to any such knowledge cannot be regarded as producing any such immediate realization (*āparokṣya*). If it is held that there is no other cause leading to the realization of pure consciousness apart from what leads to the apprehension of the specific forms of such consciousness, then the same is true of all means of knowledge, and as such it would be true of inference and of verbal expressions other than the unity texts. It is not possible therefore to adduce for the unity texts claims which may not be possessed by other ordinary verbal expressions and inferential knowledge. In the case of such phrases as "You are the tenth," if the person addressed had already perceived that he was the tenth, then the understanding of the meaning of such a phrase would only mean a mere repetition of all that was understood by such a perception; if, however, such a person did not perceive the fact of his being the tenth person, then the communication of this fact was done by the verbal expression and this so far cannot be regarded as direct, immediate or perceptual. It may be noted in this connection that though the object of knowledge may remain the same, yet the knowledge attained may be different on account of the ways of its communication. Thus, the same object may be realized perceptually in some part and non-perceptually in another part. Again, though Brahman is admittedly realized in direct perception, yet at the time of its first apprehension from such verbal phrases as "Thou art he" it is a verbal cognition, and at the second moment a realization is ushered in which is immediate and direct. But if the first cognition be not regarded as direct and immediate, why should the second be so? Again, the position taken by Śāṅkara is that since disappearance of the falsity of world-appearance cannot be explained otherwise, the communication imparted by the understanding of the unity texts must be regarded as being immediate; for falsehood is removed by the direct and immediate realization of the real. But the world is not false; if it is regarded as false because it is knowable, then Brahman, being knowable, would also be false. Again, if the world-appearance be regarded as false, there is no meaning in saying that such an appearance is destroyed by right knowledge; for that which never exists cannot be destroyed. If it is held that the world-appearance is not destroyed but only its knowledge

ceases, then it may be pointed out that a false knowledge may cease naturally with the change of one's mental state, just as the illusion of false silver may cease in deep dreamless sleep, or it may be removed by inferential and other kinds of cognition. There is no necessary implication that false knowledge must be removed only by direct and immediate knowledge. Again, if it is held that the cessation of the world-appearance means the destruction of its cause, then the reply is that no direct realization of reality is possible unless the cause itself is removed by some other means. So long as there is a pressure on the retina from the fingers there will be the appearance of two moons. Thus it is meaningless to suppose that it is only by direct and immediate perception that the falsity of the world-appearance would cease. If the removal of the falsity of world-appearance simply means that the rise of a knowledge is contradictory to it, then that can be done even by indirect knowledge, just as the false perception of two moons may be removed by the testimony of other persons that there is only one moon. But not only is the world not false and therefore cannot be removed, but verbal knowledge cannot be regarded as leading to immediate perception; even if it did, there must be other accessory conditions working along with it, just as in the case of visual perception, attention, mental alertness, and other physical conditions are regarded as accessory factors. Thus, mere verbal knowledge by itself cannot bring about immediate realization. Nor is it correct to suppose that perceptual knowledge cannot be contradicted by non-perceptual knowledge, for it is well known that the notion of one continuous flame of a lamp is negated by the consideration that there cannot be a continuous flame and that what so appears is in reality but a series of different flames coming in succession. Thus, even if the realization of the purport of unity texts be regarded as a case of direct perception, there is no guarantee that it could not be further contradicted by other forms of knowledge.

Tenth Objection. In refuting the reality of pure contentless consciousness, Veṅkaṭa urges that even if such a thing existed it could not manifest by itself its own nature as reality, for if it did it could no longer be regarded as formless; since if it demonstrated the falsity of all content, such content would be a constituent part of it. If its reality were demonstrated by other cognitions, then it was obviously not self-luminous. Then, again, it may be asked, to

whom does this pure consciousness manifest itself? The reply of the Śāṅkarites is that it does not reveal itself to this or that person but its very existence is its realization. But such a reply would be far from what is normally understood by the term manifestation, for a manifestation must be for some person. The chief objection against the existence of a contentless consciousness is that no such thing can be experienced by us and therefore its priority and superiority or its power of illuminating the content imposed upon it cannot also be admitted. The illustration of bliss in the deep dreamless sleep is of no use; for if in that state the pure contentless consciousness was experienced as bliss, that could not be in the form of a subjective experience of bliss, as it could not be called contentless. A later experience after rising from sleep could not communicate to the perceiver that he was experiencing contentless consciousness for a long period, as there is no recognition of it and the fact of recognition would be irreconcilable to its so-called contentless character.

Eleventh Objection. In attempting to refute the existence of indeterminate knowledge (*nirvikalpa*) Veṅkaṭa says that the so-called indeterminate knowledge refers to a determinate object (*nirvikalpakam api saviśeṣa-viśayakameva*). Even at the very first moment of sense-contact it is the object as a whole with its manifold qualities that is grasped by the senses and it is such an object that is elaborated later on in conceptual forms. The special feature of the *nirvikalpa* stage is that in this stage of cognition no special emphasis is given to any of the aspects or qualities of the object. If, however, the determinate characters did not in reality form the object of the cognition, such characters could never be revealed in any of the later stages of cognition and the *nirvikalpa* could never develop into the *savikalpa* state. The characters are perceived in the first stage, but these characters assume the determinate form when in the later moments other similar characters are remembered. Thus a pure indeterminate entity can never be the object of perception.

Twelfth Objection. The contention of the Śāṅkarite is that perception is directly concerned with pure being, and it is through nescience that the diverse forms are later on associated with it, and through such association they also seemingly appear as being directly perceived. Veṅkaṭa says that both being and its characters are simultaneously perceived by our senses, for they form part of

the same object that determines our knowledge. Even universals can be the objects of our direct knowledge: it is only when these universals are distinguished from one another at a later moment that a separate mental operation involving its diverse functions becomes necessary. Again, if perception only referred to indeterminate being, how then can the experience of the diverse objects and their relative differentiation be explained?

Thirteenth Objection. In refuting the view of the Śāṅkara school that the apprehension of “difference” either as a category or as a character is false, Veṅkaṭa says that the experience of “difference” is universal and as such cannot be denied. Even the much-argued “absence of difference” is itself different from “difference” and thus proves the existence of difference. Any attempt to refute “difference” would end in refuting identity as well; for these two are relative, and if there is no difference, there is no identity. Veṅkaṭa urges that a thing is identical with itself and different from others, and in this way both identity and difference have to be admitted.

Fourteenth Objection. The Śāṅkarites say that the world-appearance, being cognizable, is false like the conch-shell-silver. But what is meant by the assertion that the world is false? It cannot be chimerical like the hare’s horn, for that would be contrary to our experience and the Śāṅkarite would not himself admit it. It cannot mean that the world is something which is different from both being and non-being, for no such entity is admitted by us. It cannot also mean that the world-appearance can be negated even where it seems to be real (*pratīpanno-pādhau niṣedha-pratīyogitvam*), for if this negation cannot further be negated, then it must be either of the nature of Brahman and therefore false as world-appearance or different from it. The first alternative is admitted by us in the sense that the world is a part of Brahman. If the world-appearance can be negated and it is at the same time admitted to be identical with Brahman, then the negation would apply to Brahman itself. If the second alternative is taken, then since its existence is implied as a condition or explication of the negation, it itself cannot be denied. It cannot also be said that falsity means the appearance of the world in an entity where it does not exist (*svā-tyantā-bhāva-samāna-dhīkaraṇatayā pratīyamānatvam*), for such a falsity of the world as not existing where it appears cannot be understood by

perception, and if there is no perception for its ground no inference is also possible. If all perception is to be regarded as false, all inference would be impossible. It is said that world-appearance is false because it is different from the ultimate reality, the Brahman. Veṅkaṭa, in answer to this, says that he admits the world to be different from the Brahman though it has no existence independent and separable from it. Still, if it is argued that the world is false because it is different from reality, the reply is that there may be different realities. If it is held that since Brahman alone is real, its negation would necessarily be false, then the reply is that if Brahman is real its negation is also real. The being or reality that is attributed by Veṅkaṭa to the world is that it is amenable to proof (*prāmāṇika*). Truth is defined by Rāmānuja as that which is capable of being dealt with pragmatically (*vyavahāra-yogyatā sattvaṃ*), and the falsity of the assertion that the world is false is understood by the actual perception of the reality of the world. Again, the falsity of the world cannot be attempted to be proved by logical proof, for these fall within the world and would therefore be themselves false. Again, it may be said that Brahman is also in some sense knowable and so also is the world; it may be admitted for argument's sake that Brahman is not knowable in an ultimate sense (*pāramārthika*), so the world also is not knowable in an ultimate sense; for, if it were, the Śaṅkarite could not call it false. If that is so, how could the Śaṅkarite argue that the world is false because it is knowable, for in that case Brahman would also be false?

Sixteenth Objection. Again, it may be argued that the objects of the world are false because, though being remains the same, its content always varies. Thus we may say a jug exists, a cloth exists, but though these so-called existents change, "being" alone remains unchanged. Therefore the changeable entities are false and the unchangeable alone is real. Now it may be asked: what is the meaning of this change? It cannot mean any difference of identity, for in that case Brahman being different from other entities could be regarded as false. If, however, Brahman be regarded as identical with the false world, Brahman itself would be false, or the world-appearance would be real being identical with the real Brahman. Spatial or temporal change can have nothing to do with determining falsehood; the conch-shell-silver is not false because it does not exist elsewhere. Brahman itself is changeable in the sense that

it does not exist as unreal or as an entity which is neither being nor non-being. Change cannot here legitimately be used in the sense of destruction, for, even when the illusion of conch-shell-silver is discovered, no one says that the conch-shell-silver is destroyed (*bādha-vināśayor viviktatayai'va vyutpatteh*). Destruction (*vināśa*) is the dissolution of an entity, whereas *vādha* or contradiction is the negation of what was perceived. In such phrases as "a jug exists" or "a cloth exists," the existence qualifies jug and cloth, but jug and cloth do not qualify existence. Again, though Brahman abides everywhere, it does not cause in us the cognition "jug exists" or "cloth exists." Again, temporal variation in existence depends upon the cause of such existence, but it cannot render the existence of anything false. If non-illumination at any particular time be regarded as the criterion of falsehood, then Brahman also is false for it does not reveal itself before the dawn of emancipation. If it is held that Brahman is always self-revealing, but its revelation remains somehow hidden until emancipation is attained, then it may be said with the same force that the jug and the cloth also remain revealed in a hidden manner in the same way. Again, the eternity of illumination, or its uncontradicted nature, cannot be regarded as a criterion of reality, for it is faultlessness that is the cause of the eternity of self-illumination, and this has nothing to do with determining the nature of existence. Since the ordinary things, such as a jug or a cloth, appear as existent at some time, they are manifestations of the self-illumination and therefore real.

An opposite argument may also be adduced here. Thus, it may be said that that which is not false does not break its continuity or does not change. Brahman is false, for it is without any continuity with anything else, and is different from everything else.

Seventeenth Objection. The Śāṅkarites hold that since it is impossible to explain the existence of any relation (whatever may be its nature) between the perceiver and the perceived, the perceived entity or the content of knowledge has to be admitted as false. In reply to this Veṅkaṭa says that the falsity of the world cannot be adduced as a necessary implication (*arthāpatti*), for the establishment of a relation between the perceiver and the perceived is possible not by denying the latter but by affirming it. If, however, it is said that since the relation between the perceiver and the perceived can be logically proved chimerical, the necessary deduction

is that the perceived entity is false. To this the reply is that the falsity of the relation does not prove the falsity of the relata; the relation between a hare and a horn may be non-existent, but that will not indicate that both the hare and the horn are themselves non-existent. Following that argument, the perceiver might just as well be declared as false. If, however, it is contended that the perceiver, being self-luminous, is self-evident and cannot therefore be supposed to be false, the reply is, that even if, in the absence of the act of perceiving, the perceiver may be regarded as self-revealing, what harm is there in admitting the perceived to have the same status even when the perceiver is denied? If, however, it is said that the cognition of objects cannot be admitted to be self-established in the same way as the objects themselves, it may be asked if consciousness is ever perceived to be self-revealed. If it is said that the self-revealing character of consciousness can be established by inference, then by a counter-contention it may be held that the self-revealing character of the universe can also be proved by a suitable inference. It may again be questioned whether, if the Śāṅkarite wishes to establish the self-revealing nature of Brahman by inference, its objectivity can be denied, and thus the original thesis that Brahman cannot be the object of any process of cognition must necessarily fail.

The Śāṅkarite may indeed contend that the followers of Rāmānuja also admit that the objects are revealed by the cognition of the self and hence they are dependent on the perceiver. The reply to such a contention is that the followers of Rāmānuja admit the existence of self-consciousness by which the perceiver himself is regarded as cognized. If this self-consciousness is regarded as false, then the self-luminous self would also be false; and if this self-consciousness be admitted as real, then the relation between them is real. If the self-revealing consciousness be regarded as impossible of perception and yet real, then on the same analogy the world may as well be regarded as real though unperceived.

The objection that the known is regarded as false, since it is difficult logically to conceive the nature of the relation subsisting between the knower and the known, is untenable, for merely on account of the difficulty of conceiving the logical nature of the relation one cannot deny the reality of the related entity which is incontestably given in experience. Therefore the relation has some-

how to be admitted. If relation is admitted to be real because it is experienced, then the world is also real because it is also experienced. If the world is false because it is inexplicable, then falsity itself would be false because it is inexplicable.

The objection that there can be no relation between the past and the future is groundless, for the very fact that two things exist in the present time would not mean that they are necessarily related, e.g. the hare and the horn. If, however, it is said that it may be true that things which exist in the present time are not necessarily related, yet there are certain entities at present which are related, so also there are certain things in the present which are related with certain other things in the past and the future. It is no doubt true that the relation of contact is not possible between things of the present and the future, but that does not affect our case, for certain relations exist between entities at present, and certain other relations exist between entities in the present and the future. What relations exist in the present, past and future have to be learnt by experience. If spatial contiguity be a special feature of entities at present, temporal contiguity would hold between entities in present, past and future. However, relation does not necessarily mean contiguity; proximity and remoteness may both condition the relation. Relations are to be admitted just as they are given by experience, and are indefinable and unique in their specific nature. Any attempt to explain them through mediation would end in a conflict with experience. If an attempt is made to refute all relations as such on the ground that relations would imply further relations and thus involve a vicious infinite, the reply is that the attempt to refute a relation itself involves relation and therefore according to the opponent's own supposition stands cancelled. A relation stands by itself and does not depend on other relations for its existence.

Eighteenth Objection. In refuting the view of the Śāṅkarites that self-luminous Brahman cannot have as an object of illumination anything that is external to it, Veṅkaṭa argues that if nescience be itself inherent in Brahman from beginningless time, then there would be no way for Brahman to extricate itself from its clutches and emancipation would be impossible. Then the question may be asked, whether the *avidyā* is different from Brahman or not. If it be different, then the monism of the Śāṅkara philosophy breaks

down; if it be non-different, then also on the one hand Brahman could not free itself from it and on the other hand there could be no evolution of the *avidyā* which has merged itself in the nature of the Brahman, into the various forms of egoism, passions, etc. If this *avidyā* be regarded as false and therefore incapable of binding the free nature of Brahman, the objection may still be urged that, if this falsehood covers the nature of Brahman, how can it regain its self-luminosity; and if it cannot do so, that would mean its destruction, for self-luminosity is the very nature of Brahman. If the *avidyā* stands as an independent entity and covers the nature of Brahman, then it would be difficult to conceive how the existence of a real entity can be destroyed by mere knowledge. According to Rāmānuja's view, however, knowledge is a quality or a characteristic of Brahman by which other things are known by it; experience also shows that a knower reveals the objects by his knowledge, and thus knowledge is a characteristic quality of the knower by which the objects are known.

Nineteenth Objection. In refuting the view of Śaṅkara that ignorance or *avidyā* rests in Brahman, Veṅkaṭa tries to clarify the concept of *ajñāna*. He says that *ajñāna* here cannot mean the absolute negation of the capacity of being the knower; for this capacity, being the essence of Brahman, cannot be absent. It (*ajñāna*) cannot also mean the ignorance that precedes the rise of any cognition, for the Śaṅkarites do not admit knowledge as a quality or a characteristic of Brahman; nor can it mean the negation of any particular knowledge, for the Brahman-consciousness is the only consciousness admitted by the Śaṅkarites. This *ajñāna* cannot also be regarded as the absence of knowledge, since it is admitted to be a positive entity. The *ajñāna* which can be removed by knowledge must belong to the same knower who has the knowledge and must refer to the specific object regarding which there was absence of knowledge. Now since Brahman is not admitted by the Śaṅkarites to be knower, it is impossible that any *ajñāna* could be associated with it. The view that is held by the members of the Rāmānuja school is that the individual knowers possess ignorance in so far as they are ignorant of their real nature as self-luminous entities, and in so far as they associate themselves with their bodies, their senses, their passions, and other prejudices and ideas. When they happen to discover their

folly, their ignorance is removed. It is only in this way that it can be said to be removed by knowledge. But all this would be impossible in the case of Brahman conceived as pure consciousness. According to the view of Rāmānuja's school, individual knowers are all in their essential natures omniscient; it is the false prejudice and passions that cover up this omniscience whereby they appear as ordinary knowers who can know things only under specific conditions.

Twentieth Objection. Veṅkaṭa, in refuting the definition of immediate intuition (*anubhūti*) as that which may be called immediate perception without being further capable of being an object of awareness (*avedyatve sati aparokṣa-vyavahāra-yogyatvam*), as given by Citsukhācārya in his *Tattva-pradīpikā*, raises certain objections against it as follows. It is urged by the Śāṅkarites that if the immediate intuition be itself an object of further cognitive action, then it loses its status as immediate intuition and may be treated as an object like other objects, e.g. a jug. If by the words "immediate intuition" it is meant that at the time of its operation it is self-expressed and does not stand in need of being revealed by another cognition, then this is also admitted by Rāmānuja. Furthermore, this intuition at the time of its self-revelation involves with it the revelation of the self of the knower as well. Therefore, so far as this meaning of intuition is concerned, the denial of self-revelation is out of place.

The words "immediate intuition" (*anubhūti*) are supposed to have another meaning, viz. that the intuition is not individuated in separate individual cognitions as limited by time, space or individual laws. But such an intuition is never experienced, for not only do we infer certain cognitions as having taken place in certain persons or being absent in them, but we also speak of our own cognitions as present in past and future, such as "I know it," "I knew it" and the like, which prove that cognitions are temporally limited. It may be asked whether this immediate intuition reveals Brahman or anything else; if it reveals Brahman, then it certainly has an object. If it is supposed that in doing so it simply reveals that which has already been self-expressed, even then it will be expressive of something though that something stood already expressed. This would involve a contradiction between the two terms of the thesis *avedyatve sati aparokṣa-vyavahāra-yogyatvam*,

for, following the arguments given above, though the Brahman may be regarded as immediate, yet it has been shown to be capable of being made an object of intuition. If on the other alternative this intuition expresses something else than Brahman, that would bring the opponent to a conclusion not intended by him and contradictory as well.

Just as one may say that one knows a jug or a cloth or an orange, so one may say that one knows another man's awareness or one's own. In this way an awareness can be the object of another awareness just as another object. Again, if one cannot be aware of another man's awareness, the use of language for mental understanding should cease.

If the immediate intuition itself cannot be made an object of awareness, that would mean that it is not known at all and consequently its existence would be chimerical. It cannot be urged that chimerical entities are not perceivable because they are chimerical, but entities do not become chimerical because they cannot be perceived, for the concomitance in the former proposition is not conditional. The Śāṅkarites would not hold that all entities other than immediate intuition are chimerical. It may also be held that chimerical entities are not immediate intuition because they are chimerical; but in that case it may also be held that these objects (e.g. a jug) are not immediate intuition because of their specific characters as jug, etc. The whole point that has to be emphasized here is that the ordinary objects are other than immediate intuition, not because they can be known but because of their specific characters. The reason that an entity cannot be called immediate intuition if it can be known is entirely faulty¹.

If, again, Brahman is manifest as only immediate intuition, then neither the scriptures nor philosophy can in any way help us regarding the nature of Brahman.

Twenty-first Objection. The Śāṅkarites deny the production of individual cognitions. In their view all the various forms of so-called cognitions arise through the association of various modes of *avidyā* with the self-luminous pure consciousness. In refuting this view Veṅkaṭa urges that the fact that various cognitions arise in time is testified by universal experience. If the pure consciousness be always present and if individual cognitions are denied, then all

¹ *Śata-dūṣaṇī*, II. 78.

objects ought to be manifested simultaneously. If, however, it is ascertained that though the pure consciousness is always present yet the rise of various cognitions is conditioned by other collocating causal circumstances, the reply is that such an infinite number of causal conditions conditioning the pure consciousness would be against the dictum of the Śāṅkarites themselves, for this would be in conflict with their uncompromising monism. Now if, again, it is held that the cognitive forms do really modify the nature of pure consciousness, then the pure consciousness becomes changeable, which is against the thesis of Śāṅkara. If it is held that the forms are imposed on pure consciousness as it is and by such impositions the specific objects are in their turn illuminated by consciousness, then the position is that in order that an object may be illuminated such illumination must be mediated by a false imposition on the nature of pure consciousness. If the direct illumination of objects is impossible, then another imposition might be necessary to mediate the other false impositions on the nature of pure consciousness, and that might require another, and this would result in a vicious infinite. If the imposition is not false, then the consciousness becomes changeable and the old objection would recur. If, however, it is urged that the objects are illuminated independent of any collocating circumstances and independent of any specific contribution from the nature of the pure consciousness, then all objects (since they are all related to pure consciousness) might simultaneously be revealing. If, again, all cognitions are but false impositions on the nature of pure consciousness, then at the time of an illusory imposition of a particular cognition, say, a jug, nothing else would exist, and this would bring about nihilism. It may also be asked, if the Śāṅkarite is prepared to deny the world on account of the impossibility of any relation subsisting between it and the perceiver, how can he launch himself into an attempt to explain the relation of such a world with Brahman?

On the other hand, the experience of us all testifies to the fact that we are aware of cognitions coming into being, staying, passing away, and having passed and gone from us; except in the case of perceptual experience, there is no difficulty in being aware of past and future events; so the objection that the present awareness cannot be related to past and future events is invalid. The objection that there cannot be awareness of past or future entities because

they are not existing now is invalid, for past and future entities also exist in their own specific temporal relations. Validity of awareness consists in the absence of contradiction and not in the fact of its relating to an entity of the present moment, for otherwise an illusory perception of the present moment would have to be considered as valid. Thus, since it is possible to be aware of an awareness that was not there but which comes into being both by direct and immediate acquaintance and by inference, the view of the Śaṅkarites denying the origination of individual awareness is invalid. In the view of Rāmānuja, knowledge is no doubt admitted to be eternal; yet this knowledge is also admitted to have specific temporal characters and also specific states. Therefore, so far as these characters or states are concerned, origination and cessation would be possible under the influence of specific collocative circumstances. Again, the objection that since pure consciousness is beginningless it cannot suffer changes is invalid, for the Śaṅkarites admit *avidyā* also as beginningless and yet changeable. It may also be pointed out in this connection that the so-called contentless consciousness is never given in experience. Even the consciousness in dreamless sleep or in a swoon is related to the perceiver and therefore not absolutely contentless.

Twenty-second Objection. It is urged by the Śaṅkarites that the pure consciousness is unchanging because it is not produced. If, however, the word unchanging means that it never ceases to exist, it may be pointed out that the Śaṅkarites admit *ajñāna* to be unproduced and yet liable to destruction. Thus there is no reason why a thing should not be liable to destruction because it is not produced. If it is urged that the destruction of *avidyā* is itself false, then it may be pointed out with the same force that the destruction of all things is false. Moreover, since the Śaṅkarites do not admit any change to be real, the syllogism adduced by them that an entity which is unproduced is not changeable falls to the ground. The difference between Śaṅkara's conception of Brahman and that of Rāmānuja is that according to the former Brahman is absolutely unchangeable and characterless, and according to the latter the Brahman is the absolute, containing within it the world and the individual beings and all the changes involved in them. It is unchangeable only in so far as all the dynamical change rises from within and there is nothing else outside it which can affect it. That

is, the absolute, though changeable within it, is absolutely self-contained and self-sustained, and is entirely unaffected by anything outside it.

Twenty-third Objection. The Śāṅkarites urge that since consciousness is unproduced it cannot be many, for whatever is many is produced, e.g. the jug. If it is a pure consciousness which appears as many through the conditioning factors of *avidyā*, it may be asked in this connection whether, if the pure consciousness cannot be differentiated from anything else, it may as well be one with the body also, which is contrary to Śāṅkara's thesis. If, however, it is replied that the so-called difference between the body and the pure consciousness is only a false difference, then it would have to be admitted and that would militate against the changeless character of Brahman as held by the Śāṅkarites. Again, if the real difference between the body and the pure consciousness be denied, then it may be urged that the proposition following from it is that things which in reality differ are produced (e.g. the jug); but according to the Śāṅkarites jug, etc., are also not different from Brahman, and thus a proposition like the above cannot be quoted in support. Moreover, since the *avidyā* is unproduced, it follows that according to the maxim of the Śāṅkarites it would not be different from Brahman which, however, the Śāṅkarites would undoubtedly be slow to accept. It cannot also be held that an awareness does not differ from another awareness on the supposition that different awarenesses are but seeming forms imposed upon the same consciousness, for so long as we speak of difference we speak only of apparent difference and of apparent divergent forms; and if the apparent divergent forms are admitted, it cannot be said that they are not different. Again, it is urged that the same moon appears as many through wavy water, so it is the same awareness that appears as many, though these are identically one. To this the reply is that the analogy is false. The image-moon is not identical with the moon, so the appearances are not identical with awareness. If it is said that all image-moons are false, then on the same analogy all awarenesses may be false and then if only one consciousness be true as a ground of all awarenesses then all awarenesses may be said to be equally true or equally false. Again, as to the view that the principle of consciousness as such does not differ from individual cognitions, such a position is untenable, because the Rāmānujists

do not admit the existence of an abstract principle of consciousness; with them all cognitions are specific and individual. It may be pointed out in this connection that according to the Rāmānujists consciousness exists in the individuals as eternal qualities, i.e. it may suffer modification according to conditions and circumstances.

Twenty-fourth Objection. In objecting to the unqualified character of pure consciousness Veṅkaṭa says that to be unqualified is also a qualification. It differs from other qualities only in being negative. Negative qualifications ought to be deemed as objectionable as the positive ones. Again, Brahman is admitted by the Śāṅkarites to be absolute and unchangeable, and these are qualifications. If it is replied that these qualifications are also false, then their opposite qualifications would hold good, viz. Brahman would be admitted as changeable. Again, it may be asked how this unqualified character of Brahman is established. If it is not established by reason, the assumption is invalid; if it is established by reason, then that reason must exist in Brahman and it will be qualified by it (the reason).

Twenty-fifth Objection. Veṅkaṭa denies the assumption of the Śāṅkarites that consciousness is the self because it reveals it to itself on the ground that if whatever reveals it to itself or whatever stands self-revealed is to be called the self, then pleasure and pain also should be identical with the self, for these are self-revealed. Veṅkaṭa further urges that the revelation of knowledge is not absolutely unconditional because revelation is made to the perceiver's self and not to anything and everything, a fact which shows that it is conditioned by the self. It may also be pointed out that the revelation of knowledge is not made to itself but to the self on one hand and to the objects on the other in the sense that they form constituents of knowledge. Again, it is testified by universal experience that consciousness is different from the self. It may also be asked whether, if consciousness be identical with the self, this consciousness is unchangeable or changeable. Would later recognition be impossible? In the former alternative it may further be asked whether this unchanging consciousness has any support or not; if not, how can it stand unsupported? If it has a support, then that support may well be taken as the knower, as is done by the Rāmānujists. It may also be pointed out here that knowledge being

a character or a quality cannot be identified with that (viz. the self) which possesses that character.

Twenty-sixth Objection. The Śāṅkarites assert that the self is pure consciousness. Therefore the perception of self as “I” is false, and therefore this notion of “I” is obsolete both in dreamless sleep and emancipation. To this Venkṭa’s reply is that if the notion of “I” is obsolete in dreamless sleep, then the continuity of self-consciousness is impossible. It is no doubt true that in dreamless sleep the notion of the self as “I” is not then manifestly experienced, but it is not on that account non-existent at the time, for the continuity of the self as “I” is necessarily implied in the fact that it is experienced both before the dreamless sleep and after it. Since it is manifestly experienced both before and after the dreamless sleep, it must be abiding even at the time of the sleep. And this self-consciousness itself refers to the past and the present as a continuity. If this ego-notion was annihilated during the dreamless sleep, then the continuity of experience could not be explained (*madhye cā’ hama-rthā-bhāve saṃskāra-dhārā-bhāvāt, pratisandhānā-bhāva-prasaṅgaś ca*). It is a patent fact that in the absence of the knower neither ignorance nor knowledge can exist. It cannot also be said that the continuity of experience is transmitted to pure consciousness or *avidyā* during the dreamless sleep; for the pure consciousness cannot be a repository of experiences, and if *avidyā* is the repository it would be the knower, which is impossible; and the fact of recognition would be unexplainable, for the experience associated with *avidyā* cannot be remembered by the entity to which the ego-notion refers. Moreover, the experience of a man rising from sleep who feels “I slept happily so long” indicates that the entity referred to by the ego-notion was also experienced during the sleep. Even the experience referring to the state in dreamless sleep as “I slept so soundly that I even did not know myself” also indicates that the self was experienced at that time as being ignorant of its specific bodily and other spatial and temporal relations. It cannot be contended that the entity denoted by the ego-notion cannot abide even in emancipation, for if there was no entity in emancipation no one would attempt to attain to this stage. The existence of pure qualityless consciousness at the time of emancipation would mean the annihilation of the self, and no one would ever be interested in his own self-destruction. Moreover, if the entity

denoted by the ego-notion is not a real entity, then the view (often put forward by the Śāṅkarites) that the entity denoted by the ego-notion is often falsely identified with the body or the senses would be meaningless. If the illusion be due to a false imposition of false appearances, such as the body or the senses, on the pure consciousness, then that cannot be called the delusion of the ego-entity as the body and the senses. It cannot also be said that in the experience of the self as "I" there are two parts, the pure consciousness which is eternal and real and the egohood which is a mere false appearance. For if it is so in the ego-experience it might also be so in other experiences as objectivity as this or that. Moreover, if this is so, what is there to distinguish the specific experience as subjectivity from the experience as objectivity? What is it that constitutes the special feature of subjectivity? Thus it may be confidently stated that the ego-entity is the real nature of the self.

Twenty-seventh Objection. It is urged by the Śāṅkarites that the notion of the self as the knower is false because the ultimate reality, being the self-luminous Brahman, is absolutely unchangeable. The attribution of the characteristic of being a knower would be incompatible with this nature. To this it may be replied that if the fact of being a knower is regarded as a changeable character, then being or self-luminosity would also be a character, and they also would be incompatible with this nature. The change of the states of knowledge does not in any way affect the unchangeable nature of the self, for the self is not changed along with the change of the cognitions.

Twenty-eighth Objection. It is well known that the Śāṅkarites conceive of pure consciousness which is regarded as the witness (*sākṣin*), as it were, of all appearances and forms that are presented to it, and it is through its function as such a witness that these are revealed. It is through this *sākṣi*-consciousness that the continuity of consciousness is maintained, and during dreamless sleep the blissfulness that is experienced is also made apparent to this *sākṣi*-consciousness. The Rāmānujists deny this *sākṣi*-consciousness because it is unnecessary for them; its purpose is served by the functions of a knower whose consciousness is regarded as continuous in the waking state, in dreams, and also in dreamless sleep. Veṅkaṭa urges that the manifestation of blissfulness which is one with pure consciousness is implied by the very nature of pure consciousness as self-revealed. It may also be pointed out that the sensuous

pleasures cannot be manifested during dreamless sleep; if this is so, why should a *sākṣi*-consciousness be admitted for explaining the experience of blissfulness during dreamless sleep? Since Brahman is not admitted to be a real knower, the conception of *sākṣin* is not the same as that of a knower. It cannot also be a mere revelation; for if it be a revelation of itself as Brahman, then the mediation of the function of *sākṣi*-consciousness is unnecessary, and if it be of *avidyā*, then through its association Brahman would be false. It cannot be that the functioning of the *sākṣi*-consciousness is one with the nature of Brahman, and yet that partakes of the nature of *avidyā*; for it cannot both be identical with Brahman and the *avidyā*. If the functioning of the *sākṣi*-consciousness be false, a number of other *sākṣins* is to be admitted, leading to a vicious infinite. Thus in whatsoever way one may try to conceive of the *sākṣi*-consciousness, one fails to reconcile it either with reason or with experience.

Twenty-ninth and thirtieth Objections. Veṅkaṭa urges that the Śāṅkarites are wrong in asserting that scriptural testimony is superior in validity to perceptual experience. As a matter of fact, scriptural knowledge is not possible without perceptual experience. Therefore scriptures are to be interpreted in such a way that they do not come into conflict with the testimony of perceptual knowledge. Therefore, since the perception proves to us the reality of the many around us, the scriptural interpretation that would try to convince us of their falsity is certainly invalid. The Śāṅkarites further urge and adduce many false illustrations to prove the possibility of attaining right knowledge through false means (e.g. the fear that arises from the perception of false snakes, representations of things that are made by letters, and the combinations of letters which are combinations of lines). But Veṅkaṭa's reply to it is that in all those cases where falsehood is supposed to lead us to truth it is not through falsehood that we come to truth but from one right knowledge to another. It is because the lines stand as true symbols for certain things that they are represented by them, and it is not possible to adduce any illustration in which falsehood may be supposed to lead us to truth. If, therefore, scriptures are false (in the ultimate sense) as Śāṅkarites would say, it would be impossible for them to lead us to the true Brahma-knowledge.

Thirty-first Objection. The view of the Śāṅkarites that the emancipation may be attained by right knowledge even in this life

before death, called by them *ġivanmukti* or emancipation in life, is denied by the Rāmānujists, who hold that emancipation cannot be attained by right knowledge but by right actions and right feelings associated with right knowledge, and consequently emancipation is the result. Real separation of the association of the worldly things from the self can only come about after the body ceases to exist. Veṅkaṭa points out that, so long as the body remains, perception of the ultimate truth as one is impossible, for such a person is bound to be aware of the existence of the body and its manifold relations. If it be said that though the body persists yet it may be regarded as absolutely false or non-existent, then that would amount to one's being without any body and the distinction of emancipation in life and emancipation in death would be impossible.

Thirty-second Objection. The Śāṅkarites assert that *ajñāna* or ignorance, though opposed to knowledge, is a positive entity as it is revealed as such by perception, inference and scriptural testimony. Veṅkaṭa, in refusing this, says that if *ajñāna* be regarded as opposed to knowledge, it can only be so if it negates knowledge, i.e. if it be of the nature of negation. Such a negation must then obviously refer to a content of knowledge; and if this be admitted then the content of knowledge must have been known, for otherwise the negation cannot refer to it. To this the Śāṅkarites are supposed to say that the negation of knowledge and the content to which it refers are two independent entities such that the experience of the negation of knowledge does not necessarily imply that the content should be known. Therefore it is wrong to say that the negation of knowledge is a contradiction in terms. To this the obvious reply is that as in the case of a negation, where the presence of the object of negation contradicts a negation, so when there is a negation of all contents of knowledge the presence of any content necessarily contradicts it. So the experience that "I do not know anything" would be contradicted by any knowledge whatsoever. If it is urged that a negation of knowledge and its experience may be at two different moments so that the experience and the negation may not be contradictory, the reply is that perceptual experience always grasps things which are existent at the present time. Though in the case of the supposed perception of *ajñāna* during dreamless sleep the experience of *ajñāna* may be supposed to be

known by inference, and in cases of such perception as “I am ignorant,” “I do not know myself or anything else,” there is obviously perceptual experience of *ajñāna*. It is, therefore, impossible that “I” should perceive and be at the same time ignorant. Perception of ignorance would thus be absurd. Again, the experience of a negation necessarily must refer to a locus, and this implies that there is a knowledge of the locus and that this would contradict the experience of a universal negation which is devoid of all knowledge. It may, however, be urged that the perception of ignorance is not the experience of a negation, but that of a positive entity, and so the objections brought forward in the above controversy would not apply to it.

To this the reply is that the admission of a positive category called *ajñāna* which is directly experienced in perception may imply that it is of an entity which is opposed to knowledge; for the negative particle “a” in “*ajñāna*” is used either in the sense of absence or negation. If it does so, it may well be urged that experience of opposition implies two terms, that which opposes and that to which there is an opposition. Thus, the experience of *ajñāna* would involve the experience of knowledge also, and, therefore, when the opposite of *ajñāna* shines forth, how can *ajñāna* be perceived? It is clear, therefore, that no advantage is gained by regarding *ajñāna* as a positive entity instead of a mere negation. The conception of a positive *ajñāna* cannot serve any new purpose which is not equally attainable by the conception of it as negation of knowledge. If a positive entity is regarded as able to circumscribe or limit the scope of manifestation of Brahman, a negation also may do the same. The Śāṅkarites themselves admit that knowledge shines by driving away the ignorance which constituted the negation-precedent-to the production of (*prāga-bhāva*) knowledge, and thus in a way they admit that *ajñāna* is of the nature of negation. The supposed experience of dullness (*mugdho'smi*) involves in it the notion of an opposition. The mere fact that the word “dull” (*mugdha*) has no negative particle in it does not mean that it has no negative sense. Thus, a positive ignorance cannot be testified by perception.

It has been suggested that the existence of *ajñāna* may be proved by inference on the supposition that if light manifests itself by driving away darkness, so knowledge must shine by driving away

positive ignorance. Now inference is a mode of knowledge and as such it must drive away some ignorance which was hiding its operation. Since this *ajñāna* could not manifest itself, it must imply some other *ajñāna* which was hiding it, and without driving which it could not manifest itself, and there would thus be infinite regress. If the *ajñāna* be regarded as hiding, then the inference may as well be regarded as destroying the ignorance directly. Whenever a knowledge illuminates some contents, it may be regarded as dispelling the ignorance regarding it. The scriptural texts also do not support the conception of a positive *ajñāna*. Thus, the concept of a positive *ajñāna* is wholly illegitimate.

Fortieth Objection. The supposition that the *ajñāna* rests in the individual *jīvas* and not Brahman is also false. If the *ajñāna* is supposed to rest in the individual in its own real essence (i.e. as Brahman), then the *ajñāna* would virtually rest in Brahman. If it is supposed that *ajñāna* rests in the individual *jīvas*, not in their natural state but in their ordinarily supposed nature as suffering rebirth, etc., then this amounts to saying that the *ajñāna* is associated with the material stuff and as such can never be removed; for the material limitations of an individual can never have a desire to remove the *ajñāna*, nor has it the power to destroy it. Again, it may be asked whether the *ajñāna* that constitutes the difference of individual *jīvas* is one or many in different cases. In the former case in the emancipation of one, *ajñāna* would be removed and all would be emancipated. In the second case it is difficult to determine whether *avidyā* comes first or the difference between individual *jīvas*, and there would thus be *anyonyā-śraya*, for the Śāṅkarites do not admit the reality of difference between *jīvas*. In the theory that *ajñāna* is associated with Brahman, the difference between *jīvas* being false, there is no necessity to admit the diversity of *ajñāna* according to the diversity of *jīvas*. In any case, whether real or fictitious, *avidyā* cannot explain the diversity of the *jīvas*. Again, if the *ajñānas* which are supposed to produce the diversity of the *jīvas* be supposed to exist in the Brahman, then Brahman cannot be known. In the view that these *ajñānas* exist in the *jīvas*, the old difficulty comes in as to whether the difference of *avidyās* is primary or whether that of the *jīvas* is primary. If the difficulty is intended to be solved by suggesting that the regression is not vicious as in the case of the seed and the shoot, then it may be pointed out that

in the supposition that the *ajñānas* which produce difference in *jīvas* have these as their support then there is no scope for such a regression. The seed that produces the shoot does not produce itself. If it is suggested that the *avidyā* of the previous *jīvas* produces the later *jīvas*, then the *jīvas* would be destructible. Thus, from whichever way we may try to support the view that the *avidyā* rests in individual *jīvas* we meet with unmitigated failure.

Forty-first Objection. It is said that the defect of *avidyā* belongs to Brahman. If this defect of *avidyā* is something different from Brahman, then that virtually amounts to the admission of dualism; if it is not different from Brahman, then Brahman itself becomes responsible for all errors and illusions which are supposed to be due to *avidyā*, and Brahman being eternal all errors and illusions are bound to be eternal. If it is said that the errors and illusions are produced when Brahman is associated with some other accessory cause, then about this also the old question may be raised as to whether the accessory cause or causes are different or not different from Brahman and whether real or not. Again, such an accessory cause cannot be of the nature of a negation-precedent-to the production of the true knowledge of the identity of the self and the Brahman; for then the doctrine of a positive ignorance propounded by the Śāṅkarites would be wholly unnecessary and uncalled for. Further, such a negation cannot be identical with Brahman, for then with true knowledge and with the destruction of ignorance Brahman itself would cease. Again, since everything else outside Brahman is false, if there is any such entity that obstructs the light of Brahman or distorts it (if the distortion is in any sense real), then that entity would also be Brahman; and Brahman being eternal that distortion would also be eternal. If the defect which acts as an obstructive agent be regarded as unreal and beginningless, then also it must depend on some cause and this will lead to an infinite regress; if it does not depend upon any cause, then it would be like Brahman which shines forth by itself without depending on any defect, which is absurd. If it is supposed that this defect constructs itself as well as others, then the world-creation would manifest itself without depending upon any other defect. If it is said that there is no impropriety in admitting the defect as constructing itself, just as an illusion is the same as the construction, i.e. is made by it, then the Śāṅkarites would be contradicting their own views;

for they certainly do admit the beginningless world-creation to be due to the operation of defects. If the *avidyā* is not itself an illusory imposition, then it will be either true or chimerical. If it is regarded as both an illusory construction and a product, then it would not be beginningless. If it has a beginning, then it cannot be distinguished from the world-appearance. If illusion and its construction be regarded as identical, then also the old difficulty of the *avidyā* generating itself through its own construction would remain the same. Again, if the *avidyā* appears to Brahman without the aid of any accessory defect, then it will do so eternally. If it is urged that, when the *avidyā* ceases, its manifestation would also cease, then also there is a difficulty which is suggested by the theory of the Sāṅkarites themselves; for we know that in their theory there is no difference between the illumination and that which is illuminated and that there is no causal operation between them. That which is being illuminated cannot be separated from the principle of illumination.

If it is urged that the *avidyā* is manifested so long as there is no dawning of true knowledge, then may it not be said that the negation-precedent-to the rise of true knowledge is the cause of world-appearance and that the admission of *avidyā* is unnecessary? If it is said that the negation cannot be regarded as the cause of the very varied production of world-appearances, then it can be urged with as much force that the position may also be regarded as capable of producing the manifold world-appearance. If it is held that positive defects in the eye often produce many illusory appearances, then it may also be urged on the other side that the non-observation of distinctions and differences is also often capable of producing many illusory appearances. If it is urged that negation is not limited by time and is therefore incapable of producing the diverse kinds of world-appearances under different conditions of time, and that it is for that reason that it is better to admit positive ignorance, then also it may be asked with as much force how such a beginningless ignorance unconditioned by any temporal character can continue to produce the diverse world-appearance conditioned in time till the dawning of true knowledge. If in answer to this it is said that such is the nature and character of *avidyā*, then it may well be asked what is the harm in admitting such a nature or character of "negation." This, at least, saves us from admitting a strange and

uncalled for hypothesis of positive ignorance. It may be urged that negation is homogeneous and formless and as such it cannot undergo transformations of character, while *avidyā*, being a positive stuff, can pass through a series of transformations of character (*vivarta-paramparā*). In this connection it may be urged that the nature of *avidyā* is nothing but this succession of transformations of character; if it is so, then since it is the nature of *avidyā* to have a succession of diverse kinds of transformations, there may be all kinds of illusions at all times. It cannot also be regarded as an effect of transformation of character, for the *avidyā* is supposed to produce such effects. If it is urged that *avidyā* is a distinct entity by itself, different from the appearance of its character that is perceived, then also the old question would recur regarding the reality or unreality of it. The former supposition would be an admission of dualism; the latter supposition, that is, if it is false, the succession of it as various appearances conditioned by diverse kinds of time and space would presuppose such other previous presuppositions *ad infinitum*. If it is held that there is no logical defect in supposing that the previous sets of transformations determine the later sets in an unending series, it is still not necessary to admit *avidyā* in order to explain such a situation. For it may well be supposed that the different transformations arise in Brahman without depending upon any extraneous cause. The objection that such a supposition that Brahman is continually undergoing such diverse transformations of character (real or unreal) would inevitably lead to the conclusion that there is no Brahman beyond such transformations is invalid; for our perceptual experience shows that the transformational change of a lump of clay does not invalidate its being. In such a view Brahman may be regarded as the ground of all illusory appearances. On the other hand, it is only on the assumption of false *avidyā* that one cannot legitimately affirm the existence of a basis, for the basis of falsehood would itself be false. Therefore, if Brahman be regarded as its basis, then it would itself be false and would land us in nihilism.

Again, it may well be asked whether *avidyā* shines by itself or not. If it does not, it becomes chimerical; if it does, then it may again be asked whether this shining is of the nature of *avidyā* or not. If it is, then it would be as self-shining as Brahman and there would be no difference between them. Again, if the shining cha-

racter of *avidyā* belongs to Brahman, the Brahman being eternal, there would never be a time when *avidyā* would not shine. The shiningness cannot also be regarded as a character of either Brahman or the *avidyā*, for none of them is regarded as being a knower of it. If it is urged that the character as the knower is the result of an illusory imposition, then the objection is that the meaning of such an imposition is unintelligible unless the conception of *avidyā* is clarified. The character as knower is possible only on the supposition of an illusory imposition, and on the above supposition the illusory imposition becomes possible on the supposition of the knower. If it is due to Brahman, then Brahman, being eternal, the illusory impositions would also be eternal. If it be without any reason, then the entire world-illusion would be without any cause.

Again, any conception regarding the support of *avidyā* is unintelligible. If it has no support, it must be either independent like Brahman or be like chimerical entities. If it has a support and if that support be of the nature of Brahman, then it is difficult to conceive how the eternally pure Brahman can be the support of the impure *avidyā* which is naturally opposed to it. If the solution is to be found in the supposition that the impure *avidyā* is false, then it may well be urged that if it is false there is no meaning in the effort to make it cease. If it is said in reply that though it is non-existent yet there is an appearance of it, and the effort is made to make that appearance cease, then also the reply is that the appearance is also as false as itself. If it is admitted that though false it can yet injure one's interest, then its falsehood would be only in name, for its effects are virtually admitted to be real. If Brahman in its limited or conditioned aspect be regarded as the support of *avidyā*, then since such a limitation must be through some other *avidyā* this would merely bring us into confusion. If it is held that *avidyā* has for its support an entity quite different from Brahman conditioned or unconditioned, then the view that Brahman is the support of *avidyā* has to be given up, and there would be other difficulties regarding the discovery of another support of this support. If it be said that like Brahman *avidyā* is its own support but Brahman is not its own support, then the support of *avidyā* would have no other support. If it is said that the support can be explained on the basis of conditions, then also it would be difficult to imagine how a condition of the nature of a receptacle (*ādhārā-kāro-pādhi*) can itself

be without any support. If further supports are conceived, then there would be a vicious infinite. Again, if it is held that what is false does not require any support, then it may be urged that according to the Śāṅkarites the support is regarded as the basis on which the illusion occurs, and even the jug is regarded as an illusion on the ground. Moreover, this false experience of *avidyā* is not any of the illusory or limited perceptions, such as ego-experience or the experience of other mental states; for these are regarded as the effects of *avidyā*. If they are not so, then they must be due to some other defects, and these to other ones, and so there would be a vicious infinite. If it is held that *avidyā* is nothing different from its experience, then since all experience is of the nature of Brahman, Brahman itself would be false. Again, if the *avidyā* manifests itself as Brahman by hiding its (Brahman) nature, then all pure revelation being hidden and lost, *avidyā* itself, which is manifested by it, would also be naturally lost. If it be manifested as Brahman and its own nature be hidden, then Brahman alone being manifested there would be no question of bondage. It is obvious that it cannot manifest itself both as *avidyā* and as Brahman, for that would be self-contradictory, since knowledge always dispels ignorance. If it is held that just as a mirror reflects an image in which the character of the mirror and the real face is hidden, so *avidyā* may manifest itself and hide both itself and the Brahman. To this the reply is that in all cases of illusions of identity (*tādātmyā-dhyāsa*) the non-observation of the difference is the cause of the error. The cause of the illusion of the face and the mirror is the non-observation of the fact that the face is away from the mirror. But Brahman and *avidyā* are neither located in a proximate space so that it is possible to compare their illusion of identity by the illustration of other illusions which depend upon such proximity. If it is said of *avidyā*, not being a substance, that all criticism that applies to real and existent entities would be inapplicable to it, then such a doctrine would be almost like nihilism, for all criticisms against nihilism are accepted by nihilists as not invalidating their doctrine.

Forty-second Objection. It is held by the Śāṅkarites that *avidyā* and *māyā* are two distinct conceptions. *Māyā* is supposed to be that by which others are deluded, and *avidyā* is supposed to be that which deludes one's self. The word *māyā* is used in various senses but none of these seems to satisfy the usage of the word in Śāṅkarite

manner. If it is supposed that the word *māyā*, of which Brahman is supposed to be the support, has this peculiarity that it manifests its various forms to others as well as deludes them, then it is hard to distinguish it from the conception of *avidyā*. If it is held that the word *avidyā* is restricted to mean the agent that causes false perceptions as in the case of conch-shell-silver, then *māyā* may also be called *avidyā*, for it also causes the false world-appearance to be perceived. There is no reason why the cause of the false perception of the conch-shell-silver should be called *avidyā* and not those relatively true cognitions which contradict such illusory perceptions. *Īśvara* also may be said to be suffering from *avidyā*, for since He is omniscient He has the knowledge of all individual selves of which falsehood is a constituent. If God has no knowledge of illusions, He would not be omniscient. It is wrong also to suppose that *māyā* is that which manifests everything else except Brahman in its nature as false; for if the Brahman knows the world-appearance as false without being under an illusion, it would still be hard to repudiate the ignorance of Brahman. If Brahman knows all things as the illusions of others, then He must know the others and as such their constituent illusions, and this would mean that Brahman is itself subject to *avidyā*. It is difficult also to conceive how one can have any cognition of falsehood without being under illusion, for falsehood is not mere non-existence but the appearance of an entity where it does not exist. If Brahman sees other people only under illusions, that does not mean that Brahman deludes others by His *māyā*. There may be a magician who would try to show his magic by mere false tricks. If the Brahman tried to show His magic by mere false reflections, He would indeed be mad. It may be supposed that the difference between *avidyā* and *māyā* is that *avidyā*, by producing illusory experiences, hurts the real interests of the perceiving selves, yet the Brahman Who perceives these illusory selves and their experiences does so through the agency of *māyā* which does not injure His interest. To this the reply is that if *māyā* does not injure anybody's interest, it cannot be called a defect. It may be objected that defects have no connection with harmful or beneficial effects but they have a relation only to truth and error. Such a view cannot be accepted, for truth and error have a pragmatic value and all that is erroneous hurts one's interests; if it were not so, nobody would be anxious to remove them.

If it is argued that *māyā* is not a defect of Brahman but a quality, then it may be said that if it were so then no one would be anxious to remove it. If, again, *māyā* were a quality of Brahman and served the purpose of such a mighty person, how could the poor individual selves dare it? And if they could, they would be able to injure the practical interests of an Omnipotent Being, for *māyā* being a quality would certainly be of great use to Him. *Māyā* cannot be destroyed by itself without any cause, for that would land us in the doctrine of momentariness. If the *māyā* were eternal and real, that would be an admission of dualism. If *māyā* be regarded as being included in Brahman, then Brahman, being only self-manifesting, and *māyā* being included within it would not have the power of producing the world-delusions which it is supposed to produce. Again, *māyā* being eternal cannot also be false. Again, if the manifestation of *māyā* from Brahman be regarded as real, then the ignorance of Brahman becomes also real; if it is a false manifestation from Brahman, then it would be meaningless to suppose that Brahman should be using the *māyā* as an instrument of play. It is absurd to suppose that Brahman would be playing with false reflected images, like a child. Again, if the *jīvas* and Brahman be identical, then it is unreasonable to suppose that the ignorance of the *jīvas* would not imply the ignorance of Brahman. If, again, the *jīvas* and the Brahman be really different, then how can there be any emancipation by the knowledge of their identity? So the conception of a *māyā* and an *avidyā* different from it is wholly incomprehensible.

Forty-third Objection. It is held by the Śāṅkarites that a knowledge of monistic identity produces emancipation. Now such a knowledge cannot be different from the Brahma-knowledge; for if it is a contentless entity, then it would be no knowledge, since the Śāṅkarites hold that knowledge can only be a mental state associated with a content (*vyrtti-rūpaṃ hi jñānaṃ saviṣayam eva iti bhavatām api siddhāntaḥ*). It cannot also be identical with Brahma-knowledge, for if such a knowledge can produce emancipation the pure Brahma-knowledge would have done the same. It may be held that in the case of the illusion of conch-shell-silver, when there is a true shining regarding the nature of the "this" in its own character, then that is equivalent to the contradiction of the illusory appearance of silver, and the manifestation of identity showing the

real nature of Brahman may be regarded as contradictory to world-illusion. To this the reply is that there is no identity between the existence of the "this" as conch-shell and its appearance as silver. Thus, one knowledge may contradict the other, but in the case under review there is no new element in the notion of the identity which was not already present in the Brahma-knowledge itself. If the notion of identity be regarded as a contentful knowledge, then it would be different from the Brahma-knowledge, and being itself false it could not remove the error. The case where a thing known is again recognized is also not a proper instance for supporting the Śāṅkarite position, for here also the knowledge of recognition is not the same as the knowledge of original acquaintance, whereas the notion of identity is supposed to be the same as the Brahma-knowledge. Again, if it is supposed that a mental state of a particular content removes the illusions and produces Brahma-knowledge, then the illusions would be real entities since they were capable of being destroyed like other entities.

If it is held that the notion of identity has a reference to Brahman as limited by *avidyā*, then that will be like the manifestation of the illusory world-creations through the *sākṣi*-consciousness, and such a manifestation would not remove errors.

Again, it may be asked whether the knowledge that produces the notion that all else excepting Brahman is false can itself be regarded as constituting falsehood, for that would be self-contradictory. If the notion of the falsehood of the world-appearance be itself regarded as false, then the world would have to be regarded as real. If it is urged that as in the supposition of the death of a barren woman's son both the barren woman's son and his death are false, so here also both the world and its falsehood may be equally false. But it may be replied that in the instance put forward the falsehood of the barren woman's son and that of his death are not both false. Again, if the falsehood of the world-appearance were real, then that would imply dualism.

Again, if inferences led to the contradiction of world-appearance, then there would be no reason to suppose that the contradiction of the world-appearance would be possible only through listening to the Vedāntic texts of identity. If the contradiction of world-appearance is produced by Brahman itself, then Brahman being eternal there would be no world-illusion. Again, Brahman

has been regarded as helping the process of world-illusion in its own pure nature for otherwise there would have been no illusion at all. It is a curious doctrine that though Brahman in its pure nature helps illusion, yet, in its impure nature, as the scriptural texts or the knowledge arising out of them, it would remove it. So in whichever way we may think of the possibility of a removal of *ajñāna* we are brought into confusion.

Forty-fourth Objection. The conception of the cessation of the *avidyā* is also illegitimate. For the question that arises in this connection is whether the cessation of *avidyā* is itself real or unreal. If it is unreal, then the hope that the *avidyā* is rooted out with such a cessation is baffled, for the cessation itself is a manifestation of *avidyā*. It cannot be said that the cessation of *avidyā* has as its ground a real entity, the *ātman*, for then the *ātman* will have to be admitted as suffering change. And if in any way the cessation of *avidyā* is to be regarded as having a true cause as its support, then the cessation being real there would be dualism. If it is regarded as an illusion, and there is no defect behind it, then the assumption of *avidyā* as a defect for explaining the world-illusion would be unnecessary. If it is without any further ground like *avidyā* and Brahman, then there is no meaning in associating *avidyā* with it. There is also no reason why, even after the cessation of *avidyā*, it may not rise up again into appearance. If it is suggested that the function of the cessation of *avidyā* is to show that everything else except Brahman is false and as soon as this function is fulfilled the cessation of *avidyā* also ceases to exist, then also another difficulty has to be faced. For if the cessation of *avidyā* itself ceases to exist, then that would mean that there is a cessation of cessation which means that *avidyā* is again rehabilitated. It may be urged that when a jug is produced it means the destruction of the negation-precedent-to-production (*prāga-bhāva*), and when this jug is again destroyed it does not mean that the negation-precedent again rises into being; so it may be in this case also. To this the reply is that the two cases are different, for in the above case the negation of one negation is through a positive entity, whereas there is nothing to negate the cessation of *avidyā*; so in this case the negation would be a logical negation leading to a position of the entity negated, the *avidyā*. If it is said that there is the Brahman which negates the cessation of *avidyā*, then the difficulty would be that Brahman, the

negation of both *avidyā* and its cessation, being eternal, there ought to be no illusory world-creation at any time.

If the cessation of *avidyā* is not itself of illusory nature and if it is regarded as included in the being of Brahman, then Brahman being beginningless the *avidyā* should be regarded as having always remained arrested. It cannot be said that the existence of Brahman is itself the cessation of *ajñāna*, for then it would be impossible to connect the cessation of *avidyā* with the realization of the nature of Brahman as cause and effect.

If it is suggested that a mental state reflecting the nature of Brahman represents the cessation of *ajñāna* of Brahman and that this mental state may be removed by other causes, then the reply is that this would mean that such a mental state is illusory; and this implies that the cessation of *avidyā* is illusory. The criticism of such a view is given above. The cessation of *avidyā* is not real, being outside Brahman; neither real, something different from real, and unreal, for that could not lead to a real cessation. So ultimately it must be neither unreal nor something different from any of the above entities, for the cessation of positive and negative entities only are of the nature of real and unreal. *Ajñāna* is something different from real and unreal; its cessation is valid, being amenable to proofs. So the cessation has to be admitted as being something unique and different from all existent and non-existent entities. In reply it may be said that if the *ajñāna* is admitted to be like-a-non-existent entity (*asatīva*), then in both the two meanings of negation, that is, in the view that negation is but the other name of position and that negation is a separate category in itself, the admission of *avidyā* would involve dualism. If it is regarded as something chimerical, it could never show itself, and such a chimerical entity would have no opposition to the world-cycle. So the cessation of *avidyā* cannot lead to emancipation. Again, if the cessation of *avidyā* is non-existent, that would imply the existence of *avidyā*. The cessation of *avidyā* is not like the destruction of a jug which has a real existence, so that though it may appear like a non-being, yet the jug may be regarded as a positive entity. The destruction of *avidyā* is not of that nature, for it has no definite form. If it is held that the cessation of *avidyā* is of the fifth type, that is, different from existent, non-existent, existent-and-non-existent and different-from-existent-and-non-existent, then this is virtually the admission

of the *mādhyaṃika* doctrine of indescribability of all phenomena, for it also describes the world-phenomena as being of the fifth type. There is also really no way in which such an absolutely unique and indefinable category can be related to anything else.

Forty-fifth Objection. It is argued by the Śāṅkarites that the scriptural texts cannot signify Brahman, which is devoid of all and every specific quality. To this Veṅkaṭa replies that Brahman is endowed with all specific qualities and, therefore, it is quite legitimate that texts should signify it. It is wrong also to suppose that Brahman, being self-luminous, cannot be manifested by words, for it has been shown by the Rāmānuja school that even the self-luminous can be the object of further awareness. Brahman is also sometimes described by the Śāṅkarites as the state of being quality-less, but is itself a quality since it is used adjectively to Brahman. Moreover, if Brahman could not be signified by the scriptural texts, the texts themselves would be meaningless. It is wrong also to suppose that the scriptural words refer to Brahman only in a secondary manner, just as one may point to a tree-top in order to show that the moon is visible (*śākhā-candra-darśana*); for whatever be the method, Brahman is indicated by the texts. Even a state of non-conceptual meditation (*asamprajñāta-samādhi*) is not absolutely unpredicable. In that state one cannot apply the concepts or words. If Brahman is absolutely without any character, it cannot be admitted that it should be implied or signified in a remote manner (*lakṣya*) by the scriptures. The passages which say that Brahman is beyond word (*yato vāco nivartante*) indicate only that the qualities of Brahman are infinite. Thus, it is wholly unjustifiable on the part of the Śāṅkarites to say that Brahman is not indicated by the texts.

Forty-seventh Objection. It is maintained by the Śāṅkarites that all determinate knowledge is false because it is determinate in its nature like the conch-shell-silver. If all that is determinate is false, then since all distinctions must involve determinateness they would all be false and thus ultimately we have monism. The futility of such a position is shown by Veṅkaṭa, who points out that such an inference involves determinate concepts in all its limbs, and would thus be absolutely unwarrantable according to the thesis itself. Moreover, if the determinate knowledge is false, the indeterminate would also be false for want of corroboration. It is wrong also to suppose that determinate perceptions are false for want of cor-

roborative evidence from other awarenesses; for an illusion may be further corroborated by other illusions and may yet be false, and the last corroborative knowledge would be false for want of further corroborations, which would lead to the falsehood of the whole set of corroborations which is dependent on it. It is also wrong to suppose that determinate conceptions do not stand the test of causal efficiency, for all our practical experiences depend on determinate notions. It cannot also be held that the conceptual cognitions involving universals are false, for they are neither contradicted nor found to be doubtful in any way. Thus, if all determinate cognitions are regarded as false, then that would lead us to nihilism and not to monism. Moreover, if the indeterminate nature of Brahman is to be inferred from the indeterminate nature of our perception of external things, then on the analogy of the falsehood of the former the latter may also be false.

Fifty-fifth Objection. The Śāṅkarites hold that all effects are false, for they seem to contradict themselves if an attempt is made to conceive the logical situation. Is the effect produced out of the cause related with it or unrelated? In the first alternative the cause and the effect, being but two relata connected together by relation, there is no reason why the effect should be produced by the cause and not the cause by the effect. If the cause produces the effect without being related to it, then anything might produce anything. Again, if the effect be different from the cause, things which are different from one another would be productive of one another. If they are identical, then one could not produce the other. If it is said that cause is that which invariably precedes and effect is that which invariably succeeds, then a thing ought to be existent before the negation-precedent-to-production. Again, if the effect be regarded as having been produced from a material cause which has undergone transformation, then it may further be asked whether these transformations are produced from other transformations, and this would lead to a vicious infinite. If the effect be regarded as produced from a cause which has not undergone any transformation, then it would abide the whole time in which the material cause remains. Moreover, an effect is like the illusory silver which is non-existent in the beginning and in the end. The production of an entity cannot be either from a positive entity or a negative entity; for an effect, say, the jug, cannot be produced from its cause, the

earth-matter, without producing some change in it, that is, without negating it in some way or the other. On the other hand, if the production is regarded as being from a negation, then it will itself be a negation. So in whichever way a causal relation may be viewed, it becomes fraught with contradictions.

The reply of Venkātā to this is that the objection as to whether the effect is related to the cause in its production or unrelated to it is overcome by the view that the effect is unrelated to the cause; but that need not imply that all that is unrelated to the cause should be the effect, for mere unrelatedness does not induce the production of the effect such that the very unrelatedness will connect anything with any other thing as effect. The special powers associated with causal entity are responsible for the production of the special effects, and these can be known by the ordinary methods of agreement and difference. The relations of the causal elements among themselves are transferred to the effect. It is well known that causes produce effects of an entirely different nature, just as when a jug is produced by a stick and the potter's wheel. Even the material cause is very different from the material cause as the effect. It is indeed admitted that the effect is produced from a modified (*vikṛta*) cause, for any change in the cause, even the proximity of an accessory condition, would be a modification. But if modification or *vikāra* cannot be affirmed of the cause in the sense in which the effect is regarded as a modification, it may be said in that sense that the effect is produced from an unmodified cause. It would be wrong to suggest that any and every effect might spring from any and every unmodified cause, for an effect is produced from an unmodified cause under proper temporal conditions and the association of collocative agents. It is also wrong to suggest that in the supposition that an effect is analysable as a course of changes, the cause as the immediate antecedent would be undiscoverable; and the cause being undiscoverable the effect would also be inexplicable; for it is the effect which is recognized as perceived and this implies the existence of the cause without which it could not come into being. If it is urged that the effect is not perceived, or that it is contradicted, then the obvious reply is that both non-perception and contradiction are effects, and in denying effects through them the criticism becomes self-contradictory.

When a material cause is changed into an effect, there are cer-

tain parts of it which remain unchanged, even when that effect is changed into other objects called effects, and there are some characters which are formed only in certain effects. Thus, when gold is changed into a bangle and the bangle into a necklace, the persisting qualities of gold continue the same both in the bangle and in the necklace; but the special form of the bangle does not pass into that of the necklace. Again, the objection that if the effects were already existent in the cause, then there is no necessity of the causal operation as has elsewhere been repudiated, and it has also been pointed out that the assertion that all effects are false like conch-shell-silver is false, for these effects are not found to be contradicted like these illusory appearances. It is wrong also to suggest that because an effect does not exist in the beginning or in the end it also does not exist in the middle, for its existence in the middle is directly experienced. It may also be suggested on the other hand that because an effect exists in the middle it must also exist in the beginning and in the end.

It is suggested by the Śāṅkarites that all notions of difference as effects are illusorily imposed upon one permanent entity which permeates through all so-called different entities, and that it is this permeating entity which is real. Against such a supposition the Śāṅkarites may be asked to discover any entity that permeates both through Brahman and *avidyā*. It would be wrong to suggest that Brahman is both in itself and in the *avidyā*; for Brahman cannot have any dual entity, and also cannot be illusorily imposed upon itself.

The suggestion that since the unity of a flame is perceived to be false all perception is false is obviously wrong, for in the former case the illusion is due to the rapid coalescing of similar flames, but this does not apply to all perception.

In the sense of substance (*dravya*) an effect exists in the cause, but in the sense of an effect-state the effect does not exist in the cause. The objections of the Śāṅkhyists that if the effect-state did not exist in the cause it could not be produced and that similarly anything could be produced from anything are futile, for the effects are produced by specific powers which manifest themselves as effects in definite spatial and temporal conditions.

A question is asked whether the effects are produced from a positive or a negative entity, that is, whether when the effects are

produced they are produced as states of a substance which persists through them or not. Veṅkaṭa's reply is that the substance persists; only states and conditions change when the effect is produced. For in the production of an effect there is change only in the causal state and not in the causal substance. There is thus an agreement between the cause and the effect only so far as the substance is concerned and not with reference to their states; for it is by the negation of the causal state that the effect-state arises. It is sometimes suggested that since an effect is neither permanently existing nor permanently non-existing it must be false. But this suggestion is obviously wrong, for the fact that an entity may be destroyed at a later moment does not mean that it was non-existent at the moment when it was perceived. Destruction means that an entity which was existent at a particular moment was non-existent at another. Contradiction means that a thing is non-existent even when it is perceived. Mere non-existence is not destruction, for the negation-precedent-to-production might also be called destruction since it is also non-existent. Non-existence at a later point of time also does not mean destruction, for then even chimerical entities might also be called destruction. The case of conch-shell-silver is not a case of destruction, for clearly that is a case of contradiction in experience. Thus, if the concepts of production, destruction and non-existence be analysed, then it will be found that the concept of effect can never be regarded as illusory.

Fifty-seventh Objection. It is said that Brahman is of the nature of pure bliss (*ānanda*); but it may well be said that in whichever sense the word *ānanda* may be used it will not be possible to affirm that Brahman is of the nature of pure bliss. For if *ānanda* means an entity the awareness of which induces an agreeable experience, then Brahman will be knowable. If it means merely an agreeable experience, then Brahman would not be pure indeterminate consciousness. If it means a mere agreeable attitude, then duality will be implied. If it means negation of pain, then Brahman would not be positive and it is well admitted on all hands that Brahman is neutral. Moreover, according to the Śāṅkarites themselves the state of intuition of Brahman is regarded as a positive state like the state of dreamless sleep. Thus, in whichever way one may look at the problem the assertion that the indeterminate Brahman is of the nature of pure bliss becomes wholly unwarrantable.

Fifty-eighth Objection. The eternity of Brahman cannot be maintained, if it is regarded as indeterminate. If eternity means existence in all times, then *avidyā* also would be eternal; for it is also associated with all time, and time is itself regarded as its product. If it is urged that association with all time does not mean existence in all time, then it is wrong to regard existence in all times as a definition of eternity, for it will be enough to say that existence itself is eternal. The "inclusion of all time" as distinguished from mere existence shows the difference between existence and eternity. Eternity would thus mean existence in all time, which can be affirmed of *avidyā* also. Eternity cannot also be defined as that which does not cease in time since such a definition would apply to time also which does not cease in time. It cannot also be said that eternity means that which is not contradicted in the beginning or in the end, for then the world-appearance also would be eternal. Again, it is difficult to understand how consciousness is regarded as eternal by the Śāṅkarites, for if it is affirmed of ordinary consciousness, then that is directly against perceptual experience; and if it is affirmed of transcendental consciousness, then that is directly against experience. Further, eternity cannot be regarded as the essence, for then it would be identical with self-luminosity, and its predication, such as Brahman is eternal, would be unnecessary. If it is regarded as a knowable quality, then if such a quality existed in consciousness, consciousness would become knowable. If it did not exist in consciousness, then its knowledge would not imply the eternity of consciousness. It cannot also be said that whatever is not produced is eternal, for then negation-precedent-to-production would be eternal. If it is said that any positive entity which is not produced is eternal, then *avidyā* would also be eternal. Thus, in whichever way one may try to prove the eternity of the indeterminable pure consciousness one fails.

Sixty-first Objection. It is often asserted by the Śāṅkarites that there is a unity of the self. If by self here they mean the "ego," then clearly all the egos cannot be regarded as identical, for it is well known that the experiences of other people are never identified by us as ours. Nor can it be said that there is unity of consciousness of us all, for then each of us would know the minds of others. It is not maintainable that our underlying being is the same, for that would not mean the identity of our selves. One may think of

universal existence, but that would not mean the identity of the existents. Again, the identity of the selves cannot be regarded as real since the selves (*jīvas*) themselves are regarded as unreal. If the identity of the selves be regarded as false, then there is no reason why such a doctrine should be propounded. In any case, when one has to deal with our experiential life, one has to admit the diversity of selves and there is no other proof by which their identity may be established. Thus it would be wrong to think, as the Śāṅkarites do, that there is one self.

Meghanādāri.

Meghanādāri, son of Ātreyanātha sūri, seems to be one of the earliest members of the Rāmānuja school. He wrote at least two books, *Naya-prakāśikā* and *Naya-dyu-maṇi*, both of which are still in manuscript and only the latter has been available to the present writer. Most of the important contributions of Meghanādāri on the subject of the Rāmānuja theory of the *pramāṇas* have already been discussed in some detail in connection with the treatment of that subject under Veṅkaṭanātha. Only a few of his views on other topics of Rāmānuja philosophy will therefore be given here.

Svataḥ-prāmāṇya-vāda. Veṅkaṭa, in his *Tattva-muktā-kalāpa* and *Sarvārtha-siddhi*, says that all knowledge manifests the objects as they are. Even errors are true at least so far as they point to the object of the error. The erroneousness or error is due to the existence of certain vitiating conditions¹. When there is knowledge that there is a jug, the existence of the object is the validity (*prāmāṇya*) of it and this is made known by the very knowledge that the jug exists². Even where there is the knowledge of silver in a conch-shell, there is the knowledge of the existence of the objective silver implied in that very knowledge, and thus even in erroneous knowledge there is the self-validity so far as it carries with it the existence of the object of perception³.

Meghanādāri however, who in all probability preceded Veṅkaṭa, gives a somewhat different account of the doctrine of *svataḥ-*

¹ *jñānānām yathā-vasthitā-rtha-prakāśakatvam sāmānyam eva bhrāntasyā'pi jñānasya dharmīṇy abhrāntatvāt ato vahnyā-der dāhakatvavaj jñānānām prāmāṇyam svābhāvīkam eva upādher maṇi-mantravad doṣo-pādhi-vaśād apramāṇatvam bhrāmāṁśe. Sarvārtha-siddhi*, p. 554.

² *ghaṭo'sti' ti jñānam utpadyate tatra viśayā-stitvam eva prāmāṇyam tat tu tenaiva jñānena pratīyate ataḥ svataḥ-prāmāṇyam. Ibid.*

³ See *Ibid.*

prāmānya. He says that validity (*prāmānya*) proceeds from the apprehension of cognition (*prāmānyam jñāna-sattā-pratīti-kāraṇādeva*), for the validity must have a cause and no other cause is traceable¹.

The Naiyāyikas, arguing against the *svataḥ-prāmānya* doctrine of the Mīmāṃsakas, are supposed to say that the self-validity cannot be regarded as being produced in every case of knowledge, for the Mīmāṃsakas hold that the Vedas are eternal and thus their self-validity cannot be regarded as being produced. Self-validity cannot be regarded as produced in some cases only, for if that were the case the thesis that all cognitions are self-valid cannot stand. Therefore the proper view is that only that knowledge is self-valid which is uncontradicted in experience (*abādhitā-vyavahāra-hetutvam eva jñānasya prāmānyam*)². Self-validity cannot be regarded as a special potency, for such a potency is non-sensible and has therefore to be known by inference or some other means; neither can it be regarded as being one (*svarūpa*) with the sense-organs by which knowledge is acquired, for the existence of such sense-organs is itself inferred from mere knowledge and not from what is only true knowledge.

Arguing against the Śāṅkarites, the Naiyāyikas are supposed to say that in their view knowledge being self-luminous, there would be no way of determining validity either from uncontradicted experience or by any other means; and since, according to them, everything is false, the distinction of validity and invalidity also ought to have no place in their system, for if such distinctions are admitted it would land them in dualism. To this Meghanādāri says that if self-validity is not admitted, then the whole idea of validity has to be given up; for if validity is said to be produced from a knowledge of the proper conditions of knowledge or the absence of defects, such a knowledge has to be regarded as self-valid, for it would have to depend on some other knowledge and that again on some other knowledge, which would mean a vicious infinite. So knowledge is to be regarded as self-valid by nature and its invalidity occurs only when the defects and vitiating contributions of the causes of knowledge are known by some other means. But the method of establishing self-validity according to the followers of Kumārila is liable to criticism, for according to that system the existence of knowledge is only inferred from the fact of the revelation of the objects, and that implication cannot also further

¹ *Naya-dyu-maṇi*, p. 21 (MS.).

² *Ibid.* p. 22.

lead to the self-validity of knowledge. The theory of self-validity that it is caused by the same constituents which produce the knowledge is also inadmissible, for the senses have also to be regarded as the cause of knowledge and these may be defective. Again, it is held that knowledge which corresponds with the object (*tathā-bhūta*) is valid and that which does not correspond with the object is invalid and that such validity and invalidity are therefore directly manifested by the knowledge itself. Meghanādāri replies that if such correspondence be a quality of the object, then that does not establish the validity of knowledge; if it is a quality of knowledge, then memory has also to be regarded as self-valid, for there is correspondence in it also. Again, the question arises whether the self-validity is merely produced or also known. In the former case the self-manifestation of self-validity has to be given up, and in the latter case the Kumārila view is indefensible for by it knowledge being itself an implication from the revelation of objects its self-validity cannot obviously be self-manifested.

Meghanādāri, therefore, contends that an intuition (*anubhūti*) carries with it its own validity; in revealing the knowledge it also carries with it the conviction of its own validity. The invalidity, on the other hand, is suggested by other sources. This intuition is in itself different from memory¹. The whole emphasis of this contention is on his view that each cognition of an object carries with it its cognizability as true, and since this is manifested along with the cognition, all cognitions are self-valid in this sense. Such a self-validity is therefore not produced since it is practically identical with the knowledge itself. Meghanādāri points out that this view is in apparent contradiction with Rāmānuja's own definition of *svataḥ-prāmānya* as that which is produced by the cause of knowledge; but Rāmānuja's statement in this connection has to be interpreted differently, for the knowledge of God and the emancipated beings being eternal and unproduced any view which defines self-validity as a production from the same source from which knowledge is produced would be inapplicable to them².

Time. Time according to Meghanādāri is not to be regarded as a separate entity. He takes great pains to show that Rāmānuja has

¹ *anubhūtitaṃ vā prāmānyam astu; tac ca jñānā-vāntara-jātiḥ; sā ca smṛti-jñāna-jātitāḥ prthaktayā lokataḥ eva siddhā; anubhūteḥ svasattayā eva sphūrteḥ. Naya-dyu-maṇi, p. 31.*

² *Ibid.* p. 38.

himself discarded the view that time is a separate entity in his commentary on the *Brahma-sūtra*, the *Vedānta-dīpa* and the *Vedānta-sāra*. The notion of time originates from the relative position of the sun in the zodiac with reference to earth. It is the varying earth-space that appears as time, being conditioned by the relative positions of the Sun¹. This view is entirely different from that of Veṅkaṭa which will be described later on.

Karma and its fruits. According to Meghanādāri deeds produce their fruits through the satisfaction and dissatisfaction of God. Though ordinarily deeds are regarded as virtuous or vicious, yet strictly speaking virtue and vice should be regarded as the fruits of actions and these fruits are nothing but the satisfaction and dissatisfaction of God. The performance of good deeds in the past determines the performance of similar deeds in the future by producing helpful tendencies, capacities and circumstances in his favour, and the performance of bad deeds forces a man to take a vicious line of action in the future. At the time of dissolution also there is no separate *dharma* and *adharma*, but God's satisfaction and dissatisfaction produced by the individual's deeds determine the nature and extent of his sufferings and enjoyment as well as his tendencies towards virtue or vice at the time of the next creation. The fruits of actions are experienced in the Heaven and Hell and also in the mundane life, but not while the individual is passing from Heaven or Hell to earth, for at that time there is no experience of pleasure or pain, it being merely a state of transition. Again, except in the case of those sacrifices which are performed for injuring or molesting other fellow beings, there is no sin in the killing of animals in sacrifices which are performed for the attainment of Heaven or such other pleasurable purposes².

Vātsya Varada.

Regarding the doctrine of Vedic injunction that one should study the Vedas, Vātsya Varada in his *Prameya-mālā* holds the view, in contradistinction to the *Śabara Bhāṣya*, that Vedic injunction is satisfied only in the actual reading of the Vedic texts and that the Vedic injunction does not imply an inquiry into the mean-

¹ *sūryā-dī-sambandha-viśeṣo-pādhitah prthivya-dideśānām eva kāla-saṃjñā. Naya-dyu-maṇi*, p. 168.

² *Ibid.* pp. 243-246.

ing of those texts. Such an inquiry proceeds from the normal inquisitive spirit and the desire to know the various applications in the practical performances of sacrifices. These do not form a part of the Vedic injunction (*vidhi*).

Vātsya Varada holds that the study of the Vedic injunction and the inquiry relating to Brahman form the parts of one unified scripture, i.e. the latter follows or is a continuation of the former; and he mentions Bodhāyana in his support.

Śaṅkara had thought that the study of the Mīmāṃsā was intended for a class of people but not necessarily for those who would inquire into the nature of Brahman. The Pūrva-mīmāṃsā and the Uttara-mīmāṃsā were intended for different purposes and were written by different authors. These should not therefore be regarded as integrally related as two parts of a unified work. To this Vātsya Varada, following Bodhāyana, takes exception, for he thinks that though the Pūrva-mīmāṃsā and Uttara-mīmāṃsā are written by different authors yet the two together uphold one common view and the two may be regarded as two chapters of one whole book.

Vātsya Varada also, in referring to Śaṅkara's view that the Pūrva-mīmāṃsā assumes the existence of a real world, whereas the purport of the *Brahma-sūtra* is to deny it and therefore the two cannot be regarded as having the same end in view, challenges it by affirming the reality of the world. Śaṅkara's argument, that all which is cognizable is false, would imply that even the self is false; for many Upaniṣads speak of the perceptibility of the self. His declaration of the falsity of the world would also imply that the falsehood itself is false, for it is a part of the world. Such an argument ought to be acceptable to Śaṅkara, for he himself utilized it in refuting the nihilists.

Regarding the denial of the category of difference by the Śaṅkarites Vātsya Varada says that the opponent cannot by any means deny that difference is perceived, for all his arguments are based on the assumption of the existence of difference. If there were no difference, there would be no party and no view to be refuted. If it is admitted that the category of difference is perceived, then the opponent has also to admit that such a perception must have its own peculiar and proper cause. The real point in the conception of difference is that it constitutes its other as a part of itself. An object in its own nature has twofold characteristics, the

characteristic of its universal similarity with other things of its class and the characteristic in which it differs from others. In its second characteristic it holds its others in itself. When it is said that a thing is different it does not mean that the difference is identical with the thing or but another name for the thing, but what is meant is that a thing known as different has an outside reference to other entities. This outside reference to other entities, when conceived along with the object, produces the perception of difference.

The conception of difference involves the conception of negation as involved in the notion of otherness. If this negation is different in nature from the object which is conceived as "different" or as the "other" of other objects, then since this negation cannot be directly known by perception "difference" also cannot be known directly by perception. The *Viśiṣṭā-dvāita* theory admits that "difference" can be directly perceived. In order to prove this point Vātsya Varada gives a special interpretation of "negation" (*abhāva*). He holds that the notion of negation of an entity in another entity is due to the latter's being endowed with a special character as involving a reference to the former. The notion of negation thus proceeds from a special modified character of an object in which the negation is affirmed. There are many Śāṅkarites who regard negation as positive, but in their case it is held to be a special category by itself which is perceived in the locus of the negation by the special *pramāṇa* of non-perception. Though positive its notion is not produced according to them by the special modified nature of the object perceived in which the negation is affirmed. But Vātsya Varada holds that the notion of negation is due to the perception of a special modified nature of the entity in which the negation is affirmed¹. The negation revealed to us in one object as the otherness of another object means that the latter is included in a special character of the former which makes the reference as the otherness possible.

Vātsya Varada also emphasizes the view that the tests referring to Brahman as *satya*, *jñāna*, *ananta*, etc., indicate the fact of the possession of these qualities by God and that the monistic interpretation that these together refer to one identical being, the Brahman, is false. He also describes the infinite and unlimited nature of

¹ *pratiyogi-buddhau vastu-viśeṣa-dhār evo'petā nāsti' ti vyavahāra-hetuḥ*. Varada, *Prameya-mālā*, p. 35 (MS.).

Brahman and explains the exact sense in which the world and the individuals may be regarded as the body of God and that the individuals exist for God who is their final end. He also deals in this work with certain topics regarding the external rituals, such as shaving of the head, wearing the holy thread, etc., by ascetics.

Varada, in his *Tattva-sāra*, collects some of the specially interesting points of the *Bhāṣya* of Rāmānuja and interprets them in prose and verse. Some of these points are as follows: (i) The view that the existence of God cannot be logically proved, but can be accepted only from scriptural testimony. (ii) The special interpretation of some of the important Upaniṣadic texts such as the *Kaṇṇya* text. (iii) The results of the discussions of the important *adhikaraṇas* of Vedānta according to Rāmānuja. (iv) The doctrine that negation is only a kind of position. (v) The interpretation of the apparent dualistic and monistic texts. (vi) The discussion regarding the reality of the world, etc.

This *Tattva-sāra* provoked a further commentary on it called *Ratna-sāriṇī* by Vīra-rāghava-dāsa, a son of Bādhūla Narasiṃha Guru, disciple of Bādhūla Varada Guru, son of Bādhūla Veṅkaṭācārya. Some of Vātsya Varada's other works are: *Sārā-rtha-catustaya*, *Ārādhana-saṃgraha*, *Tattva-nirṇaya*, *Prapanna-pārijāta*, *Yati-līṅga-samarthana* and *Puruṣa-nirṇaya*¹.

Rāmānujācārya II alias Vādi-Haṃsa-Navāmvuda.

Rāmānujācārya II, the son of Padmanābhārya, belonged to the Atri lineage. He was the maternal uncle of Veṅkaṭanātha, the famous writer of the Rāmānuja school. He wrote the *Nyāya-kulīśa* which has often been referred to in Veṅkaṭa's *Sarvārtha-siddhi*. He also wrote another work called *Mokṣa-siddhi*. Some of his interpretations of Rāmānuja's ideas have already been referred to in dealing with the Rāmānuja theory of knowledge as explained by Veṅkaṭa. Other contributions by him are mentioned in brief below.

Negation. Negation as a separate category is denied by Rāmānujācārya II. He thinks that negation of an entity means only another entity different from it. The negation of a jug thus means the

¹ In his *Tattva-nirṇaya* he tries to prove that all the important *Śruti* texts prove that Nārāyaṇa is the highest God. He refers in this work to his *Puruṣa-nirṇaya* where, he says, he has discussed the subject in more detail.

existence of some other entity different from it. The real notion of negation is thus only “difference.” A negation is described as that which is antagonistic to a positive entity and there is thus no way in which a negation can be conceived by itself without reference to a positive entity. But a positive entity never stands in need of its specification through a reference to negation¹. It is also well known that the negation of a negation is nothing else than the existence of positive entity. The existence of negation cannot be known either by perception, inference, or by implication. Veṅkaṭa, in further explaining this idea, says that the idea of absence in negation is derived from the association of the object of negation with a different kind of temporal or spatial character². Thus, when it is said that there is no jug here, it merely means that the jug exists in another place. It is argued that negation cannot be regarded as the existence of positive entity, and it may be asked if negation cannot be regarded as negation, how can negation of negation be regarded as the existence of positive entity. Just as those who admit negation regard negation and existence of positive entity as mutually denying each other, so the Rāmānujas also regard the existence of positive entities and negations as denying each other in their different spatial and temporal characters. Thus it is not necessary to admit negation as a separate category. When an existing entity is said to be destroyed, what happens is that there is a change of state. Negation-precedent-to-production (*prāga-bhāva*) and the negation of destruction do not mean anything more than two positive states succeeding each other, and there may be an infinite series of such states. If this view is not admitted, and if the negation of destruction (*pradhvaṃsā-bhāva*) and the negation-precedent-to-production (*prāg-abhāva*) be regarded as separate categories of negation, then the destruction of negation-precedent-to-production and negation-precedent-to-production of destruction will depend upon an infinite series of negations which would lead to a vicious infinite. It is the succession of a new state that is regarded as the destruction of the old state, the former being a different state from the latter. It is sometimes held that negation is mere vacuity and has no reference to the existence of positive entity. If that were so, then on the one hand

¹ *athā'bhāvasya tad-rūpaṃ yad-bhāva-pratipakṣatā nai'vam adyā'py asau yasmād bhāvo-ttīrṇena sādhitah. Nyāya-kulīśa. MS.*

negation would be causeless and on the other it could not be the cause of anything; and so negations would thus be both beginningless and eternal. In that case the whole world would be within the grasp of negation and everything in the world would be non-existing. Thus it is unnecessary to admit negation as a separate category. The difference of one positive entity from another is regarded as negation.

Another problem that arises in this connection is that if negation is not admitted as a separate category how can negative causes be admitted. It is well known that when certain collocations of causes can produce an effect they can do so only when there are no negative causes to counteract their productive capacity. This capacity (*śakti*) is admitted in the Rāmānuja school as the collocation of accessories which helps a cause to produce the effect (*kāraṇasya kāryo-payogī sahakāri-kalāpaḥ śaktir ity ucyate*)¹. To this Rāmānujācārya's reply is that the absence of counteracting agents is not regarded as a separate cause, but the presence of the counteracting agents along with the other accessory collocations is regarded as making those accessory collocations unfit for producing the effect. Thus there are two sets of collocations where the effect is or is not produced, and it is the difference of two collocations that accounts for the production of the effect in one case and its non-production in another; but this does not imply that absence or negation of the obstructive factors should be regarded as contributing to the causation. In one case there was the capacity for production and in another case there was no such capacity². Capacity (*śakti*) is not regarded by Rāmānujācārya as a separate non-sensible (*atīndriya*) entity, but as an abstract specification of that which produces any effect (*śakti-gata-jāty-anabhyupagame tad-abhāvāt śaktasya'iva jātiḥ kārya-niyāmikā na tu śakti-jātir iti*)³.

Jāti (*universal*). Rāmānujācārya does not admit any *jāti* or universal in the sense of any abstract generality of individuals. Accord-

³ *Ibid.*

ing to him any unified assemblage of parts similar to such other assemblages of parts (*susadr̥ṣa-saṃsthāna*) is called a universal¹.

Veṅkaṭa, a follower of Rāmānujācārya, defines *jāti* as mere similarity (*sausadr̥ṣya*). Criticizing the Naiyāyika theory of *jāti* he says that if that which manifests universals is itself manifested through universals, then these universals should have to be manifested by others which have to be manifested by further universals and this would lead to a vicious infinite. If to avoid such a vicious infinite it is held that the second grade parts that manifest a *jāti* (universal) do not require a further *jāti* for their manifestation, then it is better to say that it is the similar individuals that represent the notion of *jāti* and that it is not necessary to admit any separate category as *jāti*. It is clear that the notion of universals proceeds from qualities or characters in which certain individuals agree, and if that is so it should be enough to explain the notion of universals. It is these characters, the similarity of which with the similar characters of other individuals is remembered, that produce the notion of universals². When some parts or qualities are perceived in some things they of themselves naturally remind us of other similar parts in other things and it is this fact, that the two mutually stand, one beside the other, in the mind, which is called similarity³. It is inexplicable why certain qualities or characters remind us of others and it can only be said that they do so naturally; and it is this fact that they stand beside each other in the mind which constitutes their similarity as well as their universal. There is no other separate category which may either be called similarity (*sadr̥ṣya*) or universal. There is not, however, much difference between Rāmānujācārya's definition of universals and Veṅkaṭa's definition of it, for though the former defines it as any assemblages that are similar and the latter as similarity, yet the very conception of similarity of Veṅkaṭa involves within it the assemblage of parts as its constituent; for the notion of similarity according to Veṅkaṭa is not

anything abstract, but it means the concrete assemblages of parts that stand beside one another in memory. Veṅkaṭa, however, points out that the notion of “universal” does not necessarily mean that it can be with regard to assemblages of parts only, for in case of those partless entities, such as qualities, there cannot be any assemblage of parts, yet the notion of universals is still quite applicable. It is for this reason that Veṅkaṭa makes “similarity” only as the condition of “universals” and does not include assemblages of parts (*saṁsthāna*) as is done by Rāmānujācārya.

Svataḥ-prāmānya (self-validity). It is sometimes argued that as in all things so in the determination of validity and invalidity the application of the methods of agreement and difference is to be regarded as the decisive test. The presence of qualities that contribute to validity and the absence of defects that make any perception invalid is to be regarded as deciding the validity or invalidity of any perception. To this Rāmānujācārya says that the ascertainment of qualities that contribute to validity cannot be determined without an assurance that there are no defects, and the absence of defects cannot also be known without the knowledge of the presence of qualities that contribute towards validity; and so, since they mutually depend upon each other, their independent determination is impossible. Thus the suggestion is that there is neither the determination of validity nor invalidity, but there is doubt. To this the reply is that unless something is known there cannot be any doubt. So there is a middle stage before the determination of validity or invalidity. Before it is known that the knowledge corresponds with the object or does not do so, there must be the manifestation of the object (*artha-prakāśa*) which, so far as it itself is concerned, is self-valid and does not depend for its validity upon the application of any other method; for it is the basis of all future determinations of its nature as true or false. So this part of knowledge—the basic part—the manifestation of objects—is self-valid. It is wrong to say that this knowledge is in itself characterless (*niḥsvabhāva*), for it is of the nature of the manifestation of an objective entity like the determination of tree-ness before its specific nature as a mango or a pine tree¹. The knowledge of the contri-

¹ *yathā-rtha-paricchedaḥ prāmānyam ayathā-rtha-paricchedaḥ aprāmānyam katham tad-ubhaya-parityāge artha-pariccheda-siddhiḥ iti cen na, aparityājyavā-bhyupagamat. tayoh sādhanam eva hy artha-paricchedaḥ brūmah śiṁśapā-palāśa-diṣu iva vṛkṣatvam. Nyāya-kūṭiśa. MS.*

butory qualities is not the cause of validity, but when validity is determined they may be regarded as having contributed to the validity. The self-validity is of the knowledge (*jñāna*) and not of its correspondence (*tathātva*). If the correspondence were also directly revealed, then there can never be any doubt regarding such correspondence. When the followers of Kumārila say that knowledge is self-valid, they cannot mean that knowledge itself imparts the fact that there has been a true correspondence, for they do not admit that knowledge is self-revealing. They have therefore admitted that there are some other means by which the notion of such validity is imparted. The validity of those will again have to depend upon the validity of other imparting agents, and there will thus be a vicious infinite. For the determination of validity one is bound to depend on the ascertainment by corroboration and causal efficiency. If validity thus depends upon the ascertainment of contributory qualities, then there is no self-validity. The Vedas also cannot be self-valid in this view. If there are no defects in them because they have not proceeded from any erring mortals, then they have no contributory qualities also because they have not proceeded (according to the Mīmāṃsā view) from any trustworthy person. So there may legitimately be a doubt regarding their validity. The truth of any correspondence depends upon something other than the knowledge itself, e.g. the falsehood of any mis-correspondence. If it depended merely on the cause of the knowledge, then even a false knowledge would be right. For establishing the validity of the Vedas, therefore, it has to be admitted that they have been uttered by an absolutely trustworthy person. Knowledge does not manifest merely objectivity but a particular thing or entity and it is valid so far as that particular thing has been manifested in knowledge¹. The validity of knowledge thus refers to the thing in its general character as the manifestation of a particular thing and not regarding its specific details in character². Such a validity, however, refers only to the form of the knowledge itself and not to objective corroboration³. Whatever may be doubtful in it is to be ascertained by contributory qualities, corroboration and the like, and when the

chances of error are eliminated by other sources the original validity stands uncontradicted.

Sapraśāśatva (self-luminosity). Rāmānujācārya first states the Naiyāyika objection against self-luminosity. The Naiyāyikas are supposed to argue that things are existent but they become knowable only under certain conditions and this shows that existence (*sattā*) is different from cognition or its self-illumination (*prakāśa*). Arguing from the same position it may be said that knowledge as an existent entity is different from its illumination as such¹. If knowledge itself were self-revealing, then it would not depend upon any conditioning of it by its contiguity or relationing with objects and as such any individual cognition would mean universal cognition. If, on the other hand, knowledge requires a further conditioning through its relationing with objects, then knowledge would not be self-revealing. Further, knowledge being partless, there cannot be any such conception that one part of it reveals the other. In the case of partless entities it is not possible to conceive that knowledge should be self-revealing, for it cannot be both an agent and an object at the same time. Again, if knowledge were self-revealing, then the difference between consciousness and its re-perception through introspection cannot be accounted for. Further, it must be remembered that the difference between one cognition and another depends upon the difference of its objective content. Apart from this there is no difference between one cognition and another. If the objective content was not a constituent of knowledge, then there would be no difference between the illumination of knowledge as such and the illumination of an object. If knowledge were by itself self-illuminating, then there would be no place for objects outside it and this would bring us to absolute idealism. So the solution may be either on the Mīmāṃsā lines that knowledge produces such a character in the objective entity that by that cognized character of objects cognition may be inferred, or it may be on Nyāyā lines that knowledge manifests the objects. Thus it has to be admitted that there must be some kind of cognitive relation between the object and its knowledge, and it would be the specific nature of these relations that would determine the cognitive character in each case. Now it may again be asked whether this cognitive relation is only object-pointing or

¹ *sarvasya hi svataḥ sva-gocara-jñānā-dhānaḥ prakāśaḥ samvidāṁ api tathai'va abhyupagantum ucitaḥ. Nyāya-kulīśa. MS.*

whether it is object-knowledge-pointing. In the former case the object alone would be manifested and in the latter case knowledge would be its own object, which is again absurd. If knowledge manifested the object without any specific relation, then any knowledge might manifest any object or all objects. Knowledge implies a cognitive operation and if such an operation is not admitted knowledge cannot be manifested, for the very objectivity of knowledge implies such an operation. Hence the conclusion is that as knowledge manifests other objects so it is also manifested by a further cognition of re-perception. When one says "I perceive it," it is not a case of mere knowledge-manifestation but a re-perception of having perceived that particular object. So knowledge is manifested by a further re-perception and not by itself. To this Rāmānujācārya raises an objection: it may be asked whether this re-perception of knowledge takes place in spite of the absence of any desire to re-perceive on the part of the knower or as the result of any such desire. In the former case, since the re-perception takes place automatically, there will be an infinite series of such automatic re-perceptions. In the latter case, i.e. when the re-perception takes place in consequence of a desire to do so, then such a desire must be produced out of previous knowledge and that would again presuppose another desire, and that another knowledge, and there would thus be a vicious infinite. To this the *Naiyāyika* reply is that the general re-perception takes place without any desire, but the specific re-perception occurs as a result of a desire to that effect. This ordinary re-perception of a general nature follows as a natural course, for all mundane people have always some knowledge or other throughout the course of their experience. It is only when there is a desire to know some specific details that there is a specific mental intuition (*mānasa-pratyakṣa*) to that effect.
